

GUIDE INFORMATION FOR ELECTRICAL EQUIPMENT THE WHITE BOOK 2008

UL PRODUCT CATEGORIES CORRELATED TO THE 2005 AND 2008 NATIONAL ELECTRICAL CODE®

UL's General Guide Information is updated daily. To confirm the current status of any UL record, consult UL's Online Certifications Directory at www.ul.com/database.

OFFICES AND TESTING FACILITIES IN THE UNITED STATES CORPORATE HEADQUARTERS

Underwriters Laboratories Inc.
333 Pfingsten Rd.
Northbrook,
IL 60062-2096
Customer Service:
Phone: +1-877-ULHELPS (1-877-854-3577)
Fax: +1 847-407-1395
E-mail: CustomerExperienceCenter@us.ul.com

Underwriters Laboratories Inc.
San Jose Division
455 E. Trimble Rd.
San Jose,
CA 95131-1230
Customer Service:
Phone: +1-877-ULHELPS (1-877-854-3577)
Fax: +1 408-689-6500
E-mail: CustomerExperienceCenter@us.ul.com

Underwriters Laboratories Inc.
New York Division
1285 Walt Whitman Rd.
Melville,
NY 11747-3081
Customer Service:
Phone: +1-877-ULHELPS (1-877-854-3577)
Fax: +1 631-439-6464
E-mail: CustomerExperienceCenter@us.ul.com

Underwriters Laboratories Inc.
North Carolina Division
12 Laboratory Dr.
P.O. Box 13995
Research Triangle Park,
NC 27709-3995
Customer Service:
Phone: +1-877-ULHELPS (1-877-854-3577)
Fax: +1 919-547-6000
E-mail: CustomerExperienceCenter@us.ul.com

Underwriters Laboratories Inc.
Camas Division
2600 N.W. Lake Rd.
Camas, WA 98607-8542
Customer Service:
Phone: +1-877-ULHELPS (1-877-854-3577)
Fax: +1 360-817-6137
E-mail: CustomerExperienceCenter@us.ul.com

Additional U.S. locations are listed at the back of the White Book.

www.ul.com

Founded in 1894, Underwriters Laboratories Inc. (UL) is an independent, not-for-profit organization dedicated to working for a safer world. UL and its subsidiaries operate facilities throughout the world for the testing, certification and quality assessment of products, systems and services. With an unwavering commitment to public safety and societal well-being, UL provides the highest level of conformity assessment services to its global clients.

Guide Information for Electrical Equipment — THE WHITE BOOK

Table of Contents

Introduction

Look for the UL Mark	33
Identification of UL Listed and Classified Products	33
UL Certification Services and Marks	34
Listing Service	
Classification Service	
Component Recognition Service	
Field Evaluation Service	35
Field Inspection Service	35
Installation and Use of Products Bearing the UL Mark	36
Practical Application of the White Book in the Field	37
Field Modifications	39
Field Labeling	39
CE Marking Information	39
Over 600 Volts Rated Equipment and Devices Category List	31
Distributed Power Generation Equipment Category List	31

Index of UL Product Categories Correlated to the 2008 NEC®	395
--	-----

Index of UL Product Categories Correlated to the 2005 NEC®	437
--	-----

Appendix A - UL Marking Guides	483
--------------------------------------	-----

Dead-Front Switchboards	
Electrical Heating and Cooling Equipment	
Luminaires	
Molded Case Circuit Breakers 600 Volts or Less	
Panelboards	
Swimming Pool Equipment, Spas, Fountains and Hydromassage Bathtubs	
Wire and Cable	

Appendix B - Online Certifications Directory Quick Guide	
--	--

Appendix C - Index of Product Categories and Industry Terms	
---	--

Membership Application for International Association of Electrical Inspectors (IAEI)	
--	--

List of Underwriters Laboratories Inc. U.S. Locations 481

UL Product Categories by Category Code

Building Materials (AABM)	41
Fire Protection Equipment (AAFP)	41
Heating, Cooling, Ventilating and Cooking Equipment (AAHC)	42
Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ)	43
Electrical Equipment for Use in Ordinary Locations (AALZ)	46
Mechanical Equipment and Associated Products (AAME)	48
Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ)	48
Plumbing and Associated Products (AAPP)	52
Flammable and Combustible Liquids and Gases Equipment (AAPQ)	53
Access Control System Units for Use in Hazardous Locations (AATF)	54
Advertising Displays, Nonilluminated (AAVU)	54
Air Conditioning Equipment (AAYZ)	54
Accessories, Air Conditioning Equipment (ABFY)	54
Accessories, Air Duct Mounted (ABQK)	55
Air Conditioners, Packaged Terminal (ACKZ)	55
Air Conditioners, Room (ACOT)	56
Air Conditioners, Special Purpose (ACVS)	56
Packaged Terminal Air Conditioners, Replacement (ADAU)	56
Air Filtering Appliances (AEDX)	57
Dehumidifiers (AERV)	57
Dehumidifiers, Refrigeration Type (AFFT)	57
Electrostatic Air Cleaners (AGGZ)	57
Evaporative Cooler Retrofit Pumps (AGIS)	58
Evaporative Coolers (AGNY)	58
Humidifiers (AHIV)	58
Air Conditioning Equipment for Use in Hazardous Locations (AHSY)	59
Air Conditioners for Use in Hazardous Locations (AIDR)	59
Room Air Conditioners for Use in Hazardous Locations (AINU)	59
Air Filtering Appliances for Use in Hazardous Locations (AISX)	59
Air-sampling Equipment for Use in Hazardous Locations (ALOA)	59
Alarm System Units for Use in Hazardous Locations (ALSY)	59
Intrusion Detection Units for Use in Hazardous Locations (ARCX)	59
Alternators, Electric for Use in Hazardous Locations (ARDK)	60
Amusement and Gaming Machines (ASMU)	60
Antenna Discharge Units (ASWA)	60
Appliance Controls (ATNZ)	60
Appliance Outlet Centers (AUJZ)	61
Commercial Appliance Outlet Centers (AUUZ)	61
Residential Appliance Outlet Centers (AVGQ)	61
Arc-fault Circuit Interrupters (AVYI)	61
Arc-fault Circuit Interrupters, Branch/Feeder Type (AVZQ)	61
Arc-fault Circuit Interrupters, Combination Type (AWAH)	62
Arc-fault Circuit Interrupters, Cord Type (AWAY)	62

Arc-fault Circuit Interrupters, Outlet Branch Circuit Type (AWBZ)	62
Arc-fault Circuit Interrupters, Outlet Circuit Type (AWCG)	63
Arc-fault Circuit Interrupters, Portable Type (AWDO)	63
Architectural and Floating Fountains (AWEG)	63
Armored Cable (AWEZ)	63
Armored Cable Connectors, Type AC (AWSX)	64
Attachment Plugs (AXGV)	64
Attachment Plugs, Fuseless (AXUT)	64
Attachment Plugs with Switches (AYIR)	65
Attachment Plugs with Overload Protection (AYVZ)	66
Audio and Radio Equipment, Commercial (AZCY)	66
Commercial Audio and Radio Equipment, Systems and Accessories (AZJX)	66
Audio/Video Apparatus (AZSQ)	66
Audio and Video Equipment (AZUJ)	67
Audio and Video Equipment Classified for Use in Specified Equipment (AZVG)	
.....	67
Bank Equipment (BALT)	68
Lubricant-dispensing Equipment for Use in Hazardous Locations (BAYZ)	68
Battery Chargers for Engine-driven Emergency and Standby Power System	
Generators (BBHH)	68
Boat Cable (BDFX)	68
Boilers, Electric (BDJS)	68
Boxes, Enclosures, Handholes and Vaults, Underground, Utility Specification	
(BGHL)	69
Boxes, Junction and Pull (BGUZ)	69
Boxes, Junction and Pull for Use in Zone Classified Hazardous Locations	
(BGYM)	70
Brakes, Electric for Use in Hazardous Locations (BHIX)	70
Building Materials (BHWV)	71
Discrete Products Installed in Air-handling Spaces (BHZF)	71
Fire Resistance Ratings (BXRH)	71
Fire Resistance Ratings - ANSI/UL 263 (BXUV)	71
Ceiling Dampers (CABS)	82
Luminaires and Luminaire Assemblies Classified for Fire Resistance (CDHW) ...	82
Speaker Assemblies for Fire Resistance (CHML)	82
Wall Opening Protective Materials (CLIV)	83
Busways, Metal Enclosed, Over 600 Volts (CVZW)	83
Busways and Associated Fittings (CWFT)	83
Busways and Associated Fittings Classified in Accordance with IEC	
Publications (CWTN)	84
Cabinets and Cutout Boxes (CYIV)	84
Cable Assemblies and Fittings for Industrial Control and Signal Distribution	
(CYJV)	84
Cable Fittings for Use in Zone Classified Hazardous Locations (CYMJ)	85

Cable Sealing Fittings for Use in Hazardous Locations (CYMX)	85
Cable Trays (CYNW)	85
Cable Trays, Nonmetallic (CYOV)	85
Camera Equipment for Use in Zone Classified Hazardous Locations (CYPB)	86
Camera Equipment for Use in Hazardous Locations (CYPH)	86
Capacitors (CYWT)	86
Carbon Monoxide Alarms, Single and Multiple Station (CZHF)	86
Casters, Rubber, Electrically Conductive, Relating to Hazardous Locations (CZXZ)	87
Centrifuges for Use in Hazardous Locations (DAZV)	87
Motor-operated Check-out Stands (DBNT)	87
Seasonal and Holiday Decorative Products (DGVT)	87
Seasonal and Holiday Decorative Product Accessories (DGWU)	87
Electric Ornaments (DGXC)	88
Lamps, Decorative (DGXO)	88
Outfits, Decorative (DGXW)	88
Strings, Decorative Lighting (DGZZ)	88
Circuit Breakers (DHJR)	89
Adapters, Circuit Breaker (DHWZ)	89
Circuit Breaker Accessories (DIHS)	89
Circuit Breaker and Secondary Surge Arresters (DIMV)	89
Circuit Breaker and Transient-voltage Surge Suppressors (DIPJ)	89
Circuit Breaker Current Limiters (DIRW)	90
Circuit Breakers for Use in Communications Equipment (DITT)	90
Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ)	90
Circuit Breakers, Molded-case, Classified for Use in Specified Equipment (DIXF)	91
.....	91
Circuit Breakers with Equipment Ground-fault Protection (DIYA)	92
Fused Circuit Breakers (DIYV)	92
Circuit Breaker and Ground-fault Circuit Interrupters (DKUY)	92
Circuit Breakers for Use in Hazardous Locations (DKAR)	93
Branch Circuit and Service Circuit Breakers for Use in Hazardous Locations (DKNZ)	93
Circuit Breakers for Use in Zone Classified Hazardous Locations (DKPA)	93
Branch Circuit and Service Circuit Breakers for Use in Zone Classified Hazardous Locations (DKPN)	93
Circuit Breakers and Metal-clad Switchgear Over 600 Volts (DLAH)	93
Circuit Breakers, Medium Voltage, Classified for Use in Specified Equipment (DLBC)	94
Circuit Breaker Switchgear, Metal Enclosed, Over 600 Volts (DLBK)	95
Circuit Protectors (DLBX)	96
Class 2 and Communication Cable Management Systems (DLPV)	96
Cleaning Machines (DMDT)	96
Cleaning Machines, Motor Operated (DMGK)	96
Dishwashers, Commercial (DMGR)	96
Dishwashers, Household (DMIY)	97
High-pressure Cleaning Machines, Electrically Operated (DMKK)	97
Vacuum Cleaning Machines and Blower Cleaners (DMLW)	97

Cleaning Machines for Use in Hazardous Locations (DMRR)	97
Coaxial Fault Protectors for Network-powered Broadband Communication Systems (DUAA)	98
Cold Cathode Transformers and Power Supplies (DUEC)	98
Combustion Detection Equipment for Use in Hazardous Locations (DUFK)	98
Communication Cable Assemblies (DUNH)	98
Communications Circuit Accessories (DUXR)	99
Communications Service Equipment (DUZO)	99
Communications Cable (DUZX)	100
Communications Cable Verified in Accordance with National or International Specifications (DVBG)	101
Communications Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (DVBH)	101
Data Transmission Cable Verified in Accordance with National or International Specifications (DVBI)	101
Community Antenna Television Cable (DVCS)	102
Computer Interconnection Cable Assemblies (DVPJ)	102
Conductor Termination Compounds (DVYW)	102
Conduit and Fittings (DWFV)	102
Conduit and Cable Hardware (DWMU)	102
Conduit Fittings (DWTT)	103
Retrofit Fitting Kits Classified for Use with Extruded Rigid PVC Conduit (DWUC)	103
Flexible Conduit, Liquid-tight (DWWY)	104
Flexible Metal Conduit Assemblies, Liquid-tight (DXAS)	104
Flexible Metal Conduit, Liquid-tight (DXHR)	104
Flexible Nonmetallic Conduit, Liquid-tight (DXOQ)	104
Flexible Metal Conduit (DXUZ)	105
Intermediate Ferrous Metal Conduit (DYBY)	105
Rigid Ferrous Metal Conduit (DYIX)	105
Rigid Nonferrous Metallic Conduit (DYWV)	106
Reinforced Thermosetting Resin Conduit (DZKT)	106
Rigid Nonmetallic Cellular Core Schedule 40 PVC Conduit (DZLR)	106
Rigid Nonmetallic Schedule 40 and Schedule 80 PVC Conduit (DZYR)	106
Rigid Nonmetallic Underground Conduit, Plastic (EAXX)	107
Conduit Fittings for Use in Zone Classified Hazardous Locations (EBMB)	107
Conduit Fittings for Use in Hazardous Locations (EBNV)	108
Connectors, Special Purpose (ECIS)	108
Containment Products (ECPR)	109
Aboveground Flammable Liquid Tank Systems (ECRU)	109
Storage Tanks (EDQX)	110
Underground Flammable Liquid Tanks (EGHX)	110
Control Dampers (EIMZ)	111
Conveyors (EJJR)	111
Cord Sets and Power-supply Cords (ELBZ)	112
Cord Restraint Devices (ELDW)	113
Outdoor Seasonal-use Cord-connected Wiring Devices (ELEI)	113

Seasonal-use Cord Sets (ELEV)	113
Utility Service Cord Sets (ELFT)	113
Cord Sets with Leakage-current Detection and Interruption (ELGN)	113
Corrosion-measuring Equipment for Use in Zone Classified Hazardous Locations (ELHN)	113
Corrosion-measuring Equipment for Use in Hazardous Locations (ELHS)	114
Crane and Hoist Electrification Systems (ELPX)	114
Current Taps and Adapters (EMDV)	114
Custom-built Kiosks (EMHH)	114
Dampers for Fire Barrier and Smoke Applications (EMME)	115
Data Processing Cable (EMRB)	116
Data Processing Equipment, Electronic (EMRT)	116
Data Processing Equipment, Electronic for Use in Hazardous Locations (ENWS)	117
Data Processing Equipment, Electronic for Use in Zone Classified Hazardous Locations (ENYB)	117
Dielectric Mediums (EOUV)	117
Transformer Fluids (EOVK)	118
Dimmers (EOVZ)	118
Dimmers, Commercial (EOXT)	118
Dimmers, General Use Switch (EOYX)	118
Dimmers, Theater (EPAR)	119
Dimmers, Theater, Controls (EPCT)	119
Direct Plug-in and Cord-connected Class 2 Power Units (EPBU)	119
Dispensing Devices (EPWR)	120
Dispensing Device Accessories (EQJZ)	120
Retrofit Assemblies (ERKQ)	120
Power-operated Dispensing Devices (EAFX)	120
Flammable Liquid Dispensing Devices, Power Operated (EWTV)	120
Flammable Liquid Dispensing Devices, Power-operated, Rebuilt (EXAU)	120
LP-Gas Dispensing Devices, Power Operated (EXHT)	121
Distributed Generation Power Systems Equipment for Use in Hazardous Locations (FCHD)	121
Photovoltaic Modules and Panels for Use in Hazardous Locations (FCJU)	121
Door Operators for Use in Hazardous Locations (FCQU)	121
Door, Drapery, Gate, Louver, and Window Operators and Systems (FDDR)	121
Door Holders for Use in Hazardous Locations (FDGF)	122
Door Panel Assemblies (FDIT)	122
Drilling Equipment for Use in Zone Classified Hazardous Locations (FDJJ)	123
Drilling Instrumentation for Use in Zone Classified Hazardous Locations (FDJN)	123
Marine Shipboard Cable Fittings for Use in Zone Classified Hazardous Locations (FDJR)	123
Drilling Equipment for Use in Hazardous Locations (FDJZ)	123
Drilling Instrumentation for Use in Hazardous Locations (FDKX)	123

Marine Shipboard Cable Sealing Fittings for Use in Hazardous Locations (FDLW)	123
Earthquake-actuated Equipment (FFPC)	123
Earthquake-actuated Shutoff Systems (FFPH)	124
Electric Vehicle Systems (FFQM)	124
Electric Vehicle Battery Packs (FFRW)	124
Electric Vehicle Cable (FFSO)	124
Electric Vehicle Charging System Equipment (FFTG)	125
Electric Vehicle Charging Systems, Indoor Charging Without Ventilation (FFTY)	125
Electric Vehicle Charging System Personnel Protection Equipment (FFUQ)	125
Electric Vehicle Power Outlets (FFWA)	125
Electrical and Electronic Measuring and Testing Equipment (FHCW)	126
Electrical Circuit Protective Systems (FHIT)	126
Electrical Circuit Protective Materials (FHIY)	127
Fire-resistive Cable (FHJR)	127
Electrical Metallic Tubing (FJMX)	127
Electrical Metallic Tubing Fittings (FKAV)	128
Electrical Nonmetallic Tubing (FKHU)	128
Electrical Nonmetallic Tubing Fittings (FKKY)	128
Electric Discharge Lamp Control Equipment (FKOT)	128
Drivers for Light-emitting-diode Arrays, Modules and Controllers (FKSZ)	128
Fluorescent Lamp Ballasts (FKVS)	129
High-intensity-discharge Lamp Ballasts (FLCR)	129
Holders for Automatic Starters (FLPZ)	130
Starters, Automatic (FMDX)	130
Starters, Manual (FMRV)	130
Electric Discharge Lamp Control Equipment, Specialty (FNFT)	130
Electric Lamp Control Equipment for Use in Hazardous Locations (FNTR)	131
Ballasts for Use in Hazardous Locations (FOGZ)	131
Electrically Conductive Corrosion-resistant Compounds (FOIZ)	131
Electromagnetic Interference Filters (FOKY)	131
Electromagnets for Use in Hazardous Locations (FOOM)	131
Elevator Equipment (FQKR)	131
Elevator Controls and Accessories (FQMW)	132
Elevator Control Panels (FQPB)	132
Elevator Door-locking Devices and Contacts (FQXZ)	132
Elevator Oil Buffers (FQZD)	132
Elevator Switches (FRAH)	132
Passenger Elevator Car Enclosures (FRBK)	132
Elevator Equipment for Use in Hazardous Locations (FRZV)	133
Elevator Control Panels for Use in Hazardous Locations (FSNA)	133
Elevator Door-locking Devices and Contacts for Use in Hazardous Locations (FSNT)	133
Elevator Equipment Relating to Hazardous Locations (FSRA)	133
Elevator Control Panels Relating to Hazardous Locations (FSSA)	133
Emergency Lighting and Power Equipment (FTBR)	134
Engine Generators (FTCA)	134

Engine Generators for Portable Use (FTCN)	134
Engine Generators for Recreational Vehicles (FTCZ)	135
Emergency Lighting Equipment for Use in Hazardous Locations (FTEV)	135
Emergency Lighting Equipment Fittings for Use in Hazardous Locations (FTGT)	135
Emergency Lighting Equipment for Use in Zone Classified Hazardous Locations (FTHR)	135
Enclosures for Use in Zone Classified Hazardous Locations (FTQH)	135
Enclosures for Metering Equipment for Use in Hazardous Locations (FTRQ)	136
Enclosures for Use in Hazardous Locations (FTRV)	136
Enclosure Accessories for Use in Hazardous Locations (FTRX)	136
Enclosure Accessories for Use in Zone Classified Hazardous Locations (FTRY) ...	136
Energy Usage Monitoring Systems (FTRZ)	137
Engine Generators (FTSR)	137
Engine Generators Fueled by Biogas or Raw Natural Gas (FTPU)	137
Equipment Ground-fault Protective Devices (FTTE)	137
Engine Control Equipment and Engine Generators for Use in Hazardous Locations (FTVV)	138
Engine Generators for Use in Hazardous Locations (FTWG)	138
Ignition Controls for Use in Hazardous Locations (FTWL)	138
Exit Signs and Exit Appliances (FUDQ)	138
Exit Doors (FUXV)	138
Exit Fixtures (FWBO)	139
Exit Signs, Self-luminous and Photoluminescent (FWBX)	139
Exit Sign Conversion Kits (FWCF)	139
Exit Fixture to Exit Light Conversions, Retrofit (FWCN)	139
Exit Signs and Exit Appliances for Use in Zone Classified Hazardous Locations (FWDD)	140
Exit Signs and Markers for Use in Zone Classified Hazardous Locations (FWDJ)	140
Exit Sign Retrofit Kits (GGET)	140
Factory Automation Equipment (GPNY)	140
Fan Parts (GPPF)	140
Fans, Ceiling Suspended (GPRT)	141
Fans, Electric (GPWV)	141
Rangehood Cord-Connection Kits (GQFM)	142
Fan-speed Controls (GQHG)	142
Fans, Portable Electric for Use in Hazardous Locations (GQJA)	142
Fans, Portable Pneumatic for Use in Hazardous Locations (GQJX)	142
FC Cable (GQKT)	143
FC Cable Fittings (GQRS)	143
Fence Controllers, Electric (GQYR)	143
Fire Doors (GSNV)	143
Fire Alarm Cable (HNGV)	144

Nonpower-limited Fire Alarm Cable (HNHT)	144
Power-limited Fire Alarm Cable (HNIR)	144
Luminaires and Fittings (HYXT)	145
Luminaires and Fittings, Special Purpose, Miscellaneous (IETR)	145
Luminaire Conversions, Retrofit (IEUQ)	146
Luminaire Poles (IEUR)	146
Fluorescent Lamp-type Luminaires (IEUT)	146
Fluorescent Surface-mounted Luminaires (IEUZ)	146
Fluorescent Recessed Luminaires (IEVV)	147
Light Diffusers and Lenses for Air-handling Luminaires, Fluorescent (IEWR) .	147
High Intensity Discharge Lamp-type Luminaires (IEWX)	147
High-intensity-discharge Surface-mounted Luminaires (IEXT)	147
High-intensity-discharge Recessed Luminaires (IEXZ)	148
Incandescent Lamp-type Luminaires (IEYV)	149
Incandescent Surface-mounted Luminaires (IEZR)	149
Incandescent Recessed Luminaires (IEZX)	149
Incandescent Recessed Luminaires, Convertible, Non-IC/IC (IFAH)	150
Light-emitting-diode Luminaires (IFAK)	150
Light-emitting-diode Surface-mounted Luminaires (IFAM)	151
Light-emitting-diode Recessed Luminaires (IFAO)	151
Special-purpose Luminaires (IFAT)	152
Canopy Luminaires (IFAW)	152
Electric Discharge Lighting Systems, Cold Cathode (IFAY)	152
Landscape Lighting Systems, Low Voltage (IFDH)	152
Luminaires and Luminaire Assemblies Classified for Fire Resistance (IFDL) ..	153
Low-voltage Luminaires for Recreational Vehicle Use (IFDQ)	153
Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR) .	153
Medical-Dental Luminaires (IFDT)	154
Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ)	154
Submersible Luminaires (IFEV)	155
Track Lights and Tracks (IFFR)	155
Luminaire Fittings (IFFX)	156
Fixture Fittings for Track Lighting (IFGT)	156
Recessed Luminaire Trims (IFGW)	156
Luminaires and Fittings for Use in Hazardous Locations (IFGZ)	157
Luminaires for Use in Hazardous Locations (IFUX)	157
Luminaires, Paint Spray Booth for Use in Hazardous Locations (IFYJ)	157
Luminaires, Recessed Type for Use in Hazardous Locations (IGBW)	157
Luminaire Fittings for Use in Hazardous Locations (IGIV)	158
Luminaire Fittings for Use with Specified Fittings for Use in Hazardous	
Locations (IGMX)	158
Lighting Unit Fittings, Auxiliary for Use in Hazardous Locations (IGOY)	158
Luminaires and Fittings for Use in Zone Classified Hazardous Locations (IHRV)	
.....	159
Luminaire Fittings for Use in Zone Classified Hazardous Locations (IHSN)	159
Luminaires for Use in Zone Classified Hazardous Locations (IHTF)	159
Flashlights and Lanterns for Use in Zone Classified Hazardous Locations (IJRF)	
.....	159
Flashlights and Lanterns for Use in Hazardous Locations (IKBR)	159
Flat Conductor Cable, Type FCC (IKKT)	159
Flat Conductor Cable Fittings (IKMW)	160

Flatirons and Garment-finishing Appliances (IKOZ)	160
Flexible Lighting Products (ILGJ)	160
Flexible Metallic Tubing (ILJW)	160
Fittings, Flexible Metallic Tubing (ILNR)	161
Flexible Stage and Lighting Power Cable (ILPH)	161
Floor Cleaners for Use in Hazardous Locations (ILQV)	161
Flooring, Electrically Conductive, Relating to Hazardous Locations (INFZ)	161
Flooring, Static Dissipative, Relating to Hazardous Locations (INTX)	162
Food-preparing Machines (IPNX)	162
Food-preparing Machines, Commercial (IPST)	162
Fuel Cell Equipment (IRGN)	162
Fuel Cell Power Systems for Use in Industrial Trucks (IRGQ)	162
Hand-held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU)	163
Stationary Fuel Cell Systems (IRGZ)	163
Fuel Gas Booster Compressor Equipment (IUXX)	164
Furnishings (IYMR)	164
Building Components (IYMT)	164
Commercial Displays (IYMX)	165
Decorative Furnishings (IYNA)	165
Furniture Power Distribution Units (IYNC)	165
Furniture, Powered and Nonpowered (IYNE)	165
Motorized Furnishings (IYNG)	166
Powered Table Systems (IYNI)	166
Fumigant-dispensing Equipment for Use in Hazardous Locations (IYNK)	166
Furnishings, Household and Commercial (IYQX)	166
Fused Power-circuit Devices (IYSR)	167
Fuseholders (IYXV)	167
Fuseholders, Cartridge Fuse (IZLT)	167
Fuseholders, Special Purpose (IZND)	168
Fittings for Fuseholders (IZZR)	168
Fuseholders, Plug Fuse (JAMZ)	168
Fuses (JCQR)	168
Branch Circuit Fuses (JCSA)	168
Cartridge Fuses, Nonrenewable (JDDZ)	168
Cartridge Fuses, Renewable (JDRX)	171
Plug Fuses (JEFV)	171
Defined-use Fuses (JDUA)	171
Cable Limiters (CYMT)	171
Fuses, Automobile (FHXT)	172
Special-purpose Fuses (JFHR)	172
Marine Miniature Fuses (PFAU)	173
Fuse Accessories (JDVS)	173
Fuses, Supplemental (JDYX)	174
Fuses Certified to International Standards (JECA)	174
Low-voltage Fuses Classified in Accordance with IEC Publications (JEFA)	175
Universal Modular Fuses (JGFI)	175
Fuses Over 600 Volts (JEEG)	175

Garage Equipment (JGWV)	176
Gas Appliance Electric Accessories (JHYR)	176
Gas Detectors, Residential and Recreational Vehicles (JKIS)	177
Gas and Vapor Detection Equipment for Use in Zone Classified Hazardous Locations (JLVG)	177
Gas and Vapor Detection Equipment Classified for Use in Zone Classified Hazardous Locations (JLVV)	177
Gas and Vapor Detection Equipment for Use in Hazardous Locations (JTNQ)	177
Gas and Vapor Detection Equipment Enclosures for Use in Hazardous Locations (JTOL)	177
Gas and Vapor Detection Equipment Classified for Use in Hazardous Locations (JTPD)	177
Gas and Vapor Detection Equipment Listed for Use in Hazardous Locations (JTPX)	178
Generators (JZGZ)	178
Ground-fault Circuit Interrupters (KCXS)	179
Special-purpose Ground-fault Circuit Interrupters (KCYC)	179
Ground-fault Circuit Interrupters for Use in Hazardous Locations (KCYN)	179
Ground-Fault Sensing and Relaying Equipment (KDAX)	180
Grounding and Bonding Equipment (KDER)	180
Grounding and Bonding Equipment, Communication (KDSH)	181
Grounding Equipment, Neutral Grounding Devices, Over 600 Volts (KDZC)	181
Health Care Facilities Equipment (KEVQ)	181
Hospital Ground Jacks and Grounding Cord Assemblies (KEVX)	182
Isolated Power Systems Equipment (KEWV)	182
Isolated Power Wall Modules (KEXS)	182
Prefabricated Medical Headwalls and Medical Supply Units (KEZR)	182
Medical and Dental Equipment, Professional (KFBQ)	183
Medical Waste Disposal Systems, Equipment and Accessories (KFCC)	183
Power Supplies for Use in Health Care Facilities (KFCG)	183
Television/Video Equipment for Use in Health Care Facilities (KFCV)	184
Uninterruptible Power Supplies for Use in Health Care Facilities (KFFG)	184
Heaters for Use in Hazardous Locations (KFHT)	184
Heaters, Air for Use in Hazardous Locations (KFVR)	184
Electrical Resistance Heat Tracing Cable Systems for Use in Hazardous Locations (KGFR)	184
Heaters, Industrial and Laboratory for Use in Hazardous Locations (KGIZ)	184
Heaters, Miscellaneous for Use in Hazardous Locations (KGWX)	185
Surface Heaters for Use in Hazardous Locations (KHCM)	185
Heaters for Use in Zone Classified Hazardous Locations (KHTG)	185
Electrical Resistance Heat Tracing Cable Systems for Use in Zone Classified Hazardous Locations (KIHP)	185
Heaters, Industrial and Laboratory for Use in Zone Classified Hazardous Locations (KIQU)	185
Heaters and Heating Equipment (KKBV)	185
Air Heaters, Movable and Wall or Ceiling Hung (KKPT)	185
Air Heaters, Room, Fixed and Location Dedicated (KKWS)	186
Baseboard Heaters (KLDR)	186

Baseboard Heater Accessories (KLQZ)	186
Clothes Dryers (KMEX)	187
Clothes Dryer Transition Ducts (KMIK)	187
Laundry Equipment Accessories Classified for Use in Specified Equipment (KMKD)	187
Control Panels, Remote, for Electric Duct Heaters (KMLW)	187
Heaters, Cooking Appliances (KMSV)	188
Commercial Cooking Appliances (KNGT)	188
Commercial Cooking Appliance Assemblies Classified for Use with Other Manufacturers' Appliances (KNJA)	188
Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG)	189
Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air (KNLZ)	189
Custom-built Food Service Equipment (KNNS)	189
Filters for Cooking Oil, Commercial (KNRF)	190
Household Cooking Appliances, Classified (KNSY)	190
Household Cooking Appliances (KNUR)	190
De-icing and Snow-melting Equipment (KOBQ)	191
Duct Heaters, Electric (KOHZ)	191
Heaters, Sauna and Steam Bath (KPJV)	192
Sauna Heating Equipment (KPSX)	192
Steam Bath Equipment (KQBZ)	192
Immersion-type Liquid Heaters, Industrial (KQGV)	192
Heaters, Industrial and Laboratory (KQLR)	193
Microwave Cooking Appliances (KQSQ)	193
Pipe Heating Cable (KQUF)	193
Mobile/Manufactured Home Pipe Heating Cable (KQVU)	194
Industrial and Commercial Pipe Heating Cable (KQXR)	194
Residential Pipe Heating Cable (KQYI)	194
Radiant Heating Equipment (KQYZ)	194
Ranges, Household Electric (KRMX)	195
Water Heaters (KSAV)	196
Commercial Storage Tank and Booster Water Heaters (KSBZ)	196
Water Heaters, Space Heating (KSDR)	196
Household Water Heaters, Storage Tank (KSDT)	196
Immersion Water Heaters (KAFX)	197
Miscellaneous Water Heaters (KSGR)	197
Heaters, Waterbed (KSHU)	197
Heaters, Specialty (KSOT)	197
Heaters, Emitter Type, Classified for Use in Specified Equipment (KSSG)	197
Heating Appliances (KTCR)	197
Boiler Assemblies (KVFT)	198
Field-erected Boiler Assemblies (KVQE)	199
Heating and Cooling Equipment (LZFE)	199
Ductless Heating and Cooling Equipment, Large, Open Building (LZPG)	203
Heating, Cooling and Ventilating Equipment (LZLZ)	204
Electric Heater Assemblies Classified for Use on Specified Equipment (LZPU)	204
Heat-recovery Ventilators, Ducted (LZTW)	204
Heat-recovery Ventilators, Nonducted (LZUU)	205
Heating and Heating-Cooling Appliance Accessories (LZZX)	205
Controls, Limit (MBPR)	205

Hoists (MSXT)	205
Hoistway Cable (MSZR)	206
Hospital Signaling and Nurse Call Accessory Equipment (NBQW)	206
Hospital Signaling and Nurse Call Equipment (NBRZ)	206
Hydrogen Generators (NCBD)	207
Hydrogen Generators, Water Reaction Type (NCBR)	207
Water-driven Ventilators for Use in Hazardous Locations (NCGV)	207
Hydromassage Bathtubs (NCHX)	207
Industrial Control Equipment (NIMX)	208
Electro-sensitive Protective Equipment (NIOZ)	209
Active Opto-electronic Protective Devices (NIPF)	209
Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM)	209
Emergency Stop Devices (NISD)	209
Industrial Control Panels (NITW)	210
Flame Control Panels (NIVT)	211
Motor Control Centers (NJAV)	211
Motor Controllers Over 1500 Volts (NJHU)	211
Power Conversion Equipment, Medium Voltage (NJIC)	212
Motor Controller Accessories Over 1500 Volts (NJIJ)	212
Motor Controllers (NJOT)	213
Auxiliary Devices (NKCR)	213
Combination Motor Controllers (NKJH)	214
Motor Controllers, Float- and Pressure-Operated (NKPZ)	214
Motor Controllers, Magnetic (NLDX)	214
Motor Controllers, Manual (NLRV)	214
Motor Controllers, Mechanically-operated and Solid-state (NMFT)	215
Power Conversion Equipment (NMMS)	215
Power Circuit and Motor-mounted Apparatus (NMTR)	215
Programmable Controllers (NRAQ)	215
Programmable Safety Controllers (NRGF)	216
Protective Relays (NRGU)	216
Proximity Switches (NRKH)	216
Switches, Industrial Control (NRNT)	216
Industrial Control Equipment for Use in Hazardous Locations (NNGZ)	217
Control Panels and Assemblies for Use in Hazardous Locations (NNNY)	217
Control Assembly Covers for Use in Hazardous Locations (NNRL)	217
Flame Control Panels for Use in Hazardous Locations (NNTE)	218
Enclosed Slip Rings for Use in Hazardous Locations (NNTR)	218
Motor Controllers for Use in Hazardous Locations (NNUX)	218
Auxiliary Devices for Use in Hazardous Locations (NOIV)	218
Combination Motor Controllers for Use in Hazardous Locations (NOTH)	218
Float- and Pressure-operated Motor Controllers for Use in Hazardous Locations (NOWT)	219
Magnetic Motor Controllers for Use in Hazardous Locations (NPKR)	219
Manual Motor Controllers for Use in Hazardous Locations (NPXZ)	219
Miscellaneous Motor Controllers for Use in Hazardous Locations (NQLX)	219
Power Conversion Equipment for Use in Hazardous Locations (NQMD)	219
Motor Controllers Over 1500 Volts for Use in Hazardous Locations (NRAA)	220
Programmable Controllers for Use in Hazardous Locations (NRAG)	220

Industrial Control Equipment Relating to Hazardous Locations (NRAW)	220
Industrial Control Panels Relating to Hazardous Locations (NRBX)	220
Motor Controllers Relating to Hazardous Locations (NRCY)	221
Auxiliary Devices Relating to Hazardous Locations (NRDZ)	221
Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWEX)	221
Control Panels and Assemblies for Use in Zone Classified Hazardous Locations (NWFA)	221
Motor Controllers for Use in Zone Classified Hazardous Locations (NWFE)	221
Auxiliary Devices for Use in Zone Classified Hazardous Locations (NWFN) ...	222
Combination Motor Controllers for Use in Zone Classified Hazardous Locations (NWFP)	222
Magnetic Motor Controllers for Use in Zone Classified Hazardous Locations (NWFR)	222
Manual Motor Controllers for Use in Zone Classified Hazardous Locations (NWFU)	222
Programmable Controllers for Use in Zone Classified Hazardous Locations (NWGD)	223
Information Technology Equipment Including Electrical Business Equipment (NWGQ)	223
Information Technology Equipment for Use in Zone Classified Hazardous Locations (NWHC)	224
Information Technology Equipment for Use in Hazardous Locations (NWHP)	225
Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN)	225
Inspection and Measuring Electrical Equipment (NYOK)	226
Inspection and Measuring Electrical Equipment for Use in Zone Classified Hazardous Locations (NYPA)	226
Inspection and Measuring Electrical Equipment, Special Inspection Equipment (NYQD)	226
Instrumentation Tray Cable (NYTT)	227
Insulating Devices and Materials (NYYV)	227
Insulating Bushings (NZMT)	227
Insulating Tape (OANZ)	227
Insulating Devices and Materials, Miscellaneous (OCDT)	227
Intercommunication Systems for Use in Hazardous Locations, Marine (ODJV) ...	228
Telephones for Use in Hazardous Locations, Marine (OEPX)	228
Intrinsically Safe Equipment and Systems for Use in Hazardous Locations (OERX)	228
Ion Generators (OETX)	228
Intrinsically Safe Equipment and Systems for Use in Zone Classified Hazardous Locations (OEVX)	228
Irrigation Cable (OFFY)	229
Irrigation Cable Assemblies (OFJZ)	229
Laboratory Equipment for Use in Hazardous Locations (OGNA)	229
Laboratory Hoods and Cabinets (OGOY)	229
Laboratory Use Electrical Equipment (OGTK)	230

Lampholders (OIMZ)	230
Lampholders, Electric Discharge (OJAX)	230
Lampholders, Electric Discharge, Over 1000 Volts (OJOV)	230
Lampholders, Electric Discharge, 1000 Volts or Less (OKCT)	230
Lampholders, Fittings (OKQR)	230
Lampholders, Incandescent (OLDZ)	231
Lampholders, Adapters (OLRX)	231
Lampholders, Candelabra and Miniature (OMFV)	231
Lampholders, Intermediate Base (OMTT)	231
Lampholders, Medium Base (ONHR)	231
Lampholders, Mogul Base (ONUZ)	231
Lampholders, Miscellaneous (OOIX)	231
Lamps (OOKH)	232
Lamps, Self-ballasted and Lamp Adapters (OOLR)	232
Lamps, Specialty (OONB)	232
Lamps, Tungsten Halogen (OOOJ)	232
Leak Detection Equipment for Use in Hazardous Locations (OPDH)	232
Lighting and Power Equipment, Auxiliary (OUST)	232
Lightning Protection (OVGR)	233
Lightning Conductors, Air Terminals and Fittings (OVTZ)	233
Lightning Protection System Installations (OWAY)	233
Surge Arresters (OWHX)	233
Surge Arresters Classified for Use in Specified Equipment (OWIW)	233
Limited Combustible Cable (OWKZ)	233
Line Isolation Monitors (OWLS)	234
Low-voltage AC Power-switching Devices (PAPU)	234
Accessories, Low-voltage Power-switching Devices (PAQF)	234
Adapters, Low-voltage AC Power-switching Devices (PAQQ)	234
Low-voltage AC Fuse Draw-outs (PAQT)	235
Low-voltage AC Power Circuit Breakers (PAQX)	235
Secondary Network Protectors (PARZ)	235
Low-voltage AC Integrally-fused Power Circuit Breakers (PASQ)	236
Low-voltage AC Power Circuit Protectors (PATT)	236
Low-voltage DC Power Circuit Breakers (PAXW)	236
Trip Devices Classified for Use in Low-voltage AC Power Circuit Breakers (PAYK)	236
Magnetic Resonance Imaging Equipment (PAZB)	236
Management Equipment, Energy (PAZX)	237
Manufactured Home Kitchen Cabinetry and Bathtub and Shower Units (PDLT)	237
Manufactured Homes (PDOV)	237
Marina and Boatyard Cable (PDYQ)	237
Marking and Coding Equipment, Electronic (PGBE)	238
Mattresses and Pads, Electrically Conductive, Relating to Hazardous Locations (PHLV)	238
Measuring, Testing and Signal Generation Equipment (PICQ)	238
Measurement Equipment Classified for Use in Hazardous Locations (PICX)	239
Medical Equipment (PIDF)	239

Medical Equipment for Use in Hazardous Locations (PINR)	240
Medium-voltage Power Cable (PITY)	240
Medium-voltage Cable Classified in Accordance with UL 1072, with Metric Conductor Sizes (PIVW)	240
Metal-clad Cable (PJAZ)	241
Metal-clad Cable Classified in Accordance with IEC Publications (PJHY)	241
Metal-clad Cable Connectors, Type MC (PJOX)	241
Metal-clad Cable Classified in Accordance with UL 1569, with Metric Conductor Sizes (PJPJ)	242
Cable for Use in Hazardous Locations (PJPP)	242
Meter Mounting Equipment (PJSR)	242
Meter Fittings (PJVV)	243
Meter Socket Bases (PJWT)	243
Metering Transformer Cabinets (PJXS)	243
Meter Sockets (PJYZ)	243
Meter Socket Accessories (PKAX)	244
Microwave and Cable Communication Equipment (POFV)	244
Communication Antennas (POQQ)	244
Microwave Communication Equipment Classified for Use in Specified Equipment (POVJ)	244
Mineral-insulated Cable Assemblies for Use in Hazardous Locations (POWD) ...	244
Mineral-insulated Cable Fittings for Use in Hazardous Locations (POWX)	244
Mineral-insulated Metal-sheathed Cable (PPKV)	245
Mineral-insulated Cable Fittings (PPYT)	245
Motor-Generator Sets (PQYW)	245
Motors (PRGY)	245
Motors and Generators for Use in Zone Classified Hazardous Locations (PRSN)	246
Motors for Use in Zone Classified Hazardous Locations (PRZA)	246
Motors, Specialty for Use in Zone Classified Hazardous Locations (PRZM)	246
Motors and Generators for Use in Hazardous Locations (PSBV)	246
Generators for Use in Hazardous Locations (PSPT)	246
Motors for Use in Hazardous Locations (PTDR)	246
Motors, Division 2 for Use in Hazardous Locations (PTHE)	246
Motors and Generators, Rebuilt for Use in Hazardous Locations (PTKQ)	247
Motors, Specialty for Use in Hazardous Locations (PUCJ)	247
Mounting Posts and Pedestals for Distribution Equipment (PUPR)	247
Multioutlet Assemblies (PVGT)	248
Multioutlet Assembly Fittings (PVUR)	248
Multi-point Interconnection Power Cable Assemblies for Industrial Machinery (PVVA)	248
Musical Instruments (PWHZ)	248
Neon Transformers and Power Supplies (PWIK)	249
Network-powered Broadband Communications Cable (PWIP)	249
Nonmetallic-sheathed Cable (PWVX)	249
Nonmetallic-sheathed Cable Connectors (PXJV)	250

Nonmetallic Extensions (PXXT)	250
Nonmetallic Extension Fittings (PYYZ)	250
Nonmetallic Surface Extensions (PZMX)	250
Nonmetallic-sheathed Cable Interconnectors (QAAV)	250
Commercial Seating Systems (QAHU)	251
Office Appliances and Business Equipment for Use in Hazardous Locations (QAVS)	251
Office Furnishings (QAWZ)	251
Office Furnishing Lights (QAXB)	252
Office Furnishing Accessories Classified for Use with Specified Equipment (QAXE)	252
Optical Fiber Cable (QAYK)	252
Optical Fiber Cable, Field Assembled (QAZD)	253
Optical Fiber Cable Verified in Accordance with National or International Specifications (QAZI)	253
Optical Fiber Cable Verified in Accordance with New York City Transit Specification TO (QAZK)	253
Optical Fiber/Communications/Signaling/Coaxial Cable Raceway (QAZM)	254
Optical Fiber Raceway Assemblies (QAZQ)	254
Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Boxes (QAZR)	254
Outlet Box Accessories for Use in Hazardous Locations (QAZV)	255
Optical Fiber/Communications Cable Routing Assemblies for Use in Telecommunication Installations (QBAA)	255
Outlet Boxes for Use in Hazardous Locations (QBCR)	255
Optical Fiber Branching Devices (QBEA)	255
Optical Fiber Branching Devices Verified in Accordance with National or International Specifications (QBEN)	256
Optical Fiber Cable Assemblies and Connectors (QBFA)	256
Optical Fiber Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (QBFN)	256
Outlet Boxes and Fittings (QBPZ)	256
Illuminated Cover Plates for Flush-mounted Wiring Devices (QBSA)	256
Outlet Boxes and Fittings Classified for Fire Resistance (QBWY)	257
Metallic Outlet Boxes (QCIT)	257
Conduit Bodies and Covers Classified for Use with Specified Equipment (QCKW)	258
Nonmetallic Outlet Boxes (QCMZ)	258
Outlet Bushings and Fittings (QCRV)	259
Wall Opening Protective Materials (QCSN)	259
Outlet Circuit Testers (QCYU)	260
Packaged Pumping Systems (QCZJ)	260
Painting Equipment, Air Compressors and Vacuum Pumps (QDFT)	260
Compressors, Vacuum Pumps and Pneumatic Paint Sprayers (QDGS)	260
Painting Equipment (QDIQ)	261
Paint Spray and Finishing Equipment for Use in Hazardous Locations (QEEA) ..	261

Paint Spray Booths Without Fire Protection Systems for Use in Hazardous Locations (QEFA)	261
Paint Spray Booths with Fire Protection Systems for Use in Hazardous Locations (QEFY)	261
Panelboards (QEUY)	262
Temporary Panelboard Ingress Barriers (QEWI)	263
Panelboards for Use in Hazardous Locations (QFIW)	263
Panelboards, Light and Power for Use in Zone Classified Hazardous Locations (QFKR)	263
Panelboards, Modular (QFOF)	264
Personal Grooming Appliances (QGRQ)	264
Personal Grooming Appliances, Commercial (QGRT)	264
Personal Grooming Appliances, Household (QGRW)	264
Personal Sun and Heat Equipment (QGRX)	264
Personal Hygiene and Health Care Appliances (QGRZ)	265
Personal Protective Equipment (QGSY)	265
Industrial Workers' Protective Apparel (QGVW)	265
Protective Clothing for Electrical Workers (QGVZ)	265
Personal Protective Equipment for Use in Hazardous Locations (QGWX)	265
Distributed Generation Power Systems Equipment (QHWJ)	265
AC Modules (QHYZ)	265
Building-integrated Photovoltaic Modules and Panels (QHZZ)	266
Building-integrated Photovoltaic Mounting Systems (QHZZ)	266
Photovoltaic Charge Controllers (QIBP)	267
Photovoltaic Modules and Panels (QIGU)	267
Photovoltaic Modules and Panels, Remanufactured (QIGZ)	267
Distributed Generation Power Systems Accessory Equipment (QIIO)	268
Distributed Resource Power Systems (QIJL)	268
Static Inverters and Converters for Use in Independent Power Systems (QIKH) ..	268
Photographic Equipment (QINT)	269
Motion Picture Projectors (QJOZ)	270
Pin-and-Sleeve Type Plugs, Receptacles and Cable Connectors (QLGD)	270
Attachment Plugs, Pin-and-Sleeve Type (QLHN)	270
Receptacles, Pin-and-Sleeve Type (QLIW)	271
Receptacle-Plug Combinations, Pin-and-Sleeve Type, Classified for Use in Specific Combinations (QLKH)	271
Plastics Used in Semiconductor Tool Construction (QMTW)	271
Plumbing Accessories (QMTX)	272
Plumbing Accessories for Use in Hazardous Locations (QNHV)	272
Polyvinyl Chloride Solvent Cement (QORV)	272
Portable Electric Hand Lamps (QORX)	272
Portable Lighting Products (QOTU)	273
Portable Cabinet Luminaires (QOVJ)	273
Luminaires, Portable (QOWZ)	273
Nightlights (QOYX)	274
Portable Luminaire Accessories, Kits and Subassemblies (QPAU)	274
Portable Work Lights (QPCJ)	274

Sun and Heat Lamps (QPDY)	274
Portable Luminaires for Use in Hazardous Locations (QPKX)	275
Portable Power Cable (QPMU)	275
Power and Control Tray Cable (QPOR)	275
Power and Control Tray Cable Connectors (QPOZ)	276
Power Cable Assemblies (QPPL)	276
Power Converters/Inverters and Power Converter/Inverter Systems (QPPY)	276
Power Distribution Blocks (QPQS)	277
Power Distribution Centers for Communications Equipment (QPQY)	277
Power Distribution Equipment, Portable (QPRW)	278
Portable Power Distribution Units and Devices (QPSH)	278
Portable Power Distribution Panels (QPSM)	278
Power-limited Circuit Cable (QPTZ)	279
Power Outlets and Power Outlet Fittings (QPYV)	279
Power Supplies (QQAQ)	280
Power Supplies, General Purpose (QQFU)	280
Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ)	280
Power Supplies, Specialty (QQIJ)	280
Power Supplies, Telephone (QQJE)	281
Nonmetallic Underground Conduit with Conductors (QQRK)	281
Prefabricated Assemblies (QQRX)	281
Manufactured Wiring Systems (QQVX)	281
Sections and Units (QQXX)	282
Wiring Assemblies (QQYZ)	282
Prefabricated Buildings (QRAR)	282
Prefabricated Units (QRHQ)	282
Commercial and Industrial Buildings (QRNZ)	283
Composite Panels (QRSY)	283
Residential Buildings (QTDY)	283
Press and Other Power-operated Machine Controls and Systems (QUEQ)	283
Presence-sensing Devices (QUHP)	283
Press Controls (QUKQ)	284
Process Control Equipment, Electrical (QUYX)	284
Process Control Equipment for Use in Hazardous Locations (QUZW)	284
Process Control Equipment for Use in Zone Classified Hazardous Locations (QVAJ)	284
Protectors (QVGK)	285
Primary Protectors for Communications Circuits (QVGV)	285
Primary Protectors for Coaxial Communications Circuits (QVKC)	285
Secondary Protectors for Communications Circuits (QVRG)	286
Pumping Equipment for Fire Service (QVUT)	286
Battery Chargers for Use with Internal Combustion Engines Driving Centrifugal Fire Pumps (QWIR)	286
Fire Pump Motors (QXZF)	286
Pump Controllers, Fire (QYZS)	286

Pump Controllers, Fire, Over 600 Volts (QZGR)	287
Pump Controllers, Fire, Residential (QZKE)	287
Pumping Equipment for Fire Service for Use in Hazardous Locations (RAHW) ..	287
Fire Pump Controllers for Use in Hazardous Locations (RCYW)	287
Pumps, Electrically Operated, Liquid (REUZ)	288
Purging and Pressurizing Controls and Accessories for Use in Hazardous Locations (RFPW)	288
Quick-connect Terminals (RFWV)	288
Raceway (RGKT)	289
Cellular Concrete Floor Raceway (RGYR)	289
Cellular Concrete Floor Raceway Fittings (RHLZ)	289
Cellular Metal Floor Raceway (RHZX)	289
Cellular Metal Floor Raceway Fittings (RINV)	289
Cellular Metal Floor Raceway Fitting Cover Assemblies Classified for Use with Specified Equipment (RIOJ)	290
Strut-type Channel Raceway (RIUU)	290
Fittings for Strut-type Channel Raceway (RIYG)	290
Surface Metal Raceway (RJBT)	290
Surface Metal Raceway Fittings (RJPR)	290
Surface Nonmetallic Raceway (RJTX)	291
Surface Nonmetallic Raceway Fittings (RJYT)	291
Surface Raceway Transition Fittings Classified for Use with Specified Products (RKBA)	291
Underfloor Raceway (RKCZ)	291
Underfloor Raceway Fittings (RKQX)	291
Radio Devices for Use in Hazardous Locations (RMGR)	292
Radio Devices, Rebuilt for Use in Hazardous Locations (RMGZ)	292
Radio Devices for Use in Zone Classified Hazardous Locations (RMJA)	292
Raised-floor Wireway (RQFW)	292
Receptacle Closures (RQYF)	292
Receptacle-Plug Combinations for Use in Hazardous Locations (RRAT)	293
Receptacle-Enclosure Combinations with Plugs for Use in Hazardous Locations (RREG)	293
Receptacle-Plug Combination Accessories for Use in Hazardous Locations (RRHS)	293
Receptacles with Plugs for Use in Hazardous Locations (RROR)	293
Receptacles with Plugs Interlocked with Circuit Breakers for Use in Hazardous Locations (RSBZ)	294
Receptacles with Plugs Interlocked with Switches for Use in Hazardous Locations (RSPX)	294
Receptacle-Plug Combinations for Use in Zone Classified Hazardous Locations (RSUN)	294
Receptacles with Plugs Interlocked with Switches for Use in Zone Classified Hazardous Locations (RSZD)	294
Receptacles (RTDV)	294
Receptacles for Plugs and Attachment Plugs (RTRT)	295
Receptacles, Stage Type (RUFRR)	297
Combination Receptacles with Switches (RUSZ)	297
Utility Service Receptacles (RVNW)	297

Recreational Vehicles (SAET)	297
Reels, Cord for Use in Zone Classified Hazardous Locations (SAOD)	297
Reels, Cord for Use in Hazardous Locations (SAOX)	298
Reels, Cord and Cable (SBCV)	298
Refrigeration Equipment (SCER)	298
Refrigeration Accessories (SCSQ)	298
Controllers, Refrigeration (SDFY)	298
Beverage Coolers and Beverage Cooler-Dispensers (SFWY)	299
Commercial Refrigerators and Freezers (SGKW)	299
Condensing and Compressor Units (SGYU)	300
Household Freezers (SHMR)	300
Household Refrigerators (SHZZ)	301
Ice Cream Makers (SINX)	301
Ice Makers (SJBV)	301
Kitchen Units, Refrigerated (SJPT)	302
Recreational Vehicle Refrigerators and Freezers (SKKQ)	302
Refrigerant-containing Components (SKQZ)	302
Condensers, Refrigerant (SLSV)	302
Refrigerated Medical Equipment (SOPT)	303
Unit Coolers (SPLR)	303
Units, Refrigerating (SPYZ)	303
Vending Machines, Refrigerated (SQMX)	304
Walk-in Units, Commercial (SQTV)	304
Water Coolers (SRAV)	305
Drinking Water Coolers (SRJX)	305
Commercial Processing Liquid Coolers (SRFR)	305
Refrigeration Equipment for Use in Hazardous Locations (SSCR)	305
Accessories, Refrigeration for Use in Hazardous Locations (SSPZ)	305
Controllers, Refrigeration for Use in Hazardous Locations (STDX)	305
Commercial Refrigerators and Freezers for Use in Hazardous Locations (STRV)	
.....	305
Water Coolers for Use in Hazardous Locations (SUFT)	306
Refrigeration Equipment for Use in Zone Classified Hazardous Locations (STFO)	306
Accessories, Refrigeration for Use in Zone Classified Hazardous Locations (STFZ)	306
Controllers, Refrigeration for Use in Zone Classified Hazardous Locations (STGN)	306
Signal and Fire Alarm Equipment and Services (SYKJ)	306
Control Units, System (UOJZ)	306
Emergency Communication and Relocation Equipment (UOQY)	307
Control Unit Accessories, System (UOXX)	308
Detectors, Automatic Fire (UPLV)	308
Smoke-automatic Fire Detectors (UROX)	308
Smoke-automatic Fire Detector Accessories (URRQ)	310
Smoke Detectors for Special Applications (URXG)	310
Fire Alarm Devices, Single and Multiple Station, and Accessories (UTER)	310
Single- and Multiple-station Heat Detectors (UTFS)	310
Single- and Multiple-station Smoke Alarms (UTGT)	311
Heat-actuated Devices for Special Application (UTHV)	311
Household Fire-warning System Units (UTLQ)	312

Control Units and Accessories, Household System Type (UTOU)	312
Power-supply Units (UTRZ)	312
Speakers and Amplifiers for Fire-protective Signaling Systems (UUMW)	313
Releasing Device Equipment for Use in Hazardous Locations (TBCX)	313
Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR)	313
Releasing Devices for Use in Hazardous Locations (TBJW)	314
Repackaged Electrical Construction Equipment (TEOZ)	314
Repackaged Hazardous Locations Equipment (TEPD)	314
Robots and Robotic Equipment (TETZ)	314
Rotary Automatic Product-filling Equipment for Use in Hazardous Locations (TONI)	314
Sanitation, Food Service Equipment (TSQS)	315
Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment (TSQT)	315
Food Equipment (TSQU)	315
Commercial Refrigerators and Storage Freezers (TSQV)	315
Doors and Door Operator Systems for Use in Meat and Poultry Plants (TSRC) ...	316
Freezers, Dispensing (TSRE)	316
Ice-making Equipment, Automatic (TSVG)	316
Food- and Beverage-dispensing Equipment, Manual (TSXL)	317
Milk-dispensing Equipment, Commercial, Bulk (TSXQ)	317
Air Curtains for Use in Commercial Food Service Entranceways (TSXT)	317
Residential Dishwashers (TSXU)	317
Commercial Warewashing Equipment (TSXV)	318
Shatter Containment of Lamps for Use in Regulated Food Establishments (TSXX)	318
Vending Machines for Food and Beverages (TSYA)	318
Washing Machines, Commercial Spray-Type for Pots, Pans and Utensils (TSYF)	318
Water Heaters, Hot Water Supply Boilers and Heat Recovery Equipment (TSYO)	319
Semiconductor Manufacturing Equipment (TWKH)	319
Analysis and Measurement Equipment (TWLR)	319
Automation and Wafer-handling Equipment (TWPV)	319
Control Panels (TWRF)	320
Liquid Chemical Distribution Systems (TWSP)	320
Miscellaneous Semiconductor Manufacturing Equipment (TWTZ)	320
Power Supplies, Semiconductor (TWVJ)	320
Process Equipment (TWWT)	321
Semiconductor Manufacturing Equipment, Limited Production (TWWU)	321
Service Cable (TXKT)	321
Service-entrance Cable (TYLZ)	321
Service-entrance Cable Fittings (TYZX)	321
Shipboard Cable, Marine (UBVZ)	322
Shipboard Cable Fittings, Marine (UBWE)	322

Video and Audio Equipment, Professional (ZC8Y)	380
Viscometers for Use in Hazardous Locations (ZCFV)	381
Waste Disposers (ZDHR)	381
Waste Disposers, Pulper Type (ZDIB)	381
Waste Disposers, Replacement Type, Household (ZDIF)	381
Waste Disposers, Sink Mounted (ZDII)	381
Welding Machines (ZGLZ)	381
Welding Machine Accessories (ZGPU)	382
Wheelchair Lifts and Stairway Chairlifts (ZGUW)	382
Wind Turbine Generating Systems (ZGXW)	382
Wind Turbine Generating System Subassemblies (ZGZJ)	382
Wind Turbine Tray Cable (ZGZN)	382
Wire (ZGZX)	383
Bus Drop Cable (ZIMX)	383
Festoon Cable (ZIPF)	383
Fixture Wire (ZIPR)	383

Flexible Cord (ZJCZ)	384
Flexible Motor Supply Cable (ZJFH)	384
Gas-Tube-Sign Cable (ZJQX)	384
Machine-tool Wire (ZKHZ)	385
Pendant Cable (ZKKA)	385
Photovoltaic Wire (ZKLA)	385
Processed Wire (ZKLU)	385
Recreational Vehicle Cable, Low Voltage (ZKRU)	385
Telephone Service Drop Wire (ZKSG)	386
Thermoset-insulated Wire (ZKST)	386
Thermoplastic-insulated Wire (ZLGR)	386
Underground Low-energy Circuit Cable (ZLIA)	387
Welding Cable (ZMAY)	387
Wire, Special Purpose (ZMHX)	388
Wire Connectors (ZMKQ)	388
Crimp Tools Classified for Use with Specified Wire Connectors (ZMLS)	388
Multi-pole Splicing Wire Connectors (ZMNA)	388
Wire Connector Adapters (ZMOW)	389
Wire Connectors and Soldering Lugs (ZMVV)	390
Sealed Wire Connector Systems (ZMWQ)	391
Wire Connectors and Soldering Lugs Classified in Accordance with IEC Publications (ZNKD)	392
Wire, Heat Resistant, for Ovens (ZNNA)	392
Wired Cabinets (ZNXR)	392
Positioning Devices (ZODZ)	392
Wire-pulling Compounds (ZOKZ)	393
Wireway, Auxiliary Gutters and Associated Fittings (ZOYX)	393
X-Ray Equipment (ZQOR)	393
X-Ray Equipment Accessories (ZQVQ)	393

Over 600 Volts Rated Equipment and Devices Category List

Overcurrent Protection and Switchgear

Fuses, Over 600 Volts (JEEG)	175
Circuit Breakers and Metal-clad Switchgear Over 600 Volts (DLAH)	93
Circuit Breakers, Medium Voltage, Classified for Use in Specified Equipment (DLBC)	94
Circuit Breaker Switchgear, Metal Enclosed, Over 600 Volts (DLBK)	95
Switchgear, Gas Insulated Type, Over 600 Volts (WVEK)	353
Switches, Load Interrupter and Isolating, Over 600 Volts (WIQG)	346
Transfer Switches (WPTZ)	349
Automatic Transfer Switches Over 600 Volts (WPYC)	350

Power Distribution Equipment and Devices

Grounding Equipment, Neutral Grounding Devices, Over 600 Volts (KDZC)	181
Surge Arresters 1000 Volts and Higher (VZQK)	334
Transformers, Distribution, Dry Type, Over 600 Volts (XPFS)	369
Transformers, Distribution, Liquid-filled Type, Over 600 Volts (XPLH)	369
Unit Substations Over 600 Volts (YEFV)	377

Wiring Methods and Devices

Busways, Metal Enclosed, Over 600 Volts (CVZW)	83
Metal-clad Cable (PJAZ)	241
Metal-clad Cable Connectors, Type MC (PJOX)	241
Cable for Use in Hazardous Locations (PJPP)	242
Metal-clad Cable Classified in Accordance with UL 1569, with Metric Conductor Sizes (PJPJ)	242
Medium-voltage Power Cable (PITY)	240
Medium-voltage Cable Classified in Accordance with UL 1072, with Metric Conductor Sizes (PIVW)	240
Power and Control Tray Cable (QPOR)	275
Power and Control Tray Cable Connectors (QPOZ)	276
Wire Connectors and Soldering Lugs (ZMVV)	390
Thermoset-insulated Wire (ZKST)	386

Control Equipment

Motor Controllers (NJOT)	213
Motor Controllers Over 1500 Volts (NJHU)	211
Motor Controller Accessories Over 1500 Volts (NJIJ)	212
Motor Controllers Over 1500 Volts for Use in Hazardous Locations (NRAA)	220
Power Conversion Equipment, Medium Voltage (NJIC)	212
Pump Controllers, Fire, Over 600 Volts (QZGR)	287

Distributed Power Generation Equipment Category List

Distributed Generation Power Systems Equipment

Distributed Generation Power Systems Equipment (QHWJ)	265
AC Modules (QHYZ)	265
Distributed Resource Power Systems (QIJL)	268
Distributed Generation Power Systems Accessory Equipment (QIIO)	268
Static Inverters and Converters for Use in Independent Power Systems (QIKH) ..	268

Gas and Fuel Power Systems

Engine Generators (includes microturbines) (FTSR)	137
Engine Generators Fueled by Biogas or Raw Natural Gas (FTPU)	137
Fuel Gas Booster Compressor Equipment (IUXX)	164
Fuel Cell Equipment (IRGN)	162

Hand-held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU)	163
Stationary Fuel Cell Systems (IRGZ)	163
Hydrogen Generators, Water Reaction Type (NCBR)	207
Photovoltaic Power Systems	
Building-integrated Photovoltaic Modules and Panels (QHZZ)	266
Building-integrated Photovoltaic Mounting Systems (QHZZ)	266
Photovoltaic Charge Controllers (QIBP)	267
Photovoltaic Modules and Panels (QIGU)	267
Photovoltaic Modules and Panels, Remanufactured (QIGZ)	267
Photovoltaic Wire (ZKLA)	385
Wind Power Systems	
Wind Turbine Generating Systems (ZGXW)	382
Wind Turbine Generating System Subassemblies (ZGZJ)	382

Introduction

The White Book contains the General Guide Information for product categories in UL's Electrical Construction Equipment and Hazardous Locations Equipment Directories. In addition, General Guide Information for selected categories in UL's Electrical Appliance and Utilization Equipment Directory, Fire Protection Equipment Directory, Fire Resistance Directory, Building Materials Directory, Heating, Cooling, Ventilating and Cooking Equipment Directory, Mechanical Equipment and Associated Products Directory, Flammable and Combustible Liquids and Gases Equipment Directory and Plumbing and Associated Products Directory are also included in the White Book. Attention is directed specifically to the General Guide Information following the product category headings that describe limitations of the Listings, such as current, voltage and horsepower and installation provisions. The scope and sizes and ratings specified in the General Guide Information is intended to indicate the current range of Listings, and is not necessarily indicative of the limitations for Listing.

The White Book includes the seven UL Marking Guides. UL developed these Marking Guides to assist Authorities Having Jurisdiction (AHJs) and installers in understanding the meanings and locations of markings associated with switchboards, panelboards, circuit breakers, luminaires, swimming pools and spas, electrical heating and cooling equipment, and wire and cable. See Appendix A.

The White Book does not contain the names of companies authorized to use the UL Mark, nor does it contain specific identification of products authorized to bear the UL Mark. Such information appears in UL's Electrical Construction Equipment Directory, Hazardous Locations Equipment Directory, Electrical Appliance and Utilization Equipment Directory, Fire Protection Equipment Directory, Fire Resistance Directory, Building Materials Directory, Heating, Cooling, Ventilating and Cooking Equipment Directory, Mechanical Equipment and Associated Products Directory, Flammable and Combustible Liquids and Gases Equipment Directory and Plumbing and Associated Products Directory.

Only those products bearing the appropriate UL Mark and the company's name, trade name, trademark or other authorized identification should be considered as being covered by UL's Listing or Classification and Follow-Up Service. The UL Mark provides evidence of listing or labeling, which may be required by installation codes or standards.

Many of the products bearing the UL Mark incorporate components that bear the UL Recognized Component Mark. The Recognized Component Mark  is applicable to components that are incomplete in construction features or limited in performance capabilities. **The Recognized Component Mark does not provide evidence of listing or labeling, which may be required by installation codes or standards.**

The White Book contains General Guide Information in effect as of April 11, 2008. Information on new or revised product categories established after the effective date will be found in UL's Online Certifications Directory at www.ul.com/database and will appear in the next annual printed White Book.

Look for the UL Mark

Identification of UL Listed and Classified Products

The symbol  and the name "Underwriters Laboratories Inc." in various forms and abbreviations are registered with the U.S. Patent and Trademark Office, and in numerous other countries. Subject to the terms of UL's Follow-Up Service Agreement, companies are permitted to use the symbol  or other specified forms of UL's name as part of the UL Mark on products that are Listed or Classified and that comply with UL's requirements.

The product name as indicated in the General Guide Information for each product category is generally included as part of the UL Mark, but may be omitted when, in UL's opinion, the use of the name is unnecessary and the UL Mark is directly and permanently applied to the product by stamping, molding, ink-stamping, silk screening or similar processes.

A separable UL Mark (not part of a nameplate and in the form of decals, stickers or labels) will always include the following four elements: UL's symbol , the word "LISTED" or "CLASSIFIED," the product or category name, and a control number assigned by UL.

The complete UL Mark will appear on the product unless otherwise indicated in the General Guide Information for a specific product category.

When a UL Listed product is of such a size, shape, material or surface texture that, in UL's opinion, it is impossible to apply legibly the complete marking to the product, the complete UL Listing Mark will appear on the smallest unit container in which the product is packaged. In these cases UL may authorize the use of the UL symbol  on the product in addition to the complete UL Mark on the package.

When a UL Classified product is of such a size, shape, material or surface texture that, in UL's opinion, it is impossible to apply legibly the complete marking to the product, the complete UL Classification Mark will appear on the smallest unit container in which the product is packaged. In these cases there shall be no reference to UL on the product.

Refer to the General Guide Information for each product category for additional information on the specific UL Mark for the products in the category.

UL Certification Services and Marks

Listing Service

UL's Listing Service is the most familiar form of UL's product safety certification programs. The UL Listing Mark on a product means that the manufacturer has demonstrated the ability to produce a product that complies with appropriate requirements regarding reasonably foreseeable risks associated with the product. The UL Listing Mark for Canada is applied to products for use in Canada that have been investigated to Canadian safety requirements. The UL Listing Mark for Canada and the U.S. is applied to products for use in the U.S. and Canada that have been investigated to the requirements of both countries. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the product with UL's requirements. .

Classification Service

With UL's Classification Service, UL determines that a manufacturer has demonstrated the ability to produce a product that complies with its requirements for the purpose of classification or evaluation regarding one or more of the following: (1) specific risks only, such as casualty, fire or shock; (2) performance under specified conditions; (3) regulatory codes; (4) other standards, including international or regional standards; or (5) other conditions UL may consider desirable. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the product with UL's requirements.

UL's Classification Mark includes a qualifying statement designated by UL. A UL Classification Mark for Canada is used for products intended for the Canadian marketplace. It indicates that UL has used Canadian standards to investigate the product for specific hazards or properties. A UL Classification Mark for Canada and the U.S. is used for products intended for the Canadian and U.S. marketplaces. This Mark indicates that UL has used the requirements of both countries to investigate the product for specific hazards or properties.

Component Recognition Service

Many UL investigations of equipment involve an evaluation of the suitability of components such as relays, thermostats, switches, etc. for specific applications. Where such components are designed to comply with all the construction and performance requirements of the category, they are eligible for UL Listing and suitable for either field or factory installation.

In some situations, components of special design may be incomplete in construction or restricted in performance capabilities and not Recognized for use as field-installed components. These components may be entirely suitable for factory installation on other equipment where the limitations of use are known to the manufacturer and where their use within such limitations may be investigated by UL.

With UL's Component Recognition Service, UL determines that a manufacturer has demonstrated the ability to produce a component for use in an end product that complies with UL's requirements. This type of investigation takes into account the performance and construction characteristics of the end product and how the component will be used in that product. UL conducts Follow-Up Service as an audit of the means the manufacturer uses to determine continued compliance of the component with UL's requirements. .

UL Recognized Component Mark

UL Recognized Component Mark for Canada and the United States

UL Recognized Component Mark for Canada

UL Recognized Components, or their packaging, are eligible to bear the UL Recognized Component Mark, the UL Recognized Component Mark for Canada, or the UL Recognized Component Mark for Canada and the U.S. **The Recognized Component Mark does not provide evidence of listing or labeling, which may be required by installation codes or standards.**

Field Evaluation Service

This service covers on-site safety evaluations of installed products or systems, conducted by UL technical staff. UL's Field Evaluated Product Mark (below) can be applied to the product in the field if the product complies with UL's safety requirements.

UL Field Evaluated Product Mark

Field Inspection Service

This service covers on-site safety inspections of products that were eligible to bear a UL Mark at the time of manufacture, but the UL Mark is not present on the product. A UL representative can perform an inspection and, if the product is determined to meet UL requirements, a UL Mark will be applied to the product.

INSTALLATION AND USE OF PRODUCTS BEARING THE UL MARK

Use of the White Book

The White Book includes the following:

- A compilation of all product categories applicable to an electrical inspector arranged alphabetically by category code
- General Guide Information for each product category that includes references to the requirements used for the investigation of the products and the UL Mark to be used on the product
 - Information relating to limitations or special conditions applying to the product
 - The titles and designations of standards or requirements that have been used for the investigation of products in a specific product category
- Index of UL Product Categories and Industry Terms
- Index of UL Product Categories Correlated to the 2008 *NEC*®
- Index of UL Product Categories Correlated to the 2005 *NEC*®
- UL Marking Guides
- UL's Online Certifications Directory Quick Guide (to assist in finding General Guide Information and Listings online)

UL Listing and Classification information is arranged alphabetically in the White Book by product category code.

The four-letter code (shown in parentheses) following each category title is the product category code designation.

This information may include the identification of published standards that have been used to investigate products in that category. There may not be a published standard against which a product can be tested and evaluated to determine its acceptability for the UL Mark. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from standards and other sources and will develop requirements to cover uses and conditions for which specific requirements did not previously exist.

The scope of each UL Standard for Safety and Outline of Investigation can be accessed at <http://ulstandardsinonet.ul.com>.

UL permits the reproduction of the material contained in the White Book subject to the following conditions: 1. The Guide Information must be presented in its entirety and in a non-misleading manner, without any manipulation of the data. 2. The statement "Reprinted from the White Book with permission from Underwriters Laboratories Inc.®" must appear adjacent to the extracted material. In addition, the reprinted material must include a copyright notice in the following format: "Copyright © 2008 Underwriters Laboratories Inc.®."

Practical Application of the White Book in the Field

Using the White Book in the field to help identify the intended use of a Listed product to assist in determining compliance with Section 110.3(B) of ANSI/NFPA 70, "National Electrical Code" (NEC®), can be accomplished by at least two methods.

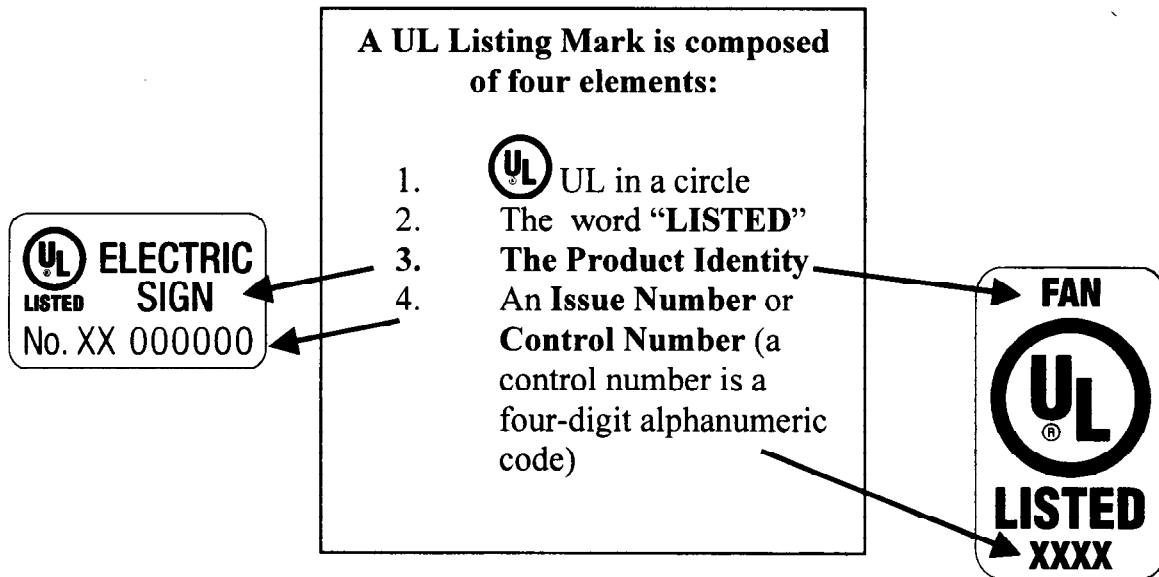

Method 1 —

If you know the Section in the 2008 or 2005 NEC® for which you are seeking to determine compliance, locate the **Index of UL Product Categories Correlated to the 2008 or 2005 NEC®** in the back of the White Book on page 395 for the 2008 or page 437 for the 2005 and search for the Code Section in question. The index may identify product categories applicable to the NEC® Section referenced if specific product categories exist for that Code Section. This index is a guide only and there may be other product categories for which Listed products are covered that may be applicable to the Code Section.

Method 2 —

This is a three-step process detailed below:

Step 1 - Determine the Product Identity from the UL Listing Mark.

Step 2 - Locate the Product Identity in the Index of UL Product Categories and Industry Terms located in the back of the White Book in Appendix C.

Once you have located the product identity, use the **Index of UL Product Categories and Industry Terms** in the back of the White Book in Appendix C to find the product category. The index will identify the product category and the page number for the product category Guide Information.

INDEX OF PRODUCT CATEGORIES 275

		Signs (UXYT)	114
		Field Installed Neon Outline Lighting Systems (UYAM)	115
		Signs, Changing Message (UYFS)	115
		Sign Accessories (UYMR)	116
		Sign Components Classified for Use with Specified Equipment (UYTA)	116
		Sign Controllers, Message Centers (UYTQ)	116

Step 3 - Access the product category Guide Information page identified in the Index of UL Product Categories and Industry Terms.

Once you locate the page, you will be able to find the Guide Information for the product category, in this case Signs (UXYT). See the Guide Information for Signs (UXYT) below.

Guide Information for Signs (UXYT)

Anatomy of UL Guide Information

- **Product Category Title**
- **Product Category Code**
(This four-letter alpha code that appears in parentheses is assigned to each specific product category for cataloging in UL's directories. The product categories in the White Book as well as all UL directories are organized alphabetically by this code. Category Codes are not acronyms; they are created and assigned by mathematic process.)
- **General Information** relating to intended use and installation, scope of certification, product markings and requirements used for investigating the product.
- **UL Mark**
The last paragraph of all Guide Information explains how to identify products covered under the product category. **The UL Mark on the product is the only way to identify a Listed product. Always consult this section of the Guide Information to identify the UL Mark requirements for the product.**

SIGNS (UXYT)

USE AND INSTALLATION

This category covers electric signs employing incandescent lamps, LEDs (light emitting diodes), electro-luminescent panels, neon tubing, fluorescent lamps, high intensity discharge lamps or combinations thereof for installation in accordance with Article 600 of NFPA 70, "National Electrical Code."

Cord and plug-connected signs do not have provision for permanent mounting to a building or structure. Due to servicing considerations, specific types of cord and plug-connected signs are intended and have provision for installation on end-use equipment.

Signs or sections of a sign forming a complete enclosure intended for permanent connection to a source of supply are provided with permanent means for attachment to a building, to a support or to a hanging rig. The mounting hardware, poles and other structural components of a sign have not been evaluated with respect to local variable conditions such as local wind and snow loading or soil conditions.

Electric signs, of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each major subassembly bears an "Electric Sign Section" Listing Mark. Sign faces, trim and mounting hardware are not considered major subassemblies. Each sign has installation instructions describing or illustrating the proper assembly, mounting and connection of the sign sections. The acceptability of the assembled sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

Signs intended for permanent installation and which have been investigated for indoor use only are so marked. Cord-connected signs investigated for outdoor use are marked "Outdoor." Signs for outline lighting are marked "Outdoor Sign for Outline Lighting."

Signs, sign sections or outline lighting marked "The neon supply(ies) complies(y) with the secondary ground-fault protection requirements of UL 2161" are provided with neon transformers and power supplies that comply with the secondary fault protection requirements specified in UL 2161, "Neon Transformers and Power Supplies."

REBUILT PRODUCTS

This category also covers signs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt signs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt signs are subject to the same requirements as new signs.

RELATED PRODUCTS

Accessories intended for use in Listed signs are covered under Sign Accessories (UYMR).

Retrofit conversions intended to be field installed in Listed electric signs are covered under Sign Conversions, Retrofit (UYWU).

Changing message center signs may contain integral controllers or may be intended for use with externally connected controllers. Externally connected controllers are covered under Sign Controllers, Message Centers (UYTQ).

This category does not cover billboard illumination, exit lights, skeletal neon tubing for show windows, or illuminated clocks rated 600 V or less.

Field-assembled neon systems used in display windows, outline lighting, or skeletal neon signs are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled (UZBL).

Field-assembled cold cathode electric discharge lighting systems that provide general illumination are covered under Electric Discharge Lighting Systems, Cold Cathode (IFAY).

Field-installed neon outline lighting systems that outline or call attention to architectural details of a room or building are covered under Field Installed Neon Outline Lighting Systems (UYAM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 48, "Electric Signs."

Electric signs that comply with the requirements in UL 153, "Portable Electric Lamps" may also be Listed as Portable Lamps (QOWZ) in the Electrical Appliance and Utilization Equipment Directory.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Indoor Electric Sign," "Electric Sign" or "Electric Sign Section."

For rebuilt signs the word "Rebuilt" precedes the product name.

Field Modifications

What happens to the Listing if a UL-Listed product is modified in the field?

An authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements when it was shipped from the factory. When a UL-Listed product is modified after it leaves the factory, UL has no way to determine if the product continues to comply with the safety requirements used to certify the product without investigating the modified product. UL can neither indicate that such modifications "void" the UL Mark, nor that the product continues to meet UL's safety requirements, unless the field modifications have been specifically investigated by UL. It is the responsibility of the Authority Having Jurisdiction (AHJ) to determine the acceptability of the modification or if the modifications are significant enough to require one of UL's Field Engineering Services staff members to evaluate the modified product. UL can assist the AHJ in making this determination.

An exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the marking on the product have been investigated for use in that product.

If a party wishes UL to determine if the modifications made to a UL Listed product comply with UL requirements, the appropriate Field Engineering Service can be initiated to investigate the modifications. This investigation will only be conducted after UL consults with the AHJ to ensure that UL's investigation addresses all areas of concern and meets all of the AHJ's needs.

If you have any questions or would like to inquire about a Field Evaluation, contact Field Services at +1-877-UL-HELPS, prompt #2 (+1-877-854-3577) or visit <http://www.ul.com/field/index.html>.

Field Labeling

Is it permissible to apply a UL Mark in the field?

The application of a UL Mark in the field is only permitted when an inspection is conducted under one of UL's Field Engineering Services in the presence of a UL representative.

CE Marking Information

A CE Marking is a European marking of conformity that indicates that a product complies with the essential requirements of the applicable European laws or Directives with respect to safety, health, environment and consumer protection. Generally, this conformity to the applicable directives is done through self-declaration. The CE Marking is required on products in the countries of the European Economic Area (EEA) to facilitate trade between the member countries. The manufacturer or his authorized representative established in the EEA is responsible for affixing the CE Marking to his product. The CE Marking provides a means for a manufacturer to demonstrate that his product complies with a common set of laws required by all of the countries in the EEA to allow free movement of trade within the EEA countries.

Unlike the UL Mark, the CE Marking:

- Is not a safety certification mark,
- Is generally based on self-declaration rather than third-party certification, and
- Does not demonstrate compliance to North American safety standards or installation codes.

A product that bears a CE Marking may also bear a certification mark, such as UL's Listing Mark; however, the CE Marking and the UL Mark have no association. The UL Mark indicates compliance with the applicable safety requirements in effect in North America and is evidence of UL certification, which is accepted by model North American installation codes, such as the *National Electrical Code*® and the *Canadian Electrical Code*®.

The CE Marking on products is not a certification mark. AHJs should continue to look for the UL Mark on products in order to determine if a product complies with applicable safety requirements for North America.

BUILDING MATERIALS (AABM)

GENERAL

Building materials include adhesives, coatings, acoustical materials and the like, investigated for surface burning characteristics, such as flame spread and smoke developed during fire exposure. Other building materials include prefabricated buildings, structural building products, gypsum board, fireplaces and chimneys, elevator equipment, and exiting equipment, such as exit signs, exit appliances, and emergency lighting and power equipment.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

FIRE PROTECTION EQUIPMENT (AAFP)

GENERAL

Fire protection equipment includes fire suppression equipment and systems, fire alarm equipment and fire fighting equipment, such as fire hoses, fire and emergency services protective clothing, and automotive fire apparatus. Also included are furnishings in buildings investigated for combustibility, such as upholstered furniture, mattresses, and warehouse pallets.

This equipment is intended for use only as described in the general Guide Information for each product category and individual Listings. This equip-

ment has been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

CERTIFICATE SERVICE

Fire alarm systems require extensive installation work and maintenance by the Listed installing company. UL's Standards for these systems cover installation methods, extent of protection, and maintenance service, which are supervised under UL's Certificate Service.

Under Certificate Service, UL authorizes the issuance of UL's certificates to installations which the Listed installing company represents to be in compliance with requirements established for the product category. The certificate indicates the classification, extent, location of equipment, period covered by the certificate, and name of the installing company.

UL conducts countercheck field examinations of representative installations of the Listed installing company. UL assumes no liability for any loss that may result from failure of the equipment, incorrect certification or nonconformity with requirements. If installations not in compliance with UL's requirements are found as a result of field examinations, they are subject to correction by the Listed installing company or cancellation of the certificate.

All of a company's alarm system installations may not be covered under UL's Certificate Service. Only those installations for which a certificate has been properly issued are covered under UL's Certificate Service.

UL maintains a Certificate Verification Service (ULCVS) that allows Authorities Having Jurisdiction (AHJs) to verify up-to-date Certificate information and identify companies eligible to issue Certificates as of the date of the inquiry. Only those alarm or signal system installations for which a Certificate has been issued are covered under UL's Certificate Service. The verification of a Certificate on ULCVS is the only method UL provides to identify the Certified alarm systems actively covered under its Listing and Follow-Up Service.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association, and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured

in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC), should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Terminations — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum, copper and copper-clad aluminum conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitable for use in hazardous locations.

HEATING, COOLING, VENTILATING AND COOKING EQUIPMENT (AAHC)

GENERAL

This equipment is intended for heating, cooling, refrigerating, ventilating and cooking, and uses various energy sources including electricity, gas, petroleum-base liquid, solid fuel or solar energy.

Fuel-fired equipment is intended for use only with the fuels described in the general Guide Information for each product category and individual Listings. This equipment has been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment with other fuels, and in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category, has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

In addition, certain products have been investigated with reference to environmental and public health effects and for potential conformity to the installation and use provisions of applicable environmental and public health requirements, if so indicated in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

HEATING, COOLING, VENTILATING AND COOKING
EQUIPMENT (AAHC)

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as “AL-CU.”

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 310.16 of ANSI/NFPA 70, “National Electrical Code” (NEC), should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Terminations — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked “CO/ALR” are for use with copper and copper-clad aluminum conductors only. Terminals marked “CO/ALR” are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked “AL/CU” are for use with copper conductors only. Terminals of switches rated 30 A and above marked “AL/CU” are for use with aluminum, copper and copper-clad aluminum conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitable for use in hazardous locations.

EQUIPMENT FOR USE IN AND
RELATING TO CLASS I, II AND III,
DIVISION 1 AND 2 HAZARDOUS
LOCATIONS (AAIZ)

GENERAL

Electrical equipment for use in and relating to Class I, II and III, Division 1 and 2 hazardous (classified) locations has been investigated with reference to risk to life and property and for potential conformity to the installation and use provisions of ANSI/NFPA 70, “National Electrical Code” (NEC), or United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, “General Provisions,” 46CFR111, “Electric Systems – General Requirements,” 46CFR112, “Emergency Lighting and Power Systems,” and 46CFR113, “Communication and Alarm Systems and Equipment.” Those products investigated for conformity to the installation and use provisions of the USCG Regulations are identified in the general Guide Information for each product category or the individual Listings and Classifications. Attention is called to the limitations of the individual Listings and Classifications specified in the general Guide Information for each product category, such as current, voltage, horsepower limits, markings, special descriptions and installation provisions.

Unless equipment is identified in 1) the product category title as relating to hazardous (classified) locations or 2) the individual Listings as apparatus for use in unclassified locations, all product categories contain electrical equipment for use in Class I, II and III hazardous (classified) locations.

HAZARDOUS (CLASSIFIED) LOCATIONS — GENERAL
INFORMATION

Hazardous (classified) locations, as defined in the NEC, are locations where fire or explosion hazards may exist due to the presence of flammable gases, vapors or flammable liquids, combustible dusts, or ignitable fibers or flyings.

There are two independent classification systems. One system, found in Article 500 of the NEC, divides all hazardous (classified) locations into

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND
III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS (AAIZ)

43

Classes, Divisions and Groups. A Division 1 location is a location where an ignitable concentration of a flammable or combustible material is present under normal operating conditions. A Division 2 location is a location where an ignitable concentration of a flammable or combustible material is present only under abnormal operating conditions.

The other classification system is found in Articles 505 and 506 of the NEC:

Article 505 divides locations having gases and vapors into Class I, Zones and Gas Groups. A Zone 0 location is a location where ignitable concentrations are present continuously or for long period of time. A Zone 1 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 2 location is a location where ignitable concentrations are not likely to occur in normal operation and, if they do occur, will only persist for a short period.

Article 506 divides locations having dusts, fibers or flyings into Zones. A Zone 20 location is a location where ignitable concentrations are present continuously or for long periods of time. A Zone 21 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 22 location is a location where ignitable concentrations are not likely to occur in normal operation and, if they do occur, will only persist for a short period.

Protection against explosion in hazardous (classified) locations requires that all equipment that could be exposed to the flammable or combustible atmospheres be of a type suitable for installation in such locations. The Classes and Groups for which equipment has been Listed or Classified are shown in the individual Listings and Classifications under the respective categories and are marked on the equipment itself. In addition, intrinsically safe circuit wiring terminals and intrinsically safe equipment is marked “Intrinsically Safe.”

Gas, Vapor and Dust Groups

The following paragraphs group flammable and explosive mixtures of specific gases, vapors and dusts in accordance with the NEC classifications noted in Article 500. For a complete list of group classifications for Class I and II materials where used within Divisions 1 or 2, see ANSI/NFPA 497, “Recommended Practice for the Classification of Flammable Liquids, Gases, or Vapors and of Hazardous (Classified) Locations for Electrical Installations in Chemical Process Areas,” and ANSI/NFPA 499, “Recommended Practice for the Classification of Combustible Dusts and of Hazardous (Classified) Locations for Electrical Installations in Chemical Process Areas.”

Class I Equipment

Equipment for use in Class I hazardous (classified) locations, as defined in the NEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification for Divisions 1 and 2, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group A — Atmospheres containing acetylene.

Class I, Group B — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) less than or equal to 0.45 mm or a minimum igniting current ratio (MIC ratio) less than or equal to 0.40. Examples of Group B materials are acrolein, butadiene, ethylene oxide, propylene oxide, hydrogen, and fuel and combustible process gases containing more than 30% hydrogen by volume.

Class I, Group C — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.45 mm and less than or equal to 0.75 mm, or a minimum igniting current ratio (MIC ratio) greater than 0.40 and less than or equal to 0.80. Examples of Group C materials are ethyl ether and ethylene.

Class I, Group D — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.75 mm or a minimum igniting current ratio (MIC ratio) greater than 0.80. Examples of Group D materials are acetone, ammonia, benzene, butane, cyclopropane, ethanol, gasoline, hexane, methane, methanol, naphtha and propane.

Equipment for use in Class I, Zone 0, 1 and 2 hazardous (classified) locations, as defined in Article 505 of the NEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group IIC — Atmospheres containing hydrogen, acetylene, or gases or vapors having either a maximum experimental safe gap (MESG) less than or equal to 0.50 mm or a minimum igniting current ratio (MIC ratio) less than or equal to 0.45.

Class I, Group IIB — Atmospheres containing acetaldehyde, ethylene, or gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.50 mm and less than or equal to 0.90 mm, or a minimum igniting current ratio (MIC ratio) greater than 0.45 and less than or equal to 0.80.

Class I, Group IIA — Atmospheres containing acetone, ammonia, ethyl alcohol, gasoline, methane, propane, or gases or vapors having either a

**EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II
AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS
(AAIZ)**

44

maximum experimental safe gap (MESG) greater than 0.90 mm or a minimum igniting current ratio (MIC ratio) greater than 0.80.

The following table compares Class I, Division 1 and 2 Gas Groups with Class I, Zone 0, 1 and 2 Gas Groups. The gases shown are representative of others in the Group.

Division 1 & 2	Zone 0, 1 & 2
A (acetylene)	IIC (acetylene and hydrogen)
B (hydrogen)	IIC (acetylene and hydrogen)
C (ethylene)	IIB (ethylene)
D (propane)	IIA (propane)

Class I Equipment in Class II and III Locations

Equipment Listed or Classified for use in Class I locations is not necessarily acceptable for Class II or III locations as it may not be dust-tight or operate at a safe temperature when blanketed with dust, fibers or flyings.

Class II Equipment

Equipment for use in Class II hazardous (classified) locations, as defined in the NEC, is tested with respect to acceptability of operation in the presence of combustible dusts in air. For purposes of location classification, the NEC groups combustible dust-air mixtures as follows:

Class II, Group E — Atmospheres containing combustible metal dusts, including aluminum, magnesium, and their commercial alloys, or other combustible dusts whose particle size, abrasiveness, and conductivity present an equivalent hazard.

Class II, Group F — Atmospheres containing carbon black, charcoal, coal or coke dusts which have more than 8% total volatile material, or atmospheres containing these dusts sensitized by other materials so that they present an explosion hazard.

Class II, Group G — Atmospheres containing combustible dusts not included in Group E or F, including flour, grain, wood, plastic and chemicals.

There are no dust groups for Zone 20, 21 or 22. In addition, Article 506 of the NEC does not cover locations where metal dusts are present.

Class II Equipment in Class III Locations

Equipment Listed or Classified for Class II, Group G hazardous (classified) locations is also suitable for use in Class III locations, except for 1) those products marked for Division 2 only, and 2) fan-cooled-type motors where there is a very large amount of lint or combustible flyings that are likely to choke or clog the air passages of the motor.

Class III Equipment

Equipment for use in Class III hazardous (classified) locations, as defined in the NEC, is tested with respect to acceptability of operation in the presence of easily ignitable fibers or flyings. These fibers or flyings are not likely to be in suspension in the air in quantities sufficient to produce ignitable mixtures.

There are no groups for fibers and flyings for Class III or for Zone 20, 21 or 22.

Intrinsically Safe Circuits and Apparatus, and Associated Apparatus

Intrinsically safe circuits and apparatus may be investigated for any or all of the Classes and Groups as defined in the NEC. In an intrinsically safe circuit, the energy level available in the hazardous (classified) location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. It is important that intrinsically safe apparatus for locations containing metal dusts be constructed to exclude dust in order to maintain the energy limitations by minimizing the possibility of circuit faults. To maintain the low energy levels, it is necessary that the intrinsically safe and associated apparatus be installed and interconnected in accordance with Article 504 of the NEC and the instructions provided with the equipment.

Associated apparatus is apparatus in which the circuits are not necessarily intrinsically safe, but which affect the energy in the intrinsically safe circuits and are relied upon to maintain intrinsic safety. Associated apparatus is not intended for use in hazardous (classified) locations unless use in hazardous (classified) locations is specifically indicated.

When interconnecting associated apparatus with equipment for use in the hazardous (classified) location, special attention should be paid to installation instructions, control drawings, or product markings which may limit the types of connections that are acceptable.

Equipment Relating to Hazardous (Classified) Locations

Equipment relating to hazardous (classified) locations includes 1) devices, products and materials for use in locations where it is necessary for safety to avoid the accumulation of static electricity on personnel or equipment, 2) anesthesia equipment, 3) devices not intended for operation in hazardous (classified) locations, but which are designed to indicate certain potentially dangerous conditions with respect to such locations, 4) electrical equipment not intended for installation in hazardous (classified) locations except for provision of certain intrinsically safe (low energy) circuit extensions as indicated in the individual Listings and Classifications, and 5) paint spray booths.

Suitability of Listed or Classified Equipment

Equipment intended for use in a hazardous (classified) location Class and Group and marked "Division 1" (or "Div. 1") or without any Division indication is suitable for use in both Division 1 and 2 locations as defined in the

**EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND
III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS (AAIZ)**

NEC, and in unclassified locations. Equipment marked "Division 2" (or "Div. 2") is suitable only for Division 2 and unclassified locations.

The NEC also permits the following:

- Intrinsically safe equipment for Class I, Division 1 locations to be used in a Class I, Zone 0, 1 or 2 location of the same gas and with a suitable temperature class.
- Equipment (other than intrinsically safe equipment) for Class I, Division 1 locations to be used in a Class I, Zone 1 or 2 location of the same gas and with a suitable temperature class.
- Equipment for Class I, Division 2 locations to be used in a Class I, Zone 2 location of the same gas and with a suitable temperature class.
- Intrinsically safe equipment for Class I, Zone 0 locations to be used in a Class I, Division 1 or 2 location of the same gas and with a suitable temperature class.
- Equipment for Class I, Zone 0, 1 or 2 locations to be used in a Class I, Division 2 location of the same gas and with a suitable temperature class.
- Intrinsically safe equipment for Class II to be used in a Zone 20, 21 or 22 location with a suitable temperature class.
- Equipment for Class II, Division 1 locations to be used in a Zone 21 or 22 location with a suitable temperature class.
- Equipment for Class II, Division 2 locations to be used in a Zone 22 location with a suitable temperature class.

RELATED EQUIPMENT

For additional information on equipment for use in Zone classified locations, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

TEMPERATURE CONSIDERATIONS

The marked temperature class (T-code) of the equipment is based on either the maximum external temperature or internal temperature of the equipment, depending on the protection technique used.

Equipment is required to be marked with the operating temperature or temperature class (T-code) if the maximum operating temperature is more than 100°C (212°F).

For Class I and II locations, this temperature marking should not exceed the ignition temperature of the specific combustible material to be encountered. For organic dusts that may dehydrate or carbonize, the temperature marking should not exceed the lower of either the ignition temperature or 165°C.

For Class III locations, the maximum permitted temperature is 120°C for equipment that is subject to overloading and 165°C for equipment that is not subject to overloading.

AMBIENT TEMPERATURES

Unless the equipment is marked otherwise, it has been investigated only for use under normal atmospheric conditions in an ambient temperature within the range of -25°C (-13°F) to +40°C (+104°F). Use of equipment under conditions of higher than normal atmospheric pressure or oxygen partial pressure, use in artificial atmospheres, and use under conditions of excessively high ambient temperatures can increase the likelihood of ignition of flammable atmospheres. In addition, low ambient temperatures may increase explosion pressures developed within explosion-proof equipment.

OVERLOAD PROTECTION

Equipment should be installed in circuits with overload and short-circuit protection for established ratings. The ampere or wattage marking on power consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

ENCLOSURE MODIFICATION AND MAINTENANCE

The integrity of an enclosure for explosion-proof or dust-ignition-proof equipment must be maintained. Making holes (other than conduit openings specified in the instructions) or alterations in the enclosure during installation may compromise the ability of the enclosure to contain the explosion or to exclude dust. Holding bolts and threaded parts must be screwed tight. The continued acceptability of the equipment will depend upon proper maintenance.

ENVIRONMENTAL CONSIDERATIONS

Unless the equipment is marked otherwise, it is intended to be used indoors where severe corrosive conditions are not likely to be present. Equipment investigated for severe environmental conditions is marked with an enclosure type designation or other designation indicating the suitability of the equipment in different environments. See **ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT** below for more information.

ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT

Section 110.11 of the NEC directs that equipment shall not be used in damp or wet locations; locations where exposed to gases, fumes, vapors, liquids or other agents having a deteriorating effect on the equipment; or

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS (AAIZ)

locations where exposed to excessive temperatures unless the equipment is identified for use in such environments. Section 300.6 of the NEC provides guidance regarding protection against corrosion. To assist Authorities Having Jurisdiction, electrical equipment Listed or Classified for use in and relating to hazardous (classified) locations may be investigated for use in certain operating environments and marked with an enclosure type number or numbers. The following table summarizes the intended uses of the various enclosure types:

Enclosure Type Number	Provides a Degree of Protection Against the Following Environmental Conditions*
1	Indoor use
2	Indoor use, limited amounts of falling water
3R	Outdoor use, undamaged by the formation of ice on the enclosure**
3	Same as 3R plus windblown dust
3S	Same as 3R plus windblown dust, external mechanisms remain operable while ice laden
4	Outdoor use, splashing water, windblown dust, hose-directed water, undamaged by the formation of ice on the enclosure**
4X	Same as 4 plus resists corrosion
5	Indoor use to provide a degree of protection against settling airborne dust, falling dirt, and dripping noncorrosive liquids
6	Same as 3R plus entry of water during temporary submersion at a limited depth
6P	Same as 3R plus entry of water during prolonged submersion at a limited depth
7	Indoor use in locations classified as Class I, Division 1, Groups A, B, C or D — air-break equipment
8	Indoor use in locations classified as Class I, Division 1, Groups A, B, C or D — oil immersed equipment
9	Indoor use in locations classified as Class II, Division 1, Groups E, F or G — air-break equipment
12, 12K	Indoor use, dust, dripping noncorrosive liquids
13	Indoor use, dust, spraying water, oil and noncorrosive coolants

* All types of enclosures provide a degree of protection against ordinary corrosion and against accidental contact with the enclosed equipment when doors or covers are closed and in place. All types of enclosures provide protection against a limited amount of falling dirt.

** All outdoor type enclosures provide a degree of protection against rain, snow and sleet. Outdoor enclosures are also suitable for use indoors if they meet the environmental conditions present.

The marking of enclosure type numbers 7, 8 and 9 is optional as the marking of Class and Group is required. The marking of Division 1 is optional for equipment suitable for Divisions 1 and 2.

In some cases, individual appliances and equipment may be marked "Raintight" or "Rainproof" indicating that they have been subjected to a test designed to simulate exposure to beating rain. For equipment designated as "Raintight" such exposure will not result in entrance of water. For equipment designated as "Rainproof" such exposure will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure.

Additionally or alternatively, IEC 60529, "Classification of Degrees of Protection Provided by Enclosures," provides a system for specifying the enclosures of electrical equipment on the basis of the degree of protection provided by the enclosure (or IP rating) as follows:

First Characteristics Numerical	Protection Against Ingress of Solid Foreign Objects
IP0X	Not investigated
IP1X	50 mm diameter or larger
IP2X	12.5 mm diameter or larger
IP3X	2.5 mm diameter or larger
IP4X	1.0 mm diameter or larger
IP5X	Dust protected
IP6X	Dust-tight

Second Characteristics Numerical	Protection Against Ingress of Water with Harmful Effect
IPX0	Not investigated
IPX1	Vertically dripping
IPX2	Dripping (15 degree tilted)
IPX3	Spraying
IPX4	Splashing
IPX5	Jetting
IPX6	Powerful jetting
IPX7	Temporary immersion
IPX8	Continuous immersion

FITTINGS AT SUPPLY ENTRIES

Consideration should be given to the Type or IP rating of fittings used at supply entries. When the manufacturer supplies a fitting with the enclosure, enclosures are to be connected to the wiring system using the fitting provided. If no fitting is provided by the manufacturer, the fitting employed must meet or exceed the Type or IP rating of the enclosure, so that the assembly maintains its protection against contaminants.

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS (AAIZ)

WIRING CONSIDERATIONS FOR ALL EQUIPMENT

Appliances and Utilization Equipment Terminations — Except as noted in the general Guide Information for some product categories, most terminals, unless marked otherwise, are for use only with copper wire. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits as specified in Table 310.16 of the NEC. If the termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Distribution and Control Equipment Terminations — Most terminals are suitable for use only with copper wire. Where aluminum or copper-clad aluminum wire can or shall be used (some crimp terminals may be Listed only for aluminum wire), there is marking to indicate this. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted in the following paragraphs or in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C ampacities for wire sizes 14-1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Table 310.16 of the NEC.

Some distribution and control equipment is marked to indicate the required temperature rating of each field-installed conductor. If the equipment, normally intended for connection by wire sizes within the range 14-1 AWG, is marked "75C" or "60/75C," it is intended that 75°C insulated wire may be used at full 75°C ampacity. Where the connection is made to a circuit breaker or switch within the equipment, such a circuit breaker or switch must also be marked for the temperature rating of the conductor.

A 75°C conductor temperature marking on a circuit breaker or switch normally intended for wire sizes 14-1 AWG does not in itself indicate that 75°C insulated wire can be used unless 1) the circuit breaker or switch is used by itself, such as in a separate enclosure, or 2) the equipment in which the circuit breaker or switch is installed is also so marked.

A 75 or 90°C temperature marking on a terminal (e.g., AL7, CU7AL, AL7CU or AL9, CU9AL, AL9CU) does not in itself indicate that 75 or 90°C insulated wire can be used unless the equipment in which the terminals are installed is marked for 75 or 90°C.

Higher-temperature-rated conductors than specified may be used if the size is based on the above statements.

Copper-clad Aluminum Conductors — Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Copper Pigtail Leads — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Wiring Devices — Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum, copper, and copper-clad aluminum conductors.

Wire Connectors — Combinations of dissimilar conductors in terminals or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing. See also the information under Wiring Connectors and Soldering Lugs (ZMVV).

Terminals — Product terminals, including wire connectors and terminal screws, are acceptable for connection of only one conductor, unless there is marking or a wiring diagram indicating the number of conductors which may be connected.

EQUIPMENT FOR USE IN AND RELATING TO CLASS I, II AND III, DIVISION 1 AND 2 HAZARDOUS LOCATIONS (AAIZ)

46

Tightening Torque — Some equipment may be marked to show a tightening torque for wire connectors intended for use with field wiring.

Supply Cords — When flexible supply cords or cord sets are replaced on utilization equipment, the replacement should be of the same type, AWG size, voltage rating and temperature rating as originally used.

Seals in Conduit and Cable Systems — Equipment with a factory-installed conduit seal is marked "Leads factory sealed" or equivalent wording. The absence of this marking indicates that the need for a field-installed seal in accordance with Section 501.15 or 502.15 of the NEC should be determined.

REQUIREMENTS

The standards used to investigate these products address the risk of explosion associated with installation in a hazardous (classified) location, as well as the risk of fire and electric shock associated with any electrical equipment. Unless indicated otherwise in the Guide Information for the product category, the basic hazardous (classified) locations standards used to investigate these products with respect to risk of explosion are referenced below for the protection techniques shown.

Protection Technique	Standard
Explosion-proof and dust-ignition-proof	ANSI/UL 1203, "Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations," ANSI/UL 698, "Industrial Control Equipment for Use in Hazardous (Classified) Locations," ANSI/UL 877, "Circuit Breakers and Circuit-Breaker Enclosures for Use in Hazardous (Classified) Locations," UL 886, "Outlet Boxes and Fittings for Use in Hazardous (Classified) Locations," ANSI/UL 894, "Switches for Use in Hazardous (Classified) Locations," ANSI/UL 1002, "Electrically Operated Valves for Use in Hazardous (Classified) Locations," and/or ANSI/UL 1010, "Receptacle-Plug Combinations for Use in Hazardous (Classified) Locations"
Intrinsic safety	ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II and III, Division 1, Hazardous (Classified) Locations"
Nonincendive circuits, components and equipment; hermetically sealed and sealed components; nonsparking equipment; dust-tight enclosures	ANSI/ISA-12.12.01, "Nonincendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations," or UL 1604, "Electrical Equipment for Use in Class I and II, Division 2, and Class III Hazardous (Classified) Locations"
Purged and pressurized	ANSI/NFPA 496, "Standard for Purged and Pressurized Enclosures for Electrical Equipment"

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

MARINE EQUIPMENT

Certain equipment has been specifically investigated and certified for use aboard marine vessels. Such equipment has been investigated in accordance with the applicable requirements of UL, the United States Coast Guard, the American Boat and Yacht Council, Inc., and the National Fire Protection Association. For additional information, see the general Guide Information for the specific product category. Equipment bearing UL's Marine Mark is suitable for use only with stranded copper wire.

ELECTRICAL EQUIPMENT FOR USE IN ORDINARY LOCATIONS (AALZ)

ELECTRICAL EQUIPMENT FOR USE IN ORDINARY LOCATIONS (AALZ)

GENERAL

Electrical equipment for use in unclassified (ordinary) locations is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). Electrical equipment for use in hazardous (classified) locations, as defined by the NEC, may also be used in ordinary locations.

INVESTIGATION REQUIREMENTS AND STANDARDS

Electrical equipment for use in ordinary locations has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the NEC.

Some products are certified for uses not within the scope of the NEC. Such products are investigated for the specifications or the use conditions indicated in the general Guide Information for each product category.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

The general Guide Information for each product category describes the limitations relative to the products covered, such as current, voltage and horsepower limits, markings, special descriptions and installation provisions.

INSTALLATION REQUIREMENTS

Ordinary locations, as defined in the NEC, include:

Damp Location — Partially protected locations under canopies, marquees, roofed open porches, and like locations, and interior locations subject to moderate degrees of moisture, such as some basements, barns, and cold-storage warehouses.

Dry Location — A location not normally subject to dampness or wetness. A location classified as dry may be temporarily subject to dampness or wetness, as in the case of a building under construction.

Wet Location — Installations underground or in concrete slabs or masonry in direct contact with the earth, and locations subject to saturation with water or other liquids, such as vehicle washing areas, and locations exposed to weather and unprotected.

Outdoor Use — In general, individual appliances and equipment have been investigated only for use indoors, in dry locations. An exception is where outdoor use is specifically permitted by the Article of the NEC concerned with the product installation. See also the general Guide Information for the product category or included in the individual Listing. In some cases the title (e.g., Snow Movers, Swimming Pool Fixtures) indicates the conditions for which the product has been investigated.

Cord- and plug-connected appliances obviously intended for outdoor use, such as gardening appliances, are not intended for use in the rain, and should be stored indoors when not in use.

Enclosure Types

Section 110.11 of the NEC specifies that equipment shall be identified for use in certain operating environments. Section 300.6 provides guidance regarding protection against corrosion and Table 430.91 provides the basis for selecting motor controller enclosure types for use in specific locations. To assist inspection authorities, UL requires type designations on power distribution and control equipment enclosures such as cabinets and cutout boxes, enclosed panelboards or switchboards, meter sockets, enclosed circuit breakers or switches, industrial control and other equipment. The following table summarizes the intended uses of the various type enclosures for other than hazardous locations:

Enclosure Type Number	Provides a Degree of Protection Against the Following Environmental Conditions*
1	Indoor use
2	Indoor use, limited amounts of falling water
3R	Outdoor use, undamaged by the formation of ice on the enclosure**
3	Same as 3R plus windblown dust
3S	Same as 3R plus windblown dust, external mechanisms remain operable while ice laden
4	Outdoor use, splashing water, windblown dust, hose-directed water, undamaged by the formation of ice on the enclosure**
4X	Same as 4 plus resists corrosion
5	Indoor use to provide a degree of protection against settling airborne dust, falling dirt, and dripping noncorrosive liquids

ELECTRICAL EQUIPMENT FOR USE IN ORDINARY LOCATIONS (AALZ)

Enclosure Type Number	Provides a Degree of Protection Against the Following Environmental Conditions*
6	Same as 3R plus entry of water during temporary submersion at a limited depth
6P	Same as 3R plus entry of water during prolonged submersion at a limited depth
12, 12K	Indoor use, dust, dripping noncorrosive liquids
13	Indoor use, dust, spraying water, oil and noncorrosive coolants

*All type enclosures provide a degree of protection against ordinary corrosion and against accidental contact with the enclosed equipment when doors of covers are closed and in place. All type enclosures provide protection against a limited amount of falling dirt.

**All outdoor type enclosures provide a degree of protection against rain, snow and sleet. Outdoor enclosures are also suitable for use indoors if they meet the environmental conditions present.

An enclosure that complies with the requirements for more than one type of enclosure may be marked with multiple designations.

Enclosures marked with a type may also be marked as follows:

- A Type 1 enclosure may be marked "Indoor Use Only"
- A Type 3, 3S, 4, 4X, 6 or 6P enclosure may be marked "Raintight"
- A Type 3R enclosure may be marked "Rainproof"
- A Type 4, 4X, 6 or 6P enclosure may be marked "Watertight"
- A Type 4X or 6P enclosure may be marked "Corrosion Resistant"
- A Type 2, 5, 12, 12K or 13 enclosure may be marked "Driptight"
- A Type 3, 3S, 5, 12K, or 13 enclosure may be marked "Dusttight"

For equipment designated "Raintight," testing designed to simulate exposure to a beating rain will not result in entrance of water. For equipment designated "Rainproof," testing designed to simulate exposure to a beating rain will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure. "Watertight" equipment is so constructed that water does not enter the enclosure when subjected to a stream of water. "Corrosion resistant" equipment is so constructed that it provides degree of protection against exposure to corrosive agents such as salt spray.

"Driptight" equipment is so constructed that falling moisture or dirt does not enter the enclosure. "Dusttight" equipment is so constructed that circulating or airborne dust does not enter the enclosure.

Sizes and Ratings

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

Marked ratings of utilization equipment include ampere, wattage or volt-ampere ratings. Motor-operated utilization equipment may also be marked with a horsepower rating. The actual marked ratings (other than the horsepower rating) and other markings or instructions, if any, are to be used to select branch-circuit conductors, branch-circuit overcurrent protection, control devices and disconnecting means.

The ampere or wattage marking on power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of name-plate ratings.

Appliance and Utilization Equipment Terminations

Except as noted in the general Guide Information for some product categories, most terminals, unless marked otherwise, are for use only with copper wire. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits as specified in Table 310.16 of the NEC. If the termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

ELECTRICAL EQUIPMENT FOR USE IN ORDINARY LOCATIONS (AALZ)

47

Distribution and Control Equipment Terminations

Most terminals are suitable for use only with copper wire. Where aluminum or copper-clad aluminum wire can or shall be used (some crimp terminals may be Listed only for aluminum wire), there is marking to indicate this. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted in the following paragraphs or in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C ampacities for wire size Nos. 14-1 AWG, and 75°C ampacities for wire size Nos. 1/0 AWG and larger, as specified in Table 310.16 of the NEC.

Some distribution and control equipment is marked to indicate the required temperature rating of each field-installed conductor. If the equipment, normally intended for connection by wire sizes within the range 14-1 AWG, is marked "75C" or "60/75C," it is intended that 75°C insulated wire may be used at full 75°C ampacity. Where the connection is made to a circuit breaker or switch within the equipment, such a circuit breaker or switch must also be marked for the temperature rating of the conductor.

A 75°C conductor temperature marking on a circuit breaker or switch normally intended for wire sizes 14-1 AWG does not in itself indicate that 75°C insulated wire can be used unless 1) the circuit breaker or switch is used by itself, such as in a separate enclosure, or 2) the equipment in which the circuit breaker or switch is installed is also so marked.

A 75 or 90°C temperature marking on a terminal (e.g., AL7, CU7AL, AL7CU or AL9, CU9AL, AL9CU) does not in itself indicate that 75 or 90°C insulated wire can be used unless the equipment in which the terminals are installed is marked for 75 or 90°C.

Higher temperature rated conductors than specified may be used if the size is based on the above statements.

Copper-clad Aluminum Conductors — Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Copper Pigtail Leads — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Wiring Devices — Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded, unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum, copper and copper-clad aluminum conductors.

Wire Connectors — Combinations of dissimilar conductors in terminal or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing. See also the information under Wire Connectors and Soldering Lugs (ZMVV).

Terminals — Product terminals, including wire connectors and terminal screws, are acceptable for connection of only one conductor, unless there is marking or a wiring diagram indicating the number of conductors which may be connected.

Tightening Torque — Some equipment may be marked to show a tightening torque for wire connectors intended for use with field wiring.

Supply Cords — When flexible supply cords or cord sets are replaced on utilization equipment and appliances, the replacement should be of the same type, AWG size, voltage rating and temperature rating as originally used.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investi-

ELECTRICAL EQUIPMENT FOR USE IN ORDINARY LOCATIONS (AALZ)

gated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

MARINE EQUIPMENT

Certain equipment has been specifically investigated and certified for use aboard marine vessels. Such equipment has been investigated in accordance with the applicable requirements of UL, the United States Coast Guard (USCG), the American Boat and Yacht Council, Inc. (ABYC), and the National Fire Protection Association (NFPA). For additional information, see the general Guide Information for the specific product category. Equipment bearing UL's Marine Mark is suitable for use only with stranded copper wire.

MECHANICAL EQUIPMENT AND ASSOCIATED PRODUCTS (AAME)

GENERAL

Mechanical equipment includes mechanically operated and gasoline-powered products, worker safety-related products, toys, and other products that have been investigated for mechanical strength and operation with regard to personal injury and for other specific hazards.

This equipment is intended for use only as described in the general Guide Information for each product category and individual Listings. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

MECHANICAL EQUIPMENT AND ASSOCIATED PRODUCTS (AAME)

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

GENERAL

Electrical equipment intended for use in and relating to Class I, Zone 0, 1 and 2 and Zone 20, 21 and 22 hazardous (classified) locations has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of Articles 505 and 506 of ANSI/NFPA 70, "National Electrical Code" (NEC), or United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electric Systems - General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment." Attention is called to the limitations of the individual Listings and Classifications specified in the general Guide Information for each product category, such as current, voltage, horsepower limits, markings, special descriptions and installation provisions.

Unless equipment is identified in 1) the product category title as relating to Zone classified hazardous locations or 2) the individual Listings as apparatus for use in unclassified locations, all product categories contain electrical equipment for use in Class I, Zone 0, 1 and 2 and Zone 20, 21 and 22 hazardous (classified) locations.

HAZARDOUS (CLASSIFIED) LOCATIONS — GENERAL INFORMATION

Hazardous (classified) locations, as defined in the NEC, are locations where fire or explosion hazards may exist due to the presence of flammable gases, vapors or flammable liquids, combustible dusts, or ignitable fibers or flyings. There are two independent classification systems.

One classification system is found in Articles 505 and 506 of the NEC:

Article 505 divides locations having gases and vapors into Class I, Zones and Gas Groups. A Zone 0 location is a location where ignitable concentrations are present continuously or for long periods of time. A Zone 1 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 2 location is a location where ignitable concentrations are not likely to occur in normal operation and, if they do occur, will only persist for a short period. Article 506 divides locations having dusts, fibers or flyings into Zones. A Zone 20 location is a location where ignitable concentrations are present continuously or for long periods of time. A Zone 21 location is a location where ignitable concentrations are likely to exist under normal operating conditions. A Zone 22 location is a location where ignitable concentrations are not likely to occur in normal operation and, if they do occur, will only persist for a short period.

The other system, found in Article 500 of the NEC, divides all hazardous (classified) locations into Classes, Divisions and Groups. A Division 1 location is a location where an ignitable concentration of a flammable or combustible material is present under normal operating conditions. A Division 2 location is a location where an ignitable concentration of a flammable or combustible material is present only under abnormal operating conditions.

Protection against explosion in hazardous (classified) locations requires that all equipment that could be exposed to the flammable or combustible atmospheres be of a type suitable for installation in such locations. The Classes, Zones and Groups for which equipment has been Listed or Classified is shown in the individual Listings and Classifications under the respective categories and is marked on the equipment itself. In addition, intrinsically safe circuit-wiring terminals and intrinsically safe equipment is marked "Intrinsically Safe."

Gas and Vapor Groups

The following paragraphs group flammable and explosive mixtures of specific gases and vapors in accordance with the NEC classifications. For a complete list of group classifications for Class I materials, see ANSI/NFPA 497, "Recommended Practice for the Classification of Flammable Liquids, Gases, or Vapors and of Hazardous (Classified) Locations for Electrical Installations in Chemical Process Areas," or IEC 60079-12, "Classification of Mixtures of Gases or Vapors with Air According to their Maximum Experimental Safe Gaps and Minimum Igniting Currents."

Equipment for use in Class I, Zone 0, 1 and 2 hazardous (classified) locations, as defined in Article 505 of the NEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification, such mixtures have been grouped on the basis of their characteristics as follows:

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

Class I, Group IIC — Atmospheres containing hydrogen, acetylene, or gases or vapors having either a maximum experimental safe gap (MESG) less than or equal to 0.50 mm or a minimum igniting current ratio (MIC ratio) less than or equal to 0.45.

Class I, Group IIB — Atmospheres containing acetaldehyde, ethylene, or gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.50 mm and less than or equal to 0.90 mm, or a minimum igniting current ratio (MIC ratio) greater than 0.45 and less than or equal to 0.80.

Class I, Group IIA — Atmospheres containing acetone, ammonia, ethyl alcohol, gasoline, methane, propane, or gases of vapors having either a maximum experimental safe gap (MESG) greater than 0.90 mm or a minimum igniting current ratio (MIC ratio) greater than 0.80.

Equipment for use in Class I, Division 1 and 2 hazardous (classified) locations, as defined in Article 500 of the NEC, is tested with respect to acceptability of operation in the presence of flammable and explosive mixtures of specific vapors and gases with air. For purposes of location classification, such mixtures have been grouped on the basis of their characteristics as follows:

Class I, Group A — Atmospheres containing acetylene.

Class I, Group B — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) less than or equal to 0.45 mm or a minimum igniting current ratio (MIC ratio) less than or equal to 0.40. Examples of Group B materials are acrolein, butadiene, ethylene oxide, propylene oxide, hydrogen, and fuel and combustible process gases containing more than 30% hydrogen by volume.

Class I, Group C — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.45 mm and less than or equal to 0.75 mm, or a minimum igniting current ratio (MIC ratio) greater than 0.40 and less than or equal to 0.80. Examples of Group C materials are ethyl ether and ethylene.

Class I, Group D — Atmospheres containing gases or vapors having either a maximum experimental safe gap (MESG) greater than 0.75 mm or a minimum igniting current ratio (MIC ratio) greater than 0.80. Examples of Group D materials are acetone, ammonia, benzene, butane, cyclopropane, ethanol, gasoline, hexane, methane, methanol, naphtha and propane.

The following table compares Class I, Division 1 and 2 Gas Groups with Class I, Zone 0, 1 and 2 Gas Groups. The gases shown are representative of others in the Group.

Division 1 & 2	Zone 0, 1 & 2
A (acetylene)	IIC (acetylene and hydrogen)
B (hydrogen)	IIC (acetylene and hydrogen)
C (ethylene)	IIB (ethylene)
D (propane)	IIA (propane)

Dust Groups

There are no dust groups for Zone 20, 21 or 22. In addition, Article 506 of the NEC does not cover locations where metal dusts are present.

Equipment for use in Class II hazardous (classified) locations, as defined in Article 500 of the NEC, is tested with respect to acceptability of operation in the presence of combustible dusts in air. For purposes of location classification, the NEC groups combustible dust-air mixtures as follows:

Class II, Group E — Atmospheres containing combustible metal dusts, including aluminum, magnesium, and their commercial alloys, or other combustible dusts whose particle size, abrasiveness and conductivity present an equivalent hazard.

Class II, Group F — Atmospheres containing carbon black, charcoal, coal or coke dusts which have more than 8% total volatile material, or atmospheres containing these dusts sensitized by other materials so that they present an explosion hazard.

Class II, Group G — Atmospheres containing combustible dusts not included in Group E or F, including flour, grain, wood, plastic and chemicals.

Intrinsically Safe Circuits and Apparatus, and Associated Apparatus

Intrinsically safe circuits and apparatus may be investigated for any or all of the Zones and Groups as defined in the NEC. In an intrinsically safe circuit, the energy level available in the hazardous (classified) location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated apparatus be installed and interconnected in accordance with Articles 504 and 505 of the NEC and the instructions provided with the equipment.

Associated apparatus is apparatus in which the circuits are not necessarily intrinsically safe, but which affect the energy in the intrinsically safe circuits and are relied upon to maintain intrinsic safety. Associated apparatus is not intended for use in hazardous (classified) locations unless use in hazardous (classified) locations is specifically indicated.

When interconnecting associated apparatus with equipment for use in the hazardous (classified) location, special attention should be paid to installation instructions, control drawings, or product markings which may limit the types of connections that are acceptable.

Equipment Relating to Hazardous (Classified) Locations

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

Equipment relating to hazardous (classified) locations includes electrical equipment not intended for installation in hazardous (classified) locations except for provision of certain intrinsically safe (low energy) circuit extensions as indicated in the individual Listings and Classifications.

Suitability of Listed or Classified Equipment

Equipment marked for use in or relating to Class I, Zone 0 locations is also suitable for Zone 1 and 2 locations of the same gas group and with a suitable temperature class. Equipment marked for use in or relating to Class I, Zone 1 locations is also suitable for use in or relating to Class I, Zone 2 locations of the same gas group and with a suitable temperature class. Equipment marked for use in or relating to Class I, Zone 2 locations is suitable only for use in or relating to those locations classified as Class I, Zone 2.

Equipment marked for use in or relating to Zone 20 locations is also suitable for Zone 21 and 22 locations with a suitable temperature class. Equipment marked for use in or relating to Zone 21 locations is also suitable for use in or relating to Zone 22 locations with a suitable temperature class. Equipment marked for use in or relating to Zone 22 locations is suitable only for use in or relating to those locations classified as Zone 22.

The NEC also permits the following:

- Intrinsically safe equipment for Class I, Division 1 locations to be used in a Class I, Zone 0, 1 or 2 location of the same gas group and with a suitable temperature class.
- Equipment (other than intrinsically safe equipment) for Class I, Division 1 locations to be used in a Class I, Zone 1 or 2 location of the same gas group and with a suitable temperature class.
- Equipment for Class I, Division 2 locations to be used in a Class I, Zone 2 location of the same gas group and with a suitable temperature class.
- Intrinsically safe equipment for Class I, Zone 0 locations to be used in a Class I, Division 1 or 2 location of the same gas group and with a suitable temperature class.
- Equipment for Class I, Zone 0, 1 or 2 locations to be used in a Class I, Division 2 location of the same gas group and with a suitable temperature class.
- Intrinsically safe equipment for Class II to be used in a Zone 20, 21 or 22 location with a suitable temperature class.
- Equipment for Class II, Division 1 locations to be used in a Zone 21 or 22 location with a suitable temperature class.
- Equipment for Class II, Division 2 locations to be used in a Zone 22 location with a suitable temperature class.

In addition, equipment for use in hazardous (classified) locations is also suitable for use in unclassified locations.

RELATED EQUIPMENT

For additional information on equipment for use in Division classified locations, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

CLASS I, ZONE 0, 1 AND 2 PROTECTION TECHNIQUES

Equipment for use in Class I, Zone 0, 1 or 2 locations may employ one or more of the following protection techniques:

Location Classification	Protection Technique	Protection Technique Identification
Zone 0	Intrinsic safety (2 fault)	ia
Zone 1	Intrinsic safety (1 fault)	ib
	Flameproof	d
	Purged and pressurized	p
	Oil immersion	o
	Increased safety	e
	Encapsulation	m
Zone 2	Powder filling	q
	Nonsparking	nA
	Sparking with protected contacts	nC
Unclassified	Restricted breathing	nR
	Associated apparatus with intrinsically safe circuit connections for Zone 0 (2 fault)	[ia]
	Associated apparatus with intrinsically safe circuit connections for Zone 1 (1 fault)	[ib]

Intrinsic Safety — Equipment in which any spark or thermal effect produced under normal or fault conditions is incapable of causing ignition of the atmosphere. See **Intrinsically Safe Circuits and Apparatus, and Associated Apparatus** above for more information.

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

Flameproof — The enclosure of the equipment will withstand an internal explosion, and prevent passage of flame to the surrounding atmosphere. Care must be taken to maintain the length and clearance (gap) of flameproof joints in service.

Purged and Pressurized — A protective gas is maintained inside the equipment enclosure at a pressure above that of the surrounding atmosphere, in order to prevent ingress of the explosive gas or vapor.

Oil Immersion — Parts capable of ignition are immersed in a protective liquid.

Increased Safety — The equipment contains no normally arcing parts, and additional measures (such as larger spacings between wiring connections) are taken to prevent the possibility of high temperatures or sparks. A minimum IP rating of IP 54 is required.

Encapsulation — Parts capable of ignition are completely surrounded by an encapsulating material.

Powder Filling — Parts capable of ignition are surrounded by a filling material (glass or quartz powder).

Nonsparking — The equipment has no normally arcing parts or thermal effects capable of ignition.

Sparking with Protected Contacts — Arcing contacts are in nonincendive circuits, or are inside a hermetically sealed container or sealed device.

Restricted Breathing — The enclosure relies on tight seals and gaskets to prevent diffusion of the explosive atmosphere into the equipment enclosure. Provision for checking that the restricted breathing properties of the enclosure are maintained is provided.

ZONE 20, 21 AND 22 PROTECTION TECHNIQUES

Equipment for use in Zone 20, 21 or 22 locations may employ one or more of the following protection techniques:

Location Classification	Protection Technique	Protection Technique Identifier
Zone 20	Intrinsic safety (2 fault)	iaD
	Encapsulation	maD
Zone 21	Intrinsic safety (1 fault)	ibD
	Encapsulation	mbD
	Pressurization	pD
Zone 22	Dust-ignition-protected enclosure	iD
	Pressurization	pD
	Dust-ignition-protected enclosure	iD
Unclassified	Associated apparatus with intrinsically safe circuit connections for Zone 20 (2 fault)	[iaD]
	Associated apparatus with intrinsically safe circuit connections for Zone 21 (1 fault)	[ibD]

Intrinsic Safety — Equipment in which any spark or thermal effect produced under normal or fault conditions is incapable of causing ignition of the atmosphere. See **Intrinsically Safe Circuits and Apparatus, and Associated Apparatus** above for more information.

Encapsulation — Parts capable of ignition are completely surrounded by an encapsulating material.

Pressurization — A protective gas is maintained inside the equipment enclosure at a pressure above that of the surrounding atmosphere, in order to prevent ingress of dust.

Dust-ignition-protected Enclosure — Parts are provided in an enclosure that prevents the ingress of dust.

The protection technique identification letter(s) is marked on the product. Products employing multiple protection techniques are marked with all applicable identifications. For example, a control station containing a flameproof switch and an encapsulated pilot light, mounted in an increased safety enclosure, will be marked with all three protection techniques: "edm."

TEMPERATURE CONSIDERATIONS

The marked temperature class (T-code) of the equipment is based on either the maximum external temperature or internal temperature of the equipment, depending on the protection technique used.

For Class I, Zone 0, 1 and 2 and Zone 20, 21 and 22 locations, this temperature marking should not exceed the ignition temperature of the specific combustible material to be encountered. For organic dusts that may dehydrate or carbonize, the temperature marking should not exceed the lower of either the ignition temperature or 165°C. For fibers and flyings, the maximum permitted temperature is 120°C for equipment that is subject to overloading and 165°C for equipment that is not subject to overloading.

AMBIENT TEMPERATURES

Unless the equipment is marked otherwise, it has been investigated only for use under normal atmospheric conditions in an ambient temperature within the range of -20°C (-4°F) to +40°C (+104°F). Use of flameproof equipment under conditions of higher than normal atmospheric pressure or oxygen partial pressure, use in artificial atmospheres, and use under conditions of excessively high ambient temperatures can increase the likelihood of ignition of flammable atmospheres. In addition, low ambient temperatures may increase explosion pressures developed within the equipment. Plastic parts

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

of enclosures or encapsulating materials may not maintain their integrity in excessively high or low ambient, unless marked otherwise.

OVERLOAD PROTECTION

Equipment is intended to be installed in circuits with overload and short-circuit protection for established ratings. The ampere or wattage marking on power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

ENCLOSURE MODIFICATION AND MAINTENANCE

The integrity of an enclosure must be maintained. Making holes (other than conduit openings specified in the instructions) or alterations in the enclosure during installation may compromise the ability of a flameproof enclosure to contain an explosion. Most other protection techniques require a minimum IP rating and alterations in the enclosure may impair the enclosure's ability to protect against ingress of contaminants or water. See **ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT** below for more information. Holding bolts and threaded parts must be screwed tight. The continued acceptability of the equipment will depend upon proper maintenance.

ENVIRONMENTAL CONSIDERATIONS

Unless the equipment is marked otherwise, it is intended to be used indoors where severe corrosive conditions are not likely to be present. Equipment investigated for severe environmental conditions is marked with an enclosure type designation or other designation indicating the suitability of the equipment in different environments. See **ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT** below for more information.

ENCLOSURE CONSIDERATIONS FOR ALL EQUIPMENT

Section 110.11 of the NEC directs that equipment shall not be used in damp or wet locations; locations where exposed to gases, fumes, vapors, liquids or other agents having a deteriorating effect on the equipment; or locations where exposed to excessive temperatures unless the equipment is identified for use in such environments. Section 300.6 of the NEC provides guidance regarding protection against corrosion. To assist Authorities Having Jurisdiction, electrical equipment Listed or Classified for use in and relating to hazardous (classified) locations may be investigated for use in certain operating environments and marked with an enclosure type number(s). The following table summarizes the intended uses of the various enclosure types:

Enclosure Type Number	Provides a Degree of Protection Against the Following Environmental Conditions*
1	Indoor use
2	Indoor use, limited amounts of falling water
3R	Outdoor use, undamaged by the formation of ice on the enclosure**
3	Same as 3R plus windblown dust
3S	Same as 3R plus windblown dust, external mechanisms remain operable while ice laden
4	Outdoor use, splashing water, windblown dust, hose-directed water, undamaged by the formation of ice on the enclosure**
4X	Same as 4 plus resists corrosion
5	Indoor use to provide a degree of protection against settling airborne dust, falling dirt, and dripping noncorrosive liquids
6	Same as 3R plus entry of water during temporary submersion at a limited depth
6P	Same as 3R plus entry of water during prolonged submersion at a limited depth
12, 12K	Indoor use, dust, dripping noncorrosive liquids
13	Indoor use, dust, spraying water, oil, and noncorrosive coolants

* All types of enclosures provide a degree of protection against ordinary corrosion and against accidental contact with the enclosed equipment when doors or covers are closed and in place. All types of enclosures provide protection against a limited amount of falling dirt.

** All outdoor type enclosures provide a degree of protection against rain, snow and sleet. Outdoor enclosures are also suitable for use indoors if they meet the environmental conditions present.

In some cases, individual appliances and equipment may be marked "Raintight" or "Rainproof," indicating that they have been subjected to a test designed to simulate exposure to beating rain. For equipment designated as "Raintight" such exposure will not result in entrance of water. For equipment designated as "Rainproof" such exposure will not interfere with the operation of the apparatus or result in wetting of live parts and wiring within the enclosure.

Additionally or alternatively, IEC 60529, "Classification of Degrees of Protection Provided by Enclosures," provides a system for specifying the enclosures of electrical equipment on the basis of the degree of protection provided by the enclosure (or IP rating) as follows:

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

First Characteristics Numerals	Protection Against Ingress of Solid Foreign Objects
IP0X	Not investigated
IP1X	50 mm diameter or larger
IP2X	12.5 mm diameter or larger
IP3X	2.5 mm diameter or larger
IP4X	1.0 mm diameter or larger
IP5X	Dust protected
IP6X	Dust-tight

Second Characteristics Numerals	Protection Against Ingress of Water with Harmful Effect
IPX0	Not investigated
IPX1	Vertically dripping
IPX2	Dripping (15 degree tilted)
IPX3	Spraying
IPX4	Splashing
IPX5	Jetting
IPX6	Powerful jetting
IPX7	Temporary immersion
IPX8	Continuous immersion

FITTINGS AT SUPPLY ENTRIES

Consideration should be given to the Type or IP rating of fittings used at supply entries. When the manufacturer supplies a fitting with the enclosure, enclosures are intended to be connected to the wiring system using the fitting provided. If no fitting is provided by the manufacturer, the fitting employed must meet or exceed the Type or IP rating of the enclosure, so that the assembly maintains its protection against contaminants.

WIRING CONSIDERATIONS FOR ALL EQUIPMENT

Appliances and Utilization Equipment Terminations — Except as noted in the general Guide Information for some product categories, most terminals, unless marked otherwise, are for use only with copper wire. If aluminum or copper-clad aluminum wire can be used, the product is marked accordingly. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

For Type of protection "e," increased safety, field wiring conductors are intended to be copper.

Except as noted in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits as specified in Table 310.16 of the NEC. If the termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Distribution and Control Equipment Terminations — Most terminals are suitable for use only with copper wire. Where aluminum or copper-clad aluminum wire can or is intended to be used (some crimp terminals may be Listed only for aluminum wire), the product is marked accordingly. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted in the following paragraphs or in the general Guide Information for some product categories, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger, as specified in Table 310.16 of the NEC.

Some distribution and control equipment is marked to indicate the required temperature rating of each field-installed conductor. If the equipment, normally intended for connection by wire sizes within the range 14 – 1 AWG, is marked "75C" or "60/75C," it is intended that 75°C insulated wire may be used at full 75°C ampacity. Where the connection is made to a circuit breaker or switch within the equipment, such a circuit breaker or switch will also be marked for the temperature rating of the conductor.

A 75°C conductor temperature marking on a circuit breaker or switch normally intended for wire sizes 14 – 1 AWG does not in itself indicate that 75°C insulated wire can be used unless 1) the circuit breaker or switch is used by itself, such as in a separate enclosure, or 2) the equipment in which the circuit breaker or switch is installed is also so marked.

A 75 or 90°C temperature marking on a terminal (e.g., AL7, CU7AL, AL7CU or AL9, CU9AL, AL9CU) does not in itself indicate that 75 or 90°C insulated wire can be used unless the equipment in which the terminals are installed is marked for 75 or 90°C.

Higher-temperature-rated conductors than specified may be used if the size is based on the above statements.

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

Copper-clad Aluminum Conductors — Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Copper Pigtail Leads — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wire in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Wiring Devices — Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors (both solid and stranded) unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum, copper, and copper-clad aluminum conductors.

Wire Connectors — Combinations of dissimilar conductors in terminals or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing. See also the information under Wiring Connectors and Soldering Lugs (ZMVV).

Terminals — Product terminals, including wire connectors and terminal screws, are acceptable for connection of only one conductor, unless there is marking or a wiring diagram indicating the number of conductors which may be connected.

Tightening Torque — Some equipment may be marked to show a tightening torque for wire connectors intended for use with field wiring.

Supply Cords — When flexible supply cords or cord sets are replaced on utilization equipment, the replacement should be of the same type, AWG size, voltage rating and temperature rating as originally used.

Seals in Conduit and Cable Systems — Equipment with a factory-installed conduit seal is marked "Leads factory sealed" or equivalent wording. The absence of this marking indicates that the need for a field-installed seal in accordance with Section 505.16 of the NEC should be determined.

Cautionary Statements and Instructions — It is expected that the user shall strictly adhere to cautionary statements and other instructions appearing on the product and in accompanying literature.

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate these products with respect to risk of explosion for Class I, Zone 0, 1 and 2 are referenced below for the location classifications and protection techniques shown. Note that for Zone 0 and Zone 1 equipment, ANSI/UL 60079-0, "Electrical Apparatus for Explosive Gas Atmospheres – Part 0: General Requirements," is also used.

Location Classification	Standard	Protection Technique Identification
Zone 0	ANSI/UL 60079-11, "Electrical Apparatus for Explosive Gas Atmospheres – Part 11: Intrinsic Safety 'i'"	ia
	ANSI/UL 60079-18, "Electrical Apparatus for Explosive Gas Atmospheres – Part 18: Construction, Test and Marking of Type of Protection Encapsulation 'm'"	ma
Zone 1	ANSI/UL 60079-1, "Electrical Apparatus for Explosive Gas Atmospheres – Part 1: Flameproof Enclosures 'd'"	d
	ANSI/UL 60079-5, "Electrical Apparatus for Explosive Gas Atmospheres – Part 5: Powder Filling 'o'"	q
	ANSI/UL 60079-6, "Electrical Apparatus for Explosive Gas Atmospheres – Part 6: Oil-Immersion 'o'"	o
	ANSI/UL 60079-7, "Electrical Apparatus for Explosive Gas Atmospheres – Part 7: Increased Safety 'e'"	e
	ANSI/UL 60079-11, "Electrical Apparatus for Explosive Gas Atmospheres – Part 11: Intrinsic Safety 'i'"	ib

PRODUCT CATEGORIES BY CATEGORY CODE

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

Location Classification	Standard	Protection Technique Identification

EQUIPMENT FOR USE IN AND RELATING TO ZONE CLASSIFIED HAZARDOUS LOCATIONS (AANZ)

Location Classification	Standard	Protection Technique Identification
	ANSI/ISA-61241-11 (12.10.06), "Electrical Apparatus for Use in Zone 20, Zone 21 and Zone 22 Hazardous (Classified) Locations – Protection by Intrinsic Safety 'iD'"	[ibD]

The basic unclassified locations standard used to investigate these products with respect to risk of fire and electric shock is ANSI/UL 508, "Industrial Control Equipment," unless otherwise specified in the general Guide Information for each product category.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

MARINE EQUIPMENT

Certain equipment has been specifically investigated and certified for use aboard marine vessels. Such equipment has been investigated in accordance with the applicable requirements of UL, the United States Coast Guard (USCG), the American Boat and Yacht Council, Inc. (ABYC), and the National Fire Protection Association (NFPA). For additional information, see the general Guide Information for the specific product category. Equipment bearing UL's Marine Mark is suitable for use only with stranded copper wire.

PLUMBING AND ASSOCIATED PRODUCTS (AAPP)

GENERAL

Plumbing products include plumbing fixtures, fixture fittings, pipe and fittings, and appliances, as well as accessories associated with such equipment.

This equipment is intended for use only as described in the general Guide Information for each product category and individual Listings. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of

the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

In addition, certain products have been investigated with reference to environmental and public health effects and for potential conformity to the installation and use provisions of applicable environmental and public health requirements, if so indicated in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC), should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Terminations — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum, copper and copper-clad aluminum conductors.

Combination of dissimilar conductors in terminal or splicing connectors is acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitable for use in hazardous locations.

FLAMMABLE AND COMBUSTIBLE LIQUIDS AND GASES EQUIPMENT (AAPQ)

GENERAL

This equipment is intended for the storing, containing, conveying, dispensing, regulating or use of flammable and combustible gases, liquids or waste materials. This equipment also includes chemical products that are Classified with respect to fire hazard.

This equipment is intended for use only with the liquids and gases described in the general Guide Information for each product category and individual Listings. This equipment has only been investigated for use as described in the instructions and markings provided with the equipment. The use of the equipment with other liquids and gases, and in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category, has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what

FLAMMABLE AND COMBUSTIBLE LIQUIDS AND GASES EQUIPMENT (AAPQ)

the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

INDOOR AND OUTDOOR USE

Unless outdoor use is specifically indicated in the general Guide Information for the product category or included in the individual Listings of the product, individual appliances have been investigated only for use indoors, unless the product, by its inherent nature, is obviously intended for use outdoors.

ELECTRICAL INSTALLATIONS

General — The ampere or wattage marking on electrical power-consuming equipment is valid only when the equipment is supplied at its marked rated voltage. In general, the current input to electric heating appliances or resistance heating equipment will increase in direct proportion to an increase in the supply voltage, while the current input to an induction motor supplying a constant load will increase approximately in direct proportion to a decrease in the supply voltage. These increases in current can cause overcurrent protection devices to open even when these devices are properly selected on the basis of nameplate ratings.

Supply Conductors — Except as noted in the general Guide Information for some product categories, most terminals are for use only with copper wire unless marked otherwise. If aluminum or copper-clad aluminum wire can be used, marking to indicate this fact is provided. Such marking is required to be independent of any marking on terminal connectors, such as on a wiring diagram or other visible location. The marking may be in an abbreviated form, such as "AL-CU."

Except as noted below or in the general Guide Information for certain product categories, the electrical termination provisions on equipment are based on the use of 60°C insulated conductors in circuits rated 100 A or less and the use of 75°C insulated conductors in higher rated circuits.

If the electrical termination provisions on equipment are based on the use of other conductors, the equipment is either marked with both the size and temperature rating of the conductors to be used or with only the temperature rating of the conductors to be used. If the equipment is only marked for use with conductors having a higher (75 or 90°C) temperature rating (wire size not specified), the 60°C ampacities (for circuits rated 100 A or less) and 75°C ampacities (for circuits rated over 100 A) specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC), should be used to determine wire size. Conductors having a temperature rating higher than specified may be used, though not required, if the size of the conductors is determined on the basis of the 60°C ampacity (circuits rated 100 A or less) or 75°C ampacity (circuits rated over 100 A).

Copper-clad aluminum conductors are subject to the ampacity requirements applicable to aluminum conductors.

Terminations — Copper pigtail leads may be used with aluminum or copper-clad aluminum supply wires in dry locations if 1) the splicing devices are Listed for use in joining copper to aluminum, 2) there is sufficient wiring space, and 3) the means provided for connecting the wiring system are acceptable for the wire size used.

Supply terminals of 15 A and 20 A switches and receptacles not marked "CO/ALR" are for use with copper and copper-clad aluminum conductors only. Terminals marked "CO/ALR" are for use with aluminum, copper and copper-clad aluminum conductors.

Screwless pressure terminal connectors of the conductor push-in type are for use only with copper and copper-clad aluminum conductors, both solid and stranded unless otherwise limited by marking.

Terminals of switches and receptacles rated 30 A and above not marked "AL/CU" are for use with copper conductors only. Terminals of switches rated 30 A and above marked "AL/CU" are for use with aluminum, copper and copper-clad aluminum conductors.

Combination of dissimilar conductors in terminal or splicing connectors are acceptable only in dry locations and when the connectors are identified as suitable for such intermixing.

Hazardous Locations — Electrical equipment and appliances are not intended for use in hazardous (classified) locations, as defined in the NEC, unless specifically identified as suitable for use in hazardous locations.

ACCESS CONTROL SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS (AATF)

USE

ACCESS CONTROL SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS (AATF)

This category covers units for access control systems, providing a means of regulating or controlling entry into an area, or access to or the use of a device by electrical, electronic and/or mechanical means.

Intrinsically safe systems covered under this category have been investigated on the basis that all equipment connected to the system is Listed as part of the system unless otherwise indicated and is used as intended.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 294, "Access Control System Units."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Access Control System Unit for Hazardous Locations," "Access Control System (Associated Apparatus)" or "Access Control System Unit (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

ADVERTISING DISPLAYS, NONILLUMINATED (AAVU)

This listing covers electrically operated, nonilluminated, units intended to draw attention to, or to display, demonstrate or advertise products.

Advertising displays intended for permanent installation indoors only are so marked. Cord and plug connected advertising displays suitable for outdoor use are marked "Outdoor".

Advertising displays including illumination, are Listed under Electric Signs (UXYT). Advertising displays that include a changing message sign are covered under the categories of Electric Signs (UXYT) and Signs, Changing Message (UYFS).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standards used to investigate products in this category are UL 48, "Electric Signs" and UL 73, "Motor-Operated Appliances".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Advertising Display", "Non-Illuminated Advertising Display", "Animated Display", or other appropriate product name.

AIR CONDITIONING EQUIPMENT (AAZY)

ACCESSORIES, AIR CONDITIONING EQUIPMENT (ABFY)

GENERAL

This category covers accessories intended for installation only on Listed equipment as designated in the individual Listings of the equipment and accessory. These accessories are intended primarily for field installation, but may be factory installed.

The equipment on which an accessory covered under this category may be field installed is marked to indicate that it is Listed for use with the specific accessory as designated by model, catalog number, part number, etc. in this category. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed.

Information concerning field wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory. For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 310.16 of ANSI/NFPA 70, "National Electrical Code," as follows:

- 75°C insulated conductors at the 75°C ampacities.
- 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
- Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

ADDITIONAL INFORMATION

Accessories, Air Conditioning Equipment (ABFY)—Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Conditioning Equipment Accessory."

ACCESSORIES, AIR DUCT MOUNTED (ABQK)

USE AND INSTALLATION

This category covers products employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution.

This equipment is rated 600 V ac or less and is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." Equipment to be connected to an air duct system is additionally intended for installation in accordance with ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," or ANSI/NFPA 90B, "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems."

This equipment is suitable for rigid sheet-metal air ducts only. Installation should be such that the structural integrity of the duct is not compromised.

Equipment employing ionization tubes is not intended for installation downstream from a humidifier or where similar exposure to other sources of moisture is likely.

PRODUCT MARKINGS

Information concerning wiring connections, mounting location, installation clearances, etc., are either marked on the accessory and/or in detailed installation instructions accompanying each accessory.

Products intended for use with germicidal lamps are marked "This product (fixture) is designed for use with germicidal lamps and must be installed in compliance with competent technical directions so that the user's eye and bare skin will not be subjected to ultraviolet rays."

UNEVALUATED FACTORS

The health aspects associated with the use of these products and their ability to aid in disinfection of environmental air have not been investigated. This limitation is specified in the instruction manual and on the product for all products covered under this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products employing ultraviolet lamps in this category are ANSI/UL 153, "Portable Electric Luminaires," ANSI/UL 1598, "Luminaires," and ANSI/UL 1995, "Heating and Cooling Equipment."

The basic standards used to investigate products employing ionization tubes in this category are ANSI/UL 1995 and ANSI/UL 867, "Electrostatic Air Cleaners."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**AIR DUCT MOUNTED ACCESSORY
WITH RESPECT TO ELECTRIC SHOCK, FIRE AND CASUALTY
HAZARDS ONLY
Control No.**

AIR CONDITIONERS, PACKAGED TERMINAL (ACKZ)

GENERAL

This category covers packaged terminal air conditioners and packaged terminal heat pumps. They consist of a wall sleeve, outdoor louvers, and a combination of assemblies designed as a unit and intended for mounting through the wall. They include refrigeration components as the prime source of cooling and dehumidification. They may also have provision for heating by hot water, reverse cycle refrigeration, steam, electric resistance heat or gas-fired burner(s). These units employ alternating current, hermetic refrigerant motor compressors with factory charged refrigeration systems

Air Conditioners, Packaged Terminal (ACKZ)—Continued

and include a means for ventilation and circulating air. Accessories intended for use with packaged terminal air conditioners are also covered under this category.

This category does not cover equipment intended for connection to duct systems for the purpose of providing central cooling and/or heating.

INSTALLATION

This equipment is rated 600 V or less and intended to be installed in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code." It is intended for installation through walls and basically intended to serve a single room, zone or space, although some units may have provision to additionally serve an adjacent room.

Permanently-connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

Units employing gas heat are intended to be installed in accordance with the installation instructions and markings on the appliance, and are intended to be connected to a gas supply of the type specified on the appliance. Equipment is intended to be installed in accordance with the current edition of ANSI Z223.1/NFPA 54, "National Fuel Gas Code."

PRODUCT MARKINGS

Cord-connected units that require a circuit breaker or time-delay fuses to permit restarting are so marked.

Units with water cooled condensers investigated for connection to ground water sources are so marked.

Some equipment may be designed to accept accessories in the field. In such cases, both the air conditioner and the accessory are marked to relate the two for proper installation.

This equipment typically consists of multiple assemblies or sections that are shipped in separate packages to be assembled in the field. The sections are marked to relate to one another for proper installation. The section incorporating the primary nameplate contains an essential elements label that details the other sections needed to complete the installation.

UNEVALUATED FACTORS

The effect of these units on the fire resistance rating of the wall has not been investigated.

RELATED PRODUCTS

See Air Conditioners, Room (ACOT) and Gas-fired Room Heaters, Vented (LPNH). Air conditioners for spot cooling or environmental control of electronic enclosures are covered under Air Conditioners, Special Purpose (ACVS). Dehumidifiers are covered under Dehumidifiers, Refrigeration Type (AFFT). Air conditioning equipment designed for duct connection to multiple rooms is covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate the refrigeration and heating (other than gas) portions of the products in this category is UL 484, "Room Air Conditioners."

The basic standard used to investigate the gas heating portion of the products in this category, if provided, is the current edition and effective addenda thereto of ANSI Z21.86/CSA 2.32, "Vented Gas-Fired Space Heating Appliances."

UL MARK

The Listing Mark and Gas-fired Listing Mark, if gas heat is provided, of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Packaged Terminal Air Conditioner," "Packaged Terminal Heat Pump," "Section of Packaged Terminal Air Conditioner," "Cooling Portion of Packaged Terminal Air Conditioner" or "Accessory for Packaged Terminal Air Conditioner."

The Gas-fired Listing Mark for the gas heating portion of these products, if provided, includes the UL symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name "Gas Heating Portion of Packaged Terminal Air Conditioner," and the standard designation "ANS Z21.86(+)-CSA-2.32(+)-(+)" Fan-Type Direct Vent Wall Furnace."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

AIR CONDITIONERS, ROOM (ACOT)**GENERAL**

This category covers room air conditioners and recreational vehicle (RV) air conditioners. They are encased assemblies designed as a unit and intended as the prime source of cooling and dehumidification, intended to serve a single room, zone or space. These products may be self-contained or split-system. Accessories intended for use with room air conditioners are also covered under this category.

INSTALLATION

This equipment is rated 600 V ac or less and is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Room air conditioners are intended for installation in windows, through walls, or as consoles located in or adjacent to the room, zone, or space to be conditioned. They may also be split-system, where the evaporator section is installed inside, and the condensing unit is installed outside. The two sections are connected by refrigerant piping and electrical wiring.

A console or in-wall type room air conditioner may have provision to additionally serve a single adjacent room.

Split-system room air conditioners are designed for field interconnection with a matching section. Such units and sections are marked to relate the two for proper installation. The sections may be shipped separately.

RV air conditioners are intended for roof-top or underfloor mounting as indicated in the installation instructions, and are intended only for permanent connection to the source of electrical supply.

These units employ hermetic refrigerant motor-compressors with factory-charged refrigeration systems and include a means for circulating air. They may also have provision for electric heating, reverse cycle heating, and ventilation. Room air conditioners are not intended for connection to duct systems for the purpose of providing central cooling and/or heating. RV air conditioners may be ducted to remote areas of the vehicle as specified in the installation instructions, which include the minimum duct size, maximum length, and minimum register size.

Permanently-connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

PRODUCT MARKINGS

Cord-connected units that require circuit breakers or time-delay fuses to permit restarting are so marked.

Units with water-cooled condensers investigated for connection to ground water sources are so marked.

Some equipment may be designed to accept accessories installed in the field. In such cases, both the room air conditioner and the accessory are marked to relate the two for proper installation.

If parts or sections of the room air conditioner are separately shipped from the factory, they are marked to relate the sections to one another for proper installation.

RELATED PRODUCTS

Packaged terminal air conditioners are covered under Air Conditioners, Packaged Terminal (ACKZ).

Air conditioners for spot cooling or environmental control of electronic enclosures are covered under Air Conditioners, Special Purpose (ACVS).

Dehumidifiers are covered under Dehumidifiers, Refrigeration Type (AFFT).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 484, "Room Air Conditioners."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Room Air Conditioner," "Split System Air Conditioner," "Split Type Air Conditioner," "Section of Room Air Conditioner" or "Accessory for Room Air Conditioner."

AIR CONDITIONERS, SPECIAL PURPOSE (ACVS)**GENERAL**

This category covers equipment designed for special purposes, such as portable spot cooling, environmental control of electronic enclosures, or supplementary cooling of computer rooms or computer equipment. These

Air Conditioners, Special Purpose (ACVS)—Continued

products may be self-contained or sectional, and are designed to provide conditioned air to a single room or space. Accessories are also covered under this category.

INSTALLATION

This equipment is rated 600 V or less and is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

This equipment consists of one or more factory-made sections. If the equipment is provided in two or more sections, each such section is designed for field interconnection with a matched section(s) to make the air conditioner assembly. Unless so indicated in the individual Listings, the evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or furnished as a separate section. The individual Listings show the distinctive designation of each section comprising the assembly.

The proper method of electrical installation (number of branch circuits, disconnects, etc.) is shown on the wiring diagram and/or marking required to be attached to the unit.

In permanently connected units employing two or more motors or a motor(s) and other loads, operating from a single supply circuit, the motor overload protective devices (including thermal protectors for motors) and other factory-installed motor circuit components and wiring are investigated on the basis of compliance with the motor branch circuit short-circuit and ground-fault protection requirements of Section 430.53(C) of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or circuit breakers with a rating that does not exceed the value marked on the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable.

Accessories for special purpose air conditioners are provided with instructions for installation into the product.

Units suitable for use with Listed field-installed accessories, such as electric resistance heaters, are specifically indicated in the individual Listings.

PRODUCT MARKINGS

Units suitable for outdoor installation are so marked. Units not marked as suitable for outdoor installation are for indoor use only.

Some equipment is designed to accept accessories installed in the field. In such cases, both the air conditioner and the accessory are marked to relate the two for proper installation.

Where a clearance is required to be maintained to combustible construction, the minimum clearance is designated in the individual Listings and is also marked on the unit. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts, and plenum.

RELATED PRODUCTS

See Air Conditioners, Room (ACOT), Air Conditioners, Packaged Terminal (ACKZ), Dehumidifiers, Refrigeration Type (AFFT) and Heating and Cooling Equipment (LZFE).

Equipment without a refrigeration system is covered under Heating and Cooling Equipment (LZFE).

Permanently connected computer room air conditioners are covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Air Conditioning Equipment (AAYZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 484, "Room Air Conditioners."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Special Purpose Air Conditioner," "Section of Special Purpose Air Conditioner" or "Accessory for Special Purpose Air Conditioner," or other appropriate product name as shown in the individual Listings.

PACKAGED TERMINAL AIR CONDITIONERS, REPLACEMENT (ADAU)**GENERAL**

This category covers replacement packaged terminal air conditioner and replacement packaged terminal heat pump chassis investigated for field installation with existing wall sleeves, louvers, and panels as marked on the unit. They are rated 600 V or less and intended as the prime source of air conditioning and dehumidification.

These units may also have provision for heating by hot water, reverse cycle refrigeration, steam or electric resistance elements. They employ alter-

AIR CONDITIONING EQUIPMENT (AAZY)

Packaged Terminal Air Conditioners, Replacement (ADAU)—Continued

nating current, hermetic refrigerant motor-compressors with factory-charged refrigeration systems, and include a means for ventilating and circulating air.

INSTALLATION

This equipment is intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and is intended for installation through walls and to serve a single room, zone or space, although some units may have provision to additionally serve an adjacent room.

Permanently-connected units are intended to be connected to a branch circuit protected by overcurrent devices that do not exceed the value marked on the data plate or attached wiring diagram. This marked protective device rating is the maximum for which the unit has been investigated and found acceptable. If the marking specifies fuses, the unit is intended to be protected by fuses only. If time-delay fuses are required for restarting, the unit is so marked.

PRODUCT MARKINGS

Cord-connected units requiring a circuit breaker or time-delay fuses to permit restarting are so marked.

Units are marked to indicate the existing wall sleeves, louvers and panels with which they are to be used and field installed.

RELATED PRODUCTS

Room air conditioners are covered under Air Conditioners, Room (ACOT).

Air conditioners intended for spot cooling or environmental control of electronic enclosures are covered under Air Conditioners, Special Purpose (ACVS).

Dehumidifiers are covered under Dehumidifiers, Refrigeration Type (AFFT).

Air conditioning equipment designed for connection to duct systems for the purpose of providing central cooling and/or heating is covered under Heating and Cooling Equipment (LZFE).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 484, "Room Air Conditioners."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**REPLACEMENT PACKAGED TERMINAL AIR CONDITIONER
FOR FIELD INSTALLATION WITH EXISTING WALL SLEEVES,
OUTDOOR LOUVERS,
AND INDOOR PANELS AS SPECIFIED ON THE PRODUCT
AS TO ELECTRIC SHOCK, FIRE AND CASUALTY HAZARDS ONLY
Control No.**

AIR FILTERING APPLIANCES (AEDX)

GENERAL

This category covers portable and stationary air filtering appliances intended for window, floor, table and similar mounting. This category also covers fixed air filtering appliances intended for permanent mounting to walls, ceilings, and similar applications. The appliances consist primarily of air-circulating fans and mechanical filters, but may additionally employ ultraviolet/germicidal lamps.

PRODUCT MARKINGS

Appliances specifically investigated for use in "other spaces used for environmental air," per Article 300.22(c) of ANSI/NFPA 70, "National Electrical Code," (2002 edition) are marked "These units evaluated for use in other spaces for environmental air per National Electrical Code Article 300.22(c)(2)."

UNEVALUATED FACTORS

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Appliances not provided with filters and intended for circulating air in a room are covered under Fans, Ceiling Suspended (GPRT) and Fans, Electric (GPWV).

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AGGZ).

Ionizers, fans employing ionizers, and ion generators are covered under Ion Generators (OETX).

Deodorizers intended to remove odors in specific applications by ozone generation are covered under Deodorizers, Ozone Generator Type (EOKL).

AIR CONDITIONING EQUIPMENT (AAZY)

Air Filtering Appliances (AEDX)—Continued

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners (EOGX).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted (ABQK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 507, "Electric Fans."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Filtering Appliance" or "Air Filter," or other appropriate product name as shown in the individual Listings.

DEHUMIDIFIERS (AERV)

These are self-contained appliances for removing moisture from the air.

DEHUMIDIFIERS, REFRIGERATION TYPE (AFFT)

GENERAL

This category covers portable, self-contained household, commercial and industrial dehumidifiers for use in removing moisture from the air. These dehumidifiers are designed for cord connection to single-phase, alternating-current circuits rated not more than 20 A, 125 V or 15 A, 208 or 230 V. They employ hermetic refrigerant motor-compressors and may also incorporate electric air heaters.

These dehumidifiers are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Air conditioners intended for spot cooling are covered under Air Conditioners, Special Purpose (ACVS).

Desiccant-type dehumidifiers with a heater are covered under Heaters, Specialty (KSOT).

Duct-mounted and permanently-connected dehumidifiers are covered under Heating and Cooling Equipment (LZFE).

See Air Conditioners, Room (ACOT).

ADDITIONAL INFORMATION

For additional information, see Air Conditioning Equipment (AAZY), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 474, "Dehumidifiers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Dehumidifier" for a household unit, or "Special Purpose Dehumidifier" for a commercial or industrial unit.

ELECTROSTATIC AIR CLEANERS (AGGZ)

GENERAL

This category covers duct type, room type (fixed), stationary and portable electrostatic air cleaners intended to remove airborne dust particles and the like.

This category also covers accessories intended for field installation on specific Listed electrostatic air cleaners. They are marked to indicate the associated Listed equipment by model, catalog number, part number, or other identifier as appropriate. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed. Information concerning field wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

Duct-type electrostatic air cleaners are intended for installation in and adjoining heating air conditioning and ventilating ducts in accordance with ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," and ANSI/NFPA 90B, "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems."

Electrostatic Air Cleaners (AGGZ)—Continued

Duct-type electrostatic air cleaners that may be used in exhaust systems of restaurant-type cooking equipment are so marked. These air cleaners are intended for installation in accordance with ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations." When installed in accordance with ANSI/NFPA 96, a Listed grease filter or extractor must be installed ahead of the air cleaner.

Room-type electrostatic air cleaners are self-contained units; the fixed types are intended for permanent installation. Portable or stationary types are cord connected.

Electrostatic air cleaners are intended for use where removal of dust and dirt from equipment is frequent enough to prevent excessive accumulation, which may result in flashover and fire damage. The instructions and warnings supplied with and on each piece of equipment should be carefully observed.

Electrostatic air cleaners have either Class 1 or Class 2 filters or adhesive-coated ionizer collector cells as follows:

Class 1 filters or adhesive-coated ionizer collector cells are those which, when clean, do not contribute fuel when attacked by flame and which emit only negligible amounts of smoke.

Class 2 filters or adhesive-coated ionizer collector cells are those which, when clean, burn moderately when attacked by flame or emit moderate amounts of smoke, or both.

Electrostatic air cleaners designed to be assembled together in the field from component parts are Listed by Report. Under this form of Listing, a Report is prepared that identifies and describes the complete assembly and includes instructions for proper installation. Copies of the report are available from the Listee.

REBUILT PRODUCTS

This category also covers electrostatic air cleaners that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt electrostatic air cleaners are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt electrostatic air cleaners are subject to the same requirements as new electrostatic air cleaners.

UNEVALUATED FACTORS

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Ionizers, fans employing ionizers, and ion generators are covered under Ion Generators (OETX).

Air filtering appliances utilizing mechanical filtration only or ultraviolet/germicidal lamps are covered under Air Filtering Appliances (AEDX).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners (EOGX).

Deodorizers intended to remove odors in specific applications by ozone generation are covered under Deodorizers, Ozone Generator Type (EOKL).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted (ABQK).

Power supplies intended for use in electrostatic air cleaning equipment are covered under Power Supplies, Electrostatic Air Cleaning Equipment (QQCH2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 867, "Electrostatic Air Cleaners."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrostatic Air Cleaner" or "Electrostatic Air Cleaner Accessory."

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

EVAPORATIVE COOLER RETROFIT PUMPS (AGIS)**USE AND INSTALLATION**

This category covers pumps intended to replace the original pumps provided in certified evaporative coolers and pumps meant as retrofit pumps providing additional functionality, such as the timed purging of evaporative cooler reservoirs. They do not require qualified service personnel for installation when the evaporative cooler is provided with a receptacle intended for cord-and-plug connection of the pump. For installations where the pump is not provided with a plug or where the plug must be cut off in

Evaporative Cooler Retrofit Pumps (AGIS)—Continued

order to wire the pump directly into the cooler circuitry, installation by qualified service personnel is specified. Pump construction, performance and installation instructions have been investigated to determine that, when properly installed, they comply with the requirements applied to original equipment pumps in these coolers.

PRODUCT MARKINGS

The pump packaging indicates the brand name, models or ratings of the evaporative coolers for which the pump is designed. Information concerning mounting of the pump, cord routing, maximum depth of water in the reservoir, and regular testing of any GFCI protecting the pump is either marked on the pump packaging or provided in detailed installation instructions accompanying each pump.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 778, "Motor-Operated Water Pumps," and ANSI/UL 507, "Electric Fans."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**EVAPORATIVE COOLER RETROFIT PUMP
FOR USE WITH SPECIFIED EVAPORATIVE COOLERS ONLY
Control No.****EVAPORATIVE COOLERS (AGNY)****USE AND INSTALLATION**

This category covers evaporative coolers of portable, window and stationary types for residential, commercial and industrial applications. Stationary types may have provision for connection to a duct system for air distribution. Models evaluated for outdoor installation are marked "Outdoor Use."

Motors used in stationary equipment intended for duct system connection are prevented from hazardous overheating by inherent overheating devices, by overcurrent protective devices, or by impedance of the motor windings.

Units permanently connected to the source of supply are intended to be installed in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code."

Evaporative media provided on stationary units that are intended for connection to a duct system in accordance with the International Mechanical Code, ANSI/NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems" or ANSI/NFPA 90B, "Standard for the Installation of Warm Air Heating and Air Conditioning Systems" are investigated in accordance with UL 900, "Air Filter Units." These products are also suitable for installation in accordance with the Uniform Mechanical Code.

RELATED PRODUCTS

Some stationary, duct-connected evaporative coolers are covered under Evaporative Coolers Evaluated in Accordance with the Uniform Mechanical Code (AGOS). Air coolers that include a motor compressor and refrigeration system are covered under Room Air Conditioners (ACOT). Products intended primarily for circulating moistened air are covered under Humidifiers (AHIV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 507, "Electric Fans."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Evaporative Cooler" or "Evaporative Air Cooler."

HUMIDIFIERS (AHIV)**GENERAL**

This category covers humidifiers intended for residential and commercial applications that circulate moistened air and generally incorporate an air-circulating fan with or without filters. Stationary types may have provision for connection to heating and ventilating ducts for air distribution.

Motors used in stationary equipment intended for duct connection are prevented from hazardous overheating by inherent overheating devices,

AIR CONDITIONING EQUIPMENT (AAZY)

Humidifiers (AHIV)—Continued

overcurrent protective devices, or inherent impedance. Impedance-protected motors do not generate smoke during locked-rotor testing.

RELATED PRODUCTS

Evaporative coolers are covered under Evaporative Coolers (AGNY) and Evaporative Coolers Certified in Accordance with the Uniform Mechanical Code (AGOS).

Vaporizers are covered under Vaporizers (YEIV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 998, "Humidifiers."

The basic standard used to investigate air filters provided on stationary-type humidifiers in this category is ANSI/UL 900, "Air Filter Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Humidifier."

AIR CONDITIONING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (AHSY)

AIR CONDITIONERS FOR USE IN HAZARDOUS LOCATIONS (AIDR)

Products covered in this section include central cooling air conditioners and room air conditioners.

Room Air Conditioners for Use in Hazardous Locations (AINU) USE AND INSTALLATION

This category covers room air conditioners for use in hazardous locations. They are encased assemblies designed as a unit and intended as the prime source of refrigeration and dehumidification, basically intended to serve a single room, zone or space. They are intended for installation in windows or through walls. These units employ alternating-current, hermetic refrigerant motor-compressors with factory-charged refrigeration systems and include a means for circulating air. The effect of in-wall units on the fire resistance rating of the wall has not been investigated.

Permanently connected units are intended to be connected only to a branch circuit protected by overcurrent devices which do not exceed the value marked on the data plate or attached wiring diagram. The marked branch circuit overcurrent device protection is the maximum for which the unit has been investigated. If time-delay fuses are required for starting, the unit is marked to this effect.

Cord-connected units that require a time-delay fuse or circuit breaker to permit motor restarting are marked to this effect.

Some room air conditioners may be designed for installation with the indoor side being located in a room purged and pressurized in accordance with ANSI/NFPA 496, "Standard for Purged and Pressurized Enclosures for Electrical Equipment," to become an unclassified (ordinary) location, and the outdoor side in a Division 2 hazardous (classified) location. Marking on the product and in the installation instructions identify units intended for this use.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 484, "Room Air Conditioners."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Room Air Conditioner for Use in Hazardous Locations."

AIR CONDITIONING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (AHSY)

59

AIR FILTERING APPLIANCES FOR USE IN HAZARDOUS LOCATIONS (AISX)

GENERAL

This category covers portable and stationary air-filtering appliances intended for window, floor, table and similar mounting. The appliances consist primarily of air-circulating fans and mechanical filters.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Filtering Appliance for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

AIR-SAMPLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (ALOA)

GENERAL

This category covers air-sampling pumps, sample-draw pumps and similar equipment.

RELATED PRODUCTS

Equipment investigated for use only in the hazardous (classified) locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Sampling Equipment for Use in Hazardous Locations" or "Air Sampling Pump for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

ALARM SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS (ALSY)

INTRUSION DETECTION UNITS FOR USE IN HAZARDOUS LOCATIONS (ARCX)

GENERAL

This category covers electronic units, including those which utilize rays (photoelectric), electromagnetic waves, ultrasonic radiation, or other electronic principles to signal intrusion or movement within mercantile premises or approaches to safes, stockrooms, etc., that may be used to form a complete protective system.

These units have been investigated for fire, electrical shock, and reliability of operation. The effect of radiation on radio communication or radio navigation has not been investigated.

The Federal Communications Commission should be consulted for regulations governing the use and operation of radiation devices.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 639, "Intrusion Detection Units."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

ALARM SYSTEM UNITS FOR USE IN HAZARDOUS LOCATIONS (ALSY)

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Intrusion Detection Unit," "Intrusion Detection Unit Power Supply" or "Intrusion Detection Unit Accessory."

The product name may be followed by "for Use in Hazardous Locations" or "(Associated Apparatus)."

ALTERNATORS, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (ARDK)

GENERAL

Electric Alternators for Use in Class I, Division 1, Class II, Division 1 and Class III Hazardous Locations

Electric Alternators for Class I, Division 2, and Class II, Division 2 Locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally-enclosed type. The Group designation is marked unless the alternator is acceptable for Groups A, B, C and D. The alternator is also marked with the operating temperature code designating the maximum internal or external surface temperature determined at rated amperes marked on the alternator, if the temperature is greater than 100 degrees C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically-sealed enclosure, constructed with current-interrupting contacts immersed in oil, located in a nonincendive circuit or located in a purged and pressurized enclosure.

For Class II, Division 2 Locations, the enclosure is of the totally enclosed type. The alternator is marked with the operating temperature or operating temperature code designating the maximum external temperature determined at rated amperes (as marked on the alternator), when operating in free air (not dust blanketed), if the external temperature is greater than 100 degrees C.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Alternator for Hazardous Locations."

AMUSEMENT AND GAMING MACHINES (ASMU)

GENERAL

This category covers self-contained commercial amusement and gaming machines.

The appliances are marked on or adjacent to the electrical rating plate with one of the following: "Suitable for Indoor Use Only," "Suitable for Protected Locations — See Installation Instructions" or "Suitable for Outdoor Use." Complete instructions appear on an appliance intended for use in a protected location, indicating the manufacturer's recommendations concerning the use or installation, or both, of any canopy, marquee, shelter, etc., that may be necessary for the protection of the appliance. The instructions may be located inside the appliance if they are accessible through the front door.

REBUILT PRODUCTS

This category also covers amusement and gaming machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt amusement and gaming machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt amusement and gaming machines are subject to the same requirements as new amusement and gaming machines.

UNEVALUATED FACTORS

The burglary and theft protection features of coin-operated machines have not been investigated unless specifically indicated in the individual Listings.

AMUSEMENT AND GAMING MACHINES (ASMU)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 22, "Amusement and Gaming Machines."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Amusement Machine," "Gaming Machine" or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

ANTENNA DISCHARGE UNITS (ASWA)

USE

This category covers antenna discharge units intended to minimize the effects of voltage surges on antenna transmission lines.

These products have not been investigated to determine their suitability as lightning protective devices.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 452, "Antenna-Discharge Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Antenna Discharge Unit," or other appropriate product name as shown in the individual Listings.

APPLIANCE CONTROLS (ATNZ)

GENERAL

This category covers controllers (single device or interconnected series of components) with one or more input power and possibly signal ports. Included are controllers with solid-state circuitry, and one or more output switching components to directly control all or a portion of household type appliances, such as portable luminaires, audio/video equipment, etc. These controllers typically respond directly or indirectly to sensors or remote control signals to affect operation or electronically store or process information by virtue of a memory system.

These controls are intended only for nonindustrial appliances.

RATINGS

Appliance controls are rated maximum 16 A and are intended to be installed on a 20 A maximum branch circuit. The voltage is limited according to the end-product standard. They are not intended for controlling motor-operated appliances unless specifically identified for such use, e.g., appliance controls designated for control of electric fans. They have been investigated for use in nominal 25°C environments, unless otherwise stated in the individual Listings.

PRODUCT MARKINGS

Controls typically have resistive or general use (power factor 0.75 – 0.80) loads. A controller may be specifically identified for other load types, e.g., "Suitable for ___ W lamp loads," or "Suitable for ___ hp electric fans," where the blank identifies the numerical value of the rating.

RELATED PRODUCTS

Devices intended to be part of a building control system are covered under Management Equipment, Energy (PAZX).

Devices that use light and/or motion (passive infrared)-sensitive switches are covered under Switches, Photoelectric (WJCT).

Devices intended for industrial applications are covered under Power Circuit and Motor-mounted Apparatus (NMTR).

Devices such as thermostats are covered under Temperature-indicating and Regulating Equipment (XAPX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 244A, "Solid-State Controls for Appliances." Controls for devices investigated to end-product standards, such as ANSI/UL 508, "Industrial Control Equipment," are identified in the individual Listings.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Appliance Control," or other appropriate product name as shown in the individual Listings.

APPLIANCE OUTLET CENTERS (AUJZ)

This category covers appliance outlet centers, which are factory-built assemblies incorporating pre-installed materials and equipment which, after installation, are usually concealed and may not be accessible for inspection at the installation site.

Materials, including the methods used for installation of electrical, mechanical and plumbing equipment incorporated in these assemblies by their manufacturer have been investigated for installation requirements in accordance with ANSI/NFPA 70, "National Electrical Code," NFPA's National Fire Codes, and model building, plumbing and mechanical codes.

Appliance outlet centers are intended for installation subject to approval by the Authority Having Jurisdiction.

Appliance outlet centers consist of one or more electrical outlets and may have one or more outlets of another type (i.e., gas, steam, water supply and drain) supported within a suitable enclosure. The enclosure itself may consist of individual components providing some compartmentalization and a single cover may be provided to enclose all compartments. They are intended for permanent indoor installation where more than one appliance may be used simultaneously. They are intended for connection to feeder circuits consistent with their marked ratings.

Components utilized in the assembly of appliance outlet centers are intended to be suitable for the use and are investigated to conform with the standard for safety which would be used if the component were to be submitted separately.

COMMERCIAL APPLIANCE OUTLET CENTERS (AUUZ)

USE AND INSTALLATION

This category covers appliance outlet centers, which consist of a group of outlets with or without suitable branch circuit overcurrent protective devices, branch circuit switching and/or timer provisions. This category also covers appliance outlet center enclosures intended for use with specific appliance outlet centers.

These products are not intended for use in residential dwellings.

Commercial appliance outlet centers may be provided as complete assemblies or as open-type designs intended to be mounted in specific enclosures. Devices that constitute an open-type assembly are marked to identify the specific commercial appliance outlet center enclosure into which they are intended to be installed. In addition, the enclosures are marked to indicate the specific commercial appliance outlet center(s) intended for use within the enclosure.

ADDITIONAL INFORMATION

For additional information, see Appliance Outlet Centers (AUJZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 891, "Dead-Front Switchboards."

These products are additionally investigated using ANSI/NFPA 70, "National Electrical Code" (NEC), to ensure compliance with the installation and use provisions of the NEC.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Appliance Outlet Center" or "Commercial Appliance Outlet Center Enclosure."

RESIDENTIAL APPLIANCE OUTLET CENTERS (AVGQ)

USE

This category covers appliance outlet centers intended for use in residential dwellings.

ADDITIONAL INFORMATION

For additional information, see Appliance Outlet Centers (AUJZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

Residential Appliance Outlet Centers (AVGQ)—Continued

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Appliance Outlet Center."

ARC-FAULT CIRCUIT INTERRUPTERS (AVYI)

USE

This category covers arc-fault circuit interrupters (AFCI) intended to mitigate the effects of arcing faults that may pose a risk of fire ignition under certain conditions if the arcing persists.

These devices have been investigated to determine their ability to recognize and react to arcing faults. They have also been investigated to determine resistance to unwanted tripping because of the presence of arcing that occurs in control and utilization equipment under normal operating conditions and to verify that operation is not unduly inhibited by the presence of loads and circuit characteristics that may mask or attenuate unwanted arcing.

PRODUCT MARKINGS

Arc-fault circuit interrupters are marked to identify the type of device to aid the user in determining the intended location in a circuit.

ARC-FAULT CIRCUIT INTERRUPTERS, BRANCH/FEEDER TYPE (AVZQ)

USE

This category covers arc-fault circuit interrupters intended to be installed at the origin of a branch circuit or feeder, such as at a panelboard, where they can function to de-energize the entire branch circuit when an arc fault is detected.

These devices are intended to provide protection of the branch-circuit wiring, feeder wiring, or both, against the unwanted effects of arcing. These devices also provide protection to cord sets and power-supply cords connected to receptacles as shown below.

These devices may be self-contained within an enclosure, separate devices intended to be mounted in an enclosure, or integrated as part of another device, such as a circuit breaker.

PROTECTION PROVIDED

The following branch-circuit diagram and arc-fault protection table illustrate the protection provided by a branch-feeder AFCI under various arc-fault scenarios.

Arc-fault Scenario	Protection Provided
Branch-circuit Wiring	
Parallel Arcing Detection	Y
Series Arcing Detection (With Ground)	Y
Series Arcing Detection Without Ground (#)	N

Cord Sets (Extension Cords), Power-supply Cords	
Parallel Arcing Detection	Y

Arc-fault Circuit Interrupters, Branch/Feeder Type (AVZQ)—Continued

Arc-fault Scenario Series Arcing Detection	Protection Provided N
---	--------------------------

Notes

- Y – Arc-fault protection provided
- N – Arc-fault protection not provided
- (#) Branch-circuit wiring systems without ground were permitted prior to the 1962 NEC
- Parallel arcing detection includes arcing line-to-line and line-to-ground

RATINGS

These devices are rated 15 or 20 A, 120 V or 120/240 V.

ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, "Arc-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Branch/Feeder Arc Fault Circuit Interrupter" (or "Branch/Feeder AFCI").

ARC-FAULT CIRCUIT INTERRUPTERS, COMBINATION TYPE (AWAH)

USE

This category covers arc-fault circuit interrupters that comply with the requirements for both branch/feeder-type AFCIs (see AVZQ) and outlet-circuit-type AFCIs (see AWCG). They are intended to provide protection of the branch-circuit wiring, feeder wiring, or both, and cord sets and power-supply cords connected to receptacles against the unwanted effects of arcing.

These devices may be self-contained with an enclosure, separate devices intended to be mounted in an enclosure or outlet box, or integrated as part of another device, such as a circuit breaker or outlet receptacle.

PROTECTION PROVIDED

The following branch-circuit diagram and arc-fault protection table illustrate the protection provided by a combination AFCI under various arc-fault scenarios.

Arc-fault Scenario Branch-circuit Wiring Parallel Arcing Detection Series Arcing Detection (With Ground) Series Arcing Detection Without Ground (#)	Protection Provided Y Y Y
---	------------------------------------

Cord Sets (Extension Cords),

Power-supply Cords Parallel Arcing Detection Series Arcing Detection	Y Y
--	--------

Notes

- Y – Arc-fault protection provided
- (#) – Branch-circuit wiring systems without ground were permitted prior to the 1962 NEC
- Parallel arcing detection includes arcing line-to-line and line-to-ground

Arc-fault Circuit Interrupters, Combination Type (AWAH)—Continued

- Combination AFCIs located at other than the origin of the branch circuit do not protect upstream branch-circuit wiring, cord sets or power-supply cords

RATINGS

These devices are rated 15 or 20 A, 120 V or 120/240 V.

ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, "Arc-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combination Arc Fault Circuit Interrupter" (or "Combination AFCI").

ARC-FAULT CIRCUIT INTERRUPTERS, CORD TYPE (AWAY)

USE

This category covers arc-fault circuit interrupters (AFCI) intended to be connected to a receptacle outlet.

These devices are intended to provide protection to the power-supply cord connected to it against the unwanted effects of arcing. The cord may be integral to the device. The device has no additional outlets.

RATINGS

These devices are rated 30 A maximum, 120 V or 120/240 V.

ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, "Arc-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Arc Fault Circuit Interrupter" (or "Cord AFCI").

ARC-FAULT CIRCUIT INTERRUPTERS, OUTLET BRANCH CIRCUIT TYPE (AWBZ)

USE AND INSTALLATION

This category covers arc-fault circuit interrupters that have been investigated to provide protection of the downstream branch-circuit wiring, cord sets and power-supply cords against the unwanted effects of arcing. These devices also provide protection to upstream branch-circuit wiring as shown below.

These devices have feed-through connections.

These devices are intended to be installed as the first outlet in a branch circuit.

PROTECTION PROVIDED

The following branch-circuit diagram and arc-fault protection table illustrate the protection provided by an outlet branch-circuit AFCI under various arc-fault scenarios.

ARC-FAULT CIRCUIT INTERRUPTERS (AVYI)

Arc-fault Circuit Interrupters, Outlet Branch Circuit Type (AWBZ)—Continued

Arc-fault Scenario	Protection Provided
Branch-circuit Wiring – First Leg	
Parallel Arcing Detection	N
Series Arcing Detection (With Ground)	Y
Series Arcing Detection Without Ground (#)	Y
Branch-circuit Wiring – Beyond First Leg	
Parallel Arcing Detection	Y
Series Arcing Detection (With Ground)	Y
Series Arcing Detection Without Ground (#)	Y
Cord Sets (Extension Cords), Power-supply Cords	
Parallel Arcing Detection	Y
Series Arcing Detection	Y

Notes

- Y - Arc-fault protection provided
- N - Arc-fault protection not provided
- (#) - Branch-circuit wiring systems without ground were permitted prior to the 1962 NEC
- Parallel arcing detection includes arcing line-to-line and line-to-ground

RATINGS

These devices are rated 15 or 20 A, 120 V.

ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1699A, "Outline of Investigation for Outlet Branch Circuit AFCIs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Branch Circuit Arc Fault Circuit Interrupter" (or "Outlet Branch Circuit AFCI").

ARC-FAULT CIRCUIT INTERRUPTERS, OUTLET CIRCUIT TYPE (AWCG)

USE AND INSTALLATION

This category covers arc-fault circuit interrupters intended to be installed at a branch circuit outlet, such as an outlet box.

These devices are intended to provide protection of cord sets and power-supply cords connected to it against the unwanted effects of arcing. These devices may provide feed-through protection of the cord sets and power-supply cords connected to downstream receptacles.

These devices may or may not have feed-through connections.

These devices may or may not have integral receptacles.

RATINGS

These devices are rated 15 or 20 A, 120 V.

ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, "Arc-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Circuit Arc Fault Circuit Interrupter" (or "Outlet Circuit AFCI").

ARC-FAULT CIRCUIT INTERRUPTERS, PORTABLE TYPE (AWDO)

USE

This category covers arc-fault circuit interrupters intended to be connected to a receptacle outlet. They are provided with one or more outlets.

These devices are intended to provide protection to connected cord sets and power-supply cords against the unwanted effects of arcing.

RATINGS

ARC-FAULT CIRCUIT INTERRUPTERS (AVYI)

63

Arc-fault Circuit Interrupters, Portable Type (AWDO)—Continued

These devices are rated 20 A maximum, 120 V.

ADDITIONAL INFORMATION

For additional information, see Arc-fault Circuit Interrupters (AVYI) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, "Arc-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Arc Fault Circuit Interrupter" (or "Portable AFCI").

ARCHITECTURAL AND FLOATING FOUNTAINS (AWEG)

USE AND INSTALLATION

This category covers electrical equipment systems intended for installation in accordance with Article 680 (Part V) and Article 682 of ANSI/NFPA 70, "National Electrical Code." Equipment may consist of pumps (including submersible pumps), lights, control panels, and timers. Equipment may also include wind sensors, light detectors, freeze prevention equipment, and the like. These systems may be submersible or intended for remote installation. Systems suitable for outdoor use are so marked.

RELATED PRODUCTS

Similar portable equipment is covered under Fountains, Small Decorative (IQRW).

Control panels for use with equipment intended for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls (WAWU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 778, "Motor-Operated Water Pumps," UL 676, "Underwater Lighting Fixtures," and UL 508A, "Industrial Control Panels."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Architectural Fountain," "Floating Fountain" or "Floating Fountain Equipment," or other appropriate product name as shown in the individual Listings.

ARMORED CABLE (AWEZ)

GENERAL

This category covers armored cable in sizes 14-1 AWG copper and 12-1 AWG aluminum or copper-clad aluminum and rated 600 V or less. Aluminum-armored cable is suitable for use in alternating current circuits only. Armored cable is for use in accordance with Article 320 of ANSI/NFPA 70, "National Electrical Code."

ACTH — Indicates armored cable rated 75°C employing conductors having thermoplastic insulation.

ACTHH — Indicates armored cable rated 90°C employing conductors having thermoplastic insulation.

ACHH — Indicates armored cable rated 90°C employing conductors having thermosetting insulation.

Armored cable connectors (box connectors) other than the direct bearing setscrew type are suitable for use on cable employing aluminum armor.

For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

PRODUCT MARKINGS

Armored cable complies with the Flame and Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables" and may be marked with the suffix "LS" and/or "For Use in Cable Trays."

Cable with aluminum armor is identified with the words "ALUMINUM ARMOR" on a marker tape and tag on coils.

Cable with copper-clad aluminum conductors is identified with the designation "AL (CU-CLAD)" or "Cu-Clad Al." on a tag, on the carton or reel. Cable with aluminum conductors is identified with the designation "AL" on a tag, on the carton or reel.

In addition, cable with compact-stranded copper conductors is identified with the designation "Compact Copper" or "CMPCT CU" following the conductor size and the words "Terminate with connectors identified for use with compact-stranded copper conductors" on a tag, on the carton or reel.

RELATED PRODUCTS

For fittings suitable as a grounding means, see Armored Cable Connectors (AWSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 4, "Armored Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel or the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Armored cable that contains copper or copper-clad aluminum conductors has the product name "Armored Cable"; armored cable that contains aluminum conductors has the product name "Armored Aluminum Cable." Armored cable that has aluminum armor has the product name "Aluminum Armored Cable."

ARMORED CABLE CONNECTORS, TYPE AC (AWSX)**GENERAL**

This category covers armored cable connectors suitable for use with armored cable (Type AC) for installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

Additional Fittings — Connectors covered under Metal-clad Cable Connectors, Type MC (PJOX) and Power and Control Tray Cable Connectors (QPOZ) are also suitable for use with armored cable when specifically indicated on the device or carton. Temporary wiring, such as flexible cable or cord, may be secured by the use of a connector suitable for use with flexible cord.

Grounding — Armored cable connectors (Type AC) are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC.

Size of Cable Used — Connectors of the 1/2 trade size, unless marked otherwise, are capable of holding 14–2 AWG armored cable and any larger size which it will accommodate.

Use with Aluminum Cable — Connectors other than direct-bearing set-screw type are suitable for use with aluminum-armored cable.

PRODUCT MARKINGS

Some connectors are also acceptable for use with flexible metal conduit, flexible cord, nonmetallic-sheathed cable, metal-clad (Type MC) cable, service-entrance cable, flexible nonmetallic tubing, or armored optical fiber cable as indicated on the device or carton. Connectors for use with nonmetallic-sheathed cable are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations.

ADDITIONAL INFORMATION

For additional information, see Armored Cable (AWEZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Armored Cable Connector."

ATTACHMENT PLUGS (AXGV)**GENERAL**

This category covers the following types of products:

Adapter — A device that adapts one blade or slot configuration to another (including a grounding adapter for a nongrounding receptacle), adapts a receptacle to a lampholder, or adapts a lampholder to a receptacle (also known as a separable attachment plug). (See EMDV for similar products.)

Appliance Coupler — A single-outlet female contact device to be wired on flexible cord as part of a detachable power-supply cord to be connected to a male inlet of an appliance.

Appliance or Flatiron Plug — An appliance coupler type of device having a slot configuration specified for use with heating or cooking appliances.

Attachment Plug — A male contact device for the temporary connection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.

Cord Connector — A female contact device to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection to an attachment plug or, as an appliance coupler, to an equipment inlet.

Male Inlet (Equipment Inlet, Motor Attachment Plug) — A male contact device to be mounted on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.

Nonseparable Attachment Plug — An adapter having a male screw shell and a pair of wire leads to be connected to utilization equipment.

Separable Attachment Plug — An adapter having a male screw shell and a slot configuration outlet.

Shore Power Inlet — A male inlet intended to provide power-supply connection to boats moored to a dock. Shore power inlets are also covered under Shore Power Inlets, Marine (UBXR).

Table Tap — A cord connector having more than one outlet and intended to rest on a horizontal surface while in use.

This category does not cover devices to be molded on flexible cord or wire and unassembled devices to be factory assembled on flexible cord or wire. Such devices are complete only after installation of the flexible cord or wire and they are judged as part of a complete assembly.

Ratings

These devices are rated 600 V or less, ac or dc, and 200 A or less. They may also be rated in horsepower as noted in the individual product categories.

Outlet devices rated 250 V are tested on circuits involving a nominal potential to ground of 125 V. Outlet devices having other voltage ratings are tested on circuits involving full-rated potential to ground, except for multiphase-rated devices, which are tested on circuits consistent with their voltage ratings, i.e., a 120/208 V, 3-phase, device is tested on a circuit involving 120 V to ground.

Terminals

The terminations of devices intended to be wired to flexible cord are based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). The ampacity of flexible cord and cable is based on Section 400.5, Tables 400.5(A) and 400.5(B). The conductors are sized as specified on the product or in the manufacturer's instructions provided with the device. The terminations are based on the use of 60°C flexible cord or cable.

The terminations of devices intended to be wired onto branch-circuit conductors are based upon the use of 60°C insulated conductors in circuits rated 100 A or less, and the use of 75°C insulated conductors in circuits rated more than 100 A, as specified in Table 310.16 of the NEC.

Grounding

Devices having a terminal identified by a green-colored finish, the words "green" or "ground," the letters "G" or "GR," or the grounding symbol are

grounding types. The blade, pin or contact number connected to this terminal is for equipment grounding only.

Enclosures

In general, devices having integral enclosures or installed as intended have been investigated for use indoors, in dry locations. All such Listed products provide a degree of protection against ordinary corrosion, accidental contact with live parts, and a limited amount of falling dirt. Some devices have been investigated for use in other operating environments when unmated and when mated with other devices in the same manufacturer's line of products. They are marked with one of the type designations 2 through 6, 12 and 13 indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). All outdoor types provide a degree of protection against rain, snow, and sleet. Outdoor types are also suitable for use indoors if they meet the environmental conditions present. A device that complies with the requirements for more than one type of enclosure may be marked with multiple designations. Complete use and mating information is provided in the installation instructions provided with each device.

RELATED PRODUCTS

This category does not cover pin-and-sleeve type devices; refer to Pin-and-Sleeve Type Plugs, Receptacles and Cable Connectors (QLGD).

ATTACHMENT PLUGS, FUSELESS (AXUT)**GENERAL**

ATTACHMENT PLUGS (AXGV)

Attachment Plugs, Fuseless (AXUT)—Continued

This category covers adapters, appliance couplers, appliance and flatiron plugs, attachment plugs, cord connectors, male inlets (equipment inlets, motor attachment plugs), nonseparable attachment plugs, separable attachment plugs, shore power inlets and table taps. These devices do not incorporate switches or overcurrent protection.

Devices for Use in Hospitals — Attachment plugs and cord connectors Listed for hospital use in other than hazardous locations in accordance with Article 517 of ANSI/NFPA 70, "National Electrical Code," are identified by (1) the marking "Hospital Only" (used to identify a specific grounding locking configuration rated 20 A, 125 V, used for the connection of mobile x-ray and similar equipment), or (2) the marking "Hospital Grade," and a green dot on the device. Male inlets may be identified only by the marking "Hospital Only." The identification is visible after installation on the flexible cord or, in the case of the male inlets, on the utilization equipment.

Federal Specification — Some Listed attachment plugs, cord connectors and male inlets in this category have been investigated for compliance with Federal Specification W-C-596, "General Specification for Electrical Power Connectors." Such devices are identified by a Listing Mark augmented by the capital letters "F" and "S," each in a wing on either side of the UL Mark. The manufacturer may also include the Federal Specification number "W-C-596F" or "W-C-596G," or the Federal Specification part number (which consists of the appropriate specification sheet and dash number described in the specification) on the device or on the smallest container in which the device is packaged.

Terminals — Terminals of appliance couplers, appliance and flatiron plugs, attachment plugs, cord connectors and table taps are intended for use with stranded copper conductors of the type used in flexible cord. Terminals of male inlets (motor attachment plugs) and shore-power inlets of the wire-binding screw, setscrew, or screw-actuated back-wired clamping types are suitable for use with both solid and stranded wire.

Horsepower Ratings — In addition to ampere and voltage ratings, standard ac horsepower ratings corresponding to the amp and voltage ratings assigned to specific attachment plugs not incorporating overcurrent protection or a switch are given in the table below. For a Design E motor rated more than 2 horsepower, it is necessary to use an attachment plug having a horsepower rating not less than 1.4 times the standard ac horsepower rating. The NEMA configuration designation is included for reference. Devices other than attachment plugs, and attachment plugs of configurations other than those indicated in the table, have horsepower ratings only if such ratings are marked on the device.

Horsepower Ratings for NEMA Configuration Attachment Plugs

Amps Rating	AC V Rating	No. of Phase	No. of Poles	No. of Wire	NEMA Dsg	HP Rating	
15	125	1	2	2	1-15, L1-15	1/2	
	125	1	2	3	5-15, L5-15	1/2	
	250	1	2	2	2-15	1-1/2#

L-L: Motor connected line-to-line

L-N: Motor connected line-to-neutral

Also suitable for 208 V motor applications at the indicated horsepower rating

For three-phase devices, the horsepower ratings indicated are for three-phase motor loads.

Refer to ANSI/NEMA WD6 (2002) for configurations of the NEMA designations.

ADDITIONAL INFORMATION

For additional information, see Attachment Plugs (AXGV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuseless Attachment Plug" or "Plug," or other appropriate name as shown in the individual Listings.

ATTACHMENT PLUGS WITH SWITCHES (AYIR)

GENERAL

This category covers appliance couplers, appliance plugs, attachment plugs, male inlets (equipment inlets, motor attachment plugs), and flatiron plugs incorporating switches.

RELATED PRODUCTS

See Snap Switches (WJQR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 498, "Attachment Plugs and Receptacles," and ANSI/UL 20, "General-Use Snap Switches," or ANSI/UL 1054, "Special-Use Switches."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol stamped or molded into the product and the Listing Mark on the smallest unit packaging is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Switch."

In lieu of the UL symbol stamped or molded into the product, "UNDERWRITERS LABORATORIES INC. LISTED" (or "UND. LAB. INC. LIST.") may be stamped or molded into the product. When marked as such, the Listing Mark shall appear on the smallest unit packaging.

PRODUCT CATEGORIES BY CATEGORY CODE

ATTACHMENT PLUGS WITH OVERLOAD PROTECTION (AYVZ)

USE

This category covers attachment plugs, separable and nonseparable attachment plugs, cord connectors, and male inlets designed to accommodate standard fuses, or provided with circuit breakers or equivalent overcurrent protection.

ADDITIONAL INFORMATION

For additional information, see Attachment Plugs (AXGV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Attachment Plug with Overload Protection," "Attachment Plug" or "Cord Connector," or other appropriate product name as shown in the individual Listings.

AUDIO AND RADIO EQUIPMENT, COMMERCIAL (AZCY)

COMMERCIAL AUDIO AND RADIO EQUIPMENT, SYSTEMS AND ACCESSORIES (AZJX)

This category includes power-operated audio and radio equipment and accessories rated 300 V or less and designed to meet the use requirements of commercial enterprises or establishments, churches, schools, theaters, factories and similar locations, and connected to supply circuits in accordance with ANSI/NFPA 70, "National Electrical Code."

Commercial audio and radio equipment includes amplifiers, preamplifier mixers, signal processors, etc. for general use; public address and centralized sound systems; intercommunication devices and systems; radio receivers, tuners and tuner/amplifiers; record turntables, sound masking systems, tape decks and power supplies intended for use with commercial sound systems; special effects units and integral amplifier/speakers, etc. that are intended for use by professional and semi-professional musicians.

This category also covers accessories for use with commercial audio and radio equipment such as audio modulated lights, audio level indicators, etc.

Products of the above types may also be Listed under Audio/Video Apparatus (AZSQ).

This category does not cover dictating or transcribing machines for office use.

This category does not cover musical instruments and accessories other than those noted above. For musical equipment not covered by this category refer to the category for "Musical Instruments".

Speakers and their accessories that have been investigated for mounting in air-handling spaces are specifically identified by markings on the product and in the individual Listings. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

Products intended to form part of any fire resistant barrier assembly can be found in the Fire Resistance Directory.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 813, "Commercial Audio Equipment". The requirements of UL 2043 "Fire Tests for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air Handling Spaces" are used to evaluate nonmetallic materials of products marked suitable for use in air handling spaces.

Equipment rack systems consist of an equipment rack and one or more audio or video components such as amplifiers, equalizers, VCRs and similar equipment. Each component installed in the rack that does not bear the UL Mark is identified by type and model number on a tag that is permanently attached to the rack. If all components installed in the rack bear the UL Listing Mark, the tag is not required.

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Commercial Audio System," "Commercial Audio Equipment," "Commercial Sound Equipment," "Commercial Audio Product," "Commercial Radio," or other appropriate product name (prefixed by "Commercial") as shown in the individual Listings.

AUDIO/VIDEO APPARATUS (AZSQ)

GENERAL

This category covers the following apparatus – rated 300 V or less and designed for household use, commercial use in churches, schools, and institutions and/or in other public places – that is to be connected to the supply mains either directly or indirectly:

(1) Apparatus and accessories that transmit or receive signals from an antenna. This includes apparatus that produces or reproduces information that is analog or digital in nature.

(2) Audio apparatus and accessories that reproduce or process audio signals, including amateur radios, amplifiers, apparatus for the visually impaired and the physically handicapped, disc players, head demagnetizers, intercommunicating devices and systems, preamplifier mixers, preamplifiers, public address and centralized sound systems, radio clocks, radio-clock-telephones, radio receivers, signal processors for general use, sound masking systems, transceivers, tuners, and tuner-amplifiers.

(3) Video apparatus that receives signals from an antenna, through a CATV/MATV cable system, from a video-recorded medium, or from image producing units, such as antenna amplifiers, antenna-positioning apparatus, cable (CATV) television converters, cable television descramblers, master antenna amplifiers, microwave or satellite receivers, school televisions, television monitors, television receivers, television tuners, video cameras, video switchers and encoders, video tape recorders, and video-amplification, -processing, -receiving, -recording, and -reproducing apparatus.

(4) Motor-driven apparatus that comprises one or more of the above-mentioned apparatus, or can be used only in combination with one or more of them including phonographs, radio-phonographs, tape players and recorders that utilize records, tape, or wire, record changers, television/radio-phonographs, television/video tape recorders, turntables, and similar apparatus. Commercial apparatus has complete reproduction facilities including record turntable, and/or tape deck, amplifier and speaker. Unless specifically noted otherwise in the individual Listings, these units are for indoor use only.

(5) Other apparatus obviously provided to be used in combination with the above-mentioned apparatus, such as cable-connected remote control devices, power supplies for use with commercial sound systems, special effects units and integral amplifier-speakers that are intended for use by professional and semiprofessional musicians.

(6) Electronic accessories, wherein the accessories are separate, but are used in addition to or as a supplement to the basic apparatus, such as audio-modulated lights, audio-level indicators, character generators, CRT degaussers, digital processors, editing controllers, tape erasers, tape rewinders.

(7) Portable audio or video apparatus that is intended for use with a vehicle, marine, or any other battery circuit as the power supply means.

(8) Battery eliminators, including direct-plug-in adapters and other types of power supplies intended for use with apparatus covered in this category.

(9) Carts, stands and similar apparatus marked for use with specific audio and video apparatus.

ACCESSORIES

Field-installed accessories to Listed equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either specific or generic Listed equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers audio and video apparatus that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt audio and video apparatus is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt audio and video apparatus is subject to the same requirements as new audio and video apparatus.

RELATED PRODUCTS

Television and video equipment intended for use in health care facilities is investigated to UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial and Similar General Use," or ANSI/UL 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements," and is covered under Television/Video Equipment for Use in Health Care Facilities (KFCV).

Musical instruments and their accessories are investigated to UL 6500 or ANSI/UL 60065 and are covered under Musical Instruments (PWHZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial and Similar General Use," or ANSI/UL 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements."

Products investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22, (C) of the National Electrical Code," or "Suitable for Use in Air-Handling Spaces." These products have been additionally investigated to

UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Products that bear the marking are suitable for installation in accordance with Article 300 of ANSI/NFPA 70, "National Electrical Code," Chapter 4 of ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

Carts and similar apparatus having a top load surface that are more than one meter above the floor, and that are intended for use in schools, institutions, hospitals, or similar locations where children may move them, also comply with the applicable requirements in ANSI/UL 1667, "Tall Institutional Carts for Audio-, Video-, and Television-Type Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Audio/Video Apparatus," "Audio Equipment," "Audio Product," "Audio System," "Commercial Audio Equipment," "Commercial Audio Product," "Commercial Audio System," "Musical Instrument," "Radio Receiver," "Television Equipment," "Television Receiver," "Video Equipment," "Video Product" or "Video System," or the name of the specific type of product as shown in the individual Listings, or combinations of the product identities where required.

The category identifier for field-installed accessories includes the word "Accessory."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

Equipment rack systems consist of an equipment rack and one or more audio or video components such as amplifiers, equalizers, VCRs and similar equipment. Each component installed in the rack that does not bear the UL Mark is identified by type and model number on a tag that is permanently attached to the rack. If all components installed in the rack bear the UL Listing Mark, the tag is not required.

AUDIO AND VIDEO EQUIPMENT (AZUJ) EQUIPMENT TYPES

This category covers:

- Audio products and accessories** intended for household use and involved with the reproduction or processing of audio signals such as amateur radio products, amplifiers, disc players, intercommunicating devices, radio-phonographs, radio receivers, radio-clocks, record players, tape recorders, tape players, transceivers, tuners, tuner-amplifiers, and similar products.
- Video products** intended for household or commercial use that receive signals off the air from a satellite or microwave antenna, through a CATV/MATV cable system, from a video-recorded medium, or from image producing units. Examples of such products are video tape recorders, video-receiving, -processing, -recording, -reproducing, and -amplification products, antenna amplifiers, antenna positioning equipment, cable television (CATV) converters, microwave or satellite receivers, television tuners, television cameras, television receivers and monitors, and similar products. These products have not been evaluated for security surveillance protection; see "Related Equipment" below.
- Auxiliary products and accessories** intended for use with audio or video products wherein the auxiliary and accessory products are separate and do not perform the desired function, but are used in addition to or as a supplement to products according to items (1) and (2). Examples of such products are character generators, digital processors, editing controllers, video switches and encoders, CRT degaussers, video tape rewinders, head demagnetizers, tape erasers, separately enclosed nonpowered loudspeakers, and similar products.
- Portable audio or video products** of the types described in items (1)–(3) intended for use with a vehicular, marine, or any other battery circuit as the power supply means.
- Carts and stands** and similar structures marked for use with specific audio and video products.
- Audio and video equipment** rebuilt by the original manufacturer or any other party that has the necessary facilities, technical knowledge, and skills. Rebuilt audio and video equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt audio and video equipment is subject to the same requirements as new audio and video equipment.

Products of the above types may also be Listed under Audio/Video Apparatus (AZSQ).

RELATED EQUIPMENT

Commercial audio products are covered under Commercial Audio and Radio Equipment, Systems and Accessories (AZJX) or Commercial Phonographs, Tape Playing and Recording Appliances and Accessories (AZQW).

Household, commercial, and professional use carts, stands, shelves and similar structures not identified for use with specific audio or video products are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV).

Carts and similar structures, not identified for use with specific audio or video products, having a top load surface that is more than 1 meter (39.37 in.) above the floor, and that are intended for use in schools, institutions, hospitals or like locations where children are likely to move them or may be asked to move them are covered under Carts, Tall Institutional (CZWK).

Video products intended for entertainment purposes in ordinary locations of health care facilities are covered under Television/Video Equipment for Use in Health Care Facilities (KFCV).

Professional audio and video equipment is covered under Video and Audio Equipment, Professional (ZCZY).

Battery chargers and power supplies, portable or for permanent installation and not packaged with or specifically referenced in literature packaged with an audio or video product are covered under the respective categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1492, "Audio-Video Products and Accessories."

Carts and similar structures having a top load surface that is more than 1 meter (39.37 in.) above the floor, and that are intended for use in schools, institutions, hospitals or similar locations where children may move them, also comply with the applicable requirements of UL 1667, "Tall Institutional Carts for Audio-, Video-, and Television-Type Equipment."

Circuits in audio and video products intended to connect directly to a telecommunication network also comply with the applicable requirements of UL 1459, "Telephone Equipment."

Separately enclosed nonpowered loudspeakers, not intended for connection to a specific audio amplifying source, comply with the requirements in the Electronic Industries Association (EIA) Interim Standard IS-33, "Recommended Loudspeaker Safety Practices — An Industry Guideline", dated May 1987.

Audio or video products intended for use by children also comply with the applicable requirements in UL 696, "Electric Toys."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Audio Equipment," "Audio Product," "Audio System," "Radio Receiver," "Television Equipment," "Television Receiver," "Video Equipment," "Video Product," "Video System," or other appropriate product name as shown in the individual Listings, or combinations of the preceding identities where required.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

AUDIO AND VIDEO EQUIPMENT CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (AZVG)

USE AND INSTALLATION

This category covers retrofit devices or kits consisting of parts and/or subassemblies intended for field installation by qualified service personnel in UL Listed commercial audio and video equipment that involves modifying, revising, or replacing the circuitry internal to the Listed equipment. These products have been investigated to determine that, when installed in accordance with the manufacturer's installation instructions, they do not adversely affect the operation of the specified equipment.

The retrofit kits are limited in the amount of field revision that will be performed to no more than 50% revision to or replacement of the Listed product circuitry. The parts that form the enclosure of the Listed product may be modified in the field, to fulfill the installation of the kit, but not replaced. Installation instructions are provided with each kit and include information identifying the specific equipment into which the kit may be installed. The instructions include a statement indicating that, upon completion of the retrofit, a 1000 V AC or DC Dielectric Strength test is to be performed between specified points.

RELATED EQUIPMENT

See Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Audio and Video Equipment Classified for Use in Specified Equipment (AZVG)—Continued

REQUIREMENTS

The basic standard used to investigate the retrofit kits in this category and their combination with the specified end-use product is UL 1492, "Audio-Video Products and Accessories," or UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT KIT FOR INSTALLATION IN SPECIFIED [identification of equipment]
IDENTIFIED IN THE MANUFACTURER'S INSTALLATION INSTRUCTIONS
Control No.

The Classification Mark appears on the largest part of the kit assembly that can be readily assembled by an installer on site. Each major part of the kit is identified by appropriate marking.

BANK EQUIPMENT (BALT)

GENERAL

This category covers bank equipment, including currency dispensers, depositories, motor-operated vault doors, remote tellers' systems, tellers' fixtures and similar devices. They have been investigated for conformity to the installation and use provisions of ANSI/NFPA 70, "National Electrical Code." These products have been Classified as to electrical fire, shock and casualty hazards only.

UNEVALUATED FACTORS

The burglary and theft protection features of this equipment have not been investigated. Vault doors have not been investigated for the protection of openings in walls against fire or for the protection of records stored in the vault.

RELATED EQUIPMENT

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems (TPEU).

Currency-handling equipment not for exclusive use in banks may be covered under Information Technology Equipment (NWGQ). The performance and functional characteristics of this equipment have not been investigated.

Electrically-operated control mechanisms that receive coins, currency, credit cards, debit cards or tokens to select prices, accumulate credits, store coins or currency, give change, or initiate a vend cycle for an appliance, or combinations of these functions, are covered under Coin and Currency Changers and Actuators (DUCU).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

BANK EQUIPMENT

AS TO ELECTRICAL FIRE, SHOCK, AND CASUALTY HAZARDS ONLY
Control No.

LUBRICANT-DISPENSING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (BAYZ)

GENERAL

This category covers equipment intended for dispensing lubricants, such as lubricating oils and greases.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

LUBRICANT-DISPENSING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (BAYZ)

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lubricant Dispensing Equipment for Hazardous Locations" or "Lubricant Dispenser for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

BATTERY CHARGERS FOR ENGINE-DRIVEN EMERGENCY AND STANDBY POWER SYSTEM GENERATORS (BBHH)

GENERAL

This category covers battery chargers for automatically controlling and maintaining the charge on batteries used to start internal combustion engines driving emergency and standby power system generators. The equipment consists of rectifying stacks, transformers, controlling relays, switches and meters.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1236, "Battery Chargers for Charging Engine-Starter Batteries," and the applicable requirements of NFPA 110, "Standard for Emergency and Standby Power Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Battery Charger for Use with Emergency Generators" or other appropriate product name as shown in the individual Listings.

BOAT CABLE (BDFX)

GENERAL

This category covers boat cable, which consists of a single insulated conductor without a jacket or two or more insulated conductors with or without an overall nonmetallic jacket, and which is suitable for use in marine pleasure crafts. Boat cable is rated 600 V or less, 60°C (122°F) or 75°C (167°F) wet, 60 to 200°C dry locations and, for cable so marked, 60°C (140°F) and lower temperatures where exposed to oil. The cable employs stranded copper conductors in a size range of 18 to 4/0 AWG inclusive for multiple-conductors, 16 to 4/0 AWG inclusive for single conductors.

Ampacities shall be in accordance with United States Coast Guard Regulations Title 33, Chapter I Parts 183.430 and 183.435 of the CFR.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1426, "Electrical Cables for Boats."

Cable rated 600 V is investigated to UL 1426. Cable rated 50 V is investigated to SAE J1127, J1128, or J378b.

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Boat Cable."

BOILERS, ELECTRIC (BDJS)

GENERAL

This category covers electrically heated steam and hot water boilers that are within the scope of ASME Boiler and Pressure Vessel Codes, Volume I (Power Boilers) and Volume IV (Heating Boilers). This category may also include water heaters if, based on water temperature, input rating, or water tank capacity, they fall under the scope of the above ASME codes.

BOILERS, ELECTRIC (BDJS)

The pressure vessels of these appliances are constructed and stamped in accordance with the applicable section of the ASME Boiler and Pressure Vessel Code. The boilers are equipped with necessary temperature- or pressure-regulating and limit controls and with the appropriate ASME-rated pressure relief devices, and are marked with the appropriate ASME symbol.

INSTALLATION

Each boiler is provided with a marking that indicates the floor material (combustible or noncombustible) on which the boiler may be mounted and the necessary clearances from all other surfaces of the boiler to combustible materials.

The minimum acceptable clearances in inches between the boiler surfaces and adjacent combustible surfaces, the type of flooring required for mounting the boiler and the proper installation in an alcove or closet are indicated on the published printed cards by appropriate symbols and dimensions. The clearances so designated are the minimum required to avoid overheating; additional clearances may be required for accessibility. Each clearance requirement is indicated on the published printed cards by appropriate symbols and dimensions.

A boiler installation is indicated as follows:

Installation Symbols and Abbreviations

Descriptions of symbols and abbreviations applicable to the installation of electric boilers are as follows:

- A – Clearance above top of boiler
- B – From front of boiler. Prefix “C” to numeral indicates suitability for closet or alcove installations; prefix “A” indicates suitability for alcove installation only
- D – From back of boiler
- E_L – From left side of boiler
- E_R – From right side of boiler
- F – Indicates type of flooring: NC = Noncombustible, C = Combustible; numeral indicates minimum clearance below suspended units to combustible floor
- G – Total minimum free area, in square inches, of closet ventilating openings

RELATED PRODUCTS

Water heaters for potable water limited to a maximum water temperature of 99°C (210°F) are covered under the various subcategories of the category Water Heaters (KSAV). Other hot water and steam generating equipment employing construction outside the scope of the ASME Boiler and Pressure Vessel Code are covered under the Heaters and Heating Equipment (KKBV) subcategories of Industrial and Laboratory (KQLR); Cooking Appliances, Commercial (KNGT) and Household (KNUR); and Heaters, Miscellaneous (KSOT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 834, “Heating, Water Supply, and Power Boilers – Electric.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electric Boiler,” or other appropriate product name as shown in the individual Listings.

BOXES, ENCLOSURES, HANDHOLES AND VAULTS, UNDERGROUND, UTILITY SPECIFICATION (BGHL)

GENERAL

This category covers boxes, enclosures, handholes, vaults, and the associated covers for underground utility company installations and similar uses. These products are intended for installation as specified by the Authority Having Jurisdiction, and provide a level of protection with respect to un-

BOXES, ENCLOSURES, HANDHOLES AND VAULTS, UNDERGROUND, UTILITY SPECIFICATION (BGHL)

tentional mechanical loading only. They have not been investigated for protection against environmental conditions.

The Vertical Design Load of the system (box, enclosure, handhole or vault in combination with a cover) is equal to the lowest Vertical Design Load of either component. The Lateral Design Load is equal to that of the box, enclosure, handhole or vault.

PRODUCT MARKINGS

Boxes, enclosures, handholes and vaults are marked with a Vertical Design Load and a Lateral Design Load. Covers for use with these boxes, enclosures, handholes and vaults are marked with a Vertical Design Load only. Boxes, enclosures, handholes and vaults are marked to identify the covers with which they may be used. Covers are also marked to identify the boxes, enclosures, handholes and/or vaults for which they are suitable. Design Load markings may be in the form of a Tier rating as shown below:

Tier Level	Application	Vertical Design Load, lbs	Lateral Design Load, lbs/sq ft
5	Sidewalk applications with an additional factor for occasional nondeliberate vehicular traffic	5000	600
8	Sidewalk applications with an additional factor for nondeliberate vehicular traffic	8000	600
15	Driveway, parking lot and off-roadway applications subject to occasional nondeliberate heavy vehicular traffic	15,000	800

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

These products are investigated in accordance with the Society of Cable Telecommunications Engineers Standard ANSI/SCTE 77-(issue date), “Specification for Underground Enclosure Integrity,” the provisions of paragraphs 5.2.3 and 5.2.4 of Western Underground Committee Guide 3.6-(issue date), “Nonconcrete Enclosures,” and additional utility specifications as noted in the individual Listings and marked on the products.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, one of the following product names: “Underground Box,” “Underground Enclosure,” “Underground Handhole,” “Underground Vault,” “Cover for Underground _____” (where the blank is filled in with “Box,” “Enclosure,” “Handhole” or “Vault” as appropriate), or other appropriate product name as shown in the individual Listings, and the statement “Investigated in Accordance with ANSI/SCTE 77-(issue date) and the Western Underground Committee Guide 3.6-(issue date).” Also, when investigated to additional specifications, the organization name and specification, such as “XYZ Phone Company Specification 123ABC-(issue date),” is marked on the product.

BOXES, JUNCTION AND PULL (BGUZ)

GENERAL

This category covers sheet-metal boxes, cast-metal boxes, and nonmetallic boxes. These boxes are provided with a cover secured by fasteners other than hinges. All boxes in this category have a volume of more than 100 cu in. (1640 cm³). These boxes are intended for installation in accordance with Article 314 of ANSI/NFPA 70, “National Electrical Code” (NEC).

ENVIRONMENTAL RATINGS AND CONDITIONS

Each junction and pull box is marked with one or more of the following Enclosure Type ratings for which it was investigated: Type 1, 2, 3, 3R, 3S,

PRODUCT CATEGORIES BY CATEGORY CODE

4, 4X, 5, 6, 6P, 12, 12K or 13. The intended uses for each Enclosure Type are as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

PVC junction and pull boxes are suitable for use with PVC rigid nonmetallic conduit. Such boxes are inherently resistant to atmospheres containing common industrial corrosive agents and will also withstand vapors or mists of caustics, pickling acids, plating baths, hydrofluoric and chromic acids.

Boxes marked as Type 2 or 3R enclosures may be marked to indicate the intended mounting orientation, or the location where electrical parts are intended to be installed, or both, where necessary to maintain the designated environmental rating.

Boxes marked as Type 3, 3S, 4, 4X, 6, 6P, 12, 12K or 13 have integral mounting means external to the enclosure cavity or may have openings into the enclosure cavity for attachment of separate mounting means supplied with the enclosure or available as a kit referenced from enclosure markings.

CONDUIT CONNECTIONS

Cast-metal boxes suitable for field drilling and tapping of holes for conduit connections and mounting are marked to indicate the location and the trade sizes of the openings either on the box or on the packaging carton.

USE IN CONCRETE OR CINDER FILL

Cast-aluminum boxes suitable for use in concrete or cinder fill are marked to indicate this fact either on the box or on the packaging carton. These boxes may not be supplied with mounting means.

ELECTRICAL EQUIPMENT

Some boxes are intended for the installation of specific kinds of equipment; however, this category does not cover any electrical material or fittings contained in the box.

GROUNDING PROVISIONS

Metal boxes are intended to receive one of the equipment grounding conductors specified in Section 250.118 of the NEC and are provided with either a factory-supplied equipment grounding conductor terminal or instructions to obtain equipment grounding conductor terminal kit(s) available from the manufacturer, or are marked to indicate the boxes are intended to be grounded by metal raceways or metallic cable sheaths.

RELATED PRODUCTS

Boxes intended to accommodate metering transformers are covered under Metering Transformer Cabinets (PJXS).

Boxes intended for electric meter sockets are covered under Meter Sockets (PJYZ).

Boxes provided with a door are covered under Cabinets and Cutout Boxes (CYIV).

Enclosures investigated for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)," are covered under Degrees of Protection by Enclosures Classified in Accordance with IEC Publications (EOFI).

Enclosures intended for use with industrial control panels are covered under Industrial Control Panels (NITW).

Boxes having a volume of 100 cu in. or less are covered under Metallic Outlet Boxes (QCIT) or Nonmetallic Outlet Boxes (QCMZ).

Boxes intended for use with swimming pool luminaires are covered under Junction Boxes (WCEJ).

Boxes intended for use aboard marine vessels are covered under Boxes, Junction and Pull, Marine (QCUP).

Boxes for use in hazardous (classified) locations are covered under Boxes, Junction and Pull for Use in Class I, Zone Classified Hazardous Locations (BGYM).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 50, "Enclosures for Electrical Equipment."

UL MARK

The Listing Mark on the product or the UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Junction and Pull Box," "Junction Box," "Pull Box," "J&P," or other appropriate product name as shown in the individual Listings.

BOXES, JUNCTION AND PULL FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (BGYM)

USE AND INSTALLATION

This category covers sheet-metal boxes, cast-metal boxes, and nonmetallic boxes intended for making wiring connections only.

All boxes in this category are for use with threaded rigid conduit or steel intermediate metal conduit, or other approved wiring methods in accordance with Section 505.15 of ANSI/NFPA 70, "National Electrical Code."

BOXES, JUNCTION AND PULL FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (BGYM)

Boxes identified with an enclosure type designation are intended for use as indicated in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

Cast-metal boxes suitable for field drilling and tapping of holes for conduit connections and mounting are marked to indicate the location and the trade sizes of the openings either on the box or on the packaging carton.

Cast-aluminum boxes suitable for use in concrete or cinder fill are marked to indicate this fact either on the box or on the packaging carton. Such boxes are protected with asphalt-base paint or the equivalent.

Where field installation of certain kinds of equipment is acceptable, which may include terminals, jumpers, busbars, conduit fittings, etc., the installation instructions provided with the product will specify the type, number and mounting arrangements for the equipment to be installed.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 50, "Enclosures for Electrical Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Junction and Pull Box for Hazardous Locations," "Junction Box for Hazardous Locations" or "Pull Box for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

BRAKES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (BHIX)

GENERAL

This category covers brakes intended primarily for holding purposes, but may be used for stopping light-inertia loads.

This category includes two types of electric brakes. One type is intended to be attached directly to a Listed motor at the factory of the motor manufacturer in accordance with instructions provided by the brake manufacturer. The other type is provided with a mounting bracket and is coupled to the motor.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the brake is acceptable for Groups A, B, C and D. The brake is also marked with the operating temperature code designating the maximum internal or external surface temperature determined at rated full-load torque marked on the brake, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current-interrupting contacts immersed in oil, located in a nonincendive circuit or located in a purged and pressurized enclosure. If the brake is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor to which the brake is coupled is deenergized, and vice versa.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The brake is marked with the operating temperature or operating temperature code designating the maximum full load external temperature determined at rated full-load torque (as marked on the brake), when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

The Listing Mark on a brake applies to the brake only, not to driving equipment, such as a motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations," or the requirements contained in UL Subject 1836, "Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

BRAKES, ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (BHIX)

together with the word "LISTED," a control number, and the product name "Electric Brake for Hazardous Locations."

BUILDING MATERIALS (BHWV)

DISCRETE PRODUCTS INSTALLED IN AIR-HANDLING SPACES (BHZF)

GENERAL

This category covers products installed in air-handling spaces (plenums) as defined in Article 300 of ANSI/NFPA 70, "National Electrical Code," Chapter 4 of ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

The test provides data with regard to peak rate of heat release, maximum peak normalized optical density and maximum average normalized optical density during fire exposure of the Classified materials.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME+]

AS TO HEAT RELEASE RATE AND SMOKE OPTICAL DENSITY ONLY Control No.

+ Or other appropriate product description as shown in the individual Classifications

FIRE RESISTANCE RATINGS (BXRH)

Fire resistance ratings are included for:

1. Assemblies, such as beams, floors, roofs, columns, and walls and partitions. These fire resistance designs provide the detailed construction of the assemblies and the components used.
2. Systems, such as construction joint systems, through-penetration fire-stop systems, electrical circuit protective systems and duct assemblies. These designs provide the detailed construction of the systems and the components used.
3. Opening protectives, such as dampers, fire doors, glazing and related equipment. Opening protectives are used to protect openings in fire resistance rated assemblies.

These materials are intended for use only in specific assembly or system designs as described in the general Guide Information for each product category and individual Listings, except for opening protectives. Opening protectives have been investigated for use as described in the instructions and markings provided with the opening protectives. The use of the materials and opening protectives in conditions other than described in the instructions, markings and the general Guide Information for the applicable product category has not been investigated by UL.

INVESTIGATION REQUIREMENTS AND STANDARDS

The scope of product sizes and ratings appearing in the general Guide Information for some product categories is intended to indicate the current range of Listed products, however, it is not necessarily indicative of limitations for those Listed products.

The standards used to investigate products are identified in the general Guide Information for each product category. There may not always be a published standard for investigating a product to determine its acceptability for Listing or Classification. If no applicable standard is available, UL will exercise its judgment in the selection of applicable requirements from related standards and other sources to develop the requirements to cover uses and conditions for which specific requirements did not previously exist.

Products, equipment and construction materials certified by UL in accordance with international or regional standards only (e.g., products Classified to an IEC or ISO Standard) are intended for distribution, installation and use in areas of the world where the specified standards have been adopted and are in effect as national or regional standards.

INSTALLATION REQUIREMENTS

The limitations for the equipment as specified in the general Guide Information for each product category such as voltage and temperature limits, markings, special descriptions and installation provisions need to be noted prior to installation and use.

FIRE RESISTANCE RATINGS (BXRH)

71

Equipment has been investigated with reference to risks to life and property and for potential conformity to the installation and use provisions of the applicable installation codes and standards of the National Fire Protection Association (NFPA), and applicable model codes identified in the general Guide Information for each product category.

Some products are certified for uses not within the scope of nationally recognized installation codes and standards. Such products are investigated for the specifications or use conditions indicated in the general Guide Information for each product category.

These products are intended for installation subject to approval by the Authority Having Jurisdiction. Authorities Having Jurisdiction should be consulted before installation.

INSTRUCTIONS AND PRODUCT MARKINGS

These products are intended to be installed in accordance with the installation instructions provided with the product. It is critical that the cautionary statements and installation and operating instructions on the product and in accompanying literature be followed.

FIELD MODIFICATIONS

The UL Mark applies to the product as it is originally manufactured when shipped from the factory. Authorized use of the UL Mark is the manufacturer's declaration that the product was originally manufactured in accordance with the applicable requirements. UL does not know what the effect of a modification may have on the safety of the product or the continued validity of the UL certification mark unless the field modifications have been specifically investigated by UL. Unless UL investigates a modified product, UL cannot indicate that the product continues to meet UL's safety requirements.

The only exception for a field modification authorized by UL is when the product has specific replacement markings. For example, a switchboard may have specific grounding kits added in the field. The switchboard is marked with a list of specific kit numbers that have been investigated for use in that particular switchboard. Only grounding kits that are included on the product have been investigated for use in that product.

TECHNICAL SERVICE

Fire resistance assemblies and products are developed by the design submitter and have been investigated by UL for compliance with applicable requirements. The published information cannot always address every construction nuance encountered in the field.

Design Modifications

Careful consideration needs to be given to alterations or modifications of the fire resistance assemblies.

When field issues arise, it is recommended the first contact for assistance be the technical service staff provided by the product manufacturer noted for the design. Users of fire resistance assemblies are advised to consult the general Guide Information for each product category and each group of assemblies. The Guide Information includes specifics concerning alternate materials and alternate methods of construction.

Contacting UL

UL provides assistance to users of fire resistance assemblies and products, which includes clarification of the published information.

UL also provides a service to investigate modifications to the fire resistance assemblies when requested by the design submitter or by an end user. Requests for clarification should describe the change and include drawings, if necessary.

Requests for clarifications or investigations can be made by contacting UL at:

- Phone: +1 847-272-8800 Ext. 40057
- Fax: +1 847-574-4017
- E-mail: nbk.architectural.services@us.ul.com
- or
- UL's website: www.ul.com

FIRE RESISTANCE RATINGS - ANSI/UL 263 (BXUV)

Design Information Section

I. INTRODUCTION

This category covers fire-rating Classifications based upon the test method and acceptance criteria in ANSI/UL 263 (ASTM E119 and NFPA 251), "Fire Tests of Building Construction and Materials." The ratings are expressed in hours and are applicable to floor-ceilings, roof-ceilings, beams, columns, walls and partitions.

The average furnace temperature from which these ratings are derived is 1000°F at 5 min., 1400°F at 15 min., 1550°F at 30 min., 1700°F at 60 min., 1850°F at 120 min., 1925°F at 180 min. and 2000°F at 240 min.

When a test assembly complies with the acceptance criteria, a detailed description of the assembly, its performance in the fire test and other pertinent details such as specification of materials, Classification coverage and alternate assembly details are included in a Report for the test sponsor. Sponsors may provide copies of the complete Test Report upon request. The Report also contains a summary of important features of the

rated assembly. These summaries are also published in this Directory. Variations from the published specifications should be considered as not being investigated by UL.

Miscellaneous (Direct-applied Protection) — Various types of fire-resistant coating materials, including intumescent mastic and subliming coatings.

NUMBERING SYSTEM FOR FIRE RATED ASSEMBLIES

Groups of Construction	TYPES OF PROTECTION								
	Membrane Protection					Direct Applied Protection		Unprotected	
	000-099	100-199	200-299	300-399	400-499	500-599	600-699	700-899	900-999

The prefix numbers with an asterisk (*) and the design numbers indicated as "Reserved" in the above table are for future expansion and to cater to new types of systems developed in the future.

+ SFRM denotes Spray-Applied Fire Resistive Materials

NUMBERING SYSTEM FOR FIRE-RATED ASSEMBLIES

The prefix numbers with an asterisk (*) and the design numbers indicated as "Reserved" in the above table are for future expansion and to cater to new types of systems developed in the future

+ SFRM denotes Spray-applied Fire-resistive Materials

1. Rapid Rise Fire Test

Fire-resistance designs for protecting structural members subject to petrochemical exposure fires are investigated to ANSI/UL 1709, "Rapid Rise Fire Tests of Protection Materials for Structural Steel," and are covered under Fire Resistance Ratings - ANSI/UL 1709 (BYBU). Systems complying with these requirements include an "XR" design prefix.

2. Definitions

Definitions of selected terms used to identify the types of protection referenced in the following Numbering System Table are:

Batts and Blankets — A category for a group of UL Classified products. The complete description of the products in the category and supplementary requirements for Classification are covered under Batts and Blankets (BZJZ).

Building Units — A category for a group of UL Classified products. The complete description of the products in the category and supplementary requirements for Classification are covered under Building Units (BZXX).

Concealed Grid System — Suspension system for acoustical material that is not visible from the occupied space.

Exposed Grid System — Suspension system for acoustical material that is visible from the occupied space.

Fire-resistant Joint System — An assemblage of specific materials or products rated in accordance with ANSI/UL 2079 to resist for a prescribed period of time, the passage of fire through joints between fire resistance-rated assemblies. See Joint Systems (XHBN).

Insulating Concrete — Nonstructural concrete with a unit weight less than 60 pcf.

Membrane Penetration — An opening made through one side (wall, floor or ceiling membrane) of a fire resistance-rated assembly.

Mineral and Fiber Boards — A category for a group of UL Classified products. The complete description of the products in the category and supplementary requirements for Classification are covered under Mineral and Fiber Boards (CERZ).

Miscellaneous (Wall and Partitions) — Various types of wall assemblies, including gypsum wallboard shaft walls, log walls, folding assemblies and assemblies with glazing materials.

Partition Panel Units — A category for a group of UL Classified Products. The complete description of the products in the category and supplementary requirements for Classification are covered under Units, Partition Panel (CJMR).

Prefabricated Building Columns — Structural building columns that include a fire-resistive protection system when delivered to the construction site. These products are Classified and identified as Prefabricated Building Columns (CGHT). The complete description of the products and supplementary requirements for Classification are covered under CGHT.

Through Penetration — An item such as a pipe, cable tray or duct that passes through a horizontal or vertical fire-resistive assembly.

Through-penetration Firestop Systems — An assemblage of specific materials rated in accordance with ANSI/UL 1479 (ASTM E814). Firestop systems maintain the fire containment integrity of horizontal or vertical fire-resistive assemblies where through penetrations are located. See Through-penetration Firestop Systems (XHEZ).

Unprotected Fire-resistive Assemblies — Assemblies that do not require direct applied coatings or suspended ceilings to protect the structural elements.

3. Numbering System

The summarized form of the test assembly is identified by an alphanumeric design number. The prefix letter designates the group of construction, the first number designates the type of protection and the other numbers and letters identify the particular assembly.

The prefix letters representing the various groups of constructions are:

Prefix Letters	Group of Construction
A	Floor-Ceiling Designs - Concrete with Cellular Steel Floor Units and Beam Support
D	Floor-Ceiling Designs - Concrete with Steel Floor Units and Beam Support

FIRE RESISTANCE RATINGS - ANSI/UL 263 (BXUV)

Prefix Letters	Group of Construction
G	Floor-Ceiling Designs – Concrete and Steel Joists
J or K	Floor-Ceiling Designs – Precast and Field Poured Concrete
L	Floor-Ceiling Designs – Wood or Combination Wood and Steel Joist Assemblies
N	Beam Designs for Floor-Ceiling Assemblies
P	Roof-Ceiling Designs
S	Beam Designs for Roof-Ceiling Assemblies
U or V	Wall and Partition Designs
X or Y	Column Designs

II. GENERAL

The following information is appropriate to all fire-resistive designs described in this Directory. It is recommended that the users review this information in addition to the general guidelines provided for specific materials and construction types.

Authorities Having Jurisdiction should be consulted before construction.

Fire-resistance ratings apply only to assemblies in their entirety. Except for those separately rated structural members supporting tested assemblies, individual components are not assigned a fire-resistance rating and are not intended to be interchanged between assemblies but rather are designated for use in a specific design in order that the ratings of the design may be achieved.

All ratings are based on the assumption that the stability of structural members supporting the assembly are not impaired by the effects of fire. The extent of damage of the test assembly at the rating time is not a criteria for the rating.

The specifications for materials in an assembly are important details in the development of fire-resistance ratings. Those materials provided with an “*” in the design text are eligible to be produced under the Follow-Up Service Program of Underwriters Laboratories Inc. Information identifying such materials and the Classified companies authorized to provide the materials are located in the product category section of this Directory. The appearance of the Classification Mark on the product is the only method provided by UL to identify products that have been produced under its Follow-Up Service.

1. Metric Dimensions

It is recommended that the Metric Guide for Federal Construction published by the National Institute of Building Sciences (NIBS) be consulted for guidance regarding the use of metric dimensioned building materials. The dimensional conversion of building materials from the inch-pound system to metric may either be hard or soft.

Hard conversions are typically applied to manufactured products used in modular construction. These products include suspended ceiling systems, gypsum wallboard, insulation boards, etc. Classified products which are available in metric sizes are identified in the Classification information for the individual product categories located near the end of this Directory.

For soft conversions, inch-pound dimensions are mathematically converted to exact equivalent metric values. Examples of dimensions which may be soft converted include concrete thickness, depth of concealed space above suspended ceilings and coating thicknesses.

It is recommended that dimensions which are identified as minimum or maximum in fire-resistive designs be initially softly converted and, if required, further converted to a hard metric equivalent following the min/max guidance. The spacing of hanger wire and other supports for suspended ceilings would be examples requiring this type of consideration.

2. Loading of Test Specimens

ANSI/UL 263 requires the load applied to test samples to be based upon the limiting conditions of design as determined by nationally recognized structural design criteria. For some applications, the nationally recognized design criteria may be based upon the Working Stress Design Method or the Limit States Design Method. For applications where these two design methods are available, the load applied to the test sample was determined in accordance with the Working Stress Design Method unless the rated assembly specifically references the Limit States Design Method. Also, unless otherwise stated, the load capacity of steel beams assumes the beams are fabricated from A36 steel.

ANSI/UL 263 permits samples to be tested with the applied load being less than the maximum allowable load as determined by the limiting conditions of a nationally recognized structural design criteria. The ratings for assemblies determined from tests where the applied load was less than allowed by the nationally recognized structural design criteria are identified as “Restricted Load Condition.” The percent of the maximum load, the percent of the maximum stress, and the nationally recognized design criteria will be identified in text describing the structural element of rated assemblies with a restricted load condition. An example of the text used in an assembly with a Restricted Load Condition and steel joist loaded to 80% of the maximum allowable is:

The design load for the structural member described in this design should not: (1) exceed 80% of the maximum allowable load specified in

FIRE RESISTANCE RATINGS - ANSI/UL 263 (BXUV)

73

“Catalog of Standard Specifications and Load Tables for Steel Joists and Steel Girders,” published by the Steel Joist Institute, or (2) develop a tensile stress greater than 24 ksi, which is 80% of the maximum allowable tensile stress of 30 ksi. (Note: The maximum allowable total load develops a tensile stress of approximately 30 ksi.)

Some restricted-load conditions have resulted from changes in product availability. An example is the substitution of K-Series joists for other series joists as described under Section III, FLOOR-CEILINGS AND ROOF-CEILINGS, Item 7, Steel Joists.

3. Penetrations

Penetrations through all or a portion of an assembly can significantly affect the rating. Firestop systems developed to protect openings created by penetration items are covered in Volume 2 of the Fire Resistance Directory.

4. Finish Ratings

A finish rating is established for assemblies containing combustible (wood) supports. The finish rating is defined as the time at which the wood stud or wood joist reaches an average temperature rise of 250°F or an individual temperature rise of 325°F as measured on the plane of the wood nearest the fire. A finish rating is not intended to represent a rating for a membrane ceiling. The requirements for finish ratings are not included in ANSI/UL 263.

5. Nails and Screws

Nails are specified according to ASTM F547 or ASTM C514. Nails used to attach gypsum board to wood framing should be cement-coated box nails or cement-coated cooler nails unless specified otherwise in the specific designs. Screws meeting ASTM C1002 or ASTM C954 may be substituted for nails, one for one, when the head diameter, length, and spacing equal or exceed the requirements for the specified nails.

6. Interior and Exterior Applications

The fire-resistive designs and the UL Classified materials are investigated with the understanding their use is limited to interior applications unless the design or the Classification information for the material includes a statement such as “Investigated for exterior use” or unless the exterior use is obvious as in the case of roofs or coated metal wall facings used in exterior walls.

7. Exposed Interior Finishes

The surface flammability and smoke development characteristics of Classified materials that may be used as exposed interior finishes are measured by the test method in ANSI/UL 723 (ASTM E84 and NFPA 255), “Test for Surface Burning Characteristics of Building Materials.” The flame spread index of these materials is less than 200 and the smoke development index of these materials is less than 450. Surface Burning Classifications are contained in the Building Materials Directory.

8. Radiant Heating Cable

The effect of the use of electrical radiant heating cable or wire on the fire resistance performance of assemblies has not been investigated.

9. Coating Materials

Coating materials include products identified as: 1) Spray-applied Fire-resistive Materials and 2) Mastic and Intumescent Coatings.

The type of material is specified in each design. Materials that have been investigated for exterior application are so indicated in the individual designs and in the product category.

Regulations governing the application and use of coating materials have been promulgated by many governmental agencies. Authorities Having Jurisdiction should be consulted for current local requirements.

Spray-applied Fire-resistive Materials

The surfaces on which the material is to be applied must be free of dirt, oil and loose scale. Surfaces may be primed with the primers/paints covered under Primers for Structural Steel (CGJM).

The following method of determining the bond strength of the spray-applied materials only applies to primers or paints that are not covered under Primers for Structural Steel (CGJM). Unless specifically prohibited in a design, materials identified as Spray-applied Fire-resistive Materials (CHPX) may be applied to primed or similarly painted wide-flange steel shapes and pipe and tube-shaped columns provided: (A) the beam flange width does not exceed 12 in.; (B) the column flange width does not exceed 16 in.; (C) the beam or column web depth does not exceed 16 in.; (D) the pipe outer diameter or tube width does not exceed 12 in.; (E) bond tests conducted in accordance with ASTM E736, “Standard Test Method for Cohesion/Adhesion of Sprayed Fire Resistive Materials Applied to Structural Members,” should indicate a minimum average bond strength of 80 percent and a minimum individual bond strength of 50 percent when compared to the bond strength of the fire-resistive coating as applied to clean uncoated 1/8 in. thick steel plate. The average and minimum bond strength values should be determined based upon a minimum of five bond tests conducted in accordance with ASTM E736.

The bond tests need only be conducted when the fire-resistive coating is applied to a primed or similarly painted surface for which acceptable bond strength performance between the primer or other similar material and the fire-resistive coating has not been measured. A bonding agent may be applied to the primed or similarly painted surface to obtain the

minimum required bond strength where the bond strengths are found to be below the minimum acceptable values.

As an alternative to the bond test conducted on control samples applied to an uncoated steel plate, the following method may be used for unknown coatings in existing structures. Sections of painted steel are to be coated with a bonding agent compatible with the sprayed material being used on the project. The treated and untreated substrates should be coated with material, cured and subjected to five bond tests each, in accordance with ASTM E736. If the failure mode of the sections treated with the bonding agent is 100 percent cohesive in nature, it will be acceptable to use this bond test value as the control bond strength. The value obtained on the untreated painted section should be compared to the control value using the minimum 80 percent average, 50 percent individual bond strength acceptance criteria established in ASTM E736.

If condition (E) is not met, a mechanical bond may be obtained by wrapping the structural member with expanded metal lath (minimum 1.7 lbs per sq yd).

If any of the conditions specified in (A), (B), (C) or (D) are not met, a mechanical break should be provided. A mechanical break may be provided by mechanically fastening one or more minimum 1.7 lbs per sq yd metal lath strips to the flange, web or tube and pipe surface either by weld, screw, or powder actuated fasteners, on maximum 12 in. centers, on each longitudinal edge of the strip, so that the clear spans do not exceed the limits established in conditions (A), (B), (C) or (D) as appropriate. No less than 25 percent of the width of the oversize flange or web element should be covered by the metal lath. No strip of metal lath should be less than 3-1/2 in. wide.

As an alternative to metal lath, the mechanical break may be provided by the use of minimum No. 12 gauge steel studs with minimum No. 28 gauge galvanized steel disks if such a system is described in a specific design (usually bottomless trench in an electrified floor design) for the fire-resistive coating being applied. The studs should be welded to the oversize element in rows such that the maximum clear span conforms to conditions (A), (B), (C) or (D) as appropriate. The spacing of studs along each row should not exceed 24 in. and a minimum one stud per 256 sq in. should be provided.

Where metal lath strips or steel studs and disks are used, acceptable bond strength as described in item (E) should also be provided. A bonding agent may be applied to the painted surface to obtain the required minimum bond strength where bond strengths to a painted surface are found to be below minimum acceptable values.

The dry density at which sprayed material should be applied to building elements is specified on the individual designs. Dry density measurements may be determined by removing at least 6 in. sq sections randomly selected from the building, subjecting the samples to 120°F in an oven until constant weight is obtained, followed by accurate weighing, measuring and calculation of the density in lb per cu ft. Constant weight is usually obtained after 24 to 48 h exposure within a 120°F oven.

The spray-applied fire-resistive material thickness specification in a design should be considered the minimum average thickness of the individual thickness readings measured in accordance with ASTM E605, "Standard Test Methods for Thickness and Density of Sprayed Fire Resistive Material Applied to Structural Members." When spray-applied fire-resistive material is applied to metal lath, the spray-applied fire-resistive material thickness should be measured to the face of the lath unless specified otherwise in the design.

Individual measured thickness, which exceeds the thickness specified in a design by 1/4 in. or more should be recorded as the thickness specified in the design plus 1/4 in. For design thicknesses 1 in. or greater, the minimum allowable individual thickness should be the design thickness minus 1/4 in. For design thicknesses less than 1 in., the minimum allowable individual thickness should be the design thickness minus 25 percent.

The thickness of the spray-applied fire-resistive material should be corrected by applying additional material at any location where: (1) the calculated average thickness of the material is less than that required by the design or (2) an individual measured thickness reading is more than 1/4 in. less or more than 25 percent less, (for design thicknesses greater than 1 in. and less than 1 in. respectively) than the specified thickness required by the design.

Areas of the structural frame and/or floor area are to be selected to obtain representative average thicknesses. Thickness readings on floor or wall area, are to be taken symmetrically over the selected area. The average of all measurements is to be considered the average thickness of the area. Thickness measurements on beams and/or columns are to be made around the member at sections within 12 in. of each other. The average thickness is to be considered the average of the readings taken at both sections.

Screw tips penetrating the steel roof deck in all P700 and P800 series designs require spray-applied fire-resistive material. The spray-applied fire-resistive material specified in the design should be applied to cover the tips at a minimum thickness of 1/2 in.

Mixing and spraying instructions are included with each container of material.

Mastic and Intumescent Coatings

The surfaces on which the material is to be applied must be free of dirt, oil and loose scale. The Classification information for materials identified as Mastic and Intumescent Coatings (CDWZ) should be consulted for specific recommendations regarding the application of the coating over primed painted surfaces.

The mastic and intumescent coating thickness specification in a design should be considered the minimum average thickness of the individual thickness readings measured in accordance with Technical Manual 12-B, "Standard Practice of the Testing and Inspection of Field Applied Thin-Film Intumescent Fire Resistive Materials; an Annotated Guide," published by the Association of the Wall and Ceiling Industries.

The mastic and intumescent coating average thickness should not exceed the maximum thickness published in the individual designs and no individual thickness measurement should be less than 80 percent of the thickness specified design.

Mixing and spraying instructions are included with each container of material.

10. Gypsum Board Orientation

Vertically applied gypsum board is gypsum board that is applied with the long edges parallel to the framing members to which it is attached. Horizontally applied gypsum board applied is gypsum board applied with the long edges perpendicular to the framing members to which it is attached.

11. Gypsum Board Joint Treatment (Fire Taping)

Unless otherwise specified in the specific design all gypsum board systems except those with predecorated or metal covered surfaces have joints taped and joints and fastener heads covered with one coat of joint compound (fire taped). Base layers in multi layer systems are not required to have joints or fastener heads taped or covered with joint compound.

12. Plaster

The proper aggregate and mix proportions are specified on each design. Thicknesses are measured from the outer face of the plaster base. When a finish coat is not specified, it is not included in the thickness dimensions, but it may be added. Materials investigated for exterior application are so indicated on the individual designs.

13. Dampers

Building codes include requirements for four types of dampers: fire dampers, smoke (leakage rated) dampers, ceiling dampers, and corridor dampers. Dampers have been investigated for installation in wall or ceiling constructions in the maximum sizes and orientations (vertical or horizontal) indicated in their Listing. Dampers have been investigated for the following applications:

Fire Dampers are included in Volume 3 of this Directory and are intended for use where air ducts and air transfer openings traverse fire resistance-rated walls and floors.

Leakage-rated (Smoke) Dampers are included in Volume 3 of this Directory and are intended for use where air ducts and air transfer openings traverse smoke barriers.

Corridor Dampers are included in Volume 3 of this Directory and are intended for use where air ducts penetrate or terminate at horizontal openings in the ceilings of certain corridors, as required by the building code.

Ceiling Dampers are included in this Directory (see CABS) and are intended to function as a heat barrier in air-handling openings penetrating fire-resistive membrane ceilings. Additional details on duct outlet protection methods for membrane ceiling constructions, designated Systems A and B, is included under **Section III FLOOR-CEILINGS AND ROOF-CEILINGS, Item 17, Air Ducts and Protection Systems.**

14. Wood Structural Panel

Wood Structural Panel is a structural panel product composed primarily of wood and meeting the requirements of the U.S. Department of Commerce Voluntary Product Standard PS 1, Construction and Industrial Plywood or the U.S. Department of Commerce Voluntary Product Standard PS 2, Performance Standard for Wood-Based Structural-Use Panels. Wood structural panels include all-veneer plywood, composite panels containing a combination of veneer and wood-based material, and mat-formed panels such as oriented strand board and waferboard. The panels are to bear the label of a code recognized certification organization with a specific reference to the PS 1 or PS 2 standard. The panels are also marked Exposure 1 or Exterior. Some individual designs may limit the type of panel that can be used.

As an alternate, wood structural panels investigated in accordance with APA - The Engineered Wood Association Standard PRP-108, Performance Standards and Policies for Structural-Use Panels, or the PFS Research Foundation Standard PRP-133, Performance Standards and Policies for Wood-Based Structural-Use Panels, and meeting the description for the panel type in the individual designs, may be used.

15. Sound Transmission Class (STC)

In addition to the fire-resistance ratings, where indicated in the individual designs, the Sound Transmission Class (STC) rating is published for those designs where the sound transmission loss (STL) test was also investigated. ASTM E90-99, "Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions," is the test method

used to evaluate the sound transmission loss for the various designs. The STC rating applies to the assembly of materials as indicated in the individual designs.

16. Impact Insulation Class (IIC)

In addition to the fire-resistance ratings, where indicated in the individual designs, the Impact Insulation Class (IIC) rating is published for those designs where the impact noise test was also investigated. ASTM E492-96, "Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine," is the test method used to evaluate the impact noise of the design. The IIC rating applies to the assembly of materials as indicated in the individual designs.

17. Curtain Wall/Floor Protection Systems

The category Perimeter Fire Containment Systems (XHDC) in Volume 2 of the Fire Resistance Directory includes designs that have been investigated to protect the void created at the intersection of a fire rated floor assembly and an exterior curtain wall assembly.

18. Fire-resistant Joint Systems

The category Joint Systems (XHBN) in Volume 2 of the Fire Resistance Directory includes designs that have been investigated to protect the joints between fire resistance-rated walls, floors, floor-ceiling assemblies and roof-ceiling assemblies.

19. Fire Doors, Frames and Hardware

Product categories associated with fire doors, frames and associated hardware are included in Volume 3 of this Directory. See Product Category index (GSNV). This includes leakage rated products investigated to limit the spread of smoke through these assemblies.

20. Glazing, Wired Glass and Glass Blocks

The product category Fire-protection-rated Glazing Materials (KCMZ) in Volume 3 of this Directory contains information on wired glass and non-wired glazing investigated for fire resistance. The product category Glass Blocks (KCJU) in the Building Materials Directory contains information on glass blocks investigated for fire resistance.

III. FLOOR-CEILINGS AND ROOF-CEILINGS

The following guidelines are directed towards the materials and construction methods described for floor-ceiling and roof-ceiling assemblies. These guidelines are intended to supplement the specific description included with each design.

Specific guidelines for the application of beam designs to floor-ceiling and roof-ceiling assemblies are provided in this Directory under the heading entitled "Beams."

1. Concrete

The concrete compressive strength specified in the designs may be reduced 500 psi to obtain the minimum value. The maximum compressive strength is not limited. The thickness is a minimum unless otherwise indicated.

The concrete's air dry unit weight is determined in accordance with ASTM C567. The unit weight specifications (unless stated as a range for individual designs) have a tolerance of plus or minus 3 pcf. If normal weight concrete (145 to 155 pcf) is specified, the use of lightweight (90 to 120 pcf) is not recommended because its greater insulating properties could cause higher temperatures on supporting members. When lightweight concrete is specified, the use of normal weight concrete is not recommended because its lower insulating properties could cause higher unexposed surface temperatures.

2. Fiber Reinforcement

Classified synthetic fiber reinforcements may be added to the concrete mix for the purpose of controlling shrinkage cracks.

These fibers are not intended to satisfy any structural requirements. The structural capacity of the concrete slab should be maintained in accordance with the requirements of the ACI building code.

3. Steel Floor and Form Units

The type of unit and the minimum steel thickness is specified in each design.

The steel floor and roof deck minimum thickness table is based upon an industry standard for steel deck. The load tables published by the steel deck industry are based upon the design thickness and a 5% tolerance is applied to derive the minimum thickness. The tolerance is in accordance with AISI specifications. For steel floor and roof deck, the minimum bare metal thickness should be as follows:

Gauge	Design Thkns In.	Min Thkns Bare Metal In.
28	0.0149	0.014
26	0.0179	0.017
24	0.0238	0.023
22	0.0295	0.028
20	0.0358	0.034
18	0.0474	0.045
16	0.0598	0.057

The effect on the fire resistance of the assembly when cellular sections are used as air handling units has not been investigated.

Some steel units are provided with patterned indentations and are thereby considered to act compositely with the concrete topping. Moment and shear

capacities are usually determined empirically from structural tests. The allowable load is provided in the manufacturer's catalogs. The loading for floors with noncomposite units (without indentations) is based on their section modules. Some fire tests have been conducted on slabs utilizing the composite units but with the loading based on the section modules of the steel. In such cases the design will specify noncomposite loading. Fire tests have generally shown that composite slabs deflect more than similar noncomposite slabs. Therefore, the ratings developed with composite units would not be jeopardized if noncomposite units of the same profile are used provided the loading is based on the section modules of the noncomposite units.

The steel form units used in floor or roof assemblies may be painted or galvanized when used in designs that include suspended ceilings (Designs G0--, G2--, G4--, G5--, P0--, P2--, P4--, P5--). In designs which specify the steel form units to be welded to supports with welding washers, the welding washers may be omitted when the steel form unit is 22 MSG gauge or heavier.

Normally, assemblies with steel deck are constructed and tested with simple span conditions, however, the ratings also apply to continuous span conditions.

4. Electrical Boxes for Concrete Floors

The category Outlet Boxes and Fittings Classified for Fire Resistance (CEYY) covers pre-set and post-set inserts for use in concrete floors for electrical and communication connections. These devices have demonstrated an ability to be used in specific assemblies without reducing their fire-resistive ratings. In those floor-ceiling designs where the inserts are not specifically shown, penetrations to the concrete topping with electrical inserts may jeopardize the rating unless proper compensating protection is provided. In the absence of specific information for inserts in individual designs, inserts which do not penetrate through the entire floor and bear the UL Classification Mark for Outlet Boxes and Fittings Classified for Fire Resistance may be used in floor-ceiling designs which include fire-resistive coating materials on both fluted and cellular floor units for the entire floor span between supports. The cellular units should be protected in one of the following ways:

1. For inserts which penetrate into the top of the cell and where concrete is not removed from the valleys of the steel floor units, the thickness of fireproofing material specified below standard trench headers (with bottom pan) is applicable.
2. For inserts which penetrate into the sides of the cells with no concrete in the valley between the cells under the inserts, the thickness of the fire-resistive coating specified below the bottomless trench header (without bottom pan) is applicable.

The above recommended protection is intended only for structural concrete floors which contain welded wire fabric or fiber reinforcement when permitted and consist of a blend of one or more fluted to one cellular unit. The entire underside of the cellular units should be protected with the same material and thickness as required below the trench headers with a gradual reduction in thickness to that specified for fluted units in the designs. The spacing between inserts should be sufficient for structural integrity. The diameter of any holes in the insert cover for the passage of wire should be no more than 1/8 in. larger than the diameter of the wire.

5. Nonmetallic Outlet Boxes for Ceilings

Nonmetallic outlet boxes investigated for installation in floor-ceiling or roof-ceiling assemblies are included in Outlet Boxes and Fittings Classified for Fire Resistance (CEYY).

6. Metallic Electrical Outlet Boxes

Listed metallic outlet boxes with metallic or nonmetallic cover plates may be used in floor-ceiling and roof-ceiling assemblies with ratings not exceeding 2 hours. These assemblies should have gypsum wallboard membranes. The metallic outlet boxes should be securely fastened to the joists and the opening in the wallboard facing should be cut so that the clearance between the box and the gypsum wallboard does not exceed 1/8 in. The surface area of individual boxes should not exceed 16 sq. in. The aggregate surface area of the boxes should not exceed 100 sq. in. per 100 sq. ft of ceiling surface.

7. Steel Joists

The specified minimum size joist in floor- or roof-ceiling designs is the joist that meets the requirements for both the minimum depth and the minimum weight per foot. Joists that exceed the specified minimum size may be used, provided the accessories are compatible. The dimension from the bottom chord of joists to the ceiling, whether given or calculated, is a minimum.

Spacing between joists may be increased from that specified to a maximum of 4 ft on centers if the floor slab meets structural requirements and the spacing of the hanger wires supporting the ceiling is not increased. Where it is necessary to provide support for the ceiling hanger wires between the joists, this may be accomplished by using 1-1/2 in., No. 16 gauge or larger cold-rolled steel channels. Each channel with its web oriented vertically should be placed on top of and perpendicular to the joist's bottom chord and tied thereto with a double strand of No. 18 SWG galvanized steel wire.

The area of bridging bars or angles specified in the individual designs is a minimum. Larger bridging may be necessary in order to meet the structural and/or code requirements.

For designs requiring application of coating materials to steel joists, the bridging bars or angles should be protected with the coating material thickness required on the joist for a minimum distance of 12 in. beyond the joist.

When the joists are coated with a fire-resistive material, the cavities, if any, between the upper flange of the joist and the steel floor or roof units should be filled with the fire-resistive coating material applied to the joist, unless specified otherwise in the individual design.

For designs that require the bottom chords of the joists to consist of round bars, the substitution of angles of an equivalent area is not recommended.

K-Series joists, LH-Series joists and joist girders specified in floor- or roof-ceiling assemblies should be designed and fabricated in accordance with the Steel Joist Institute's Specifications adopted November 4, 1985, and revised May 1, 2000.

K-Series joists may be substituted for other joists specified in floor- or roof-ceiling designs as follows:

Floor-Ceiling Assemblies

K-Series joists of equal or greater depth and weight per foot may be substituted for any S-, J-, H-, LH- and/or DLH-Series joists in any floor-ceiling design, which employs a structural concrete floor and a suspended membrane ceiling.

Roof-Ceiling Assemblies

K-Series joists of equal or greater depth and weight per foot may be substituted for any S-, J-, H-, LH- and/or DLH-Series joists in any roof-ceiling design, with the following restrictions:

- Minimum Nominal Depth = 10 in.
- Maximum Tensile Stress = 26,000 psi.

Any stress limitation specified in floor or roof designs containing S-, J-, H-, LH- and/or DLH-Series joists should remain applicable when a K-Series joist is substituted.

When a K-Series joist is substituted, any restriction regarding minimum allowable joist member sizes, areas of steel, and/or bridging material sizes remain applicable. Refer to section "Fire-Resistance Ratings with Steel Joists" in the Standard Specifications Load Tables & Weight Tables for Steel Joists and Joist Girders, 41st edition, published by the Steel Joist Institute, for guidance.

8. Precast Concrete Units

For restrained assembly ratings, some designs require end clearances and lateral expansion joints with the use of noncombustible compressible materials along the sides of the precast concrete units. This requirement may be waived and the clearance spaces filled with sand-cement grout if the stiffness of the building floor and supporting column system surrounding the precast concrete units does not exceed 80 percent of the stiffness of the test frame in which the assemblies are tested and rated.

The relative stiffness of the frame work surrounding a building floor assembly may be calculated using an approximate test frame size of 14 ft by 17 ft and an approximate stiffness of frame of 700,000 KIP-in. and 850,000 KIP-in., expressed by EI/L , along the 17 ft and 14 ft dimensions, respectively.

For unrestrained assembly ratings, clearances should be provided around the ends and sides of the precast concrete units so that they may expand freely during fire exposure.

In most floor-ceiling designs, sand-cement grout is required to be poured between adjacent precast units. This grout may be omitted if a minimum 1 in. thick concrete topping is placed over the precast concrete units.

9. Gypsum Board

Gypsum board thicknesses specified in specific designs are minimums. Greater thicknesses of gypsum board are permitted as long as the fastener length is increased to provide penetration into framing that is equal to or greater than that achieved with the specified gypsum board thickness and fasteners.

Additional layers of gypsum board are permitted to be added to any design.

For designs containing the statement "See Gypsum Board (CKNX) Category for names of Classified Companies," any product in the category (CKNX) that meets the specifications (i.e., thickness, size) described in the design may be used. This statement is applicable to any gypsum board manufacturer who produces Classified gypsum board meeting the thickness and size of the board specified in the design. It is not required that these Design Numbers appear in the individual Classifications.

10. Ceiling Control Joints

For G500 and L500-Series floor-ceiling designs having a maximum 1 hr Unrestrained Assembly Rating and having a ceiling membrane consisting of

a single-layer of nominal 5/8 in. thick gypsum wallboard, max 1/2 in. wide control joints may be incorporated in the ceiling using one of the following methods:

Ceiling Suspended Below Floor Assembly

- Floor Assembly — (Not Shown)** — The floor assembly should be constructed of the materials and in the manner described in the individual G-500 or L500-Series Floor-Ceiling design.
- Cold-Rolled Steel Channel** — Nom 1-1/2 in. deep, min 16 gauge cold-rolled steel channels installed perpendicular to control joint direction. Channels suspended from floor joists with 12 SWG galv steel hanger wires. Hanger wires spaced max 48 in. OC. Channels installed to extend approx 6 in. past control joint location with channels on opposite sides of control joint offset from each other. Hanger wire at end of each channel to be located in span between furring channels over control joint location.
- Furring Channels** — Nom 7/8 in. deep, min 25 gauge painted or galv steel rigid furring channels installed perpendicular to cold-rolled steel channels and spaced max 16 in. OC. Furring channel along each side of ceiling control joint to be located with its centerline 3 in. from the center of the control joint. Furring channels secured to cold-rolled steel channels with a double strand of 18 SWG galv steel wire.
- Gypsum Board** — Installed with long dimension perpendicular to furring channels. Gypsum wallboard type, fastener type and fastener spacings to be as specified in the individual L500-Series Floor-Ceiling design. Max width of control joint centered between furring channels is 1/2 in. Strip of gypsum wallboard over control joint to be nom 5/8 in. thick by 3-1/2 in. wide and to be secured to ceiling along only one side of control joint with 1-1/2 in. long Type G wallboard screws spaced max 24 in. OC.
- Control Joint** — Vinyl or zinc control joint conforming to ASTM C1047, "Standard Specification for Accessories for Gypsum Wallboard and Gypsum Veneer Base." Control joint stapled to gypsum wallboard on each side of joint opening prior to finishing of ceiling.

Control Joint Parallel With Wood Joists

- Flooring** — Lumber or plywood subfloor with finish floor of lumber, plywood or floor-topping mixture as specified in the individual L500-Series Floor-Ceiling design.
- Wood Joists** — 2 by 10 in., spaced 4 in. apart at the control joint location and max 16 in. OC away from control joint as specified in the individual L500-Series Floor-Ceiling design.
- Gypsum Board** — Installed with long dimension perpendicular to wood joists. Gypsum wallboard type, fastener type and fastener spacings to be as specified in the individual L500-Series Floor-Ceiling design. Max width of control joint centered between wood joists is 1/2 in. Strip of gypsum wallboard over control joint to be nom 5/8 in. thick by 3-1/2 in. wide and to be secured to ceiling along only one side of control joint with 1-1/2 in. long Type G wallboard screws spaced max 24 in. OC.
- Control Joint** — Vinyl or zinc control joint conforming to ASTM C1047.

Control joint stapled to gypsum wallboard on each side of joint opening prior to finishing of ceiling.

Control Joint Perpendicular to Wood Joists

- Flooring** — Lumber or plywood subfloor with finish floor of lumber, plywood or floor-topping mixture as specified in the individual L500-Series Floor-Ceiling design.
- Wood Joists** — 2 by 10 in., spaced max 24 in. OC as specified in the individual L500-Series Floor-Ceiling design.
- Furring Channels** — Nom 7/8 in. deep, min 25 gauge painted or galv steel rigid furring channels installed perpendicular to wood joists and spaced max 16 in. OC. Furring channel along each side of ceiling control joint to be located with its centerline 3 in. from the center of the control joint. Furring channels secured to wood joists as specified in the individual L500-Series Floor-Ceiling design.
- Gypsum Board** — Installed with long dimension perpendicular to furring channels. Gypsum wallboard type, fastener type and fastener spacings to be as specified in the individual L500-Series Floor-Ceiling design. Max width of control joint centered between furring channels is 1/2 in. Strip of gypsum wallboard over control joint to be nom 5/8 in. thick by 3-1/2 in. wide and to be secured to ceiling along only one side of control joint with 1-1/2 in. long Type G wallboard screws spaced max 24 in. OC.
- Control Joint** — Vinyl or zinc control joint conforming to ASTM C1047. Control joint stapled to gypsum wallboard on each side of joint opening prior to finishing of ceiling.

Control Joint Parallel to Wood Joists

- Flooring** — Lumber or plywood subfloor with finish floor of lumber, plywood or floor-topping mixture as specified in the individual L500-Series Floor-Ceiling design.
- Wood Joists** — 2 by 10 in., spaced max 24 in. OC as specified in the individual L500-Series Floor-Ceiling design.
- Furring Channels** — Nom 7/8 in. deep, min 25 gauge painted or galv steel rigid furring channels installed perpendicular to wood joists and spaced max 16 in. OC. Furring channels to cantilever approx 1/4 in. beyond wood joist in 4 in. wide joist cavity containing control joint. Furring channels secured to wood joists as specified in the individual L500-Series Floor-Ceiling design.
- Gypsum Board** — Installed with long dimension perpendicular to furring channels. Gypsum wallboard type, fastener type and fastener spacing to be as specified in the individual L500-Series Floor-Ceiling design. Max width of control joint centered in 4 in. wide joist cavity is 1/2 in. Strip of gypsum wallboard over control joint to be nom 5/8 in. thick by 3 in. wide and to be secured to ceiling along only one side of control joint with 1-1/2 in. long Type G wallboard screws spaced max 24 in. OC.
- Control Joint** — Vinyl or zinc control joint conforming to ASTM C1047. Control joint stapled to gypsum wallboard on each side of joint opening prior to finishing of ceiling.

11. Acoustical Material

The type and size is specified in each design. Where a range of panel sizes is indicated, compatible sizes of suspension members must be used. Designs incorporating lay-in acoustical ceiling panels specify the use of hold-down

clips. Hold-down clips are required for assemblies incorporating ceiling panels weighing less than 1 lb per square foot.

12. Suspension Systems

The type and size of the suspension system are specified on the design. Support of the system is an important feature in its performance. Spacing of the supports should not exceed but may be less than specified. When the length of cross tee between the main runner and the wall molding is 30 in. or longer, each such cross tee should be supported by a hanger wire at midpoint of the tee or at a location nearer the wall unless specified differently in the design.

As an alternate to the wall molding specified in the designs, the molding may be an angle fabricated from minimum 0.017 in. thick steel. Each leg of the angle should be at least 7/8 in. long with a 0.115 in. hemmed edge. The wall molding should be reliably secured to the wall with steel fasteners on maximum 16 in. centers unless specified otherwise in a design.

Cross tees which are parallel and adjacent to walls and are spaced 12 in. or less from the wall should each be supported by a hanger wire at midpoint. These hanger wires are intended to minimize their rotation under fire conditions due to the unbalanced weight of panels on their flanges.

Where a ceiling is supported directly from structural members, it may be lowered and intermediate supports may be used, if necessary, provided they produce an in place stiffness equivalent to that of the originally tested elements. A suggested method for providing an equivalent in place stiffness is by use of 1-1/2 in. cold-rolled channels made of No. 16 gauge or heavier painted or galvanized steel, with the web oriented vertically and suspended from the structural members by No. 12 SWG or heavier galvanized steel wire at a maximum spacing of 48 in. OC. The channels may be oriented parallel or perpendicular to the structural members but should be spaced not more than the spacing of the members.

Where it is necessary to cut away the expansion mechanism of suspension members to fit room dimensions or corridor widths, the member is to be installed with a gap of approximately 1/10 in. per ft of length to permit free thermal expansion.

Hanger wires should be installed vertically unless permitted otherwise in a design.

Some floor-ceiling designs with structural concrete topping on steel floor units specify the use of steel hanger clips as an attachment provision for hanger wires. As an alternate to hanger clips, low-velocity, powder-actuated, steel-eye pin fasteners may be used for hanger wire attachment in the floor-ceiling designs. The fasteners should have a minimum 5/32 in. diameter by minimum 7/8 in. long pointed shank with a washer and nominal 7/8 in. long by 7/16 in. wide head containing a rounded slot opening. The fasteners are intended to be secured to concrete in valleys of fluted steel floor units with powder charges sufficient to fully embed the shank portion without shattering the concrete.

13. Fluorescent Recessed Luminaires

Luminaires may be installed individually or end to end (in rows). Side-by-side installation has not been investigated.

The spacing of luminaires specified in the designs refers to the maximum aggregate area of the luminaires to be used in each 100 sq ft of ceiling. Unless specified differently, the luminaires are of the fluorescent lamp type with steel housing and hardware.

Where air-handling type luminaires were tested, the design may describe the luminaire as air handling or as provided with slots in the housing. However, since no air movement was employed during the test, the ratings require that air movement be effectively stopped at the start of a fire. Air-handling luminaires may be used in any design that specifies luminaires, provided it is not necessary to alter the enclosure surrounding the luminaire and that provisions are made for effectively stopping the movement of air at the start of a fire.

In ceilings employing an exposed grid suspension system, when hanger wire is required at midpoint of the cross tee on each side of luminaires, the wire should be installed with approximately 1/8 in. of slack such that it will not be pulling on the cross tee at room temperature conditions.

14. Enclosures for Fluorescent Recessed Luminaires

Enclosures for luminaires should be spaced away from the top of luminaire housing as shown on individual designs. When luminaires are installed end to end, one end piece of the protection material that is part of the enclosure should be placed on top of the adjoining top protection pieces to cover the gap at the junction of the luminaires. Spacers placed on top of the luminaire housing to provide clearance for the protection material should not be located directly over or adjacent to luminaire ballasts. Installation is intended to be in conformance with ANSI/NFPA 70, "National Electrical Code." For lay-in panel ceilings, as an alternate to the spacers cut from ceiling material or mineral wool batts, pieces of ceiling suspension system tees may be used to maintain the clearance between the protection material and the top of the luminaire.

15. Luminaires Classified for Fire Resistance

In addition to the luminaires described above, luminaires specifically investigated for installation in floor-ceiling and roof-ceiling designs are included in the category Luminaires and Luminaire Assemblies Classified for Fire Resistance (CDHW). Refer to the individual Classifications in that

product category for details on the designs in which the luminaires have been investigated and found acceptable.

16. Restrained and Unrestrained Assemblies

Floor-ceiling and roof-ceiling assemblies include fire-resistance ratings for use in both restrained or unrestrained conditions. It is up to the designer and Authority Having Jurisdiction to determine if an assembly is being used in a restrained or unrestrained application, as required by the building code being enforced. Unrestrained Assembly ratings may be used for floor-ceilings and roof-ceilings designed for either restrained or unrestrained conditions.

The conditions of acceptance in ANSI/UL 263 provide criteria for Restrained Assembly Ratings, Unrestrained Assembly Ratings, Restrained Beam Ratings and Unrestrained Beam Ratings. Because of their more onerous criteria, Unrestrained Assembly Ratings may be used for floors and roofs designed for either restrained or unrestrained conditions.

Classifications resulting from a tested assembly containing a full representation of a floor or roof construction may include: (1) Restrained Assembly Ratings and (2) Unrestrained Assembly Ratings. Results from test of these assemblies are identified as Design Nos. A ____, D ____, G ____, J ____, or P _____. Tested assemblies supported by beams may also include an Unrestrained Beam Rating, but do not include a Restrained Beam Rating. A Restrained Beam Rating is determined only from a test on an assembly with a restrained beam and a partial representation of a floor or roof. Results from tests on this type of assembly are identified as Design Nos. N ____ or S _____.

D900 Series Dual Unrestrained Assembly Ratings

Two unrestrained assembly ratings are indicated for some D900 Series floor-ceiling designs that include unprotected steel floor units. These unrestrained assembly ratings are influenced by the span of the steel floor units. For the longer rating, the maximum span is the span with which the assembly was tested. This rating is determined by the assembly's structural performance during the fire test. The shorter rating is determined by the steel temperatures measured during the test and the span is limited only by the manufacturer's loading tables.

Restraint Conditions

Classifications of floor-ceiling and roof-ceiling assemblies and individual beams include restrained and unrestrained ratings. ANSI/UL 263 and, specifically, Appendix C, provides general information with respect to the concept of these classifications.

Appendix C of ANSI/UL 263 defines restraint in buildings as: "Floor-ceiling and roof-ceiling assemblies and individual beams in buildings should be considered restrained when the surrounding or supporting structure is capable of resisting substantial thermal expansion throughout the range of anticipated elevated temperatures. Constructions not complying with this definition are assumed to be free to rotate and expand and should be therefore considered as unrestrained."

The restrained condition in fire tests is defined in Appendix C of ANSI/UL 263 as: "one in which expansion at the supports of a load carrying element resulting from the effects of the fire is resisted by forces external to the element." This definition may not be appropriate for conditions of restraint in actual structures. The Standard recognizes that the exercise of engineering judgement is required to determine what constitutes "substantial thermal expansion" when determining the conditions under which the restrained or unrestrained ratings should be used.

Restrained conditions for the fire test assemblies are provided by constructing floor, beam and roof test assemblies within nominal 14 ft by 17 ft frames of composite steel/concrete cross sections having an approximate stiffness (EI/L) of 850,000 kip-in. and 700,000 kip-in. along the 14 ft and 17 ft sides, respectively. The frame stiffness remains constant throughout the fire test because the test frame is insulated from the fire environment.

When applying the published restrained ratings, it is recognized that the individual responsible for the design of the fire-rated construction may ascertain that a different degree of restraint may be provided to the building assembly during a fire condition than was provided to the test sample during the fire test. Under these conditions, the designer may review the Conditions of Acceptance for restrained and unrestrained assemblies and beams in ANSI/UL 263 for additional guidance when determining whether restrained or unrestrained ratings should be specified.

17. Air Ducts and Protection Systems

For designs employing means for the movement of air, ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," or appropriate model mechanism code is to be consulted.

Unless otherwise specified by the design, the ratings were developed based on fire tests employing no air movement. The ratings, therefore, require that air movement be effectively stopped at the start of a fire.

Unless specified otherwise, the minimum distance between the bottom of the duct and the top of ceiling membrane is not to be less than 4 in.; where a greater minimum distance is specified, it may be reduced to 4 in. minimum. For ducts equipped with hinged sheet-steel dampers over duct outlets, unless specified otherwise, the maximum distance between the bottom of the duct and the top of the ceiling is not to exceed 8 in. When Classified Ceiling Dampers are used, no limit is required for the maximum distance between the bottom of the duct and the top of the ceiling since fire dampers

are installed close to the top of ceiling membrane per installation instructions. Where hinged sheet steel dampers are specified, they should be equipped with spring catches and corrosion resistant hinges. Dampers designed to close by gravity should be installed to close in the direction of the air flow. Air diffusers are to be of steel and attached to the duct outlet with steel sheet metal screws. Spacing of screws should be at least three equally spaced for round diffusers and 8 in. OC max per side for square diffusers, with no less than one on each side.

Except where noted in the design, the air diffusers used in the test assemblies were of the surface-mounted type which also supported the surrounding acoustical material by a flange at least 1 in. wide. The opening in the ceiling membrane for attachment of the diffuser to the duct outlet should not be more than 1 in. greater than the size of the duct outlet. Lay-in type diffusers may be used when they are described in the individual design(s) or in the Classification information of Ceiling Air Diffusers (BZZU) for individual companies.

Classified Ceiling Dampers (CABS) may be used in lieu of the hinged door type dampers in those designs which employ air ducts with the duct outlet protected with a hinged door type damper. The maximum area for individual duct outlets and the total aggregate area of duct outlets per each 100 sq ft of the ceiling area are specified in the design and are applicable when the hinged door type damper is used. If the Classified ceiling damper is also eligible for use in the design, when the maximum size of the duct outlets for the Classified ceiling damper would apply. The size of the duct outlets should be no larger than the maximum size of the Classified ceiling damper.

Some designs specify a smaller aggregate duct outlet area for each 100 sq ft of ceiling area than the maximum size of an individual outlet. In this case, when a Classified ceiling damper is used, the allowable outlet area per 100 sq ft of ceiling area should be established on the basis of 1/2 the area of the individual maximum size.

When a design requires the use of a covering material around the duct outlet and/or the hinged door damper, ceramic paper or a material having equivalent thermal properties of the ceramic paper should be used.

Duct outlets should be located in the field of an acoustical panel; however, where it is necessary to cut a main runner or cross tee, each cut end should be supported by a vertical No. 12 SWG hanger wire. A 1/2 in. clearance should be maintained between the duct outlet and each cut end of main runner or cross tee. The duct outlet should be located so that no more than one main runner or cross tee is cut when penetrating the ceiling membrane.

Flexible air ducts may be used with Classified Air Terminal units designated for use in designs. The flexible air duct should be 6 to 8 in. diameter, Class 0 or Class 1 Air Connector or Air Duct, bearing the UL Listing Mark. For assemblies with wood joists ("L" series designs), use Air ducts only. The flexible duct should be supported 4 to 6 ft OC with steel straps and/or No. 12 SWG steel hanger wire so that no portion of the flexible duct is within 4 in. of the top of the ceiling membrane, except where connected to the Air Terminal Unit.

The following duct outlet protection may be used as alternate systems. System A may only be used when it is specified in the individual design. System B may be used in any design which contains a steel duct with the duct outlet protected by a hinged door damper, for equal or smaller outlet size. The systems have been investigated for their effectiveness in retarding the transfer of heat into the ceiling space but their ability to retard smoke and other combustion products have not been investigated.

Duct Outlet Protection System A

Duct Outlet Protection System A

- 1. Steel Air Duct** — Construction and support provisions are specified by the individual fire-resistance design. Duct outlet to be provided with a louvered, surface mounted, steel air diffuser, secured with steel fasteners. Duct supported by 1-1/2 in., min 0.053 in. thick (No. 16 gauge) cold-rolled steel channels hung at each end from structural members of floor or roof with No. 12 SWG galv steel wire. When duct outlets are 144 sq in. or smaller, cold-rolled channels should be located adjacent to one or both sides of the duct outlet and spaced a max of 48 in. OC. When duct outlets are larger than 144 sq in., cold-rolled channels should be located adjacent to each side of the duct outlet and spaced a max of 48 in. OC.
- 2. Glass Fiber Duct Lining** — Min 1 in. thick, 3.0 to 5.0 pcf density,

- unfaced or faced with paper, foil, plastic film or asphalt emulsion. Lining affixed to inside of duct with adhesive or steel fasteners or both. Lining and adhesive should have a flame spread rating of 25 or less and a smoke developed index of 50 or less, as determined by the ANSI/UL 723 and should comply with all other specifications in ANSI/NFPA 90A. Lining should cover the full inside perimeter of the duct, extending at least 12 in. beyond the edges of the duct outlet. Lining on bottom of duct to be cut flush with the edges of the duct outlet.
- Acoustical Lay-in Panel** — Any nom 5/8 in. acoustical lay-in panel Classified by Underwriters Laboratories Inc. for use in fire-resistance designs. Panels should be laid on top of duct, extending at least 6 in. beyond sides of duct outlet along width of duct, and extending at least 18 in. beyond sides of duct outlet along length of duct. More than one panel may be butted together to form a panel of the required dimensions. Panels should have a flame spread index of 25 or less and a smoke developed index of 50 or less as determined by ANSI/UL 723 and should comply with all other specifications in ANSI/NFPA 90A.
 - Ceramic Paper** — Where specified by the individual fire-resistance design, ceramic paper should be affixed to the duct outlet.

Duct Outlet Protection System B

Duct Outlet Protection System B

- Steel Air Duct** — Construction and support provisions as specified in the individual designs. Outlet to be provided with a louvered, surface mounted, steel diffuser, fastened securely with steel fasteners. Duct supported by 1-1/2 in., min 0.053 in. thick (No. 16 gauge) cold-rolled steel channel hung at each end from structural members of floor or roof with No. 12 SWG galv steel wire. When duct outlets are 144 sq in. or smaller, cold-rolled channels should be located adjacent to one or both sides of the duct outlet and spaced a max of 48 in. OC. When duct outlets are larger than 144 sq in., cold-rolled channels should be located adjacent to each side of the duct outlet and spaced a max of 48 in. OC.
- Mineral Wool Batts** — 1-1/4 in. thick mineral wool batts, 3.5 to 8.0 pcf density. Top piece of batt should extend at least 3 in. beyond the sides of the duct and 6 in. beyond the edges of the duct outlet. Side pieces should extend from the lower face of the top piece to the upper face of the ceiling membrane along the entire length of the top piece. Side pieces tied to top piece with No. 18 SWG galv steel wire, 18 in. OC. Material should have a flame spread index of 25 or less, a smoke developed index of 50 or less as determined by ANSI/UL 723, and should comply with all other specifications in ANSI/NFPA 90A.
- Ceramic Paper** — Where specified in the design, ceramic paper should be affixed to the duct outlet.

18. Blanket Insulation

Unless specifically described in a design, the addition of insulation in the concealed space between the ceiling membrane and the floor or roof structure may reduce the hourly rating of an assembly by causing premature disruption of the ceiling membrane and/or higher temperatures on structural components under fire exposure conditions.

Insulation in G500, L500 and P500 Series Designs — For 1-hour rated G500, L500 and P500 series assemblies, fiberglass insulation, either loose-fill, batts or blankets may be added to the plenum or joist space above the gypsum wallboard provided an additional layer of gypsum wallboard is added to the assembly. The gypsum wallboard should be of the same type as shown in the individual designs. The base layer of wallboard should be attached with the fastener type and spacing as described in the design. It is not necessary to tape the joints of the base layer. The finish layer of gypsum wallboard should also be attached with the fastener type and spacing as described in the individual design. The length of the fasteners should be increased by a minimum of the wallboard thickness of the additional layer. The joints in the finish layer should be finished as described in the design.

Other methods of adding insulation in the plenum or joist cavity are not permitted unless indicated in the individual designs.

19. Wood Frame Construction

Spaces between joists or trusses and spaces between the ceiling and the floor above should be provided with firestopping or draft stopping as specified in the provisions of applicable building codes.

When a non fire rated wood stud wall assembly abutts the bottom of a wood joist floor-ceiling assembly employing a membrane ceiling, the membrane should be continuous above the top plate of the wall assembly.

20. Roof Coverings

Most roof assemblies are tested with Class C roof covering. The fire-resistance ratings for these assemblies are also applicable when the roof covering is a Class A, B or C system consisting of hot mopped or cold applied bituminous materials. The Class A, B and C ratings are determined by ANSI/UL 790, "Standard Test Methods for Fire Tests of Roof Coverings."

Class A, B or C roof coverings consisting of hot mopped or cold applied bituminous materials or a roof covering material Classified under Roofing Membranes (CHCI) may be applied directly to the concrete or wood surface of floor designs being used as roofs without a reduction of fire-resistance ratings.

Class A, B or C prepared roof covering may be used on wood floor designs without a reduction of the fire-resistance rating provided a nailer of equal thickness to the length of the mechanical fasteners is added to the flooring.

21. Roof Insulation

Roof insulation is to be carefully controlled relative to manufacturer, type and thickness as specified. Less than the specified thickness could result in higher temperatures on the roof covering while a greater thickness of insulation could cause earlier structural failure.

Classified polystyrene insulation, with a density of 5 pcf or less, may be placed on concrete floors or structural concrete roofs without reducing the assembly rating.

When mineral and fiber boards, polystyrene insulation exceeding 5 pcf or polyisocyanurate insulation are used over the concrete in D 900 Series designs, the unrestrained beam rating should be increased by a minimum of 1/2 hr.

22. Uplift Resistance

The resistance of the roof assemblies to uplift by pressures on the roof surface or other damage which may result from high velocity wind has not been investigated. Roof deck constructions Classified for uplift resistance are illustrated in the Roofing Materials and Systems Directory.

23. Steel Roof Deck Fasteners

Steel Roof Deck Fasteners that have been investigated as part of a Roof Deck Construction may be used to fasten the roof deck to steel joists or beams in lieu of welding or screws, in fire-resistive assemblies. See Roof Deck Fasteners (TLX) for a list of manufacturers. See Roof Deck Constructions (TGKX) for a list of roof constructions that have been investigated for uplift resistance. The steel fasteners must be compatible with the construction shown in the individual fire-resistive designs.

Screw tips penetrating the steel roof deck in all P700 and P800 series designs require spray-applied fire-resistive material. The spray-applied fire-resistive material specified in the design should be applied to cover the tips at a minimum thickness of 1/2 in.

24. Steel Floor Unit Fasteners

Power driven fasteners may be used as an alternate to welding the steel floor units to the structural supports in A ____, D ____ and G ____ series designs. The uplift resistance of the assembly with power driven fasteners should be equal to or greater than the uplift resistance of the assembly when using welds.

Minimum 3/4-in. long #10 self-drilling screws may be used as an alternate to button-punching the side laps of adjacent steel floor and form units in A ____, D ____, G ____ and P ____ series designs. The spacing of the screws should be the same as indicated for the button punches.

IV. BEAMS

This section on beams applies to W, M or S shaped hot rolled structural steel sections as defined by the American Institute of Steel Construction.

The conditions of acceptance in ANSI/UL 263 provide criteria for Restrained Beam Ratings and Unrestrained Beam Ratings. A greater thickness of protection material is typically required for the Unrestrained Beam Rating as compared to the protection material thickness required for the Restrained Beam Rating based on the differences in the rating criteria. Accordingly, Unrestrained Beam Ratings may be used for beams designed for either restrained or unrestrained conditions. Restrained Beam Ratings may be used for beams designed for restrained conditions.

ANSI/UL 263 provides for beams to be included in two types of test assemblies. One type of test assembly contains a full representation of the floor or roof construction being supported by the beam. Classifications resulting from this type of tested assembly may include: (1) Restrained Assembly Ratings, (2) Unrestrained Assembly Ratings, and (3) Unrestrained Beam Ratings. Restrained Beam Ratings are not determined from this type of test assembly. Results from these tests are identified as Design Series Nos. A00, D00, G00, J00 or P00. The other type of test assembly contains a partial representation of the floor or roof construction. Classifications resulting from this type of tested assembly may include: (1) Restrained Beam Ratings and (2) Unrestrained beam Ratings. Ratings for floor or roof assemblies are not determined from this type of test assembly. Results from these tests are identified as Design Series Nos. N00 or S00.

1. Beam Size

For fire resistance purposes, the minimum beam size is expressed in terms of a W/D ratio, where W is the weight of the beam per lineal foot

and D is the perimeter of protection material at the interface between the steel section and the protection material. Accordingly, beams of the same configuration and having a greater W/D ratio than the beam size specified in the fire-resistive design are considered larger than the specified minimum size beam and may be used in that design.

W/D values are published by the American Institute of Steel Construction, Inc. In 2001, the method used to calculate the perimeter was refined to include the fillets of hot-rolled sections rather than assuming right angle intersections. An example of this change results in the W/D value for a W8x28 section changing from 0.80 to 0.819.

Application of equations in the Fire Resistance Directory that include proportional relationship of the (W/D) value are not affected by the change in the calculation process for (W/D), provided the (W/D) values used are determined by a single method.

2. Composite and Noncomposite Beams

The load applied on beams during the fire tests has been determined by the allowable stress design method specified by the American Institute of Steel Construction. Noncomposite beams may be substituted when composite beams are specified in a design because composite beams deflect more under fire conditions when loaded to their design load than noncomposite beams. Composite beams may only be substituted into designs which specify composite beams.

3. Cavities

Cavities, if any, between the upper beam flange and the steel floor or roof units should be filled with the fire-resistive coating material applied to the beam, unless specified otherwise on the individual design.

4. Beam Substitution

Beam ratings depend upon the type of floor or roof the beam is supporting and the protection on the floor or roof units, as well as the type and thickness of protection material applied to the beam. The substitution of beams into a floor assembly (A--, D--, G-- or J-- Design) or roof assembly (P-- Design) should be limited to assemblies which have a similar or greater capacity for heat dissipation from the beam as compared to the capacity for heat dissipation of the floor or roof construction specified in the design from which the beam is being transferred.

For concrete floors, an equal or greater capacity for heat dissipation exists when the concrete has an equal or greater density range and volume per unit floor area.

Spray-applied Fire-resistive Materials

Application of N Series Designs

When it is the intent to only maintain the existing Assembly Rating, the beams, steel joists and steel trusses from N Series Designs may be substituted for the tested structural member provided the hourly Unrestrained Beam Rating of the structural member being transferred is at least equal to the Unrestrained Beam Rating of the structural member being replaced. Additionally, for steel joists and steel trusses the Restrained Beam Rating of the joist or truss being transferred is to be equal to or greater than the Restrained Assembly Rating of the floor-ceiling assembly into which the joist or truss is being transferred.

When it is the intent to comply with requirements that the structural member's hourly rating be equal to or greater than the assembly's hourly rating, the structural member from the N Series Design may be substituted for the tested structural member provided also that the hourly Beam Rating of the structural member being transferred is at least equal to the hourly rating of the requirement. Additionally, the Restrained Beam Rating of the structural member being transferred is to be equal to or greater than the Restrained Assembly Rating of the floor assembly into which the structural member is being transferred.

For applications where the assembly's hourly rating differs from the structural member rating, particular attention should be made to the thickness of fire protection materials applied to the underside of the floor adjacent to the structural member. The thickness of fire protection material required within 12 in. beyond the edges of the structural member should be the lesser of the beam protection thickness or the deck protection thickness as required by the N Series Design but not less than the thickness of fire protection material required by the assembly.

Application of S Series Designs

When it is the intent to only maintain the existing Assembly Rating, the beams, steel joists and steel trusses from the S Series Designs may be substituted for the tested structural member provided the hourly Unrestrained Beam Rating of the structural member being transferred is at least equal to the Unrestrained Beam Rating of the structural member being replaced. Additionally, the Restrained Beam Rating of the structural member being transferred is to be equal to or greater than the Restrained Assembly Rating of the roof assembly into which the structural member is being transferred.

When it is the intent to comply with requirements that the structural member's hourly rating be equal to or greater than the assembly's hourly rating, the structural member from the S Series Design may be substituted for the tested beam provided also that the hourly Beam Rating of the structural member being transferred is at least equal to the hourly rating of the requirement. Additionally, the Restrained Beam Rating of the structural

member being transferred is to be equal to or greater than the Restrained Assembly Rating of the roof assembly into which the structural member is being transferred.

For applications where the assembly's hourly rating differs from the structural member rating, particular attention should be made to the thickness of fire protection material applied to the underside of the roof deck adjacent to the structural member. The thickness of fire protection material required within 12 in. beyond the edges of the structural member should be the lesser of the beam protection thickness or the deck protection thickness as required by the S Series Design but not less than the thickness of fire protection material required by the assembly.

Application of A, D, G, J and P Series Designs

When it is the intent to only maintain the existing Assembly Rating, the beams from A, D, G, J and P Series Designs may be substituted for the tested beam provided that: (1) the Unrestrained Beam Rating of the beam being transferred is equal to or greater than the Unrestrained Beam Rating of the beam being replaced; and (2) the Restrained Assembly Rating of the assembly from which the beam is being transferred is equal to or greater than the Restrained Assembly Rating of the assembly into which the beam is being transferred.

When it is the intent to comply with requirements that the beam's hourly rating be equal to or greater than the assembly's hourly rating, the beams from A, D, G, J and P Series Designs may be substituted for the tested beam provided also that the hourly Unrestrained Rating of the beam being transferred is at least equal to the hourly rating of the requirement.

Mastic and Intumescent Coatings

Application of N Series and S Series Designs

The beams, steel joists and steel trusses from N Series Designs may be substituted for the tested structural member, provided the hourly Unrestrained Beam Rating of the structural member being transferred is at least equal to the Unrestrained Beam Rating of the structural member being replaced, and the Restrained Beam Rating of the structural member being transferred is equal to or greater than the Restrained Assembly Rating of the floor-ceiling assembly into which the structural member is being transferred.

5. Unprotected Floors and Roofs

The Unrestrained Beam Ratings in the N400, N600, N700 and N800 Series designs with spray-applied fire protection material on the steel floor decks may be used with unprotected steel floor deck assembly designs (D900 Series) or unprotected precast concrete floors provided that the beam fire protection material is oversprayed to the underside of the floor on both sides of the beam for a minimum width of 12 in. beyond the edges of the beam flange. The thickness of the protection material oversprayed to the underside of the floor should be the same as required for the beam. Overspraying is not required when the N Series designs with unprotected steel floor decks are substituted in the D900 Series designs or to support unprotected precast concrete units.

The Unrestrained Beam Ratings in the S400, S600, S700 and S800 Series designs with spray-applied protection material on the steel roof decks may be used with unprotected steel roof deck assembly designs (P9-- designs) provided the beam protection material is oversprayed to the underside of the roof on both sides of the beam for a minimum distance of 12 in. beyond the edges of the beam flange. The thickness of protection material oversprayed to the underside of the roof should be the same as required for the beam. Overspraying is not required when the S-- designs with unprotected steel roof decks are substituted in the P9-- roof designs.

6. Adjustment of Thickness of Spray-applied Fire-resistive Materials for Restrained and Unrestrained Beams

Alternate-sized steel beams may be substituted for the given beam in the A700, A800, A900, D700, D800, D900, G700, G800, J700, J800, J900, N700, N800, P700, P800, P900, S700 and S800 series designs, provided the beams are of the same shape, and the thickness of spray-applied fire-resistive material for 1, 1-1/2, 2, 3 and 4 h Restrained and Unrestrained Beam ratings is adjusted in accordance with the following equation:

$$T_1 = \frac{\left(\frac{W_2}{D_2} + 0.6\right)(r_1)}{\left(\frac{W_1}{D_1} + 0.6\right)}$$

Where:

T = Thickness (in.) of spray-applied material

W = Weight of beam (lb/ft)

D = Perimeter of protection, at the interface of the protection material and the steel through which heat is transferred to steel (in.)

Subscript 1 = Refers to alternate beam size and required material thickness

Subscript 2 = Refers to given beam size and material thickness shown on the individual design

1) W/D values are not less than 0.37

2) T₁ values are not less than 3/8 in. and

3) the Unrestrained and Restrained Beam Rating is not less than 1 h.

The use of this procedure is applicable to the adjustment of spray-applied fire-resistive material thickness on restrained and unrestrained beams hav-

ing insulid web members. It is not applicable to the adjustment of mastic and intumescent coatings on restrained and unrestrained beams.

When used to adjust the material thickness for a restrained beam, the use of this procedure is limited to steel sections classified as compact in accordance with the Specification for the Design of Structural Steel Buildings by the American Institute of Steel Construction, Load and Resistance Factor Design (Third Ed.).

7. Restrained and Unrestrained Conditions

Classifications of floor-ceiling and roof-ceiling assemblies and individual beams include restrained and unrestrained ratings. See **Section III FLOOR-CEILING AND ROOF-CEILING, Item 16 Restrained and Unrestrained Assemblies** for additional information on this subject.

V. COLUMNS

The minimum column size and configuration of the steel member is specified in the X and Y Series designs. The same hourly rating applies when a steel section with an equal or greater W/D ratio is substituted for the specified column size of the same configuration.

W/D values are published by the American Institute of Steel Construction, Inc, for contour and box protection configurations. In 2001, the method used to calculate the contour perimeter was refined to include the rounded fillets of hot-rolled sections rather than assuming right angle web-flange intersections. An example of this change results in the W/D value for a W10x49 section (with four side contour protection) changing from 0.83 to 0.84.

Application of equations in the Fire Resistance Directory that include a proportional relationship of the (W/D) value is not affected by the change in the calculation process for (W/D), provided the (W/D) values used in each application are determined consistently by a single method.

The thickness of the coating materials in the X700, X800 and Y700 Series designs required on wide flange steel sections smaller than specified in a design may be calculated as follows:

$$X_2 = 1.25(X_1) \left(\frac{W_1}{D_1} \right) \left(\frac{D_2}{W_2} \right)$$

Where:

- x2 = Thickness of coating for smaller wide flange section
- x1 = Thickness of coating used on the rated steel section
- W2 = Weight per foot of smaller wide flange section
- W1 = Weight per foot of the rated steel section
- D2 = Perimeter of smaller steel section at interface with coating
- D1 = Perimeter of the rated steel section at interface with coating

Guidance addressing the application of spray-applied fire-resistive materials to primed or similarly painted wide flange steel shapes is provided in the section titled **Coating Materials**.

The fire-resistive materials applied to the steel sections should be protected from damage.

VI. WALL AND PARTITION ASSEMBLIES

The ratings for walls and partitions apply when either face of the assembly is exposed to the fire unless indicated otherwise on a specific design. Flashing and corner details may vary from those described in a design provided structural equivalency is maintained and similar materials to those specified in the design are used for supports, fasteners and flashings.

The hourly rating of a load-bearing assembly also applies to the same assembly when it is used as a non-load-bearing assembly.

The size of studs are minimum unless otherwise stated in a design.

The spacing of studs is a maximum unless otherwise stated in a design.

Spacing between parallel rows of studs are minimums unless otherwise stated in the individual designs.

Gypsum board thicknesses specified in specific designs are minimums. Greater thicknesses of gypsum board are permitted as long as the fastener length is increased to provide penetration into framing that is equal to or greater than that achieved with the specified gypsum board thickness and fasteners.

Additional layers of gypsum board are permitted to be added to any design.

Orientation, vertical or horizontal, of the application of gypsum board in walls and partitions is specified in the individual designs.

Except when gypsum board is allowed to be applied horizontally in the individual wall designs, horizontal butt joints of vertically applied gypsum board should be backed by the same type studs as specified in the design. Alternatively, minimum 25 gauge steel framing with a minimum attachment face of 1-1/4 in. may be used for the backing. Both edges of the gypsum board forming the horizontal joint should be attached to the backing with the same screws and spacing as specified in the design for the attachment of the gypsum board edges, then finished as specified for the vertical joints.

Horizontal butt joints on opposite sides of the studs in single-layer applications should be staggered a minimum of 12 in. unless otherwise stated in the individual designs. Horizontal butt joints in adjacent layers on the same face of the assembly in multiple-layer applications should be staggered a minimum of 12 in. unless otherwise stated in the individual designs.

1. Wood Stud Walls

The firestopping requirements for wood stud assemblies should be determined from the Authority Having Jurisdiction. Horizontal bridging is

included in most fire test samples in order to fully load the wood studs. This horizontal bridging should not be considered as a means of firestopping.

The hourly fire ratings for load-bearing wood stud walls were derived with a superimposed load applied to the wall assembly intended to theoretically develop maximum working stresses not exceeding the design values published in the Supplement to the 1991 Edition of the National Design Specification for wood construction. In addition, the design load per square inch of cross-sectional area for any wood stud should not exceed 385 psi.

Wood stud walls may contain fire-retardant-treated studs as well as untreated wood studs.

2. Steel Studs

The dimensions and gauge of steel studs are minimums. The hourly ratings apply when the steel studs are of a heavier gauge and/or larger dimensions than specified in a design. The superimposed load of bearings walls utilizing steel studs should be based on the capacity of the studs as determined by the 1986 edition of the AISI Specification for the Design of Cold Formed Steel Structural Members with the December 11, 1989 Addendum.

The loads applied to steel studs having a yield stress higher than the stated minimum should be based upon the specified minimum yield stress stated in the design.

3. Metal Thickness

Unless otherwise indicated in the individual designs, the following minimum metal thickness tables apply where a metal gauge designation is stated. Metal gauges are no longer referenced in ASTM Standards. It is still an industry practice to specify steel components by gauge. Because many of the designs contained herein refer to metal gauge the following information is to be used as a guide where field questions occur. The tables shown herein should be used as a reference and the Authority Having Jurisdiction should be consulted if discrepancies exist between these tables and a local code requirement. Due to structural considerations and fire performance considerations the minimum thickness tables are different for steel deck (floor or roof), load-bearing studs and non-load-bearing studs.

The minimum thickness for load-bearing steel studs is based upon ASTM C955-96, "Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks) and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases." The color code denoted by the ASTM Standard is also shown below. For load-bearing steel studs, the minimum bare metal thickness should be as follows:

Gauge	Color Code	Min Thkns Bare Metal In.
20	White	0.0329
18	Yellow	0.0428
16	Green	0.0538
14	Orange	0.0677

For non-load-bearing studs, the minimum thickness is based upon the gauge conversion table found in the 1997 Uniform Building Code. For non-load-bearing steel studs, the minimum bare metal thickness should be as follows.

Gauge	Min Thkns Bare Metal In.
25	0.018
24	0.021
22	0.027
20	0.033
18	0.044
16	0.055

4. Gypsum Board Joint Treatment

The joints in gypsum board applied to wood or steel studs may either be exposed or covered with joint tape and joint compound for that portion of the joint above a suspended ceiling which is part of a fire-resistive floor-ceiling or roof-ceiling assembly.

5. Nonmetallic Electrical Outlet Boxes

Outlet Boxes and Fittings Classified for Fire Resistance (CEYY) includes Classifications for nonmetallic outlet and switch boxes for use in wall or partition assemblies. The information provided for each Classification includes the model numbers for the Classified products, a description of the rated assemblies, the spacing limitations for the boxes and the installation details. Nonmetallic boxes should not be installed on opposite sides of walls or partitions of staggered stud construction unless Classified for use in such constructions.

6. Metallic Electrical Outlet Boxes

Listed single and double gang metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in bearing and nonbearing wood stud and steel stud walls with ratings not exceeding 2 h. These walls should have gypsum wallboard facings similar to those shown in Design Nos. U301, U411 and U425. The metallic outlet or switch boxes should be securely fastened to the studs and the opening in the wallboard

facing should be cut so that the clearance between the box and the wall-board does not exceed 1/8 in. The surface area of individual metallic outlet or switch boxes should not exceed 16 sq in. The aggregate surface area of the boxes should not exceed 100 sq in. per 100 sq ft of wall surface. The aggregate surface area of the boxes may be exceeded when Wall Opening Protective Materials (CLIV) are installed according to the requirements of their Classification.

Metallic boxes located on opposite sides of walls or partitions should be separated by a minimum horizontal distance of 24 in. This minimum separation distance between metallic boxes may be reduced when Wall Opening Protective Materials (CLIV) are installed according to the requirements of their Classification.

Metallic boxes should not be installed on opposite side of walls or partitions of staggered stud construction unless Wall Opening Protective Materials are installed with the metallic boxes in accordance with Classification requirements for the protective materials.

7. Exterior Walls

Fire-resistive wall designs are investigated with the understanding that their use is limited to interior applications only unless the design includes the statement "Investigated for Exterior Use" or unless the exterior use is obvious, as in the case of coated metal wall facings or other exterior siding being provided.

8. Concrete Masonry Units

Unless otherwise indicated in the individual designs, the allowable compressive stress for the concrete masonry units have been determined from the empirical design method for masonry found in the model codes. For assemblies that have been tested at less than 100% of the allowable compressive stress, the design states the maximum allowable compressive stress for the assembly.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

CEILING DAMPERS (CABS)

USE AND INSTALLATION

This category covers ceiling dampers investigated for use in fire-resistance designs as detailed in Fire Resistance Ratings – ANSI/UL 263 (BXUV).

Ceiling dampers are designed to function as a heat barrier in air-handling openings penetrating the ceiling membrane of fire-resistive floor-ceiling designs and/or roof-ceiling designs for which they have been investigated.

The Classification covers ceiling damper models for (1) use in lieu of hinged-door-type dampers in floor-ceiling or roof-ceiling designs that contain air ducts and specify the use of a hinged-door-type damper over each duct outlet, or (2) use in specific floor-ceiling and/or roof-ceiling designs as marked on the damper. An air duct with a hinged-door-type damper must be a specified component of the floor-ceiling and/or roof-ceiling design for a ceiling damper to be an acceptable option unless the ceiling damper is Classified for use in the design.

Ceiling dampers are intended to be installed in accordance with the provided installation instructions. For ceiling dampers intended for installation in a duct outlet in lieu of hinged-door-type dampers, the location of the ceiling damper in the duct outlet relative to the ceiling level is specified in the installation instructions. This location must be followed during installation in order to obtain the hourly fire-rated performance of the design.

The individual Classifications information indicate whether (1) each damper type can be used in all designs conforming to the specifications under the Classification, or (2) only for specific design(s) that show the Classified company name and damper type. In the latter case, the individual design numbers are shown in the Classification Mark.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate the physical performance of ceiling dampers in this category is ANSI/UL 555C, "Ceiling Dampers."

The basic standard used to investigate the fire-resistance performance of ceiling dampers in this category for use in floor-ceiling and/or roof-ceiling designs in lieu of the hinged-door-type dampers shown in those designs is ANSI/UL 555C.

The basic standard used to investigate the fire-resistance performance of ceiling dampers in this category for use in floor-ceiling and/or roof-ceiling designs that do not indicate the use of hinged-door-type dampers in the design is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

Fire performance measured by both ANSI/UL 263 and ANSI/UL 555C is based upon the assumption that air movement will be effectively stopped at the start of a fire.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for

these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CEILING DAMPER

LUMINAIRES AND LUMINAIRE ASSEMBLIES CLASSIFIED FOR FIRE RESISTANCE (CDHW)

USE

This category covers luminaires and luminaire assemblies investigated for use in fire-resistance designs as detailed in Fire Resistance Ratings – ANSI/UL 263 (BXUV). The luminaires and assemblies are intended for recessed installation in ceilings in accordance with ANSI/NFPA 70-2005, "National Electrical Code." They have been shown to provide a degree of fire resistance with the floor or roof assemblies with which they have been tested.

These luminaires and luminaire assemblies have been investigated and found to comply with applicable electrical requirements and are so labeled.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 263, "Fire Tests of Building Construction and Materials," and ANSI/UL 1598, "Luminaires."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. * LUMINAIRE or LUMINAIRE ASSEMBLY

SPEAKER ASSEMBLIES FOR FIRE RESISTANCE (CHML)

USE AND INSTALLATION

This category covers speaker assemblies investigated for use in ceilings of fire-resistive floor-ceiling and roof-ceiling assemblies as detailed in Fire Resistance Ratings – ANSI/UL 263 (BXUV). The assemblies have been shown to provide a degree of fire resistance when installed in the specific designs described for each Classified company.

The speaker assemblies have been investigated for use in specific ceilings with respect to: (1) maximum size of the individual speaker assemblies, (2) minimum spacing between individual speakers and (3) maximum aggregate area of the speaker assemblies per 100 sq ft of ceiling area.

Speaker assemblies are intended to be installed in accordance with the installation instructions supplied with the product and as described in the individual fire-resistive designs.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings – ANSI/UL 263 (BXUV).

Speakers for use in nonhourly fire-rated ceiling systems and rated for ple-nium use are covered under Speakers and Amplifiers for Fire-protective Signaling Systems (UUMW).

SPEAKER ASSEMBLIES FOR FIRE RESISTANCE (CHML)

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

Some of these speaker assemblies are provided with an outer enclosure. The insulation material that surrounds the enclosure that is exposed to the airflow in a return air-plenum space has additionally been investigated to ANSI/UL 723, "Test for Surface Burning Characteristics of Building Materials." These materials have a flame spread value of 25 or less and a smoke developed value of 50 or less.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

WALL OPENING PROTECTIVE MATERIALS (CLIV)

USE AND INSTALLATION

This category covers wall opening protective materials investigated for use in fire-resistance designs as detailed in Fire Resistance Ratings – ANSI/UL 263 (BXUV). The protective materials are proprietary compositions used to maintain the hourly ratings of fire-resistive walls and partitions containing flush-mounted devices, such as outlet boxes, electrical cabinets and mechanical cabinets.

The Nonmetallic Electrical Outlet Boxes section under **WALL AND PARTITION ASSEMBLIES** in BXUV specifies the conditions under which Listed metallic outlet and switch boxes may be installed within fire-resistance-rated wall assemblies constructed with bearing and nonbearing wood or steel studs and gypsum board facings. In addition, Outlet Boxes and Fittings Classified for Fire Resistance (CEYY) includes Classifications for nonmetallic outlet boxes along with the conditions under which such outlet and switch boxes may be installed within fire-resistive wall assemblies. With either type of outlet or switch box, it may be possible to install the boxes under less stringent conditions when such boxes are used in conjunction with wall opening protective materials. The use of wall opening protective materials may allow for (1) reducing the spacing between boxes contained on opposite sides of the wall, (2) increasing the size of the boxes, (3) increasing the density of boxes installed, and/or (4) allowing the use of boxes on each side of staggered stud walls. The individual Classifications indicate the specific applications and the method of installation for which the materials have been investigated.

Electrical devices are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings – ANSI/UL 263 (BXUV).

BUSWAYS, METAL ENCLOSED, OVER 600 VOLTS (CVZW)

GENERAL

This category covers metal-enclosed busways of the nonsegregated phase type, for use in accordance with Article 368 of ANSI/NFPA 70, "National Electrical Code." Nonsegregated phase busway is one in which all phase conductors are in a common metal enclosure without barriers between the phases.

These are assemblies of metal-enclosed conductors, together with associated interconnections, enclosures, and supporting structures.

These assemblies are intended for use on systems with nominal rated voltages from 601 V to 38 kV ac. Current ratings are from 600 to 10,000 A. These assemblies may be intended for either indoor or outdoor applications. An assembly that has been investigated to determine that it is rain-proof is marked "Rainproof," "Outdoor" or "3R."

Enclosures are of the ventilated or nonventilated type. A ventilated enclosure is provided with means to permit circulation of sufficient air to remove excess heat.

A nonventilated enclosure is constructed to provide no intentional circulation of external air through the enclosure.

PRODUCT MARKINGS

These products are marked with the following electrical ratings: rated voltage, rated continuous current, insulation (BIL) level, frequency, rated frequency withstand voltage (dry), and rated short-circuit withstand current (momentary current). When shipped in sections, each section is marked.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C37.23-2003, "IEEE Standard for Metal-Enclosed Bus."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-Enclosed Busway."

BUSWAYS AND ASSOCIATED FITTINGS (CWFT)

GENERAL

This category covers busways and associated fittings, rated 600 V or less, 6000 A or less. Busways are grounded metal enclosures containing factory-mounted bare or insulated conductors, which are usually copper or aluminum bars, rods or tubes. These enclosures and, in some cases an additional ground bus, are intended for use as equipment grounding conductors.

Some busways are not intended for use ahead of service equipment and are marked with the maximum rating of overcurrent protection to be used on the supply side of the busway.

Busways may be of one of the following designs:

Lighting Busway — Busway intended to supply and support industrial and commercial luminaires. Lighting busway is limited to a maximum current rating of 50 A.

Trolley Busway — Busway having provision for continuous contact with a trolley by means of a slot in the enclosure. Trolley busway may be additionally marked "Lighting Busway" if intended to supply and support industrial and commercial luminaires.

Continuous Plug-in Busway — Busway provided with provision for the insertion of plug-in devices at any point along the length of the busway. Continuous plug-in busway is intended for general use and may be installed within reach of persons. Busways of this design are limited to a maximum current rating of 225 A.

Short-run Busway — Unventilated busway intended for a maximum run of 30 ft horizontally, 10 ft vertically and are primarily used to supply switchboards. Except for transformer stubs, short-run busway is not intended to have intermediate taps.

USE AND INSTALLATION

Busways are intended for installation in accordance with Article 368 of ANSI/NFPA 70, "National Electrical Code" (NEC), and the manufacturer's installation instructions.

Busways investigated to determine their suitability for

- installation in a specified position,
- for use in a vertical run, or for support at intervals greater than 5 ft,
- for outdoor use

are so marked. This marking is on or contiguous with the name plate incorporating the manufacturer's name and electrical rating.

A busway or fitting containing a vapor seal is so marked, but unless marked otherwise, the busway or fitting has not been investigated for passage through a fire-rated wall.

Busway marked "Lighting Busway" and protected by overcurrent devices rated in excess of 20 A is intended for use only with luminaires employing heavy-duty lampholders unless additional overcurrent protection is provided for the luminaire in accordance with the NEC.

Trolley busway should be installed out of the reach of persons or be otherwise installed to prevent accidental contact with exposed conductors.

Some busways have a number of short stubs and are marked for use with certain compatible equipment.

Busways and fittings covered under this category are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on the terminal connectors and is on a wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 60°C ampacities for wire sizes 14 – 1 AWG, and 75°C ampacities for wire sizes 1/0 AWG and larger as specified in Table 310.16 of the NEC. Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Some fittings are suitable for use as service equipment and are so marked.

PLUG-IN BUSWAY FITTINGS INTENDED FOR USE ON OTHER MANUFACTURERS' BUSWAYS

Busway fittings of the plug-in design may be suitable for use on other manufacturers' continuous plug-in or lighting busways. Busway fittings investigated for use on other manufacturers' busways are limited to fittings incorporating luminaires. Fittings are marked to indicate with which busway they are intended to be used. Fittings intended for this application are limited to short-circuit current ratings of 10 kA, 600 V or less.

RATINGS

Busways and associated fittings marked "Short Circuit Current Rating(s) Maximum RMS Symmetrical Amps ___ Volts ___" have been investigated for the rating indicated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 857, "Busways."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Busway," "Short-Run Busway" or "Busway Plug," or other appropriate product name.

BUSWAYS AND ASSOCIATED FITTINGS CLASSIFIED IN ACCORDANCE WITH IEC PUBLICATIONS (CWTN)

This category covers products investigated in accordance with IEC 60439, "Low-Voltage Switchgear and Control Gear Assemblies, Part 1 – Type-Tested and Partially Type-Tested Assemblies and Part 2: Particular Requirements for Busbar Trunking Systems (Busways)." These products may additionally be investigated to IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)." These products may also be provided with the Listing Mark for Busways and Associated Fittings (CWFT). For additional information, see Busways and Associated Fittings (CWFT).

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service.

For those products which are also Listed, the Classification Mark includes the appropriate Listing Mark and the statement: "ALSO CLASSIFIED BY UNDERWRITERS LABORATORIES INC. IN ACCORDANCE WITH IEC _____." The designation of the appropriate publications are filled in the blank.

For those products which are not also Listed, the Classification Mark consists of the statement: "CLASSIFIED BY UNDERWRITERS LABORATORIES

INC. IN ACCORDANCE WITH IEC _____" and a control number. The designation of the appropriate publications are filled in the blank. Additionally, the Classification Mark may include the UL symbol and the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory).

CABINETS AND CUTOUT BOXES (CYIV)

GENERAL

This category covers sheet-metal boxes and nonmetallic boxes. Cutout boxes are provided with a door secured by hinges and one or more fasteners and are intended for surface mounting. A cabinet consists of two parts: a cabinet box and a mating cabinet front that contains a door. A cabinet may be flush mounted or surface mounted. These boxes are intended for installation in accordance with Article 312 of ANSI/NFPA 70, "National Electrical Code."

ENVIRONMENTAL RATINGS AND CONDITIONS

Each cabinet and cutout box is marked with one or more of the following Enclosure Type ratings for which it was investigated: Type 1, 2, 3, 3R, 3S, 4, 4X, 5, 6, 6P, 12, 12K or 13. The intended uses for each Enclosure Type are as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Cabinets and cutout boxes marked as Type 2 or 3R enclosures may be marked to indicate the intended mounting orientation, or the location where electrical parts are intended to be installed, or both, where necessary to maintain the designated environmental rating.

Cabinets and cutout boxes marked as Type 3, 3S, 4, 4X, 6, 6P, 12, 12K or 13 have integral mounting means external to the enclosure cavity or may have openings into the enclosure cavity for attachment of separate mounting means supplied with the enclosure or available as a kit referenced from enclosure markings.

ELECTRICAL EQUIPMENT

Some cabinets and cutout boxes are intended for the installation of specific kinds of equipment; however, this category does not cover any electrical material or fittings contained in the box.

RELATED PRODUCTS

Boxes provided with a cover secured by fasteners other than hinges are covered under Boxes, Junction and Pull (BGUZ).

Enclosures investigated for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)," are covered under Degrees of Protection by Enclosures Classified in Accordance with IEC Publications (EFOI).

Enclosures intended for use with industrial control panels are covered under Industrial Control Panels (NITW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 50, "Enclosures for Electrical Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Cabinet Front," "Electric Cabinet Box" or "Cutout Box."

The product name "Electric Cabinet Front" is for the front trim or matt used on the flush- or surface-mounted cabinet box. The product name "Electric Cabinet Box" is for the box only.

The product name "Cutout Box" is for the surface-mounted box provided with a door.

CABLE ASSEMBLIES AND FITTINGS FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION (CYJV)

USE

This category covers cable assemblies, male and female cable fittings, panel-mounted fittings and fittings used with industrial control equipment in accordance with Article 725 of ANSI/NFPA 70, "National Electrical Code" (NEC). These assemblies are intended to be used in an industrial environment to distribute the control signals to remote proximity switches or other control circuit devices. The cable assemblies and mating fittings are not intended to be used as a substitute for the fixed wiring of the building structure. These devices are intended for use only with the Listee's same line of products covered under this category.

Cable assemblies and fittings are rated in volts and amperes. The devices are marked with such rating on the device or smallest unit shipping container. The products covered under this category are not intended for inter-purposes of current and are so marked.

CABLE ASSEMBLIES AND FITTINGS FOR INDUSTRIAL CONTROL AND SIGNAL DISTRIBUTION (CYJV)

Cable Assemblies — Cable assemblies consist of a length of flexible cord with a molded-on or assembled-on male or female connector on at least one end of the cable. Cable assemblies with only one end terminated are intended for direct connection to a proximity switch, control panel, or similar device.

Male and Female Cable Fittings — Fittings intended to be field-wired onto flexible cord may have a male or female insert configuration. The diameter and the wire size of the flexible cord to which the fitting is intended to be assembled is indicated on the fitting or the smallest unit shipping container.

Panel-mounted Fittings — These fittings consist of a panel-mounted assembly with either a male or female insert. Each assembly is provided with a means to secure to a panel. These fittings may be provided with leads intended for direct wiring connection to a control panel, proximity switch, or other similar device.

Tap Fittings — Tap fittings consist of field-wiring terminals for feed-through connection to power-limited tray cable or other appropriate cable together with either a female connector to connect to a cable assembly or field wiring terminals to connect to flexible cord suitable for hard use that is the same size and ampacity as the cable. Tap fittings are intended for use within outlet boxes supported by cable trays in Class 1 power-limited circuits to provide a point of connection to the fixed wiring of the building structure. They may also be installed on Type PLTC cable on open wiring in Class 2 circuits in accordance with Section 725.61(D)(4) of the NEC. They have been investigated for electrical insulation, mechanical strength, temperature rise, fault current withstand and effectiveness of grounding path to demonstrate equivalency to the wiring system on which they are intended to be installed.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2238, "Cable Assemblies and Fittings for Remote Control, Signaling and Power Circuits."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cable Assembly for Industrial Control and Signal Distribution" or "Cable Assembly Fitting for Industrial Control and Signal Distribution."

The cable assemblies which have terminations on one end only may be bulk labeled with the Listing Mark provided on the smallest unit shipping container. All other Listing Marks are applied to each individual device.

CABLE FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYMJ)**USE**

This category covers cable termination fittings and combination cable termination and sealing fittings for threaded connection of cable to equipment in Class I, Zone classified hazardous locations as indicated in the individual Listings. The termination and sealing fittings are intended for use only with sealing compound as specified by the manufacturer in instructions furnished with the fitting.

These devices are intended for use in sealing the conductors and outer jackets of Listed cable of the type indicated in the individual Listings. No splices of conductors are permitted to be made in the fitting. Restrictions on position and/or location of the sealing fitting are indicated in the manufacturer's instructions.

ANSI/NFPA 70, "National Electrical Code," does not permit the use of elastomeric seals in flameproof cable fittings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged with the UL symbol on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control num-

CABLE FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYMJ)

85

ber, and the product name "Type + Cable Sealing Fitting for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

+ Generic cable designation, such as MC-HL, ITC-HL, etc.

CABLE SEALING FITTINGS FOR USE IN HAZARDOUS LOCATIONS (CYMX)**USE**

This category covers combination termination and sealing fittings for threaded connection of cables to equipment in Class I, Division 1 and Division 2, and/or Class II, Division 1 and 2 hazardous locations, as indicated in the individual Listings. They are intended for use only with sealing compound as specified by the manufacturer in instructions furnished with the fitting.

These devices are intended for use in sealing the conductors and outer jackets of Listed cables of the type indicated in the individual Listings. No splices of conductors are permitted to be made in the fitting. Restrictions on position and/or location of the sealing fitting are indicated in the manufacturer's instructions.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged with the UL symbol on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Type + Cable Sealing Fitting for Use in Hazardous Locations."

+ Generic cable designation, such as MC, MC-HL, TC, TC-HL, etc.

CABLE TRAYS (CYNW)**USE**

This category covers cable trays intended for assembly in the field and for use in accordance with Article 392 of ANSI/NFPA 70, "National Electrical Code" (NEC). They have been Classified as to their suitability for use as equipment grounding conductors in accordance with Sections 392.3(C) and 392.7(B) of the NEC. The cable trays are marked on the outer surface of the sidewall of the tray indicating the cross-sectional area of the grounding metal.

INSTALLATION

Cable tray assemblies have been investigated for bonding between sections using the minimum hardware provided by the manufacturer. The manufacturer may supply cable tray sections and fittings without a positive mechanical means for completing the grounding connection. Assemblies not provided with positive mechanical grounding connections are intended to be bonded with mechanical connectors or bonding jumpers provided by the installer, in accordance with 392.7(B)(4) of the NEC.

RELATED PRODUCTS

For nonmetallic cable trays, see Cable Trays, Nonmetallic (CYOV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**CABLE TRAY
AS TO ITS SUITABILITY AS AN
EQUIPMENT GROUNDING CONDUCTOR ONLY
Control No.**

CABLE TRAYS, NONMETALLIC (CYOV)**USE**

This category covers nonmetallic, including fiberglass (fiberglass reinforced plastic) cable tray systems installed for the support of power

and/or control cable. Nonmetallic cable trays are intended for assembly in the field and for use in accordance with Article 392 of ANSI/NFPA 70, "National Electrical Code."

Cable trays are intended to be installed in accordance with NEMA VE 2, "Cable Tray Installation Guidelines," or as recommended by the manufacturer. Cable trays are marked with load/span ratings and may additionally be marked with class designations Class A, B, C, D or E. These class designations represent the static weight supportable by cable tray spans.

Span (ft)	Load (lb/linear foot)				
	Class A	Class B	Class C	Class D	Class E
20	50	75	100	45	75
16	50	75	100	—	—
12	50	75	100	—	—
10	25	—	65	120	200
8	50	75	100	—	—

Listed nonmetallic cable trays are constructed of flame retardant material, provide a degree of voltage isolation, are investigated for the effects of low temperature handling, and are suitable for outdoor use.

Nonmetallic cable trays have not been investigated for use in air-handling spaces.

The investigation of nonmetallic cable trays does not include the support system.

RELATED PRODUCTS

For metallic cable trays, see Cable Trays (CYNW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 568, "Nonmetallic Cable Tray Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Cable Tray."

CAMERA EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (CYPB)

GENERAL

This category covers cameras and pan and tilt drives.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 60065, "Audio, Video, and Similar Electronic Apparatus - Safety Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Camera for Use in Hazardous Locations" or "Pan and Tilt Drive for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

CAMERA EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (CYPH)

GENERAL

This category covers camera equipment, such as cameras and pan and tilt drives.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

CAMERA EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (CYPH)

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Camera for Use in Hazardous Locations" or "Pan and Tilt Drive for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

CAPACITORS (CYWT)

GENERAL

This category covers general-use power factor correction units rated 600 V maximum. These assemblies employ integrally protected capacitors investigated under Capacitors (CYWT2).

This category does not cover power factor correction units with integral automatic controls or power factor correction unit controllers.

USE AND INSTALLATION

These units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and are intended for indoor use, unless otherwise indicated. This information, together with other restrictions of use, such as mounting means and special electrical connections, are detailed in the manufacturer's installation instructions furnished with the product.

RELATED EQUIPMENT

Power factor correction units with integral automatic controls are covered under Industrial Control Panels (NITW).

Power factor correction controllers are covered under Power Circuit and Motor-mounted Apparatus (NMTR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is Part II of ANSI/UL 810, "Capacitors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Factor Correction Unit" or "Capacitor Bank," or other appropriate product name as shown in the individual Listings.

CARBON MONOXIDE ALARMS, SINGLE AND MULTIPLE STATION (CZHF)

GENERAL

This category covers single- and multiple-station carbon monoxide alarms, intended to be employed in indoor locations, as a travel alarm and for use in recreational vehicles.

Single-station Type — Single-station carbon monoxide alarm are self-contained units that incorporate a sensor and related electrical components to initiate an audible alarm signal from the unit when an abnormal amount of carbon monoxide actuates the unit. These devices may be energized from (1) a commercial power-supply source by means of permanent wiring in accordance with ANSI/NFPA 70, "National Electrical Code," or a flexible power-supply cord and plug, (2) use of limited-energy cable or equivalent wiring connected to the output of a suitable Class 2 power supply, or (3) by one or more batteries.

Where a battery is employed as a main supply, its depletion below the level at which an alarm signal would be obtained is indicated by a distinctive audible trouble signal that persists for at least seven days.

Multiple-station Type — Multiple-station carbon monoxide alarms are similar to single-station units but are provided with leads or terminals to permit the interconnection of single-station units so that actuation of any one unit results in the actuation of audible alarms of all units. The installation instructions indicate the maximum number of units that can be interconnected. Refer to the instruction manual provided with each alarm for installation data.

Travel Alarm — A travel alarm consists of a carbon monoxide alarm provided with a mounting bracket for temporary mounting only. Its use is indicated on the UL Listing Mark.

Alarms for Recreational Vehicles — These devices are investigated for the more stringent environmental and operational conditions encountered in recreational vehicles as described in the designated sections of ANSI/UL 2034.

Where applicable, supplementary devices and accessories for use with these units, such as a remote horn, are indicated in the individual Listings.

CARBON MONOXIDE ALARMS, SINGLE AND MULTIPLE STATION (CZHF)**ADDITIONAL INFORMATION**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2034, "Single and Multiple Station Carbon Monoxide Alarms."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and one of the following product names as appropriate:

- "Single-station Carbon Monoxide Alarm"
- "Multiple-station Carbon Monoxide Alarm"
- "Single- and/or Multiple-station Carbon Monoxide Alarm"
- "Single- and/or Multiple-station Carbon Monoxide Alarm Accessory"
- "Travel Carbon Monoxide Alarm"
- "Single-station Carbon Monoxide Alarm – Also Suitable as Travel Carbon Monoxide Alarm"
- "Single-station Carbon Monoxide Alarm – Also Suitable for Use in Recreational Vehicles"
- "Single-station Carbon Monoxide Alarm – Also Suitable for Use in Recreational Vehicles as a Travel Carbon Monoxide Alarm"
- "Single-station Smoke Alarm – Also Suitable as a Single-station Carbon Monoxide Alarm"
- "Multiple-station Smoke Alarm – Also Suitable as a Multiple-station Carbon Monoxide Alarm"
- "Single- and/or Multiple-station Smoke Alarm – Also Suitable as a Single- and/or Multiple-station Carbon Monoxide Alarm"
- "Single-station Smoke and/or Carbon Monoxide Alarm Accessory – Also Suitable for Use as a Home Health Care Control Unit"

CASTERS, RUBBER, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (CZXZ)

These products are electrically conductive rubber casters which have metal shafts and forks, and are provided with conductive rubber composition wheels or with metal wheels having conductive rubber tires. The casters are intended for use on portable equipment in hospital operating rooms.

Tests indicate that static electrical charges are discharged through these casters when in contact with ground or suitable electrically conductive floor, and that the electrical resistance conforms to the requirements of the Standard of The National Fire Protection Association for Health Care Facilities, NFPA 99.

Oil is injurious to rubber compounds and impairs the electrically conductive properties of these casters. The use of floor oils and oily sweeping compounds should therefore be avoided. Insulating floor waxes should not be used.

Conductive floors are required for the proper dissipation of static electrical charges by these casters. Please refer to listings of Electrically Conductive Floorings.

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Rubber Caster Relating to Hazardous Locations".

CENTRIFUGES FOR USE IN HAZARDOUS LOCATIONS (DAZV)**GENERAL**

This category covers centrifuges designed for use in hazardous (classified) locations. They have been investigated with respect to risk of explosion, fire, electric shock, and injury to persons.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

CENTRIFUGES FOR USE IN HAZARDOUS LOCATIONS (DAZV) 87**UL MARK**

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Centrifuge for Use in Hazardous Locations."

MOTOR-OPERATED CHECK-OUT STANDS (DBNT)**USE**

This category covers motor-operated check-out stands intended for use in retail stores to facilitate tally and packing operations. These check-out stands are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." Foot and knee controls are also covered under this category.

RELATED PRODUCTS

Self-check-out stands not provided with a motorized belt are covered under Custom-built Kiosks (EMHH).

Point-of-sale cabinets not provided with a motorized belt are covered under Wired Cabinets (ZNXR) or Furniture, Powered and Nonpowered (YNE).

Bar code scanners and cash registers are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ).

Conveyors that do not form a component part of a check-out stand are covered under Conveyors (EJJR).

Scales are covered under Scales and Accessories, Electronic (TUTT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 73, "Motor-Operated Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Check Out Stand."

SEASONAL AND HOLIDAY DECORATIVE PRODUCTS (DGVT)

This category covers temporary use, seasonal decorative lighting products and accessories with a maximum input rating of 120 V ac. Temporary use is considered to be a period of installation and use not to exceed 90 days per year. A seasonal product is a product painted in colors to suggest a holiday theme or a snow covering, a figure in a holiday costume, or any decoration associated with a holiday or a particular season of the year.

Products covered under this category are factory assembled, portable, and intended for connection to a receptacle.

In Listing seasonal and holiday decorative products, it is assumed that any medium base, intermediate base, candelabra base, miniature base or midget-base lamps to be used in these products are made in accordance with American National Standards Institute specifications, as well as the applicable requirements in UL 588, "Seasonal and Holiday Decorative Products." The use of lamps that are not in conformance with such standards may present shock hazards or high temperature conditions that are in excess of safe limits of operation.

This category does not cover nonseasonal lighting, nonseasonal products, permanently connected products, nondecorative lighting intended for general illumination only, cord sets (extension cords) or relocatable power taps.

SEASONAL AND HOLIDAY DECORATIVE PRODUCT ACCESSORIES (DGWU)**GENERAL**

This category covers accessories intended for use with decorative-lighting strings and decorative outfits. This includes such items as flasher controllers with or without sound, and other miscellaneous devices that provide a decorative effect for use with decorative-lighting strings and decorative outfits. The accessories may be in the form of a direct plug-in type.

This category does not cover decorative lamps, decorative-lighting strings, decorative outfits, electric ornaments, cord sets (extension cords), temporary power taps, decorative-lighting harnesses, or any other nondecorative-lighting products.

**SEASONAL AND HOLIDAY DECORATIVE PRODUCTS
(DGV T)**
**Seasonal and Holiday Decorative Product Accessories
(DGWU)—Continued**
ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 588, "Seasonal and Holiday Decorative Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Decorative Outfit Accessory."

ELECTRIC ORNAMENTS (DGXC)
USE

This category covers electric ornaments, which are units provided with input leads and adapters intended to take the place of push-in lamps in a series-connected decorative lighting string or decorative outfit. An ornament may be electronically or nonelectronically operated.

An electronically-operated ornament employs at least one of the following: a motor, a printed wiring assembly, electronic components, or the like. This type of ornament may produce sound, be illuminated, animated, or the like, or any combination of the above.

A nonelectronically-operated ornament is provided with a wiring assembly consisting of only a lamp and lampholder on one end and an adapter on the other end. This type of ornament is illuminated only.

ADDITIONAL INFORMATION

For additional information, see Seasonal and Holiday Decorative Products (DGV T) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 588, "Seasonal and Holiday Decorative Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Ornament."

LAMPS, DECORATIVE (DGXO)
GENERAL

This category covers intermediate and candelabra-base lamps Classified for use in Listed decorative lighting strings and outfits.

These lamps have been investigated in accordance with the requirements specified in Supplement SA of UL 588, "Seasonal and Holiday Decorative Products." These lamps have been investigated with respect to lamp base gauging, exposure of live parts, envelope-to-base securement, center and side filament protrusion, and lamp-envelope temperature.

PRODUCT MARKINGS

In addition to the Classification Mark, the lamp or the smallest unit container is marked with the wattage, voltage, lamp type, manufacturer's identification and model or catalog number. Each lamp is marked with the manufacturer's identification, rated voltage and wattage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 588, "Seasonal and Holiday Decorative Products."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**DECORATIVE LAMP
FOR USE IN LISTED DECORATIVE
LIGHTING STRINGS AND OUTFITS**
Control No.

OUTFITS, DECORATIVE (DGXW)
USE

This category covers decorative outfits intended for seasonal, temporary use, not to exceed 90 days per year, and includes factory-assembled decora-

SEASONAL AND HOLIDAY DECORATIVE PRODUCTS (DGV T)
Outfits, Decorative (DGXW)—Continued

tion units providing a seasonal theme, such as wreaths, stars, tree-top units, sprays, light sculptures, molded figures, such as a pumpkin or a snowman, candles or candle sets without lamp shades, tree stands, and motorized decorative displays having illumination or other decorative effects. Decorative lighting strings provided with lamp shades or diffusers over the lamps are also considered decorative outfits. Decorative outfits are intended for connection to a receptacle by means of an attachment plug and are portable.

Decorative outfits are marked with the maximum number of strings, of the same type, to be connected together for series-connected outfits or the maximum number of lampholders for outfits that are parallel connected. Parallel type products should not be intermixed with series type products.

Decorative outfits are not intended to be permanently connected, and are not intended to be used as toys.

RELATED PRODUCTS

This category does not cover decorative lighting strings or electric ornaments; refer to Strings, Decorative Lighting (DGZZ) and Electric Ornaments (DGXC).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 588, "Seasonal and Holiday Decorative Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Decorative Outfit."

STRINGS, DECORATIVE LIGHTING (DGZZ)
USE

This category covers decorative-lighting strings intended for seasonal, temporary use, not to exceed 90 days per year, consisting of a string of lights that may be draped over or around trees or other objects for decorative effect. Decorative-lighting strings are factory assembled with replaceable or nonreplaceable lamps and are connected by means of an attachment plug or the like. Series-connected lighting strings using LED lamps that employ nonremovable covers or diffusers are also considered decorative-lighting strings.

Strings are not intended for installation on artificial trees employing metal or metalized plastic needles, leaves or branch coverings. They also should not be installed in a manner that can cut or damage wire insulation.

Decorative-lighting strings are not intended to be permanently connected or provide general illumination.

PRODUCT MARKINGS

Decorative-lighting strings intended for indoor use only include, as part of the attached Listing Mark, the statement "For Indoor Use Only." In addition, the UL Mark and the word "LISTED" are printed in green ink.

Decorative-lighting strings for indoor and outdoor use include, as part of the attached Listing Mark, the statement "For Indoor Use and Outdoor Use." In addition, the UL Mark and the word "LISTED" are printed in red ink.

Decorative-lighting strings are marked with the maximum number of strings, of the same type, to be connected together for series-connected lighting strings or the maximum number of lampholders for lighting strings that are parallel connected. Parallel-type strings should not be intermixed with series type strings. Each string is marked with its type.

RELATED PRODUCTS

Decorative-lighting strings provided with individual lamp shades or diffusers over each individual lamp and decoration units other than strings are covered under Outfits, Decorative (DGXW), Seasonal and Holiday Decorative Product Accessories (DGWU) and Electric Ornaments (DGXC).

Decorative-lighting strings do not employ lampholders larger than intermediate base and do not include temporary-lighting strings. Construction of strings that employ larger than intermediate base lampholders are covered under Temporary-lighting Strings (XBRT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 588, "Seasonal and Holiday Decorative Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name

SEASONAL AND HOLIDAY DECORATIVE PRODUCTS
(DGVF)

Strings, Decorative Lighting (DGZZ)—Continued

“Decorative-lighting String for Indoor Use Only” or “Decorative-lighting String for Indoor Use and Outdoor Use.”

CIRCUIT BREAKERS (DHJR)

USE

This category covers circuit breakers which, unless otherwise noted, are of the manually operable, air break type, providing automatic overcurrent protection.

PRODUCT MARKINGS AND RATINGS

These circuit breakers and circuit breaker enclosures are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are located on a wiring diagram or another readily visible location.

1. Circuit breaker enclosures are marked to indicate the temperature rating of all field installed conductors.
2. Circuit breakers with a current rating of 125 A or less are marked as being suitable for 60°C, 75°C only or 60/75°C rated conductors. It is acceptable to use conductors with a higher insulation rating, if the ampacity is based on the conductor temperature rating marked on the breaker.
3. Circuit breakers rated 125 A or less and marked suitable for use with 75°C rated conductors are intended for field use with 75°C rated conductors at full 75°C ampacity only when the circuit breaker is installed in a circuit breaker enclosure or individually mounted in an industrial control panel with no other component next to it, unless the end-use equipment (panelboard, switchboard, service equipment, power outlet, etc.) is also marked suitable for use with conductors rated 75°C.
4. A circuit breaker with a current rating of more than 125 A is suitable for use with conductors rated 75°C.
5. Circuit breakers intended for continuous operation at 100 percent of rated current may be marked to be connected with 90°C rated wire with the size based on 75°C ampacity.

A suitable marking is required in a circuit breaker enclosure, whether or not terminals are mounted therein, if it is intended that the breaker to be mounted therein is to be used with aluminum wire.

ADAPTERS, CIRCUIT BREAKER (DHWZ)

USE AND INSTALLATION

This category covers equipment designed to adapt circuit breakers to receiving devices, such as panelboards, panel base assemblies, etc. Field installation is intended only in those receiving devices specifically marked for their use.

Circuit breaker adapters intended for field installation are provided with installation instructions unless the construction makes the installation obvious.

PRODUCT MARKINGS

Circuit breaker adapters are marked with a catalog number or the equivalent and the name or trademark of the manufacturer.

Markings to identify the circuit breakers and/or circuit breaker frames with which the adapter is intended to be used is marked either on a label affixed to the device, imprinted on the smallest packaging, or included as part of the installation instructions.

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Breaker Adapter.”

CIRCUIT BREAKER ACCESSORIES (DIHS)

USE

This category covers accessories, such as manual and electrical operators, shunt trip devices, undervoltage trip devices, alarm switches and auxiliary switches, intended for field installation for use only with specific circuit breaker types. Correct combinations of circuit breakers and accessories are indicated by markings on or with the accessory and/or the circuit breaker.

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Breaker Accessory” (or “C.B. Acc.”), or the name of the specific product, such as “Undervoltage Trip Relay.”

CIRCUIT BREAKER AND SECONDARY SURGE ARRESTERS (DIMV)

USE AND INSTALLATION

This category covers combination circuit breaker and secondary surge arrester devices designed to serve the dual function of providing overcurrent protection, and protection against power-distribution system surge-related damage to connected circuits and load-connected equipment.

They are intended for installation in circuit breaker enclosures, panelboards and the like, on grounded 60 Hz alternating-current power circuits in accordance with ANSI/NFPA 70, “National Electrical Code.”

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ) and Surge Arresters (OWHX).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate the circuit breaker portion of products in this category is ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures.”

The basic standard used to investigate metal-oxide surge arresters in this category is ANSI/IEEE C62.11, “Standard for Metal-Oxide Surge Arresters for AC Power Circuits (>1 kV).” All other types of surge arresters in this category are investigated to IEEE C62.1-1989, “IEEE Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Breaker and Secondary Surge Arrester.”

CIRCUIT BREAKER AND TRANSIENT-VOLTAGE SURGE SUPPRESSORS (DIPJ)

GENERAL

This category covers combination circuit breaker and transient-voltage surge suppressor devices designed to serve the dual function of providing overcurrent protection, and intended to limit the maximum amplitude of transient-voltage surges on power lines to specified values. They are not intended to function as surge arresters.

The transient-voltage surge suppressors have been tested to verify that transient-voltage surges are limited to the maximum amplitudes specified by the manufacturer when subjected to a 1.2 by 50 μ s 6 kV voltage pulse.

The effect of the suppressor on connected loads, the effect of the suppressor on harmonic distortion of the supply voltage, and the adequacy of the suppression level to protect connected equipment from damage from transient-voltage surges have not been investigated.

These devices are intended for installation in circuit breaker enclosures, panelboards and the like, on grounded 60 Hz alternating-current systems in accordance with ANSI/NFPA 70, “National Electrical Code.”

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ) and Transient-voltage Surge Suppressors (XUHT).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate the circuit breaker portion of products in this category is ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures.”

Circuit Breaker and Transient-voltage Surge Suppressors (DIPJ)—Continued

The basic standard used to investigate transient-voltage surge suppressors in this category is ANSI/UL 1449, "Transient Voltage Surge Suppressors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Breaker and Transient Voltage Surge Suppressor."

CIRCUIT BREAKER CURRENT LIMITERS (DIRW)

GENERAL

This category covers circuit breaker current limiters designed to be used in conjunction with specific circuit breakers and to be directly connected to the load terminals of the circuit breakers. They contain fusible elements that function only to increase the fault-current-interrupting ability of the combination, which is intended for use in the same manner as circuit breakers when installed at the service and as branch-circuit protection. The limiters are rated 600 V or less.

The fusible elements in circuit breaker current limiters are so coordinated that they function at currents below those specified in short-circuit test requirements for circuit breakers. Except for this feature of short-circuit operation, combinations of circuit breakers and circuit breaker current limiters meet all requirements applicable to branch circuit and service circuit breakers and, in addition, are required to clear circuits up to and including 25 times their amp rating, and circuits of 1000 A or less regardless of amp rating, without causing operation of the fusible elements in the current limiter.

USE AND INSTALLATION

An interrupting rating on a circuit breaker current limiter included in a piece of equipment does not automatically qualify the equipment in which the combination is installed for use on circuits with higher available currents than the rating of the equipment itself.

The combination of circuit breaker and circuit breaker current limiter is intended to be mounted in Listed enclosures.

Equipment (such as panelboards, service equipment, and dead-front switchboards) suitable for use with the combination of circuit breaker current limiter and circuit breaker is marked to indicate that both may be used.

Circuit breaker current limiters are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and shall be readily visible.

Unless the circuit breaker current limiter is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and the use of 75°C wire for higher amp-rated circuits.

PRODUCT MARKINGS

Circuit breaker current limiters are marked to indicate the breakers with which they are intended to be used.

Circuit breaker current limiters marked "Current Interrupting Rating(s), MAXIMUM RMS SYM. AMPERES _____ VOLTS _____" have been investigated in conjunction with the circuit breaker and found suitable for the marked interrupting rating.

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Breaker Current Limiter."

CIRCUIT BREAKERS FOR USE IN COMMUNICATIONS EQUIPMENT (DITT)

USE

This category covers dc-rated circuit breakers intended to provide branch-circuit protection in communications circuits.

The acceptability of circuit breakers at 100% of the ampere rating is determined in the end product.

Circuit Breakers for Use in Communications Equipment (DITT)—Continued

Circuit breakers that may be used in ambient at temperatures other than 25°C are marked with either a maximum ambient temperature or a range of temperatures.

These circuit breakers have not been investigated for use on motor circuits.

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches, and Circuit Breaker Enclosures," in addition to the requirements contained in UL Subject 489A, "Outline of Investigation for Circuit Breakers for Use in Communications Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Circuit Breaker for Use in Communication Equipment" (or "CIR. BKR. FOR USE IN COMM. EQUIP."), "Communications Equipment Circuit Breaker" (or "COMM. EQUIP. CIR. BKR."), "Circuit Breaker for Use in Communications Equipment" (or "CIR. BKR. FOR USE IN COMM. EQUIP."), "Communication Equipment Circuit Breaker" (or "COMM. EQUIP. CIR. BKR.>").

CIRCUIT BREAKERS, MOLDED-CASE AND CIRCUIT BREAKER ENCLOSURES (DIVQ)

USE

This category covers circuit breakers and circuit breaker enclosures designed to provide service-entrance, feeder or branch circuit protection in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These circuit breakers are intended for use with Listed enclosures, or as part of other Listed equipment, or without enclosures where acceptable.

Investigation of a Listed "replacement circuit breaker" involves only the circuit breaker and associated parts; the end application or any series combination application has not been investigated.

Some circuit breakers are not provided with a means to prevent their installation in Class CTL assemblies. These circuit breakers are for use in old style, non-Class CTL equipment and are marked "For Replacement Use Only, Not CTL Assemblies."

Circuit breakers marked "SWD" and rated 347 V or less are suitable for switching fluorescent lighting loads on a regular basis at their rated voltage.

Circuit breakers marked "HID" have been investigated for switching high-intensity discharge lighting loads on a regular basis at their rated voltage.

Some circuit breakers include a pole intended to disconnect the grounded circuit conductor of a branch circuit. All poles of these circuit breakers open simultaneously.

Single-pole circuit breakers rated 120 V ac are suitable for use on circuits rated 120 V to ground.

Single-pole or multi-pole independent trip circuit breakers, with or without handle ties, rated 120/240 V ac, are suitable for use in a single-phase, multi-wire circuit on line-to-neutral connected loads.

Single-pole or multi-pole independent trip circuit breakers, with handle ties, rated 120/240 V ac, are suitable for use on multi-wire circuits with line-to-line or line-to-ground connected loads.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 120/240 V ac, are suitable for use in line-to-line single-phase circuits or line-to-line lighting and appliance branch circuits connected to 3-phase, 4-wire systems, provided the systems have a grounded neutral and the voltage to ground does not exceed 120 V.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 125/250 V dc, are suitable for use in line-to-line connected 3-wire dc circuits supplied from a system with a grounded neutral where the voltage to ground does not exceed 125 V.

2-pole independent trip breakers and single-pole breakers with handle ties, rated 125/250 V (both ac and dc), are suitable for use in accordance with either of the above two paragraphs, as applicable.

Some independent trip circuit breakers are marked "independent trip," "no common trip" or equivalent wording.

3-pole circuit breakers having provision for two poles to be connected to a bus structure and a third isolated pole (commonly referred to as delta breakers) are marked "For Replacement Use Only."

3-pole circuit breakers are suitable for use only on 3-phase systems unless marked to indicate otherwise.

CIRCUIT BREAKERS (DHJR)

Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ)—Continued

Multi-pole common trip circuit breakers rated 120/240 V ac are suitable for use in a single-phase multi-wire circuit, with or without the neutral connected to the load, where the voltage to ground does not exceed 120 V.

Multi-pole common trip circuit breakers rated 125/250 V or 125/250 V dc are suitable for use in a single-phase and a dc multi-wire circuit, with or without the neutral connected to the load, where the voltage to ground does not exceed 125 V.

Circuit breakers, the performance of which may be affected by a 40°C ambient temperature within the enclosure, and that have been investigated for this application, are marked "40 C."

Unless otherwise marked, circuit breakers should not be loaded to exceed 80 percent of their current rating, where in normal operation the load will continue for three hours or more.

Circuit breakers rated 50 A or less and 125/250 V or less are investigated for use with tungsten-filament lamp loads.

Circuit breaker enclosures marked for service equipment use may also be used to provide the main control and means of cutoff for a separately derived system or a second building.

Circuit breaker enclosures identified with an enclosure type designation are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

A current-limiting circuit breaker is one that does not employ a fusible element and that when operating within its current-limiting range, limits the let-through I^2t to a value less than the I^2t of a 1/2 cycle wave of the symmetrical prospective current.

PRODUCT TYPES

Circuit breakers and circuit breaker enclosures are indicated by the label designations as follows:

Circuit Breaker — without enclosure, and with noninterchangeable trip units.

CTL Circuit Breaker — has physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, is designed to prevent the installation of more circuit breaker poles than the number for which the assembly is designed and rated.

Circuit Breaker Frame — frame only of circuit breaker with provision for interchangeable trip units. A labeled circuit breaker frame is Listed for use only with a labeled circuit breaker trip unit.

Circuit Breaker Trip Unit — trip unit only of circuit breaker having provision for interchangeable trip units.

Circuit Breaker Enclosure — enclosure only for individual 1-, 2- or 3-pole circuit breaker or for two single-pole breakers not interconnected.

Replacement Circuit Breaker — a present design with external modifications to permit its mounting in place of obsolete designs of the same manufacturer in previously Listed applications, such as panelboards, switchboards and the like, which are still in service.

INSTALLATION

Some circuit breakers include a ground-fault trip element. These ground-fault trip elements have been investigated in accordance with ANSI/UL 1053, "Ground-Fault Sensing and Relaying Equipment," and are suitable for providing ground-fault protection of equipment in accordance with Sections 215.10, 230.95 or 240.13 of the NEC.

Circuit breakers with ground-fault elements intended for use in accordance with NEC Articles 426 or 427 are covered under Circuit Breakers with Equipment Ground Fault Protection (DIYA).

Circuit breakers are tested under overload conditions at six times the rating to cover motor-circuit applications and are suitable for use as motor-circuit disconnects per Section 430.109 of the NEC.

Listed circuit breakers may be mounted in any position unless marked to indicate otherwise. If, however, the circuit breaker is mounted so that the handle is operated vertically rather than rotationally or horizontally, the up position of the handle should be in the "on" position.

Line and load markings on a circuit breaker are intended to limit connections thereto as marked.

RATINGS

Listed circuit breakers are rated 600 V or less. A circuit breaker is marked ac or dc, or both ac and dc. A symbol (~), where used, represents ac. The frequency is included if other than 60 Hz.

Circuit breakers that have an interrupting rating higher than 5000 A are marked to indicate the higher rating(s).

An interrupting rating on a circuit breaker included in a piece of equipment does not automatically qualify the equipment in which the circuit breaker is installed for use on circuits with higher available currents than the rating of the equipment itself.

Circuit breaker enclosures that have a short-circuit current rating are marked accordingly.

PRODUCT MARKINGS

A circuit breaker that includes an accessory device, whether attached to the circuit breaker by the manufacturer of the circuit breaker, or by others, is marked to indicate the presence of that accessory.

CIRCUIT BREAKERS (DHJR)

91

Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ)—Continued

Where the accessory is a shunt trip device that is suitable for operation with ground-fault sensing and relaying equipment, such suitability is indicated in the marking of the circuit breaker.

2-pole circuit breakers suitable for controlling 3-phase, corner-grounded delta circuits are marked " $1\phi - 3\phi$ " to indicate their suitability.

Circuit breaker enclosures that are suitable for use as service equipment are marked accordingly.

Some circuit breakers are intended to be used with uninterruptible power supplies (UPS) with two or three poles connected in series. These circuit breakers are marked with both the maximum and nominal DC voltage of the system where use is intended, a wiring diagram showing the proper connections of the poles in series, and a statement that these DC ratings are applicable only with UPS.

Current-limiting circuit breakers are marked "current limiting" and are marked either to indicate the let-through characteristics or to indicate where such information may be obtained.

Circuit breakers investigated for application aboard noncombatant and auxiliary naval ships are marked "Naval." The Marine Listing Mark identifies circuit breakers investigated for use in a marine environment.

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ) and Circuit Breakers, Molded-case and Circuit Breaker Enclosures, Marine (DKTY).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Circuit Breaker," "CTL Circuit Breaker," "Circuit Breaker Frame," "Circuit Breaker Trip Unit," "Circuit Breaker Enclosure" or "Replacement Circuit Breaker." The words "Circuit Breaker" may be abbreviated "C.B." in all of the product names permitted above (e.g., "C.B. Enclosure").

CIRCUIT BREAKERS, MOLDED-CASE, CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (DIXF)

GENERAL

This category covers Classified molded-case circuit breakers rated 15 to 50 A, 120/240 V maximum that have been investigated and found suitable for use in place of other Listed circuit breakers in specific Listed panelboards, with ratings not exceeding 225 A, 120/240 V ac and a short-circuit current of 10 kA. The circuit breakers are Classified for use in specified panelboards in accordance with the details described on the circuit breaker or in the publication provided therewith.

In addition, Classified molded-case circuit breakers may also be Listed with additional features such as a ground-fault trip element, ground-fault circuit interrupter, arc-fault circuit interrupter, secondary surge arrester, transient voltage surge suppressor, and the like.

PRODUCT MARKINGS

A circuit breaker that is Classified only is marked on the side with the statement:

"Classified for use only in specified panelboards where the available short-circuit current is 10 kA, 120/240 volts ac or less. Do not use in equipment connected to circuits having an available system short-circuit current in excess of 10 kA, 120/240 volts ac. For catalog numbers (or equivalent) of specified panelboards, refer to Publication No. _____ provided with this circuit breaker. If additional information is necessary, contact [Classified circuit breaker manufacturer's name]."

A circuit breaker that is both Classified and Listed is marked on the side with the statement:

"This circuit breaker is Listed for use in circuit breaker enclosures and panelboards intended and marked for its use. This circuit breaker is Classified for use, where the available short-circuit current is 10 kA, 120/240 V ac or less, in the compatible panelboards shown in Publication No. _____ provided with this circuit breaker. When used as a Classified circuit breaker, do not use in equipment connected to circuits having an available system short-circuit current in excess of 10 kA, 120/240 V ac. If additional information is necessary, contact [Classified circuit breaker manufacturer's name]."

Circuit Breakers, Molded-case, Classified for Use in Specified Equipment (DIXF)—Continued

The referenced publication is a compatibility list which tabulates the company name, catalog number, number of poles and electrical ratings of the Classified circuit breaker, in addition to the company name and catalog number of the applicable UL Listed panelboards, and corresponding UL Listed circuit breakers in place of which the Classified circuit breaker has been investigated. The compatibility list also details the maximum permissible voltage and maximum available short circuit current of the supply system to the panelboard. The Classified circuit breaker is not suitable for the specified application if the system supply characteristics exceed the maximum values indicated in the compatibility list. One copy of the compatibility list is provided with each circuit breaker.

Circuit breakers which are both Classified and Listed have markings as above, with the addition of the Listing Mark, located on the side of the circuit breaker.

RELATED PRODUCTS

For information on markings, see Molded-case Circuit Breakers and Circuit Breaker Enclosures (DIVQ) and Circuit Breakers (DHJR). For those Classified molded-case circuit breakers containing additional features, refer to the following categories: for Arc Fault Circuit Interrupters, Branch/Feeder Type, see AVZQ; for Circuit Breaker and Secondary Surge Arresters, see DIMV; for Circuit Breaker and Transient Voltage Surge Suppressors, see DIPJ; for Circuit Breakers with Equipment Ground Fault Protection, see DIYA; for Circuit Breaker and Ground-fault Circuit Interrupters, see DKUY.

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures," and ANSI/UL 67, "Panelboards."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark appears on the side of the circuit breaker and consists of the words "Underwriters Laboratories Inc. Classified Circuit Breaker" together with a control number. The words "Underwriters Laboratories Inc." may be abbreviated "Underwriters Lab. Inc." or "Und. Lab. Inc."

The following mark:  appears on the front, visible surface of the circuit breaker.

CIRCUIT BREAKERS WITH EQUIPMENT GROUND-FAULT PROTECTION (DIYA)

USE AND INSTALLATION

This category covers combination circuit breaker and equipment ground-fault protective devices designed to serve the dual function of providing overcurrent protection, and ground-fault protection for equipment, as required by Articles 426 and 427 of ANSI/NFPA 70, "National Electrical Code" (NEC).

A circuit breaker and equipment ground-fault device is intended to be installed only on grounded alternating-current systems in accordance with the NEC.

- (1) These devices are intended to be installed in new or existing panelboards or the like.
- (2) The equipment ground-fault protection trip level is marked on the devices.
- (3) These devices are suitable for use on systems where the voltage does not exceed the rating on the device.
- (4) A two-wire device is not suitable for use in a multiwire branch circuit as defined in the NEC.
- (5) These devices are marked so that they can be distinguished from a circuit breaker and ground-fault circuit interrupter.
- (6) These devices may have any voltage rating that is acceptable for a circuit breaker.

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures," and ANSI/UL 1053, "Ground-Fault Sensing and Relaying Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

Circuit Breakers with Equipment Ground-fault Protection (DIYA)—Continued

together with the word "LISTED," a control number, and the product name "Circuit Breaker With Equipment Ground Fault Protection" (or "C.B. W/EQ.GFP").

FUSED CIRCUIT BREAKERS (DIYV)

USE AND INSTALLATION

This category covers fused circuit breakers designed to provide service-entrance, feeder or branch-circuit protection in accordance with ANSI/NFPA 70, "National Electrical Code." They are rated 600 V or less.

These fused circuit breakers are intended for use with Listed enclosures, or as part of other Listed equipment, or without enclosures where applicable.

Fused circuit breakers include all the mechanical features of molded-case circuit breakers and, in addition, have one or more replaceable current limiters or fuses that function to increase the fault-current interrupting ability. They are intended to be used in the same manner as other circuit breakers when installed at the service and as branch-circuit protection and are intended to be mounted in Listed enclosures. Fused circuit breakers are identified with respect to their performance characteristics as either Type 1 or Type 2.

Type 1 fused circuit breakers meet all performance requirements of molded-case circuit breakers. The fuse, fuses, or replaceable current limiters function only to extend the fault-current interrupting rating beyond the short-circuit test requirement applicable. Type 1 devices are limited to constructions that are designed to accommodate and coordinate with fuses or replaceable current limiters having high interrupting-capacity ratings.

Type 2 fused circuit breakers use a fuse, fuses or current limiters so coordinated that they function at currents below those specified in short-circuit test requirements. Except for this feature of short-circuit operation, Type 2 fused circuit breakers meet all requirements applicable to molded-case circuit breakers and, in addition, are required to clear circuits up to and including 25 times their amp rating, and circuits of 1000 A or less regardless of amp rating, without causing operation of the fuse, fuses or current limiters that are a part of the device. Type 2 devices are limited to constructions designed to accommodate and coordinate with fuses having high interrupting-capacity ratings.

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers (DHJR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fused Circuit Breaker" or "Fused Circuit Breaker Frame."

CIRCUIT BREAKER AND GROUND-FAULT CIRCUIT INTERRUPTERS (DKUY)

USE AND INSTALLATION

This category covers combination circuit breaker and ground-fault circuit interrupter devices designed to serve the dual function of providing overcurrent protection, and protection against shock hazard, as required by ANSI/NFPA 70, "National Electrical Code" (NEC).

A circuit breaker and ground-fault circuit interrupter is intended to be installed only on grounded 60 Hz alternating-current systems in accordance with the NEC.

These devices are intended to be installed in new or existing service equipment, panelboards, and the like.

These devices are categorized by a lettered Class designation, such as Class A, to ensure proper coordination with certain utilization equipment, such as underwater swimming pool fixtures.

A two-wire device is not suitable for use in a multiwire branch circuit as defined in the NEC.

Some devices rated 120/240 V do not have a load neutral wire connector and are intended for use with 208 V or 240 V loads only.

RELATED PRODUCTS

REQUIREMENTS

CIRCUIT BREAKERS (DHJR)

Circuit Breaker and Ground-fault Circuit Interrupters (DKUY)—Continued

The basic standards used to investigate products in this category are ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit-Breaker Enclosures," and ANSI/UL 943, "Ground-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Breaker and Ground-fault Circuit Interrupter" (or "C.B./GFCI").

CIRCUIT BREAKERS FOR USE IN HAZARDOUS LOCATIONS (DKAR)

This category covers circuit breakers which, unless otherwise noted, are of the manually operable, air-break type, providing automatic overcurrent protection.

These circuit breakers and circuit breaker enclosures are intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal conductors and are on a wiring diagram or other readily visible location.

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of Type R, or other 60°C wire, in circuits rated 100 A or less, and the use of Type RH, or other 75°C wire, for higher amp-rated circuits.

A suitable marking is required in a circuit breaker enclosure, whether or not terminals are mounted therein, if it is intended that the breaker to be mounted therein is intended to be used with aluminum wire.

BRANCH CIRCUIT AND SERVICE CIRCUIT BREAKERS FOR USE IN HAZARDOUS LOCATIONS (DKNZ)

USE

This category covers enclosed circuit breakers and circuit breaker enclosures designed to provide service-entrance, feeder or branch-circuit protection in accordance with ANSI/NFPA 70, "National Electrical Code." These circuit breakers are designed to carry rated current at ambient temperatures of 40°C or less and are marked "40C."

Circuit breaker enclosures are intended for use only with Listed mechanisms specified in the enclosure markings.

RELATED PRODUCTS

See Circuit Breakers (DHJR) and Ground-fault Circuit Interrupters (DKUY).

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers for Use in Hazardous Locations (DKAR) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standards used to investigate products in this category are ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures," and ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Circuit Breaker for Hazardous Locations" or "Circuit Breaker Enclosure for Hazardous Locations."

CIRCUIT BREAKERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (DKPA)

This category covers circuit breakers of the manually operable, air-break type, providing automatic overcurrent protection. ANSI/NFPA 70, "National Electrical Code," does not permit the use of aluminum field wiring conductors on increased safety "e" terminations. These circuit breakers and circuit breaker enclosures are intended for use only with copper conductors.

CIRCUIT BREAKERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (DKPA)

93

BRANCH CIRCUIT AND SERVICE CIRCUIT BREAKERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (DKPN)

USE

This category covers enclosed circuit breakers and circuit breaker enclosures designed to provide service-entrance, feeder or branch-circuit protection in accordance with ANSI/NFPA 70, "National Electrical Code." These circuit breakers are designed to carry rated current at ambient temperature of 40°C or less and are marked "40C."

These circuit breakers are open type and intended to operate within flameproof enclosures, or enclosed flameproof circuit breakers having increased safety "e" terminals for mounting within increased safety "e" enclosures or panelboards, or as part of other Listed equipment having a type of protection suitable for the intended location. Increased safety terminals are intended for termination of copper conductors only.

RELATED PRODUCTS

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers for Use in Zone Classified Hazardous Locations (DKPA) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standards used to investigate products in this category are ANSI/UL 489, "Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures," and ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Branch Circuit Breaker for Use in Hazardous Locations" or "Service Circuit Breaker for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR OVER 600 VOLTS (DLAH)

GENERAL

This category covers indoor medium-voltage ac power circuit breakers rated over 600 V and the metal-clad switchgear in which they are intended to be installed. The term "indoor" does not preclude the use of these circuit breakers in outdoor enclosures, but rather defines the class of equipment. These circuit breakers are specifically intended to provide service entrance, feeder or branch circuit overcurrent protection, serve as a disconnecting means, or both. These devices are intended for installation in accordance with the requirements of ANSI/NFPA 70, "National Electrical Code."

CIRCUIT BREAKERS

The circuit breakers are three-pole devices of the draw-out type, are trip-free and may be air break, vacuum-type or devices employing other insulation medium.

Circuit Breaker Ratings

Each circuit breaker is provided with a marking that indicates the voltage and current ratings for both the close and trip coils. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amperes. Circuit breakers have a rated maximum voltage of 4.76, 8.25, 15, 27 or 38 kV with continuous current ratings of 1200, 2000 or 3000 A.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amperes that is applicable at the maximum rated voltage. Circuit breakers using the rating structure of ANSI C37.06-1987 are also provided with a "K" factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. The circuit breaker may interrupt a current greater than "I" by a factor up to the value of "K," at a voltage reduced from the maximum rated voltage, "V max" by the same factor, or at a lower voltage, as depicted in Illustration 1. Circuit breakers using

**CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR
OVER 600 VOLTS (DLAH)**

the rating structure of ANSI C37.06-1997 or later do not have a "K" factor, or are marked with a "K" factor of 1.0.

Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

METAL-CLAD SWITCHGEAR

Metal-clad switchgear may consist of one or two compartments in a vertical section. A compartment may be intended to house a circuit breaker, or it may be designated an auxiliary compartment. An auxiliary compartment may typically contain potential transformers, control gear, protective relays and the like. Vertical sections may consist of a single freestanding section or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amps. Each vertical section of a line up of abutting vertical sections is provided with a "____ of ____" marking, where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

A section, with only horizontal bus or with no installed equipment, may be provided. This section is identified as an enclosure and is numbered as part of a line-up.

Current sensors are factory installed and may be mounted on the circuit breaker or on the line or load bus within the metal-clad switchgear. The output of these current sensors is connected to either protective relays or similar sensing and relaying equipment that is typically located on the door of the circuit breaker compartment or in an auxiliary compartment.

Metal-clad Switchgear Ratings

Metal-clad switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. This marking appears on each vertical section bearing the UL Mark.

GROUND AND TEST DEVICES

A ground and test device is a switchgear accessory device that can be inserted in place of a draw-out circuit breaker for the purpose of (1) grounding the main bus and/or external circuits connected to the switchgear assembly and/or (2) primary circuit testing.

A ground and test device is marked with the manufacturer's name, a type designation, electrical ratings, primary disconnecting devices compartment compatibility and an instruction manual number.

ENCLOSURES

An enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R." Enclosures may be either nonventilated or ventilated. Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ARC-RESISTANT SWITCHGEAR

Metal-clad switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear has been evaluated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant switchgear is marked with an Accessibility Type designation based upon the construction. The Types may be either A, B or C (when investigated to EEMAC G14-1), or 1, 1C, 2 or 2C (when investigated to ANSI C37.20.7), based upon the construction and the standard used for the investigation.

**CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR OVER
600 VOLTS (DLAH)**

Type A or 1 designates switchgear with arc-resistant construction at the front only.

Type 1C designates switchgear with arc-resistant construction at the front, and between compartments within the same cell or adjacent cells.

Type B or 2 designates switchgear with arc-resistant construction at the front, sides and rear.

Type C or 2C designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells.

In Type C, 1C or 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate circuit breakers and metal-clad switchgear in this category are ANSI/IEEE C37.20.2-1999, "IEEE Standard for Metal-Clad Switchgear," ANSI/NEMA C37.54-2002, "Indoor Alternating-Current High-Voltage Circuit Breakers Applied as Removable Elements in Metal-Clad Switchgear Assemblies - Conformance Test Procedures," and ANSI/NEMA C37.55-2002, "Metal-Clad Switchgear Assemblies - Conformance Test Procedures." Circuit breakers investigated prior to 2002 were investigated to ANSI/NEMA C37.54-1987.

The basic standard used to investigate ground and test devices in this category is ANSI/IEEE C37.20.6-1997, "IEEE Standard for 4.76 kV to 38 kV Rated Grounding and Testing Devices Used in Enclosures."

The basic standards used to investigate switchgear Classified as "arc resistant" are EEMAC G14-1, 1987, "Procedure for Testing the Resistance of Metal-Clad Switchgear Under Conditions of Arcing Due to an Internal Fault," or IEEE C37.20.7-2001, "Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults," as indicated in the Classification Mark.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Medium Voltage AC Power Circuit Breaker," "Metal-clad Switchgear," "Metal-clad Switchgear Enclosure" or "Ground and Test Device."

In an assembly of products, the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark on the overall enclosure covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of Underwriters Laboratories Inc. on switchgear investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

**ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH
[designation of standard and date]**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker. Each vertical section of a line-up of abutting vertical sections is provided with a "____ of ____" marking, where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

**CIRCUIT BREAKERS, MEDIUM VOLTAGE,
CLASSIFIED FOR USE IN SPECIFIED
EQUIPMENT (DLBC)**
USE

This category covers circuit breakers of current design that have been modified to replace obsolete circuit breakers.

These circuit breakers are intended to be installed in switchgear where the exact replacement is no longer available.

The ratings on the circuit breaker apply unless the ratings on the host switchgear are lower. In either case the lower rating is applicable.

In addition to other required markings, these circuit breakers are marked to indicate the Type of switchgear where they are intended to be used.

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers and Metal-Clad Switchgear Over 600 V (DLAH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

**CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR
OVER 600 VOLTS (DLAH)**
**Circuit Breakers, Medium Voltage, Classified for Use in
Specified Equipment (DLBC)—Continued**

The basic standards used to investigate products in this category are ANSI/IEEE C37.20.2-1999, "Standard for Metal-Clad Switchgear," ANSI/NEMA C37.54-2002, "For Indoor Alternating Current High-Voltage Circuit Breakers Applies as Removable Elements in Metal-Enclosed Switchgear – Conformance Test Procedures," and ANSI/NEMA C37.55-2002, "Switchgear – Medium Voltage Metal-Clad Assemblies – Conformance Test Procedures."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MEDIUM VOLTAGE CIRCUIT BREAKER
FOR USE ONLY IN SWITCHGEAR
AS DESIGNATED ON THE NAMEPLATE
Control No.**

The nameplate on the circuit breaker shall identify the switchgear for which the circuit breaker is designed, including the switchgear manufacturer and type or model number.

**CIRCUIT BREAKER SWITCHGEAR, METAL
ENCLOSED, OVER 600 VOLTS (DLBK)**
GENERAL

This category covers indoor medium-voltage ac power circuit breakers rated over 600 V and the metal-enclosed switchgear in which they are installed. The term "indoor" does not preclude the use of these circuit breakers in outdoor enclosures, but rather defines the class of equipment. These circuit breakers are specifically intended to provide overcurrent protection. The circuit breakers are supplemented by a series-connected switch that can ground the load circuit and serves as a disconnecting means.

This equipment is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

CIRCUIT BREAKERS

The circuit breakers are three-pole devices of the stationary or drawout type, are trip-free and may be either gas insulated or vacuum-type devices.

Circuit Breaker Ratings

Each circuit breaker section is provided with a marking that indicates the voltage and current ratings. This marking also contains a "close-and-latch" rating in kiloamperes that is equivalent to the momentary rating (maximum asymmetrical current rating) of the circuit breaker. This rating is expressed in rms asymmetrical amps. Circuit breakers may be rated up to 38 kV and 3150 A.

Circuit breakers are marked with an interrupting rating "I" in rms symmetrical amps that is applicable at the maximum rated voltage. Circuit breakers using the rating structure of ANSI/IEEE C37.06-1987, "AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis Preferred Ratings and Related Required Capabilities," are also provided with a "K" factor for determining the interrupting rating at a use voltage lower than the maximum rated voltage. When there is a marked "K" factor, the circuit breaker may interrupt a current greater than "I" by a factor up to the value of "K," at a voltage reduced from the maximum rated voltage, "V max," by the same factor, or at a lower voltage. Circuit breakers using the rating structure of ANSI/IEEE C37.06-1995 or later do not have a "K" factor rating, or are marked with a "K" factor of 1.0.

Unless specifically marked otherwise, these circuit breakers are intended for use on three-phase circuits where the nominal voltage-to-ground is 0.58 times the line-to-line voltage.

METAL-ENCLOSED SWITCHGEAR

Metal-enclosed switchgear may consist of one or more vertical sections. Vertical sections may consist of a single freestanding section, or they may consist of a number of abutting vertical sections intended for interconnection by a horizontal bus. A vertical section may be intended to house a circuit breaker and switch or other attendant equipment, or it may be designated an auxiliary section. An auxiliary section may typically contain potential transformers, control gear, protective relays and the like. When provided with a horizontal bus, each section is marked with the ampacity of the horizontal bus in amps. Each vertical section of a line-up of abutting vertical sections is provided with a "___ of ___" marking where the second blank indicates the total number of vertical sections provided (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

A section, with only horizontal bus or with no installed equipment, may be provided. This section is identified and is numbered as part of a line-up.

Current sensors are factory installed. The output of these current sensors is connected to either protective relays or similar sensing and relaying equipment that is typically located on the door of the section, in the front compartment of a section, or in an auxiliary compartment.

Metal-enclosed Switchgear Ratings
**CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR OVER
600 VOLTS (DLAH)**

95

**Circuit Breaker Switchgear, Metal Enclosed, Over 600 Volts
(DLBK)—Continued**

Metal-enclosed switchgear assemblies are marked with the following ratings: maximum voltage, frequency, insulating level, continuous current, short-time current and momentary current. This marking appears on each vertical section bearing the UL Listing Mark.

ENCLOSURES

An enclosure investigated to determine that it is rainproof is marked "Rainproof," "Outdoor" or "3R." Enclosures may be either nonventilated or ventilated. Enclosures are marked to indicate the exposure Category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended to be installed in areas accessible to qualified personnel only. The environmental and exposure category marking need only appear on the first (incoming) switchgear vertical section of a line-up.

ARC-RESISTANT SWITCHGEAR

Metal-enclosed switchgear specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant switchgear.

Arc-resistant switchgear has been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant switchgear is marked with an Accessibility Type designation based upon the construction. The Types may be either A, B or C (when investigated to EEMAC G14-1, "Procedure for Testing the Resistance of Metalclad Switchgear Under Condition of Arcing Due to an Internal Fault"), or 1, 1C, 2 or 2C (when investigated to ANSI C37.20.7, "Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear"), based upon the construction and the standard used for the investigation.

Type A or 1 designates switchgear with arc-resistant construction at the front only.

Type 1C designates switchgear with arc-resistant construction at the front, and between compartments within the same cell or adjacent cells.

Type B or 2 designates switchgear with arc-resistant construction at the front, sides and rear.

Type C or 2C designates switchgear with arc-resistant construction at the front, sides and rear, and between compartments within the same cell or adjacent cells.

In Type C or 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent feeder cells.

ADDITIONAL INFORMATION

For additional information, see Circuit Breakers and Metal-clad Switchgear Over 600 Volts (DLAH) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate circuit breakers and metal-enclosed switchgear in this category are ANSI/IEEE C37.20.3-2001, "IEEE Standard for Metal-Enclosed Interrupter Switchgear," ANSI/NEMA C37.57-2003, "Metal-Enclosed Interrupter Switchgear Assemblies – Conformance Testing," and ANSI/NEMA C37.54-2002, "Indoor Alternating-Current High-Voltage Circuit Breakers Applied as Removable Elements in Metal-Clad Switchgear Assemblies – Conformance Test Procedures."

The basic standard used to investigate switchgear Classified as "arc resistant" is EEMAC G14-1, 1987, "Procedure for Testing the Resistance of Metalclad Switchgear Under Condition of Arcing Due to an Internal Fault," and/or IEEE C37.20.7-2001, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults," as indicated in the Classification Mark.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-enclosed Circuit Breaker Switchgear."

In an assembly of products the Listing Mark is applied to each vertical section eligible for Listing. The Listing Mark covers only the sections included in the assembly.

Classification Mark for Arc-resistant Switchgear

The Classification Mark of Underwriters Laboratories Inc. on switchgear additionally investigated as arc resistant is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or the removable circuit breaker.

CIRCUIT BREAKERS AND METAL-CLAD SWITCHGEAR OVER 600 VOLTS (DLAH)

Circuit Breaker Switchgear, Metal Enclosed, Over 600 Volts (DLBK)—Continued

Each vertical section of a line-up of abutting vertical sections is provided with a “___ of ___” marking where the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark) and the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark.

The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

**ARC-RESISTANT SWITCHGEAR
ALSO CLASSIFIED IN ACCORDANCE WITH
[standard designation and date]**

CIRCUIT PROTECTORS (DLBX)

USE

This category covers circuit protectors designed for installation in standard Edison-base fuseholders and intended to provide overcurrent protection for services and branch circuits. Circuit protectors are not provided with manual “On” and “Off” switching means, but are provided with a trip-free manual reset to reclose the circuit after automatic opening as a result of overload or short circuit.

Circuit protectors are suitable for use on circuits where the available fault current does not exceed 5000 amps rms symmetrical.

RELATED PRODUCTS

See Circuit Breakers, Molded-case and Circuit Breaker Enclosures (DIVQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 489, “Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Circuit Protector.”

CLASS 2 AND COMMUNICATION CABLE MANAGEMENT SYSTEMS (DLPV)

USE

This category covers cable management systems consisting of extruded channels and related fittings for the routing of Class 2 and communication circuits.

These products are not intended for applications that require the use of a raceway in accordance with NFPA 70, “National Electrical Code.” These products are not intended for use with optical fiber cable. These products are not intended for use in environmental air spaces, plenums, risers or any concealed use.

PRODUCT MARKINGS

The number, type and size of cables which may be installed in the Listed system is marked on the lengths of extruded channel, on the installation instruction sheet or on the package in which it is shipped. Each length of extruded channel is marked “For Class 2 Circuits Only,” “For Communication Circuits Only” or equivalent wording. The Listing Mark is applied to each length of extruded channel cover or base and each fitting or the smallest unit container in which the fitting is packaged.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 5C, “Surface Raceways and Fittings for Use with Data, Signal, and Control Circuits.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product when size or shape permits is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Class 2 and Communication Cable Management System.”

CLEANING MACHINES (DMDT)

CLEANING MACHINES (DMDT)

This category covers household and commercial dishwashers, motor-operated cleaning machines, electrically-operated high-pressure cleaning machines, vacuum cleaning machines and blower cleaners.

Appliances such as wet-pick-up vacuum cleaners intended to employ water or other solutions with similar characteristics are provided with means for grounding or are double-insulated.

Appliances specified as double insulated are constructed with a special insulating system in lieu of grounding to comply with Sections 250.110 and 250.114 of ANSI/NFPA 70, “National Electrical Code” (NEC). Such appliances are distinctively marked “Double-Insulated” or “Double Insulation.”

In cases where the nature or construction of the equipment is such that precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings are marked on the equipment.

Those cleaning machines which have been found suitable for installation outdoors, or with sections exposed outdoors, are so indicated on the equipment.

The burglary and theft protection features of the coin-operated machines have not been investigated.

CLEANING MACHINES, MOTOR OPERATED (DMGK)

USE

This category covers cleaning machines of the motor-operated type for household and commercial use. Products employing liquid cleaning agents are intended for use with water based (nonflammable) cleaners.

REBUILT PRODUCTS

This category also covers motor-operated cleaning machines that are rebuilt by the original manufacturer. Rebuilt motor-operated cleaning machines are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt motor-operating cleaning machines are subject to the same requirements as new motor-operated cleaning machines.

UNEVALUATED FACTORS

Any health hazards that may be associated with the use of these cleaning machines, such as removal of pathological, chemical, physical, radioactive, or other contaminating agents, have not been investigated.

RELATED PRODUCTS

This category does not cover dishwashers, high-pressure cleaning machines, vacuum cleaning machines, blower cleaners, or cleaning machines of the heating type for household and commercial use. See Dishwashers, Commercial (DMGR), Dishwashers, Household (DMY), High-pressure Cleaning Machines, Electrically Operated (DMKK), High-pressure Cleaning Machines, Engine Driven (DNZW), Vacuum Cleaning Machines and Blower Cleaners (DMLW) and Heaters, Specialty (KSOT) for details on these types of cleaning machines.

ADDITIONAL INFORMATION

For additional information, see Cleaning Machines (DMDT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 73, “Motor Operated Appliances.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products the word “Rebuilt,” “Refurbished” or “Remanufactured” precedes the product name.

DISHWASHERS, COMMERCIAL (DMGR)

USE AND INSTALLATION

This category covers commercial, freestanding, undercounter, and counter-insert dishwashers using water as the principal cleaning medium. Commercial dishwashing machines may be provided with electric heaters, natural or LP-gas equipment or low-pressure steam equipment for water heating. The water is heated in open (atmospheric pressure) tanks.

These dishwashers are intended to be installed in accordance with ANSI/NFPA 70, “National Electrical Code,” and ANSI Z223/NFPA 54, “National Fuel Gas Code.”

Commercial dishwashers are intended for use in commercial establishments, such as kitchens of restaurants, bars and hospitals, where they are not to be accessible to the public.

RELATED PRODUCTS

For sanitation requirements of commercial dishwashers, see Washing Machines, Commercial Spray-Type for Pots, Pans and Utensils (TSYF).

For safety requirements of household dishwashers, see Household Dishwashers (DMY). For sanitation requirements of household dishwashers, see Residential Dishwashers (TSXU).

Dishwashers, Commercial (DMGR)—Continued

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 921, "Commercial Electric Dishwashers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

DISHWASHERS, HOUSEHOLD (DMIY)

USE AND INSTALLATION

This category covers household dishwashers intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Household dishwashing machines may be of the cord-and-plug-connected or permanently connected type.

An undercounter unit may not have a complete enclosure; the unit should be installed beside kitchen cabinets, and an enclosure should be provided at installation. Such units are so marked.

Some cord-connected units are suitable for field conversion to permanently connected installation; conversion instructions are provided with the conversion parts kit.

Some permanently connected type dishwashers may be converted to cord connection by means of a cord kit that is available from the manufacturer of the dishwasher.

The performance and design of household dishwashers have been determined to comply with the current edition of ANSI/ASSE Standard No. 1006, "Performance Requirements for Residential Use Dishwashers," which covers household dishwashers connected to the potable water supply lines and discharging into the plumbing drainage system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 749, "Household Dishwashers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

HIGH-PRESSURE CLEANING MACHINES,
ELECTRICALLY OPERATED (DMKK)

GENERAL

This category covers electrically-operated high-pressure cleaning machines that use water as the cleaning agent for household and commercial use. The products may use either hot or cold water, and they may be portable, stationary or fixed. Per ANSI/NFPA 70, "National Electrical Code," single-phase products rated 250 V ac or less are either provided with an equipment grounding conductor or terminal and a ground-fault circuit interrupter, or are not provided with an equipment grounding conductor or terminal and are double insulated and provided with a permanent marking indicating the product is to be connected to a receptacle protected by a ground-fault circuit interrupter. Products used with liquid cleaning agents are intended for water-based (nonflammable) cleaners.

UNEVALUATED FACTORS

Any health hazard that may be associated with the use of these cleaning machines, such as dispersion of pathological, chemical, physical, radioactive, or other contaminating agents has not been investigated.

RELATED PRODUCTS

Fuel-engine-driven high-pressure cleaning machines are covered under High-pressure Cleaning Machines, Engine Driven (DNZW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1776, "High-Pressure Cleaning Machines."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

High-pressure Cleaning Machines, Electrically Operated
(DMKK)—Continued

together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

VACUUM CLEANING MACHINES AND
BLOWER CLEANERS (DMLW)

GENERAL

This category covers coin-operated vacuum cleaners and motor-operated vacuum cleaners and blower cleaners intended for household and commercial (industrial) use. Products intended for household use only are so marked. Attachments packaged with the products or indicated in the instruction manual packaged with the product are also covered under this category.

Central vacuum cleaners are intended for installation as part of a permanent central suction system in a building and investigated for remote operation.

This category also covers electrified wall inlet valve assemblies for use in central vacuum cleaning systems. These valve assemblies are intended for installation in accordance with Section 422.15 of ANSI/NFPA 70, "National Electrical Code." The assemblies are shipped as a kit comprised of the mounting plate/rough-in box and cover plate. The cover plate identifies the appropriate hoses and nozzles Listed for use with the valve. The assembly bears the Listing Mark.

REBUILT PRODUCTS

This category also covers vacuum cleaners that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt vacuum cleaners are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt vacuum cleaners are subject to the same requirements as new vacuum cleaners.

ATTRIBUTES NOT INVESTIGATED

Any health hazards that may be associated with the use of vacuum cleaners or combination blower and vacuum cleaners, such as dispersion of pathological, biological, chemical, physical, radioactive, or other contaminating agents have not been investigated.

RELATED PRODUCTS

Steam cleaning machines with vacuum cleaning features are covered under Heaters, Specialty (KSOT).

ADDITIONAL INFORMATION

For additional information, see Cleaning Machines (DMDT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1017, "Vacuum Cleaners, Blower Cleaners, and Household Floor Finishing Machines."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

CLEANING MACHINES FOR USE IN
HAZARDOUS LOCATIONS (DMRR)

GENERAL

This category covers portable vacuum cleaners provided with special suction attachments, such as crevice tools, brushes, etc., intended to facilitate cleaning operations.

Some vacuum cleaners are designed specifically to pick up water in connection with floor scrubbing operations; such cleaners are so indicated in the individual Listings.

Connections to supply lines require the use of receptacles with plugs, or receptacles with plugs interlocked with snap switches or their equivalent, Listed for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to the conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only when necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

**CLEANING MACHINES FOR USE IN HAZARDOUS
LOCATIONS (DMRR)**

98

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cleaning Machine for Use in Hazardous Locations."

COAXIAL FAULT PROTECTORS FOR NETWORK-POWERED BROADBAND COMMUNICATION SYSTEMS (DUAA)

GENERAL

This category covers coaxial fault protectors intended for use with low-power, network-powered broadband communication systems. These systems are intended to be installed in accordance with Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC). The protectors are intended to be installed by the public utility company that provides the service. The protectors are intended for use with direct-buried cable systems only.

The units or systems covered in this category are designed to monitor, detect and disconnect network power on the communication cable when a fault condition exists. Network power is disconnected at the utility serving terminal or "tap" end of the direct-buried cable. The protector may only be used with low-power underground cable as described in Article 830 of the NEC.

Buried cable emerging from the ground (finished grade) is intended to be enclosed within conduit as described in Article 830 of the NEC. Those products that employ a subscriber-end module of the coaxial fault protector system are intended to have the module enclosed within a compatible network interface device (NID). The NID is provided with a means to connect conduit.

A current-limiting or extinguishing device or current-limiting or extinguishing component may be employed within the fault protector or may be a separate device or component coordinated externally with the fault protector.

INSTALLATION INSTRUCTIONS

Installation instructions are provided by the manufacturer.

PROTECTION

Products covered under this category protect against the following fault conditions:

1. A short-circuit condition between the coaxial shield and center conductor, and/or
2. An open circuit in the center conductor of the coaxial cable, and/or
3. Leakage current greater than 0.5 mA between the center conductor and cable shield or ground.

RELATED PRODUCTS

See Protectors (QV GK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2389, "Outline of Investigation for Coaxial Fault Protectors for Network-powered Broadband Communication Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Coaxial Fault Protector."

COLD CATHODE TRANSFORMERS AND POWER SUPPLIES (DUEC)

USE

This category covers indoor and outdoor use cold cathode transformers and power supplies for use as part of a cold cathode electric discharge lighting system, sign, field-assembled skeletal neon sign and outline lighting system, or field-installed neon outline lighting system.

These transformers and power supplies have been evaluated for the secondary-circuit ground fault protection requirements in ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," "Weatherproof" or "WP." Products marked

**COLD CATHODE TRANSFORMERS AND POWER SUPPLIES
(DUEC)**

"Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 4 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

Type 2 – Neon supply with input and output terminals or leads that should be enclosed in accordance with the NEC.

Type 3 – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the NEC.

Type 4 – Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations (AALZ).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2161, "Neon Transformers and Power Supplies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cold Cathode Transformer" or "Cold Cathode Power Supply."

COMBUSTION DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (DUFK)

USE

This category covers electronically-operated combustion detectors intended for use on gas- or oil-burning equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combustion Detection Equipment for Use in Hazardous Locations" or "Combustion Detector for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

COMMUNICATION CABLE ASSEMBLIES (DUNH)

USE AND INSTALLATION

This category covers factory-assembled communication cable assemblies that are comprised of Listed communication cable and communication cable connectors suitable for the application. They are intended for use in residential and/or commercial applications as connected communication premises wiring. These assemblies are intended for installation in accordance with Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC). Restrictions that apply to the cable used in these assemblies, according to this article, also apply to the complete cable assemblies. The connectors employed in these assemblies have not been investigated for use under carpet.

These assemblies have not been investigated for use in environmental air spaces, in accordance with Section 300.22(B) and (C) of the NEC unless specifically marked for the application.

COMMUNICATION CABLE ASSEMBLIES (DUNH)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1863, "Communications Circuit Assemblies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Communication Cable Assembly."

COMMUNICATIONS CIRCUIT ACCESSORIES (DUXR)

GENERAL

This category covers devices intended for use in residential or commercial communication station applications for connections to the telephone communication loop circuits. The individual Listings describe the intended location of these devices, either 1) on the equipment side or 2) outside plant side of primary protectors for communication circuits (see QVGV).

The term "equipment side" indicates that the communication circuit accessory may only be employed on that portion of the loop circuit protected by primary protectors for communication circuits (see QVGV).

The term "outside plant," as defined in ANSI/IEEE 100-2000, "The Authoritative Dictionary of IEEE Standards Terms," is "that part of the plant extending from the line side of the main distributing frame to the line side of the station or PBX protector or connecting block, or to the line side of the main distributing frame in another office building." The "outside plant" side is not protected by a primary protector.

Accessory units may also provide features relating to the communication circuit without accessorizing the communication protector function. Examples of accessories are: RJ-type jacks and plugs, quick-connect terminal assemblies, telephone wall plates, telephone extension cords, cross-connect terminal blocks, MTU modules, terminal enclosures, network interface devices (NIDs) (excluding complex interface devices, such as fiber optic and broadband subscriber interface units), wire guide assemblies and connector blocks.

EQUIPMENT TYPES

Equipment covered includes the following communication circuit accessories: Modular jack and plug assemblies, quick-connect terminal assemblies, wall plates, extension cords, cross-connect terminal-block assemblies, maintenance terminal modules, terminal enclosures, cable-splice enclosures, wire-guide assemblies and connector boxes.

INSTALLATION INSTRUCTIONS

In certain applications, communication circuit protectors are not required because there is no exposure to accidental contact with electric light or power conductors as defined by Article 800 of ANSI/NFPA 70, "National Electrical Code." Accordingly, those products normally used only on the equipment side of a primary protector may be used without the protector. Products intended for this application are identified in the individual Listings and the installation documentation.

Communication circuit accessories investigated for mounting in air-handling spaces are specifically identified by markings on the product and the individual Listings. Installation details are shown on the product or are provided in a separate installation document provided with the product and referenced in the marking on the product.

RELATED EQUIPMENT

Other telecommunications appliances and equipment are covered under Telephone Appliances and Equipment (WYQQ), Telephones, Cellular (WYLR) or Information Technology Equipment Including Electrical Business Equipment (NWXG).

Modular assemblies of telecommunication equipment (e.g., racks, circuit card assemblies) that are designed for field installation by trained service personnel are covered under Custom-built Telecommunication Equipment (WYKM).

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies is covered under Communication Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunications equipment, but include components and assemblies that are intended to power, protect, heat, cool or otherwise support IT or telecommunications equipment that will be installed at a later time are covered under Information Technology and Telecommunications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY).

COMMUNICATIONS CIRCUIT ACCESSORIES (DUXR)

99

Power supplies for information technology and telecommunications equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1863, "Communications-Circuit Accessories."

The basic standard used to investigate nonmetallic materials of products marked suitable for use in air-handling spaces is UL 2043, "Fire Tests for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for Verification of communication circuit accessories that not only meet the requirements of UL 1863, but have also been investigated for industry standard performance characteristics in accordance with TIA/EIA-568-A or TIA/EIA-568-B (Category 3, 4, 5, 5e or 6), "Commercial Building Telecommunications Cabling Standard."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

An accessory that has also been investigated in accordance with industry specifications is marked in combination with the Listing Mark "Also Verified by Underwriters Laboratories Inc. IN ACCORDANCE WITH [applicable document name, category designation and appropriate draft number (when applicable)]" as illustrated in the following examples:

"TIA/EIA 568-A, Cat. (3, 4 or 5) Transmission,"

"TIA/EIA 568-A Reliability,"

"TIA/EIA 568-A, Cat. (3, 4 or 5) Transmission, Reliability,"

"TIA/EIA 568-B.2-1, Cat. 6, Draft 10" or

"[Specification name and/or number]."

Note: The term "Transmission" identifies compliance of the connection hardware with the applicable requirements in ANSI/TIA/EIA 568-B.2, section 5.4 (5.4.2 – 5.4.5). The term "Reliability" identifies compliance with the reliability requirements within the same standard, section 5.3.5.

COMMUNICATIONS SERVICE EQUIPMENT (DUZO)

GENERAL

This category covers communication service equipment intended to be installed on the network side of the subscriber demarcation point, up to and including the subscriber interface unit (SIU), network interface unit (NIU), or network interface device (NID). This equipment is intended to be installed and maintained by telecommunication companies, CATV companies, and similar network communication companies that provide public telecommunication, CATV, or other network services to subscriber premises. As appropriate, this equipment is intended to be installed in accordance with Articles 770, 800 and 820 of ANSI/NFPA 70, "National Electrical Code" (NEC), and the applicable sections of ANSI C2, "National Electrical Safety Code."

This equipment may or may not incorporate primary protection for communication circuits, or have provision for the installation of a Listed primary protector. This information is specified in the individual Listings for the equipment. Primary protectors are intended to suppress abnormal voltage conditions that may exist on the circuit due to accidental contact with electrical light and power conductors operating at over 300 V to ground as defined in Article 800 of the NEC. These devices may also be used to protect against electrical transients from electromagnetic disturbances or higher than normal voltages induced on the network circuits due to close proximity of the protected circuit to electric light or power conductors.

Primary protection is identified as "provided" when primary protection is built into the equipment, "compatible" when the equipment has provision for the installation of a Listed primary protector, or "none" when there are no provisions for a primary protector. Where applicable, compatible primary protector designations are either marked on the equipment or included on the individual product data sheet.

Primary protector fusing information identifies whether the primary protector is integrally "fused" (a "fused primary protector") or if a fusing wire is to be provided (a "fuseless primary protector"). Where a fusing wire is required, the maximum size fusing wire to be used in series with the equipment is indicated by the following alphabetical designations:

A — 24 AWG copper wire with thermoplastic insulation

100 COMMUNICATIONS SERVICE EQUIPMENT (DUZO)

B — 22 AWG copper wire with thermoplastic insulation

C — 20 AWG, 40% copper-clad wire

D — 26 AWG copper wire with thermoplastic insulation

Equipment intended to connect a shielded cable drop and/or incorporating a primary protector is provided with an appropriately sized grounding terminal.

Requirements for the location and installation of equipment incorporating primary protectors and provisions for cable grounding are provided in Articles 770, 800 and 820 of the NEC.

Unless marked "indoor use only", this equipment is suitable for indoor and outdoor use and provides basic protection against rain and corrosion. Equipment that provides a degree of protection against more severe environmental conditions, such as wind-blown dust and rain, icing, splashing water, immersion, etc., is marked with an enclosure type designation and provides a degree of protection as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Except for **OTHER EQUIPMENT** identified with a specific temperature range, outdoor equipment has been investigated over a temperature range of -40°C to +46°C. The effects of insolation (solar loading) have also been considered.

Where indicated by a "WARNING" marking on the interface unit, the cable drop may supply Class 3 power with a voltage up to 100 V to the interface. For such installations, the cable drop should be located, routed, or protected so that it is not exposed to touch by persons, or appropriate cable constructions or other means suitable for the installation should be provided.

INTERFACE EQUIPMENT

A subscriber interface unit (SIU), network interface unit (NIU) or network interface device (NID) is used to provide telecommunication, CATV, and other signal information to the subscriber premises and isolation between the Class 3 power on the cable drop and the subscriber premises signal circuits. An interface may incorporate two separate compartments, one compartment for network connections and components, and another compartment for the subscriber connection terminals and standard jacks.

Each individual interface Listing provides the following information: Interface designation, primary protector provisions, compatible primary protectors, fusing information and indoor or outdoor environmental use specifications.

Primary protector provisions and fusing information are marked on the interface.

TAP EQUIPMENT

A power passing tap (PPT) or power passing multi-tap (PPMT) is used to tap both signal and Class 3 power from the main utility network for the subscriber cable drop. This tap may be located on a utility pole, within a utility owned equipment pedestal or vault, or similar location in accordance with ANSI C2. In addition to coupling the signal circuits from the network to the cable drop, the tap limits power on the cable drop to Class 3 Levels with a maximum voltage of 100 V. Unless otherwise noted in the individual Listings, taps using communication cables for cable drops have been investigated for subscriber cable drops not exceeding 500 ft in length.

Each individual tap Listing provides the following information: Tap designation, voltage rating, power carrying media, primary protector provisions, compatible primary protectors, fusing information and indoor or outdoor environmental use specification.

OTHER EQUIPMENT

Other equipment may contain features that are unique to a system or application. Information concerning special installation procedures, compatibility and other important design features are provided in the individual Listings, on product markings, on product data sheets and in utility installation practices.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 497, "Protectors for Paired-Conductor Communications Circuits," UL 1459, "Telephone Equipment," and UL 1950, "Information Technology Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Subscriber Interface Unit" (or "SIU"), "Network Interface Unit" (or "NIU"), "Network Interface Device" (or "NID"), "Power Passing Tap" (or "PPT"), "Power Passing Multi-Tap" (or "PPMT") or, for other equipment, "Communication Service Equipment," with or without an appropriate product name.

COMMUNICATIONS CABLE (DUZX)**USE AND INSTALLATION****COMMUNICATIONS CABLE (DUZX)**

This category covers communications cable which is a single conductor coaxial cable or a multiple conductor jacketed cable for telephone and other communications circuits for use as described in Article 800 of ANSI/NFPA 70, "National Electrical Code" (NEC).

This cable is used as wiring from a protector to a telephone or other communications equipment within a building, and for use as interconnecting wiring between parts of a communications system.

Except for special locations specifically required by the NEC, communications cable, in general, is not required to be installed in conduit or raceway.

PRODUCT MARKINGS

Communications cable is identified by marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

CM — Indicates cable intended for general use within buildings in accordance with Section 800.154(E)(1) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

CMG — Indicates cable for general use within buildings in accordance with Section 800.154(E)(1) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test in UL 1685.

CMF — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 800.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft, when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CMR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 800.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CMUC — Indicates cable for undercarpet use in accordance with Section 800.154(E)(6) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

CMX — Indicates cable intended for use within buildings (1) where the wire or cable is enclosed in raceway or noncombustible tubing, or (2) in nonconcealed spaces where the exposed length of wire or cable does not exceed 10 ft, or (3) in one- or two-family or multifamily dwellings when the cable diameter is less than 0.25 in., in accordance with Section 800.154(E) of the NEC. Type CMX cable may be marked "Outdoor" to indicate its suitability for installation outdoors on dwellings. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

Cable that contains one or more optical fiber members has the suffix "-OF" added to the above.

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "Shielded" contains one or more electromagnetic shields.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Listed cable that is additionally marked "Verified (UL) Category 2, 3, 4, 5, 5E, 6 or 6A [including latest draft number if applicable]" or "Verified (UL) Category 3, 4, 5, 5E, 6 or 6A [including latest draft number if applicable]" Patch Cable" for stranded conductor cable, has been investigated in accordance with the UL Data Transmission Performance Category Marking Program and is manufactured under an acceptable quality assurance system.

Listed cable that is additionally marked "Verified (UL) Category 6 or 7 NEMA WC66" has been investigated in accordance with NEMA WC66-1999, "Performance Standard for Category 6 and 7 100 Ohm Shielded and Unshielded Twisted Pair Cable." Additionally, this cable has been manufactured under an acceptable quality assurance system.

Listed cable that is additionally marked "Verified In Accordance With [Specification name and/or number]" complies with the requirements of a transmission performance specification referenced and is manufactured under an acceptable quality assurance system.

Communications wire is a single wire or unjacketed multi-conductor assembly of these wires that is intended for use in distributing frames and in cross-connect arrays in accordance with Section 800.154(C) of the NEC. This wire or assembly is marked "cross-connect wire."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 444, "Communications Cables." In addition, the standards used to investigate cables marked "Verified in Accordance with [Specification]" include the applicable Performance Standards.

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Communications Cable."

Cable that is also Verified to the UL Data Transmission Performance Category Marking Program has the marking "Verified to UL Performance Category Program," along with the UL symbol (as illustrated in the Introduction of this Directory) on the product, or the UL Verification Mark along with the words "Performance Category Program," together with the Listing Mark information on the tag, the reel or the smallest unit container. Cable that is also Verified to another transmission performance specification has the marking "Verified in Accordance with [Specification name and/or number]," along with the UL symbol (as illustrated in the Introduction of this Directory) on the product, or the UL Verification Mark along with the applicable Specification name and/or number together with the Listing Mark information on the tag, the reel or the smallest unit container.

COMMUNICATIONS CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (DVBG)

COMMUNICATIONS CABLE ASSEMBLIES AND CONNECTORS VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (DVBH)

GENERAL

This category covers communications cable assemblies and connectors whose signal transmission, environmental and/or mechanical performance characteristics have been investigated to one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

A communications cable assembly covered under this category consists of a metallic cord or cable with a connector or other terminating means at one or both ends.

Examples of cable assemblies and connectors are: modular-type jacks and plugs, quick-connect terminal assemblies, telephone line and extension cords, cross-connect terminal blocks, patch/equipment cords and connector blocks.

PRODUCT MARKINGS

Where the performance specification has the provision to investigate communications cable assemblies and connectors to different levels of performance, such as in ANSI/TIA/EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components," the product, the attached tag or the smallest unit container in which the product is packaged is marked with an appropriate performance level designation, such as the "Category" number designation 3, 4, 5, 5e, 6 or 6A to indicate the requirements in the standard to which the cable was investigated.

RELATED PRODUCTS

Listed communications cable assemblies and connectors are covered under Communications Circuit Accessories (DUXR).

Listed communications cable and communications cable whose signal transmission, environmental and/or mechanical performance characteristics have been verified by UL, which is a single-conductor coaxial cable or a multiple-conductor jacketed cable for telephone and other communications circuits for use as described in Article 800 of ANSI/NFPA 70, "National Electrical Code," is covered under Communications Cable (DUZX).

Optical fiber cable assemblies and connector products whose signal transmission, environmental and/or mechanical performance characteristics have been verified by UL are covered under Optical Fiber Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (QBFN).

Listed optical fiber cable assemblies and connector products are covered under Optical Fiber Cable Assemblies and Connectors (QBFA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Examples of performance specifications used to investigate products (Category 3, 4, 5, 5e, 6 or 6A) in this category are contained in ANSI/TIA/EIA-568-B.2, "Commercial Building Telecommunications Cabling Standard – Part 2: Balanced Twisted Pair Cabling Components."

Communications Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (DVBH)—Continued

Other performance specifications, applicable to communications cable assemblies and connectors, may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Communications Cable Assembly" or "Communications Connector," the Specification name(s) and/or number(s), and the date of the Specification(s).

For communications cable assemblies and connectors that are also Listed under Communications Cable Accessories (DUXR), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

DATA TRANSMISSION CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (DVBI)

GENERAL

This category covers data transmission cable whose signal transmission characteristics have been determined to be in accordance with one of the specifications shown below or other national or international data transmission performance specifications. This cable has not been investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS AND MARKINGS

This cable is marked as noted below to indicate compliance to the referenced specification. The UL symbol (either the "UL in a circle symbol" or "(UL)") is not used in place of "Underwriters Laboratories Inc." in the statement.

Cable investigated to TIA/EIA-568B, "Commercial Building Telecommunications Cabling," is marked, "Verified by Underwriters Laboratories Inc. in Accordance with Category 3, 5E, 6 or 6A TIA/EIA-568B [including latest draft number, if applicable] Only," or, for stranded conductor cable, "Verified by Underwriters Laboratories Inc. in Accordance with Category 3, 5E, 6 or 6A Patch Cable TIA/EIA-568B [including latest draft number, if applicable] Only."

Cable investigated to ISO/IEC 11801, "Information Technology – Generic Cabling for Customer Premises," is marked, "Verified by Underwriters Laboratories Inc. in Accordance with Category 5 or 6 ISO/IEC 11801 Only."

Cable investigated to NEMA WC 66-1999, "Performance Standard for Category 6 and 7 100 Ohm Shielded and Unshielded Twisted Pair Cables," is marked, "Verified by Underwriters Laboratories Inc. in Accordance with Category 6 or 7 NEMA WC 66 Only."

Cable investigated for conformance to other data transmission performance specifications (based upon industry needs) is marked, "Verified by Underwriters Laboratories Inc. in Accordance with [Specification name and/or number]."

UL MARK

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Data Transmission Cable" and the Specification name and/or number.

In addition to the marking on the tag, reel or smallest unit container, cables that have been Verified by UL in accordance with the signal transmission characteristics and have not been Listed by UL as Communications Cable, Power-Limited Circuit Cable or other UL Listed Cable, are marked with the statement "Verified by Underwriters Laboratories Inc. in accordance with [Specification name(s) and/or number(s)] Only" in the surface print legend. The UL symbol [either the UL in a circle symbol or "(UL)"] is not used in place of the wording "Underwriters Laboratories Inc." in the statement.

COMMUNITY ANTENNA TELEVISION CABLE (DVCS)

USE AND INSTALLATION

This category covers community antenna television cable for use in accordance with Article 820 of ANSI/NFPA 70, "National Electrical Code" (NEC).

PRODUCT MARKINGS

Community antenna television cable is identified by marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

CATVP — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 820.179(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

CATVR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 820.179(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

CATV — Indicates cable intended for general use within buildings in accordance with Section 820.179(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

CATVX — Indicates cable intended for limited use within buildings (1) where the cables are enclosed in raceway or noncombustible tubing, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, or (3) installed in one- or two-family or multifamily dwellings when the cable diameter is less than 0.375 in. in accordance with Section 820.179(D) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

Cable marked "direct burial," "for direct burial" or "dir bur" has been investigated and found suitable for direct burial in the earth.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1655, "Community Antenna Television Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Community Antenna Television Cable."

COMPUTER INTERCONNECTION CABLE ASSEMBLIES (DVPJ)

USE AND INSTALLATION

This category covers computer interconnection cable assemblies intended for installation between units of electronic equipment where the cable is outside of the equipment enclosure and within the computer room as defined in Article 645 of ANSI/NFPA 70, "National Electrical Code." These cable assemblies may also be used in an office environment where the cable is visible after installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 444, "Communications Cables," UL 13, "Power-Limited Circuit Cables," or UL 758, "Appliance Wiring Material," and UL 60950-21, "Information Technology Equipment Safety - Part 21."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products

includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Computer Interconnection Cable Assembly."

CONDUCTOR TERMINATION COMPOUNDS (DVIW)

Conductor termination compounds are for use on splice and termination connections of aluminum, copper-clad aluminum and copper conductors where used to retard oxidation at the conductor/connector interface. These compounds do not have a deleterious effect on the conductor metal, insulation or equipment when used in accordance with the manufacturer's installation instructions.

Reference should be made to the product label located on the smallest unit container for specific instructions as to the proper use of the compound.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number and the following product name: "Conductor Termination Compound" .

CONDUIT AND FITTINGS (DWFV)

CONDUIT AND CABLE HARDWARE (DWMU)

GENERAL

This category covers conduit straps, staples, and similar types of hardware for installation in wiring systems in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

The mechanical strength of these products is investigated with consideration given to the intended installation. Metallic devices are also investigated for resistance to corrosion, and nonmetallic devices may be for flammability and exposure to elevated or cold temperatures.

CARTON MARKINGS

The product carton for a metallic construction of any conduit and cable hardware that is intended for use in spaces used for environmental air is marked "Suitable for use in Air-Handling Spaces in accordance with Section 300.22(B), (C) and (D) of the NEC."

The product carton for a construction made of polymeric material of any conduit and cable hardware that is intended for use in spaces used for environmental air is marked "Suitable for use in Air-Handling Spaces in accordance with Section 300.22(C) and (D) of the NEC."

The product made of polymeric material that is suitable where exposed to rain is so indicated on the device or carton. The term "Wet Location" on the device or carton indicates suitability for use where directly exposed to rain.

Products intended for use at elevated or cold temperatures (above 90°C or below -5°C) are so indicated on the device or carton. The application temperature on the device or carton indicates suitability for use at the extended temperature range.

The following, where applicable, is marked on the carton or installation instructions provided on or in the carton:

1. Types or range of thicknesses of a beam flange, drop wire, or rod
2. Intended mounting orientations, if restricted (for example, vertical or horizontal)
3. Sizes and types of conduit, cable, or tubing intended to be supported for hangers, staples, and straps
4. Load rating greater than for the intended applications
5. Designated assembly torque when other than intended

RELATED PRODUCTS

Cable ties are covered under Positioning Devices (ZODZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2239, "Hardware for the Support of Conduit, Tubing, and Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Conduit and Cable Hardware," or other appropriate product name as shown in the individual Listings.

CONDUIT FITTINGS (DWTT)

USE

This category covers metallic and nonmetallic conduit fittings, such as couplings, conduit bodies, short radius conduit bodies, expansion fittings, locknuts and connectors for use in the assembly of nonmetallic and metallic wiring systems. Also covered are fittings used to provide a transition between metallic and nonmetallic wiring systems. All fittings are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and are intended for installation and use in accordance with the following information and the limitations specified in the appropriate conduit or tubing category.

Some of these fittings are also suitable for use in certain hazardous (classified) locations where unclassified locations fittings are permitted in Articles 501, 502, 503, 505 and 506 of the NEC.

This category also includes metal bushings for use in conduit and insulating bushings for use on conduit inside boxes, gutters, etc.

Conduit Bodies — Conduit bodies that are not provided with a volume marking are not intended to enclose splices, taps or devices. Conduit bodies that are provided with a volume marking are covered under Metallic Outlet Boxes (QCIT) or Nonmetallic Outlet Boxes (QCMZ). Conduit bodies Classified for use with specific conduit body covers and conduit body covers Classified for use with specific conduit bodies are covered under Conduit Bodies and Covers Classified for Use with Specified Equipment (QCKW).

Short-radius Conduit Bodies — Short-radius conduit bodies, such as capped elbows and service entrance elbows, are not intended to contain splices or taps and are not marked with a volume.

Insulating Bushings — Insulating bushings provided either separately or as part of a fitting are suitable for temperatures of 150°C if they are colored black or brown, and for 90°C if any other color unless specifically marked for a higher temperature.

Volume — Fittings or covers for fittings should be judged to contribute no volume other than the equivalent raceway connected to it unless specifically marked.

Sealing Locknuts — Sealing locknuts are intended for use with threaded rigid metal conduit and intermediate metal conduit with one sealing locknut in the outside or the inside and either an ordinary locknut or sealing locknut on the opposite side of the enclosure for wet locations or liquid-tight applications. Sealing locknuts may also be used with Listed wet location or liquid-tight fittings where so marked on the fitting carton.

CARTON MARKINGS

Fittings for use with electrical metallic tubing (adapters), unthreaded rigid metallic, intermediate metallic conduit or threaded couplings which split to fit over the ends of threaded rigid metal or intermediate metal conduit and then are bolted in place have been tested only for use with steel conduit or tubing unless marked on the fitting or carton to indicate suitability for use with aluminum or other material.

A fitting that is taped completely (from the raceway to the box, or raceway to raceway) is concrete-tight when the product carton is marked "CONCRETE-TIGHT WHEN TAPED."

Fittings for use with flexible metal conduit have been tested only for use with the type of conduit marked on the carton. The carton may be marked "FMC" for all six types of flexible metal conduit, or may also be marked "FE," "AL," "FERW," "ALRW," "FEXRW" or "ALXRW" in any combination for any combination of the six types of flexible metal conduit.

Flexible metal conduit fittings for use with conduit less than 1/2 (16) trade size, having an end stop that does not completely encircle the end of the conduit, will have the carton marking "Armored Cable Bushing Required on Flexible Metal Conduit," or will indicate to use another type of bushing. This bushing will provide protection to the conductors as they exit the conduit into the electrical enclosure.

Threadless conduit fittings suitable for use in concrete or where exposed to the weather are identified by a marking on the carton. Aluminum fittings are not considered suitable for use in concrete or cinder fill unless protected with an asphalt paint or the equivalent.

All liquid-tight fittings are identified on the carton as "Liquid-Tight." The term "Liquid-Tight" on the carton indicates suitability for use where directly exposed to oil spray or to rain.

A metallic fitting that physically cannot be connected to any type of conduit other than liquid-tight flexible metallic or nonmetallic Type B conduit can have the marking on carton in which the fitting is packed. It is marked "Liquid-Tight Flexible Nonmetallic Conduit Type B Only," "LFNC-B" or "FNMC-B."

Fittings identified with an enclosure type designation or as rain-tight or liquid-tight on the carton are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Connectors that are also suitable for use with power and control tray cable, nonmetallic sheathed cable, service entrance cable, or flexible nonmetallic tubing are so identified by the appropriate marking on the carton. Connectors designated "For Use With Nonmetallic Sheathed Cable" are also suitable for use with multiconductor underground feeder and branch circuit cable where used in dry locations. Unless marked otherwise on the carton, the connectors are suitable for connection of only one cable per cable entry.

GROUNDING

Conduit Fittings (DWTT)—Continued

All metal fittings for metal cable, conduit and tubing are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC, except as noted for flexible metal conduit fittings and liquid-tight flexible metal conduit fittings.

FITTINGS

Flexible Metal Conduit Fittings — Flexible metal conduit fittings designed for connection to the conduit by clamping around the circumference of the conduit are considered suitable for grounding for use in circuits over and under 250 V and when used in accordance with the NEC and containing conductors protected by overcurrent devices rated 20 A or less. Flexible metal conduit fittings of types other than the clamping type mentioned previously in the 3/8 through 3/4 in. trade size and containing conductors protected by overcurrent devices rated 20 A or less are considered suitable for grounding when used in accordance with the NEC. All other trade sizes that have been investigated for grounding are marked "GRND" or the equivalent.

Liquid-tight Flexible Metal Conduit Fittings — Liquid-tight flexible metal conduit fittings in the 1-1/4 in. and smaller trade sizes are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC. A straight metallic fitting for use in direct contact with earth is marked "Direct Burial."

Liquid-tight Flexible Nonmetallic Conduit Fittings — Liquid-tight flexible nonmetallic conduit fittings are marked as follows:

1. A fitting for Type A conduit only is marked "Liquid-Tight Flexible Nonmetallic Conduit Type A Only," "LFNC-A only" or "FNMC-A only."
2. A metallic fitting for Type B is marked "Liquid-Tight Flexible Nonmetallic Conduit Type B Only," "LFNC-B" or "FNMC-B."
3. A nonmetallic fitting for Type B conduit only is marked "Liquid-Tight Flexible Nonmetallic Conduit Type B Only," "LFNC-B only" or "FNMC-B only."
4. A nonmetallic fitting for Type C conduit only is marked "Liquid-Tight Flexible Nonmetallic Conduit Type C Only," "LFNC-C only" or "FNMC-C only."
5. A straight metallic fitting for use in direct contact with earth is marked "Direct Burial."

Nonmetallic Fittings — Nonmetallic fittings suitable for use with rigid nonmetallic conduit are identified by the appropriate marking on the carton. Such fittings are inherently resistant to atmospheres containing industrial corrosive agents and will also withstand vapors or mists of caustic, pickling, acids, plating baths, hydrofluoric, and chromic acids. Fittings that have been investigated for exposure to other reagents may be identified by the designation "Reagent Resistant" printed on the surface of the fittings. Such special uses are described in greater detail in the individual carton markings or instructions packed with the device. Nonmetallic fittings for use with rigid PVC conduit are suitable with wires rated 90°C or less.

Threadless Fittings — Threadless fittings for use with electrical metallic tubing, rigid metal conduit, intermediate metal conduit or threaded couplings which split to fit over the ends of threaded rigid metal or intermediate metal conduit and then are bolted in place are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with the NEC.

Additional Fittings — For additional Listings of conduit fittings, see Outlet Bushings and Fittings (QCRV), Insulating Bushings (NZMT), Rigid Ferrous Metal Conduit (DYIX), Intermediate Ferrous Metal Conduit [for elbows] (DYBY) and Armored Cable Connectors [for connectors which may also be suitable for use with flexible cord, flexible metal conduit and metal-clad (Type MC) cable] (AWSX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Conduit Fitting," "Adapter" or "Coupling," or other appropriate product name as shown in the individual Listings.

Retrofit Fitting Kits Classified for Use with Extruded Rigid PVC Conduit (DWUC)

USE

Retrofit Fitting Kits Classified for Use with Extruded Rigid PVC Conduit (DWUC)—Continued

This category covers Listed retrofit fitting kits Classified for use with extruded rigid nonmetallic PVC Schedule 40 conduit. These kits are intended only for truncating conduit in concrete. They are not intended for use with conduit in open air.

The kits are provided with the tools and instructions necessary for proper installation. Separate fittings intended for use with the tools may be sold separately. The kit and installation instructions are marked "PVC Conduit Repair Fitting," or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Conduit Fittings (DWTT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RETROFIT FITTING KIT

FOR USE WITH RIGID NONMETALLIC PVC SCHEDULE 40 CONDUIT Control No.

FLEXIBLE CONDUIT, LIQUID-TIGHT (DWWY)

Flexible Metal Conduit Assemblies, Liquid-tight (DXAS)

USE AND INSTALLATION

This category covers liquid-tight flexible metal conduit, in trade sizes 3/8 to 4 (metric designators 12 to 103) inclusive, for installation in accordance with Article 350 of ANSI/NFPA 70, "National Electrical Code" (NEC), for conductors in circuits of 600 V, nominal, or less. This product may also be used for installation of conductors in motor circuits, and for electric signs and outline lighting in accordance with the NEC.

Liquid-tight flexible metal conduit assemblies consist of a length of liquid-tight metal conduit terminated at each end with a permanently attached connector.

Liquid-tight flexible metal conduit assemblies are suitable for use in certain hazardous (classified) locations as permitted in the NEC.

Liquid-tight flexible metal conduit assemblies are sunlight resistant and suitable for use outdoors.

Where terminated in fittings investigated for grounding and where installed with not more than 6 ft (total length) in any ground return path, liquid-tight flexible metal conduit in the 3/8 and 1/2 (12 and 16) trade sizes is suitable for grounding where used on circuits rated 20 A or less and the 3/4, 1 and 1-1/4 (21, 27 and 35) trade sizes are suitable for grounding where used on circuits rated 60 A or less.

The following are not considered to be suitable as a grounding means:

1. The 1-1/2 (41) and larger trade sizes.
2. The 3/8 and 1/2 (12 and 16) trade sizes where used on circuits rated higher than 20 A or where the total length in the ground return path is greater than 6 ft.
3. The 3/4, 1 and 1-1/4 (21, 27 and 35) trade sizes where used on circuits rated higher than 60 A, or where the total length in the ground return path is greater than 6 ft.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 360, "Liquid-Tight Flexible Steel Conduit," and ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-Tight Flexible Metal Conduit Assembly."

Flexible Metal Conduit, Liquid-tight (DXHR)

USE AND INSTALLATION

This category covers liquid-tight flexible metal conduit in trade sizes 3/8 to 4 (metric designators 12 to 103) inclusive, for installation in accordance with Article 350 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Flexible Metal Conduit, Liquid-tight (DXHR)—Continued

Liquid-tight flexible metal conduit is intended for use with conductors in circuits of 600 V nominal or less. This product may also be used for installation of conductors in motor circuits, and for electric signs and outline lighting in accordance with the NEC.

Liquid-tight flexible metal conduit is sunlight resistant and suitable for use outdoors.

Where terminated in fittings investigated for grounding and where installed with not more than 6 ft (total length) in any ground return path, liquid-tight flexible metal conduit in the 3/8 and 1/2 (12 and 16) trade sizes is suitable for grounding where used on circuits rated 20 A or less, and the 3/4, 1 and 1-1/4 (21, 27 and 35) trade sizes are suitable for grounding where used on circuits rated 60 A or less. See Conduit Fittings (DWTT) with respect to fittings suitable as a grounding means.

The following are not considered to be suitable as a grounding means:

1. The 1-1/2 (41) and larger trade sizes.
2. The 3/8 and 1/2 (12 and 16) trade sizes where used on circuits rated higher than 20 A, or where the total length in the ground return path is greater than 6 ft.
3. The 3/4, 1 and 1-1/4 (21, 27 and 35) trade sizes where used on circuits rated higher than 60 A, or where the total length in the ground return path is greater than 6 ft.

PRODUCT MARKINGS

Liquid-tight flexible metal conduit suitable for direct burial and in poured concrete is marked "Direct Burial," "Burial," "Dir Burial" or "Dir Bur."

Liquid-tight flexible metal conduit not marked with a temperature designation or marked "60 C" is intended for use at temperatures not in excess of 60°C (140°F).

Conduit intended for use in dry or oily locations at a temperature higher than 60°C (140°F) is marked "____ C dry, 60 C wet, 70 C oil res" or "____ C dry, 60 C wet, 70 C oil resistant" with "80" or "105" inserted as the dry-locations temperature.

Conduit marked "80 C dry, 60 C wet, 60 C oil res" or "80 C dry, 60 C oil resistant" is intended for use at 80°C (176°F) and lower temperatures in air, and at 60°C (140°F) and lower temperatures where exposed to water, oil or coolants.

Conduit that has not been investigated for use where exposed to oil is marked "OIL-FREE ENVIRONMENTS ONLY."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 360, "Liquid-Tight Flexible Steel Conduit."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Liquid-Tight Flexible Metal Conduit."

Flexible Nonmetallic Conduit, Liquid-tight (DXOQ)

USE AND INSTALLATION

This category covers liquid-tight flexible nonmetallic conduit, in trade sizes 3/8 in. to 4 (metric designators 12 to 103) inclusive, for installation in accordance with Article 356 of ANSI/NFPA 70, "National Electrical Code" (NEC), for conductors in circuits of 600 V, nominal, or less. This product may also be used for installation of conductors for electric signs and outline lighting in accordance with the NEC.

PRODUCT MARKINGS

Liquid-tight flexible nonmetallic conduit suitable for direct burial and in poured concrete is marked "Direct Burial," "Burial," "Dir Burial" or "Dir Bur."

Liquid-tight flexible nonmetallic conduit suitable for use outdoors is marked "Outdoor."

Liquid-tight flexible nonmetallic conduit is marked with the product name in conjunction with the Listing Mark and the type of construction: "A" for layered conduit, "B" for integral conduit and "C" for corrugated conduit, or with "LFNC-A" for layered conduit, "LFNC-B" for integral conduit, and "LFNC-C" for corrugated conduit.

Liquid-tight flexible nonmetallic conduit not marked with a temperature designation or marked "60 C" is for use at temperatures not in excess of 60°C (140°F).

Conduit for use in dry or oily locations at a temperature higher than 60°C (140°F) is marked "____ C dry, 60 C wet, 70 C oil res" or "____ C dry, 60 C wet, 70 C oil resistant" with "80 C" or "105 C" inserted as the dry locations temperature.

Flexible Nonmetallic Conduit, Liquid-tight (DXOQ)—Continued

Conduit marked “___C dry, 60 C wet, 60 C oil res” or “___C dry, 60 C wet, 60 C oil resistant” is for use at a temperature of 105°C (221°F) and lower temperatures in air, and at 60°C (140°F) and lower temperatures where exposed to water, oil or coolants, with “80 C,” “90 C” or “105 C” inserted as the dry locations temperature.

RELATED PRODUCTS

Fittings for use with liquid-tight nonmetallic conduit are covered under Conduit Fittings (DWTT) and are suitable only for the type of conduit indicated by the marking on the fitting.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1660, “Liquid-Tight Flexible Nonmetallic Conduit.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Liquid-Tight Flexible Nonmetallic Conduit,” “LFNC-A,” “LFNC-B” or “LFNC-C.”

FLEXIBLE METAL CONDUIT (DXUZ)**USE**

This category covers flexible aluminum and steel conduit in trade sizes 3/8 to 4 (metric designators 12 to 103) inclusive, flexible aluminum and steel conduit Type RW (reduced wall), flexible aluminum and steel conduit Type XRW (extra reduced wall) in trade sizes from 3/8 to 3 (16 to 78) inclusive, for installation in accordance with Article 348 of ANSI/NFPA 70, “National Electrical Code” (NEC), for conductors in circuits of 600 V, nominal, or less. This product may also be used for installation of conductors in motor circuits, electric signs and outline lighting in accordance with the NEC.

Flexible metal conduit (steel or aluminum) should not be used underground (directly buried or in duct which is buried) or embedded in poured concrete or aggregate, or in direct contact with earth or where subjected to corrosive conditions. In addition, flexible aluminum conduit should not be installed in direct contact with masonry in damp locations.

Flexible metal conduit no longer than six ft and containing circuit conductors protected by overcurrent devices rated at 20 A or less is suitable as a grounding means.

Flexible metal conduit longer than six ft has not been judged to be suitable as a grounding means.

To prevent possible damage to flexible aluminum conduit, flexible aluminum and steel conduit Types RW and XRW, care must be exercised when installing connectors employing direct bearing set screws.

PRODUCT MARKINGS

Flexible aluminum conduit is marked at intervals of not more than one ft with the letters “AL.”

Flexible aluminum conduit Type RW is marked at intervals of not more than one ft with the letters “AL” and “RW.”

Flexible steel conduit Type RW is marked at intervals of not more than one ft with the letters “RW.”

Flexible aluminum conduit Type XRW is marked at intervals of not more than one ft with the letters “AL” and “XRW.”

Flexible steel conduit Type XRW is marked at intervals of not more than one ft with the letters “XRW.”

RELATED PRODUCTS

See Conduit Fittings (DWTT) with respect to fittings suitable as a grounding means.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1, “Flexible Metal Conduit.”

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Flexible Aluminum Conduit,” “Flexible Steel Conduit,” “Flexible Aluminum Conduit Type RW,” “Flexible Steel Conduit Type RW,” “Flexible Aluminum Conduit Type XRW” or “Flexible Steel Conduit Type XRW.”

INTERMEDIATE FERROUS METAL CONDUIT (DYBY)**USE AND INSTALLATION**

This category covers intermediate ferrous metal conduit that includes standard 10 ft. lengths of straight conduit, with a coupling, special lengths either shorter or longer, with or without a coupling for specific applications or uses, elbows, and nipples in trade sizes 1/2 to 4 (metric designators 16 to 103) inclusive, for installation in accordance with Article 342 of ANSI/NFPA 70, “National Electrical Code.”

Galvanized intermediate steel conduit installed in concrete does not require supplementary corrosion protection.

Galvanized intermediate steel conduit installed in contact with soil does not generally require supplementary corrosion protection.

In the absence of specific local experience, soils producing severe corrosive effects are generally characterized by low resistivity less than 2000 ohm-centimeters.

Wherever ferrous metal conduit runs directly from concrete encasement to soil burial, severe corrosive effects are likely to occur on the metal in contact with the soil.

RELATED PRODUCTS

Fittings for use with unthreaded intermediate ferrous metal conduit are covered under Conduit Fittings (DWTT) and are suitable only for the type of conduit indicated by the marking on the carton.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1242, “Electrical Intermediate Metal Conduit – Steel.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Intermediate Metal Conduit” (or “IMC”).

RIGID FERROUS METAL CONDUIT (DYIX)**USE AND INSTALLATION**

This category covers rigid ferrous metal conduit that includes standard 10 ft. lengths of straight conduit, with a coupling, special lengths either shorter or longer, with or without a coupling for specific applications or uses, elbows, and nipples in trade sizes 3/8 to 6 (metric designators 12 to 155) inclusive, for installation in accordance with Article 344 of ANSI/NFPA 70, “National Electrical Code” (NEC).

Corrosion Protection and Coatings

Galvanized rigid steel conduit installed in concrete does not require supplementary corrosion protection.

Galvanized rigid steel conduit installed in contact with soil does not generally require supplementary corrosion protection.

In the absence of specific local experience, soils producing severe corrosive effects are generally characterized by low resistivity (less than 2000 ohm-centimeters).

Wherever ferrous metal conduit runs directly from concrete encasement to soil burial, severe corrosive effects are likely to occur on the metal in contact with the soil.

Conduit that is provided with a metallic or nonmetallic coating, or a combination of both, has been investigated for resistance to atmospheric corrosion. Nonmetallic outer coatings that are part of the required resistance to corrosion have been additionally investigated for resistance to the effects of sunlight.

Nonmetallic outer coatings of greater than 0.010-in. thickness are investigated with respect to flame propagation detrimental effects to any underlying corrosion protection, the fit of fittings and electrical continuity of the connection of conduit to fittings.

Conduit with nonmetallic coatings has not been investigated for use in ducts, plenums, or other environmental air spaces in accordance with the NEC.

Rigid metal conduit with or without a nonmetallic coating has not been investigated for severely corrosive conditions.

RELATED PRODUCTS

Fittings for use with unthreaded rigid metal conduit are covered under Conduit Fittings (DWTT) and are suitable only for the type of conduit indicated by the marking on the carton.

Other Listings for elbows are covered under Conduit Fittings (DWTT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 6, “Electrical Rigid Metal Conduit – Steel.”

UL MARK

Rigid Ferrous Metal Conduit (DYIX)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Rigid Metal Conduit" (or "ERMC-S").

RIGID NONFERROUS METALLIC CONDUIT (DYWV)**USE**

This category covers rigid nonferrous metal conduit that includes straight conduit, elbows, and nipples in trade sizes 3/8 to 6 (metric designators 12 to 155) inclusive for installation in accordance with Article 344 of ANSI/NFPA 70, "National Electrical Code."

Aluminum conduit used in concrete or in contact with soil requires supplementary corrosion protection.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 6A, "Electrical Rigid Metal Conduit – Aluminum, Red Brass and Stainless Steel."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rigid Metal Conduit."

As appropriate, a designation such as "Stainless Steel," "Red Brass" or "Aluminum" is appended to the product name or is substituted for the word "Metal" in the product name.

REINFORCED THERMOSETTING RESIN CONDUIT (DZKT)**USE AND INSTALLATION**

This category covers reinforced thermosetting resin conduit and fittings intended for installation in accordance with Article 352 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Reinforced thermosetting resin conduit is Listed in trade sizes 1/2 to 6 (metric designators 16 to 155) inclusive, in IPS, ID, RTRC 40 and RTRC 80 dimensions, and in trade sizes 3/4 to 6 (metric designators 21 to 155) inclusive, in XW dimensions as marked on the product. Listing includes straight conduit, elbows, bends, and other fittings, unless otherwise noted.

XW-type reinforced thermosetting resin conduit is Listed for aboveground use and is suitable for use wherever IPS, ID, RTRC 40 and RTRC 80 conduit may be used. The marking "AG, XW, RTRC" identifies conduit suitable for use where exposed to physical damage in accordance with the NEC.

Reinforced thermosetting resin conduit has been investigated for use with conductors rated 90°C or less.

Reinforced thermosetting resin conduit is designed for connection to couplings, fittings and boxes by use of a suitable epoxy-type cement or drive-on bell and spigot. Instructions supplied by the epoxy-type cement manufacturer describe the method of assembly and precautions to be followed.

Conduit marked "Below Ground" (or "BG") has been investigated for underground use only – for direct burial, with or without being encased in concrete.

Conduit marked "Above Ground" (or "AG") has been investigated for use aboveground, underground and for direct burial with or without encasement in concrete. This conduit has been investigated for concealed or exposed work where not subject to physical damage.

Reinforced thermosetting resin conduit, elbows, bends and other fittings investigated for direct exposure to reagents are identified by the designation "Reagent Resistant" and are marked to indicate the specific reagents.

RELATED PRODUCTS

For underground conduit other than reinforced thermosetting resin, see Rigid Nonmetallic Underground Conduit, Plastic (EAXX).

For aboveground conduit other than reinforced thermosetting resin, see Rigid Nonmetallic Schedule 40 and Schedule 80 PVC Conduit (DZYR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1684, "Reinforced Thermosetting Resin Conduit (RTRC) and Fittings," and ANSI/UL 1684A, "Supplemental Requirements for Extra Heavy Wall Reinforced Thermosetting Resin Conduit (RTRC) and Fittings."

Reinforced Thermosetting Resin Conduit (DZKT)—Continued

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Reinforced Thermosetting Resin Conduit" (or "RTRC"), "Conduit Fitting," "Adapter," "Coupling," or other appropriate product name.

Red printing on a yellow background is used as an identifying means for the Listing Mark.

RIGID NONMETALLIC CELLULAR CORE SCHEDULE 40 PVC CONDUIT (DZLR)**USE AND INSTALLATION**

This category covers rigid nonmetallic cellular core PVC conduit (Schedule 40), including straight conduit in trade sizes 1/2 to 6 (metric designators 16 to 155) inclusive, intended for installation as rigid nonmetallic raceway for conductors and cable in accordance with Article 352 of ANSI/NFPA 70, "National Electrical Code."

Rigid nonmetallic cellular core PVC Schedule 40 conduit is suitable for aboveground use indoors or outdoors exposed to sunlight and weather where not subject to physical damage, and for underground use by direct burial or encasement in concrete.

Unless marked for higher temperatures, rigid nonmetallic cellular core PVC conduit is intended for use with conductors and cable rated 75°C or less, including where it is encased in concrete within buildings and where ambient temperature is 50°C or less. Where encased in concrete in trenches outside of buildings, it is suitable for use with conductors and cable rated 90°C or less.

Listed rigid nonmetallic cellular core PVC conduit is inherently resistant to atmosphere containing common industrial corrosive agents and will also withstand vapors or mist of caustic, pickling acids, plating bath and hydrofluoric and chromic acids.

Rigid nonmetallic cellular core PVC conduit (including couplings) that has been investigated for direct exposure to other reagents may be identified by the designation "Reagent Resistant" printed on the surface of the product. Such special uses are described as follows: Where exposed to the following reagents at 60°C or less: Acetic, Nitric (25°C only) acids in concentrations not exceeding 1/2 normal; hydrochloric acid in concentrations not exceeding 30%; sulfuric acid in concentrations not exceeding 10 normal; sulfuric acid in concentrations not exceeding 80% (25°C only); concentrated or dilute ammonium hydroxide; sodium hydroxide solutions in concentrations not exceeding 50%; saturated or dilute sodium chloride solution; cottonseed oil, or ASTM 3 petroleum oil.

Rigid nonmetallic cellular core PVC conduit is designed for connection to couplings, fittings and boxes by the use of a suitable solvent-type cement. Instructions supplied by the solvent-type cement manufacturer describe the method of assembly and precautions to be followed.

RELATED PRODUCTS

For additional Listings of rigid nonmetallic conduit suitable for underground use, see Reinforced Thermosetting Resin Conduit (DZKT), Rigid Nonmetallic Schedule 40 and Schedule 80 PVC Conduit (DZYR) and Rigid Nonmetallic Underground Conduit, Plastic (EAXX).

Fittings for rigid nonmetallic cellular core conduit are covered under Conduit Fittings (DWTT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rigid Nonmetallic Cellular Core Conduit Aboveground and Underground (Schedule 40)."

RIGID NONMETALLIC SCHEDULE 40 AND SCHEDULE 80 PVC CONDUIT (DZYR)**USE AND INSTALLATION**

This category covers rigid nonmetallic PVC conduit (Schedule 40 and Schedule 80), including straight conduit and elbows in trade sizes 1/2 to 6 (metric designators 16 to 155) inclusive, intended for installation as rigid nonmetallic raceway for wire and cable in accordance with Article 352 of ANSI/NFPA 70, "National Electrical Code" (NEC).

CONDUIT AND FITTINGS (DWFV)

Rigid Nonmetallic Schedule 40 and Schedule 80 PVC Conduit (DZYR)—Continued

Schedule 40 conduit is suitable for underground use by direct burial or encasement in concrete. Schedule 40 conduit marked "Directional Boring" (or "Dir. Boring") is suitable for underground directional boring applications. Schedule 40 conduit is also suitable for aboveground use indoors or outdoors exposed to sunlight and weather where not subject to physical damage.

Schedule 80 conduit has a reduced cross-sectional area available for wiring space and is suitable for use wherever Schedule 40 conduit may be used. The marking "Schedule 80 PVC" identifies conduit suitable for use where exposed to physical damage and for installation on poles in accordance with the NEC.

Unless marked for higher temperature, rigid nonmetallic conduit is intended for use with wire rated 75°C or less including where it is encased in concrete within buildings and where ambient temperature is 50°C or less. Where encased in concrete in trenches outside of buildings it is suitable for use with wires rated 90°C or less.

Listed PVC conduit is inherently resistant to atmosphere containing common industrial corrosive agents and will also withstand vapors or mist of caustic, pickling acids, plating bath and hydrofluoric and chromic acids.

PVC conduit and elbows (including couplings) that have been investigated for direct exposure to other reagents may be identified by the designation "Reagent Resistant" printed on the surface of the product. Such special uses are described as follows: Where exposed to the following reagents at 60°C or less: Acetic, Nitric (25°C only) acids in concentrations not exceeding 1/2 normal; hydrochloric acid in concentrations not exceeding 30 percent; sulfuric acid in concentrations not exceeding 10 normal; sulfuric acid in concentrations not exceeding 80 percent (25°C only); concentrated or dilute ammonium hydroxide; sodium hydroxide solutions in concentrations not exceeding 50 percent; saturated or dilute sodium chloride solution; cottonseed oil, or ASTM 3 petroleum oil.

PVC conduit is designed for connection to couplings, fittings and boxes by the use of a suitable solvent-type cement. Instructions supplied by the solvent-type cement manufacturer describe the method of assembly and precautions to be followed.

Elbows of material other than PVC are provided with PVC couplings to be solvent-cemented to PVC conduit.

RELATED PRODUCTS

Additional Listings of rigid nonmetallic conduit suitable for underground use are covered under Reinforced Thermosetting Resin Conduit (DZKT) and Rigid Nonmetallic Underground Conduit, Plastic (EAXX).

Fittings for rigid nonmetallic conduit are covered under Conduit Fittings (DWTT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rigid Nonmetallic Conduit Aboveground and Underground (Schedule 40)" or "Rigid Nonmetallic Conduit Aboveground and Underground Extra Heavy Wall (Schedule 80)."

RIGID NONMETALLIC UNDERGROUND CONDUIT, PLASTIC (EAXX)

USE AND INSTALLATION

This category covers plastic types of rigid nonmetallic conduit, including straight conduit, elbows and other bends in sizes 1/2 to 6 (metric designators 16 to 155) inclusive, intended for installation underground as raceway for wire and cable in accordance with Articles 352 and 353 of ANSI/NFPA 70, "National Electrical Code" (NEC). This conduit may be: (1) polyvinyl chloride (PVC) Type A, Type EB or Schedule 40, or (2) high density polyethylene (HDPE) Schedule 40, Schedule 80, EPEC A, EPEC B.

The conduit is intended for underground use under the following conditions, as indicated in the Listing Mark: (1) when laid with its entire length in concrete in any location (Type A), (2) when laid with its entire length in concrete in outdoor trenches (Type EB) and (3) direct burial with or without being encased in concrete (HDPE Schedule 40, Schedule 80, EPEC A, EPEC B or PVC Schedule 40). The conduit is intended for use in ambient temperatures of 50°C or less.

Unless marked otherwise, Type A and HDPE Schedule 40, Schedule 80, EPEC A, EPEC B conduit is intended for use with wire rated 75°C or less. Type EB and Type A conduit, where encased in concrete in trenches outside of buildings, may be used with wire rated 90°C or less. HDPE Schedule 40,

CONDUIT AND FITTINGS (DWFV)

107

Rigid Nonmetallic Underground Conduit, Plastic (EAXX)—Continued

Schedule 80, EPEC A, EPEC B or PVC Schedule 40 conduit, when directly buried or encased in concrete in trenches outside of buildings, may be used with wire rated 90°C or less.

Where conduit emerges from underground installation the wiring method shall be of a type recognized by the NEC for the purpose.

PVC conduit is designed for joining with PVC couplings by the use of a solvent-type cement. HDPE conduit is designed for joining by threaded couplings, drive-on couplings, or a butt-fusing process. Instructions supplied by the solvent-type cement manufacturer describe the method of assembly and precautions to be followed.

RELATED PRODUCTS

For additional Listings of rigid nonmetallic conduit for underground use, see Reinforced Thermosetting Resin Conduit (DZKT) and Rigid Nonmetallic, Schedule 40 and Schedule 80 PVC Conduit (DZYR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 651A, "Type EB and A Rigid PVC Conduit and HDPE Conduit."

The basic standard used to investigate PVC Schedule 40 conduit in this category is ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit."

The basic standard used to investigate continuous lengths of high density polyethylene conduit in this category is ANSI/UL 651B, "Continuous Length HDPE Conduit."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Rigid Nonmetallic Conduit Underground (High Density Polyethylene, Schedule 40, Schedule 80, EPEC A, EPEC B)," "Rigid Nonmetallic Conduit Underground (Polyvinyl Chloride, Schedule 40)," "Rigid Nonmetallic Conduit Underground for Concrete Encasement Only (Type A)" or "Rigid Nonmetallic Conduit Underground for Concrete Encasement in Outdoor Trenches Only. Not for Use in Ceilings, Floors or Walls (Type EB)."

CONDUIT FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (EBMB)

See also Outlet Boxes for use in Zone Classified Hazardous Locations.

The following types of fittings are included in this category:

Conduit fittings for draining or venting are for mounting in existing conduit openings of conduit boxes and electrical devices. Fittings for draining or venting which do not mount in existing conduit openings, such as those with threads smaller than 1/2 in. trade size, are covered under the Component Recognition Program of Underwriters Laboratories Inc.

Conduit unions are for use in threaded rigid conduit wire raceways.

Conduit unions, 90 degree box connector type are for use at threaded openings of devices in accordance with requirements of the National Electrical Code.

Conduit unions, universal type box connector are for use at threaded openings of devices in accordance with requirements of the National Electrical Code and may be assembled at angle greater than 90 degrees.

Flexible connection fittings are substantial fittings having insulated inner wall and flexible-metal outer wall encased in metal braid. They are intended for use where it is necessary to employ flexible connections in threaded rigid conduit systems. Information on the minimum inside radius of bend for which these fittings have been investigated is provided with the fitting.

Prospective users should first ascertain from authorities having jurisdiction under what conditions these flexible connection fittings will be accepted. The use of flexible fittings should be avoided whenever possible. They should be used only when conditions are such that threaded rigid conduit cannot be used.

Conduit elbows and short radius capped elbows are intended for use where it is desirable to have a 90 degree bend and where wires may be guided when being pulled through the conduit line.

Cord connectors are intended for use in making connections between threaded rigid metal conduit systems or hazardous location devices and extra hard service type flexible cord, having a grounding conductor, for portable equipment.

Fittings which are raintight or concretetight are so marked, or this information is provided with the fitting.

**CONDUIT FITTINGS FOR USE IN ZONE CLASSIFIED
HAZARDOUS LOCATIONS (EBMB)**

Cast-aluminum alloy conduit fittings covered by these listings are not considered acceptable for installation in concrete or cinder fill, unless protected with asphalt-base paint or the equivalent.

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

The basic ordinary location standard used to investigate products in this category is UL 514B, "Fittings for Conduit and Outlet Boxes", in conjunction with the Standards referenced in the main guide information (AANZ).

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and the following product name: "Conduit Fitting for Hazardous Locations" or other appropriate product name as shown in the individual Listing.

**CONDUIT FITTINGS FOR USE IN
HAZARDOUS LOCATIONS (EBNV)**
GENERAL

This category covers the following types of fittings:

Conduit fittings for draining or venting are intended for mounting in existing conduit openings of conduit boxes and electrical devices. Fittings for draining or venting that do not mount in existing conduit openings, such as those with threads smaller than 1/2-in. trade size, are covered under UL's Component Recognition Program. Only drain fittings with shut-off valves should be installed in oil-immersed devices and only where there is close supervision so that the fittings will not be left open to permit loss of oil.

Conduit fittings for sealing are intended for use only with sealing compounds specified by the manufacturer in instructions furnished with the fitting. These devices are intended for use in sealing conductors in conduit lines. No splices of conductors should be made in the fittings. Instructions with the fitting indicate any restriction on position or location of the sealing fittings. The maximum number and size of conductors that may be installed within the sealing fitting are stated in the manufacturer's installation instructions provided with each fitting.

Conduit unions are intended for use in threaded rigid conduit wire raceways.

90-degree box connector-type conduit unions are intended for use at threaded openings of devices in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

Universal-type box connector conduit unions are intended for use at threaded openings of devices in accordance with the NEC and may be assembled at an angle greater than 90 degrees.

Flexible connection fittings are substantial fittings having an insulated inner wall and a flexible metal outer wall encased in a metal braid. They are intended for use where it is necessary to employ flexible connections in threaded rigid conduit systems. Information on the minimum inside radius of bend for which these fittings have been investigated is provided with the fitting.

Prospective users should first ascertain from Authorities Having Jurisdiction under what conditions these flexible connection fittings will be accepted. The use of flexible fittings should be avoided whenever possible. They should be used only when conditions are such that threaded rigid conduit cannot be used.

Conduit elbows and short-radius capped elbows are intended for use where it is desirable to have a 90-degree bend and where wires may be guided when being pulled through the conduit line.

Cord connectors are intended for use in making connections between threaded rigid metal conduit systems or hazardous location devices and extra hard service type flexible cord, having a grounding conductor, for portable equipment.

Fittings that are rain-tight or concrete-tight are so marked, or this information is provided with the fitting.

Cast-aluminum alloy conduit fittings covered under this category are not considered acceptable for installation in concrete or cinder fill, unless protected with asphalt base paint or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or with-

**CONDUIT FITTINGS FOR USE IN HAZARDOUS LOCATIONS
(EBNV)**

out the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Conduit Fitting for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

**CONNECTORS, SPECIAL PURPOSE
(ECIS)**
GENERAL

This category covers connector systems employing nonstandard blade, slot and/or pin configurations that are intended for use in special-purpose applications in wiring systems recognized by ANSI/NFPA 70, "National Electrical Code" (NEC), or in highway lighting, utility company installations, and similar uses not within the scope of the NEC. These devices may incorporate switches or overcurrent protection. The connector systems may include the following types of products:

Equipment, Power or Female Outlet — A female contact device for mounting in or on utilization equipment.

Receptacle — A female contact device intended to be installed in or on a wiring system to supply current to utilization equipment.

Plug — A male contact device for connection and disconnection of a flexible cord or cable to a receptacle, cord connector, or other female outlet device.

Cord Connector — A female contact device to be wired on flexible cord for use as an extension from an outlet to make a detachable electrical connection for an attachment plug or, as an appliance coupler to a male inlet.

Equipment, Power or Male Inlet — A male contact device to be mounted in or on utilization equipment to provide a detachable electrical connection to an appliance coupler or cord connector.

Breakaway Connector — A connector that is not intended for routine disconnection under load, but which is intended to separate from its mating half when subjected to an impact force in an emergency situation.

Hybrid Connector — A connector employing two or more dedicated constructions of blades, pins or contacts that are intended to perform different functions, such as handling power, signal currents, or fiber optic transmissions.

TERMINALS

The termination of devices intended to be wired to flexible cord is based on the use of flexible cord or cable having copper conductors, in accordance with Article 400 of the NEC. The ampacity of the flexible cord and cable is based on Section 400.5, Tables 400.5(A) and 400.5(B). Product markings or the manufacturer's instructions provided with the device indicate the conductor size(s) to be used. Unless stated otherwise in the individual Listings, the terminations are based on the use of 60°C flexible cord or cable.

Unless stated otherwise in the individual Listings, the termination provisions of all devices for fixed wiring installations are based on use of conductors having temperature ratings marked on the product at their ampacities specified in Table 310.16 of the NEC. These temperature ratings may be represented by a 7 or 9 associated with the marking "CU," "AL" or "AL-CU," e.g., "AL9," "AL9CU," "AL7CU," "CU7," "CU9."

Terminals not marked "AL-CU" are intended for use with copper conductors only. Terminals marked "AL-CU" are intended for use with aluminum, copper and copper-clad aluminum conductors.

RATINGS

These devices are rated 600 V or less, ac or dc, and 200 A or less. They may also be rated in wattage or in horsepower as noted in the individual Listings.

The devices are tested on circuits involving full rated potential to ground, except for multi-phase rated devices which are tested on circuits consistent with their voltage ratings, for example, a 120/208 V, 3-phase, device is tested on a circuit involving 120 V to ground.

GROUNDING

Devices having a terminal identified by a green colored finish, the words "green" or "ground," the letters "G" or "GR," or the "inverted-Christmas-tree" grounding symbol are grounding types. The blade, pin or contact member connected to this terminal is for equipment grounding only.

APPLICATION

Each individual connector Listing may contain features that are unique to a system or application. Information concerning special installation procedures, compatibility and other important design features are provided in the individual Listings, on product markings, on product data sheets and/or in installation instructions. The individual Listings contain the following information:

Maximum Use Temperature — Assigned to the connector systems based upon the temperature rating of the insulation of the intended conductors or the insulating materials used in the connectors, whichever is less.

Installation — Indicates whether the connectors are intended for use on flexible cord or as a part of a fixed wiring system. Specifies whether the connectors are intended for use within an overall enclosure, within locations

CONNECTORS, SPECIAL PURPOSE (ECIS)

where they will be concealed (not readily accessible) after on-site interconnection of modules or building components, or where they will be exposed. Connectors intended for exposed or concealed installation are investigated for electrical insulation, mechanical strength, temperature rise, fault-current withstand, and effectiveness of grounding path to demonstrate equivalency to the wiring system on which they are intended to be installed.

Other Conditions — Describes other conditions of use for which the connector system has been investigated, including, but not limited to, environmental factors and enclosure type designations.

RELATED PRODUCTS

This category does not cover devices to be molded on flexible cord or wire, or unassembled devices to be factory assembled on flexible cord or wire. Such devices are complete only after installation of the flexible cord or wire and are investigated as part of a complete assembly.

This category does not cover general purpose devices. See Attachment Plugs (AXGV) and Receptacles (RTDV).

This category does not cover pin-and-sleeve type devices; refer to Pin-and-Sleeve Type Plugs, Receptacles and Cable Connectors (QLGD).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 20, "General-Use Snap Switches," UL 486A-486B, "Wire Connectors," UL 486C, "Splicing Wire Connectors," UL 486D, "Insulated Wire Connector Systems for Underground Use or in Damp or Wet Locations," UL 486E, "Equipment Wiring Terminals for Use with Aluminum and/or Copper Conductors," UL 498, "Attachment Plugs and Receptacles," UL 1682, "Plugs, Receptacles, and Cable Connectors, of the Pin-and-Sleeve Type," and other related wiring device standards as appropriate.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Special Purpose Connector," or other appropriate product name as shown in the individual Listings.

CONTAINMENT PRODUCTS (ECPR)

ABOVEGROUND FLAMMABLE LIQUID TANK SYSTEMS (ECRU)

USE AND INSTALLATION

This category covers factory fabricated, pre-engineered aboveground flammable and combustible liquid storage tank systems. Tank systems are fully assembled and fabricated in the factory. Limited field assembly of some components may be required as detailed in the installation instructions provided with each tank system.

Tank systems include the primary tank, secondary containment, core components (defined below), and optional components as described in the individual Listings. All components are individually Listed or investigated to the appropriate Listing requirements.

Tank systems are investigated for installation and use in accordance with one or more of the installation codes indicated under each system. Markings on the tank system identify the installation codes for which the tank system was investigated.

All wiring and electrical utilization equipment provided as part of a tank system is intended for installation in accordance with NFPA 70, "National Electrical Code." Authorities Having Jurisdiction should be consulted to determine the extent of any hazardous (classified) locations.

SYSTEM COMPONENTS

Tank systems include the following components:

Storage Tank — Tank systems covered under this category utilize tanks covered in one of the following Listed aboveground tank categories:

- Aboveground Flammable Liquid Tanks (EEEV), investigated to UL 142, "Steel Aboveground Tanks for Flammable and Combustible Liquids"
- Fire Resistant Tanks for Flammable and Combustible Liquids (EEZI), investigated to UL 2080, "Fire Resistant Tanks for Flammable and Combustible Liquids"
- Protected Aboveground Tanks for Flammable and Combustible Liquids (EELU), investigated to UL 2085, "Protected Aboveground Tanks for Flammable and Combustible Liquids"

All tank systems include integral secondary containment. The type of tank used as part of a Listed tank system is clearly identified by product markings. Authorities Having Jurisdiction should be consulted to determine the proper storage tank for a given application, based on installation code requirements including site location, separation distances and end-use applications.

CONTAINMENT PRODUCTS (ECPR)

109

Aboveground Flammable Liquid Tank Systems (ECRU)—Continued

Core Components — These are mandatory devices included with each Listed tank system that allow the system to function in the intended manner. Core components include such items as emergency vents, liquid level gauges, overfill protection, etc. A list of core components is identified under each tank system designation below.

Optional Components — Optional components provide features that are not required as part of the model fire codes. Optional components include such items as stage I and stage II vapor recovery equipment, hose swivel connectors, access stairways or ladders, hose retrievers, photovoltaic power units, lighting, fuel management systems, etc. Optional components that have been evaluated as part of the tank system are identified in the individual Listings.

Items Not Covered — Unless otherwise shown in the installation instructions, these tank systems do not cover remotely located, field installed items such as field piping, field wiring, islands, or protective bollards (guard posts). They also do not cover components shipped to the job site from other than the tank system manufacturer.

TANK SYSTEM TYPES

Aviation Fuel Storage Tank Systems — These systems are for storing Class I, II and III-A aviation fuels, which are dispensed into aircraft refueling vehicles and/or directly into aircraft.

Codes/Regulations: NFPA 30, "Flammable and Combustible Liquids Code," NFPA 407, "Standard for Aircraft Fuel Servicing" and Model Fire Codes.

Core (Required) Components: Normal and emergency venting, liquid level indicating means, pump, filter system, bonding/grounding device, fill/point spill containment, anti-siphon valve, drop tube, overfill protection system, positive sumping, inlet strainer, hose or loading arm, nozzle, anchoring means, signage.

Where indicated on the code compliance verification list, compliance with applicable FAA Advisory circulars and other aviation industry standards, regulations, guidelines or documented practices has been evaluated.

Motor Vehicle Fuel Dispensing Tank Systems — These systems are for storing Class I, II or III-A liquids for refueling motor vehicles. Dispensers and fill connections are located on top of the tank, on the side or remote. Remote, field-installed sumps, piping, wiring, islands, etc. are not evaluated as part of the system.

Codes/Regulations: NFPA 30, NFPA 30A, "Automotive and Marine Service Station Code" and Model Fire Codes.

Core (Required) Components: Normal and emergency venting, integral piping, pressure/vacuum vent device, dispenser, pump, hose, nozzle, breakway fitting, anti-siphon device, fire shear-valve*, leak detection means, liquid level indicating means, (point of fill), fill cap, fill connection, fill pipe (drop tube), check valve# (fill piping), spill containment**, overfill prevention system, shut-off valves, pressure-relief device, grounding means, anchoring means, signage.

@ This item not required for diesel systems

*This item evaluated only for side or remote dispensers

#This item evaluated only for side or remote fill

**This item evaluated only for top fill

Oil Storage Tank Systems — These systems are for storing Class IIIB liquids such as motor oil or used motor oil (crankcase drainings).

Codes/Regulations: NFPA 30, NFPA 30A, and Model Fire Codes.

Core (Required) Components: Normal and emergency venting, piping, liquid level indicating means, leak detection means, top fill opening, withdrawal pipe, overfill protection system, anchoring means, grounding means, signage.

Generator Base Tank Systems — These systems are for storing Class II and III liquids used as a source of fuel for standby and emergency power generators which are mounted on top of the storage tank.

Codes/Regulations: NFPA 30 and Model Fire Codes.

Core (Required) Components: Normal and emergency venting, fuel supply and return hoses, anti-siphon valve*, overfill prevention system*, leak detection means, spill containment (point of fill), fill cap, grounding means, anchoring means, signage.

*These items evaluated only for generator base systems intended for indoor use

Generator Supply Tank Systems — These systems are for storing Class II and III liquids used as a source of fuel for standby and emergency power generators which are not mounted on top of the storage tank.

Codes/Regulations: NFPA 30 and Model Fire Codes.

Core (Required) Components: Normal and emergency venting, fuel supply and return hoses, spill containment (point of fill), fill cap, liquid level indicating means, leak detection means, overfill prevention system, anti-siphon valve, signage, grounding means, anchoring means.

SUPPORTING DOCUMENTATION

The following documentation is provided with each tank system:

Code Compliance Verification List — A code compliance verification list is provided which documents how the tank system complies with

Aboveground Flammable Liquid Tank Systems (ECRU)—Continued

applicable requirements from the installation codes and other installation or use requirements. Authorities Having Jurisdiction should be consulted to determine if the compliance assumptions documented in this manual are appropriate for specific tank system installations.

Installation Instructions — Installation instructions provided with the system contain a detailed description of any field assembly as well as the following information:

1. A complete list of all components provided with the system, whether factory installed or intended for field assembly, including manufacturers' names and model numbers, ratings and Listing information.
2. Instructions for site preparation and connection of the electrical service and piping.
3. Lifting and handling instructions for placing the tank system on the foundation.
4. Directions for installing all accessories provided as part of the tank system, but not installed at an authorized factory location.
5. Owner's operation, start-up, and preventative maintenance guide checklist.

PRODUCT MARKINGS

The type of tank is marked on the product as follows:

1. Primary tanks investigated to UL 142, "Steel Aboveground Tanks for Flammable and Combustible Liquids" are marked "UL 142/2244".
2. Fire resistant primary tanks investigated to UL 2080, "Fire Resistant Tanks for Flammable and Combustible Liquids" are marked "UL 2080/2244".
3. Protected type primary tanks investigated to UL 2085, "Protected Aboveground Tanks for Flammable and Combustible Liquids" are marked "UL 2085/2244".

The tanks are marked with the application for which the tank was investigated, such as "Aviation Fuel Storage Tank System," "Motor Vehicle Fuel Dispensing Tank System," "Generator Base Tank System" or "Oil Storage Tank System."

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2244, "Aboveground Flammable Liquid Tank Systems."

Compliance with additional standards, regulations, or documented industry practices including environmental and other areas have been evaluated as documented for individual Listings.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Aboveground Flammable Liquid Storage Tank System."

STORAGE TANKS (EDQX)

This category covers storage tanks which are specially designed vessels having a liquid capacity exceeding 60 U.S. gals intended for stationary installations, unless otherwise indicated.

Underground Flammable Liquid Tanks (EGHX)

USE AND INSTALLATION

This category covers tanks intended for the underground storage of flammable and combustible liquids at atmospheric pressure.

These tanks are intended for installation and use in accordance with NFPA 30, "Flammable and Combustible Liquids Code," and NFPA 31, "Standard for the Installation of Oil-Burning Equipment."

TANK CONSTRUCTIONS

Underground Tank for Flammable Liquids — Single-wall steel tanks. These tanks are not provided with a corrosion protection system which has been investigated by UL. The basic standard used to investigate this construction is UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Type I Secondary Containment Underground Tank for Flammable Liquids — Steel primary tank wrapped with an external steel secondary containment shell that is in direct contact with the primary tank. The Listing Mark identifies the extent of wrap in degrees of circumference. The tanks have provision for monitoring the annular space for leakage. These tanks are not provided with a corrosion protection system which has been investigated by UL. The basic standard used to investigate this construction is UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Type II Secondary Containment Underground Tank for Flammable Liquids — Steel primary tank completely contained (full 360° containment) within a secondary containment steel tank which is physically separated from the primary tank by standoffs creating a defined annular space. The

Underground Flammable Liquid Tanks (EGHX)—Continued

tanks have provision for monitoring the annular space for leakage. These tanks are not provided with a corrosion protection system which has been investigated by UL. The basic standard used to investigate this construction is UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Composite Underground Tank for Flammable Liquids — Single-wall steel primary tank core covered with a nonmetallic external cladding which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Type I Secondary Containment Composite Underground Tank for Flammable Liquids — Consists of a Type I Secondary Containment Underground Steel Tank core covered with a nonmetallic external cladding which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Type II Secondary Containment Composite Underground Tank for Flammable Liquids — Consists of a Type II Secondary Containment Underground Steel Tank core covered with a nonmetallic external cladding which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Coated Underground Tank for Flammable Liquids — Single-wall steel primary tank core covered with a nonmetallic external coating which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Type I Secondary Containment Coated Underground Tank for Flammable Liquids — Consists of a Type I Secondary Containment Underground Steel Tank core covered with a nonmetallic external coating which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Type II Secondary Containment Coated Underground Tank for Flammable Liquids — Consists of a Type II Secondary Containment Underground Steel Tank core covered with a nonmetallic external coating which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Jacketed Underground Tank for Flammable Liquids — Steel primary tank core completely contained within a nonmetallic external tank jacket which provides both secondary containment and corrosion protection. The tanks have provision for monitoring the annular space for leakage. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Jacketed Type Tertiary Containment Underground Tank for Flammable Liquids — Consists of Type I or Type II Secondary Containment Underground Steel Tank core completely contained within a nonmetallic external tank jacket which provides both tertiary containment and corrosion protection. The tanks have provision for monitoring both annular spaces for leakage. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Nonmetallic Underground Tank for Petroleum Products Only; Nonmetallic Underground Tanks for Petroleum Products, Alcohols and Alcohol-Gasoline Mixture; Nonmetallic Underground Tanks for Petroleum Products and Gasohol (Unleaded Gasoline and 10 Percent Maximum Ethyl Alcohol) — Single-wall nonmetallic tanks intended for the underground storage of only those liquids specified in the individual Listings and on the Listing Mark attached to the tank. The tanks employ either steel or nonmetallic fittings for attachment to piping. The basic standard used to investigate these constructions is UL 1316, "Glass Fiber Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures."

Type I Secondary Containment Nonmetallic Underground Tank for Petroleum Products Only; Type I Secondary Containment Nonmetallic Underground Tanks for Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures; Type I Secondary Containment Nonmetallic Underground Tanks for Petroleum Products and Gasohol (Unleaded Gasoline and 10 Percent Maximum Ethyl Alcohol) — Nonmetallic primary tank wrapped with an external nonmetallic secondary containment shell that is in direct contact with the primary tank. The Listing Mark identifies the extent of wrap in degrees of circumference. The tanks have provision for

Underground Flammable Liquid Tanks (EGHX)—Continued

monitoring the annular space for leakage and employ either steel or nonmetallic fittings for attachment to piping. The tanks are intended for storage of only those liquids specified in the individual Listings and on the Listing Mark attached to the tank. The basic standard used to investigate these constructions is UL 1316, "Glass Fiber Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures."

Type II Secondary Containment Nonmetallic Underground Tank for Petroleum Products Only; Type II Secondary Containment Nonmetallic Underground Tanks for Petroleum Products, Alcohols and Alcohol-Gasoline Mixture; Type II Secondary Containment Nonmetallic Underground Tanks for Petroleum Products and Gasohol (Unleaded Gasoline and 10 Percent Maximum Ethyl Alcohol) — Nonmetallic primary tank completely contained (full 360° containment) within a secondary containment nonmetallic tank which is physically separated from the primary tank by standoffs creating a defined annular space. The tanks have provision for monitoring the annular space for leakage and employ either steel or nonmetallic fittings for attachment to piping. The tanks are intended for storage of only those liquids specified in the individual Listings and on the Listing Mark attached to the tank. The basic standard used to investigate these constructions is UL 1316, "Glass Fiber Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures."

Tertiary Containment Nonmetallic Underground Tank for Petroleum Products Only; Tertiary Containment Nonmetallic Underground Tank for Petroleum Products, Alcohols and Alcohol-Gasoline Mixtures; Tertiary Containment Nonmetallic Underground Tank for Petroleum Products and Gasohol (Unleaded Gasoline and 10 Percent Maximum Ethyl Alcohol) — Consists of a nonmetallic Type I or Type II secondary containment tank completely contained within an external nonmetallic tertiary containment shell. The tanks have provision for monitoring both annular spaces for leakage and employ either steel or nonmetallic fittings for attachment to piping. The Listing Mark identifies the extent of wrap in degrees of circumference. The tanks are intended for storage of only those liquids in the individual Listings and on the Listing Mark attached to the tank. The basic standard used to investigate these constructions is UL 1316, "Glass Fiber Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures."

Cathodically Protected Underground Tank for Flammable Liquids — Single-wall steel primary tank core with a pre-engineered, factory installed galvanic type cathodic protection system which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Cathodically Protected Type I Secondary Containment Underground Tank for Flammable Liquids — Consists of a Type I Secondary Containment Underground Steel Tank core with a pre-engineered, factory installed galvanic type cathodic protection system which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

Cathodically Protected Type II Secondary Containment Underground Tank for Flammable Liquids — Consists of a Type II Secondary Containment Underground Steel Tank core with a pre-engineered, factory installed galvanic type cathodic protection system which provides corrosion protection. The basic standards used to investigate this construction are UL 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks" and UL 58, "Steel Underground Tanks for Flammable and Combustible Liquids."

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment (AAPQ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the statement "Consult Local Authorities Before Covering This Tank," and the identity of the appropriate tank construction as indicated in the individual Listings.

CONTROL DAMPERS (EIMZ)

GENERAL

This category covers control dampers intended for installation in air-handling spaces (plenums). Plenums are defined in ANSI/NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

These dampers have been subjected to tests to determine the peak rate of heat release, and the maximum peak and average normalized optical smoke density. The performance of the dampers with regard to operability has not been evaluated.

Authorities Having Jurisdiction should be consulted before installation. **Sizes** — The maximum sizes expressed in inches representing the maximum width and maximum height, or maximum diameter, are shown in the individual Classification for each damper model.

Abbreviations — The following abbreviations are used in the individual Classifications:

- H – Horizontal
- V – Vertical

RELATED PRODUCTS

Additional products Classified under the requirements of UL 2043 are covered under Discrete Products Installed in Air-handling Spaces – Plenums (BHZF).

Fire dampers, smoke dampers, combination fire and smoke dampers, and corridor dampers are covered under Dampers for Fire Barrier and Smoke Applications (EMME).

Dampers intended for installation in air-handling openings penetrating fire-resistive membrane ceilings are covered under Ceiling Dampers (CABS).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

Products covered under this category have demonstrated the following rate of heat release and smoke optical density values, through tests conducted in accordance with UL 2043:

1. A peak rate of heat release of 100 kW or less,
2. A peak normalized optical density of 0.50 or less, and
3. An average normalized optical density of 0.15 or less.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

CONTROL DAMPER

AS TO HEAT RELEASE RATE AND SMOKE OPTICAL DENSITY
Control No.

CONVEYORS (EJJR)

USE AND INSTALLATION

This category covers electrically-operated machinery intended for the transport of articles or materials within a building structure, intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/ASME B20.1, "Safety Standard for Conveyors and Related Equipment." It does not cover machinery intended for the transport of persons.

Conveyors are required to employ guards, safety releases, brakes, interlocks, etc., to reduce the likelihood of accidents with respect to the moving mechanism.

Accessory equipment intended for use with conveyors, such as utility distribution systems and electric raceways, is also covered under this category.

Conveyors intended to pass through the walls or floor of a building structure are designed so as not to preclude installation in accordance with Annex B ("Fire Doors: Protection of Conveyor Openings") of ANSI/NFPA 80, "Fire Doors and Other Opening Protectives."

RELATED PRODUCTS

Pneumatically-operated document transporting systems are covered under Office Appliances and Business Equipment (QAOT).

Conveyors forming a component part of other equipment are covered under the product category of the particular end product. For example, dishwasher systems having an integral conveyor are covered under Dishwashers, Commercial (DMGR); conveyors used in check-out stands are covered under Check-out Stands (DBNT); and conveyors used in conjunction with an automated manufacturing process are covered under Factory Automation Equipment (GPNY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 73, "Motor-Operated Appliances," and ANSI/ASME B20.1-2006, "Safety Standard for Conveyors and Related Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these prod-

ucts includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

CORD SETS AND POWER-SUPPLY CORDS (ELBZ)

GENERAL

This category covers (1) cord sets, (2) power-supply cords for use as supply connections for portable appliances, and (3) shore power cable sets for use as supply connections to boats that are moored to a dock.

Cord sets and power-supply cords are not intended to be used as a substitute for the fixed wiring of a structure and, hence, are not intended to be fastened in place. Cord sets and shore power cable sets are rated in volts, amps and watts.

Cord sets, shore power cable sets, and power-supply cords are commonly furnished in hanked or coiled form. If used in this condition, excessive heating may occur. Therefore, when placed into service, all wrappings should be removed, and the flexible cord should be extended for its entire length.

Cord sets and power-supply cords that employ ground-fault circuit interrupter protection are investigated to ANSI/UL 943, "Ground-Fault Circuit Interrupters," and covered under Ground-fault Circuit Interrupters (KCXS).

For information regarding the flexible cord types and their ratings, see Flexible Cord (ZJCZ).

CORD SETS

A cord set consists of a length of flexible cord assembled (1) to an attachment plug or current tap as a line fitting and a cord connector as a load fitting, and with or without a through-cord switch, or (2) with a series-connected current tap and a pendant switch.

Cord sets are designated as one of the following types and are so identified by the Listing Mark:

Cord Set — This is a cord set intended for general use indoors and assembled with general-use flexible cord and general purpose fittings. These cord sets may be less than six feet long. Cord sets shorter than six feet long are marked to indicate their length. Cord sets may also have integral restraint devices to prevent unintentional disconnection of the cord connector from a mating attachment plug of an appliance. Restraint devices that are separate from cord sets are covered under Cord Restraint Devices (ELDW).

Outdoor-use Cord Set — This is a cord set assembled with outdoor type flexible cord without a switch, and which is intended for use outdoor to supply portable electric equipment. It is (1) marked "Suitable For Use With Outdoor Appliances — Store Indoors While Not In Use," (2) suitable for supplying portable outdoor appliances within their marked voltage, amp and wattage rating, (3) intended for use outdoors only while the equipment supplied is in use, and (4) intended to be stored indoors (i.e., where not exposed to sunlight and/or weather) while not in use. Such a cord set has been investigated to determine (1) that the materials in the flexible cord and in the line and load fittings, and (2) the adhesion between the cord jacket and the bodies of the line and load fittings are suitable for periodic use outdoors.

The connection between the attachment plug cap and the outlet device supplying the cord set, and between the supply cord of any connected appliance and the load end of the cord set, should not be subjected to moisture or dampness. Outdoor-use cord sets may also have integral restraint devices to prevent unintentional disconnection of the cord connector from a mating attachment plug of an appliance. Restraint devices that are separate from cord sets are covered under Cord Restraint Devices (ELDW).

Adapter Cord Set — This is an outdoor-use cord set, without a switch, consisting of an attachment plug, a length of extra-hard-usage outdoor-type flexible cord, and one or more load fittings providing:

1. a total of not more than three outlets configured together, or configured with one or more flexible cords, or
2. up to six single-outlet load fittings, provided that each load fitting is in line and spaced apart from the others.

Adapter cord sets are intended for use in areas such as construction sites to provide power to two or three outlets from a single outlet, or to convert from one outlet configuration to another. An adapter cord set with more than one single-outlet load fitting may have a joint in the flexible cord with the cord branching to two or three cords, each terminating in a single-outlet load fitting.

Cord Set for Recreational Vehicles — This is an outdoor-use cord set intended for use in supplying power to recreational vehicles.

Shore Power Cable Set — A shore power cable set is an outdoor-use cord set that is used in supplying power to boats moored to a dock. They are intended to be stored aboard the boat where not exposed to sunlight and/or weather while not in use. The line and load fittings are of the locking type, rated not less than 20 A and are to be connected to suitable shore power outlet and hull power inlet devices, respectively. The connection of the attachment plug to a shore-based power outlet and the connection of the cord connector to a shore power inlet, aboard a boat, provides a seal against water. Shore power cable sets are also covered under Shore Power Cable Sets, Marine (UBWW).

POWER-SUPPLY CORDS

Power-supply cords may be either the nondetachable type or detachable type. Any item attached to the load end of a nondetachable power-supply cord is not covered under this category.

Power-supply cords are designated as one of the following types and are so identified by the Listing Mark:

Nondetachable Types

Power-supply Cord — This is a power-supply cord consisting of a length of flexible cord assembled with an attachment plug or current tap as a line fitting but without a cord connector (appliance coupler) at the opposite end. It is intended for direct wiring connection to an appliance and may include a through-cord switch. Nondetachable power-supply cords may be one of the following:

• **Power-supply Cord for General Use** — This is a power-supply cord consisting of a suitable fitting for line connection assembled to a length of general-purpose flexible cord, and may include a through-cord switch.

• **Power-supply Cord for Ranges and Dryers** — This is a power-supply cord consisting of a general-use nondetachable power-supply cord constructed using Type SRD or SRDT flexible cable. The flexible cable may employ a neutral conductor which is two AWG sizes smaller than the other circuit conductors, but not smaller than 10 AWG.

Outdoor-use Power-supply Cord — This is a power-supply cord assembled with outdoor-type flexible cord. It is for use with portable outdoor appliances.

Power-supply Cord for Recreational Vehicles — This is an outdoor-use power-supply cord with the outer surface of the flexible cord marked "For Recreational Vehicle Use: ___ Amps."

Power-supply Cord for Mobile Home — This is an outdoor-use power-supply cord with the outer surface of the flexible cord marked "For Mobile Home Use: ___ Amps."

Power-supply Cord – Special Use — A special-use power-supply cord is intended for restricted use and incorporates special design features (such as special cords and fittings) for a specific application. Each is provided with marking pertinent to its proper use, and/or limitations and electrical rating.

Detachable Types

Detachable Power-supply Cord — A detachable power-supply cord consists of a length of flexible cord assembled with (1) an attachment plug or current tap as a line fitting at one end and (2) a single outlet load fitting (appliance coupler) at the opposite end. It is intended for use and packaging with appliances. It may be one of the following types:

• **Detachable Power-supply Cord Having an Appliance Plug** — This is a power-supply cord, not less than 2 feet long, with an appliance plug as a load fitting.

• **Detachable Power-supply Cord Having a Flatiron Plug** — This is a power-supply cord, not less than 6 feet long, having a heater cord and a flatiron plug as a load fitting.

• **Detachable Power-supply Cord for Appliances Rated Not Greater Than 50 W** — This is a power-supply cord for use with hand-held appliances rated 50 W or less and having a load fitting (appliance coupler) for use with electric shavers, electric scissors, electric combs, and the like.

Detachable Power-supply Cord – Special Use — A special-use detachable power-supply cord is intended for restricted use and incorporates special design features (such as special cords and fittings) for a specific application. Each is provided with marking pertinent to its proper use, and/or limitations and electrical rating.

RELATED PRODUCTS

Power-supply cords intended for use with waste disposers are investigated to ANSI/UL 430, "Waste Disposers," and covered under Waste Disposers, Sink Mounted (ZDII). Only those power-supply cords that have been investigated to ANSI/UL 430 are permitted to be marked "Garbage Disposal Cord," or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 817, "Cord Sets and Power-Supply Cords."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Cord Set," "Outdoor Use Cord Set," "Adaptor Cord Set," "Cord Set for Recreational Vehicles," "Shore Power Cable Set," "Power Supply Cord," "Replacement Power Supply Cord," "Outdoor Use Power Supply Cord," "Replacement Outdoor Use Power Supply Cord," "Power Supply Cord for Recreational Vehicles," "Power Supply Cord for Mobile Home," "Power Supply Cord – Special Use," "Detach-

able Power Supply Cord," "Replacement Detachable Power Supply Cord" or "Detachable Power Supply Cord – Special Use."

All Listing Marks are applied to each individual piece except for "Power Supply Cord," "Outdoor Use Power Supply Cord" and "Detachable Power Supply Cord." These products are bulk labeled (label applied to smallest container indicating number of pieces) and are not intended for field application.

CORD RESTRAINT DEVICES (ELDW)

The Listing covers devices provided with retention means intended to reduce the likelihood of an attachment plug of an appliance becoming unintentionally detached from a mating cord connector of a cord set or a fixed receptacle. These devices are constructed such that (1) the plug and mating connector or receptacle are not enclosed so as to permit dissipation of any heat generated at the connection and (2) the plug can be separated from the mating cord connector or receptacle without the use of a tool.

The devices covered in this Listing are not an integral or permanently attached component of a cord set or receptacle, but rather are separate add on devices. Cord restraint devices which are integral or permanently attached to a cord set are covered under the category of Cord Sets and Power Supply Cords, (ELBZ).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The Standard used as a guide to investigate products in this category is UL 817, "Cord Sets and Power Supply Cords".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify those products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and the following or other appropriate product name: "Cord Restraint Device."

OUTDOOR SEASONAL-USE CORD-CONNECTED WIRING DEVICES (ELEI)

USE

This category covers cord-connected wiring devices intended for temporary outdoor use only, for a period not to exceed 90 days. These devices are intended for use with outdoor equipment, Christmas tree and other seasonal decorative-lighting outfits. They may be provided with integral over-current protection, clock operated and/or photoelectric switches.

INSTALLATION

These devices are not intended for permanent installation. Devices equipped with a grounding pin to provide protection against electric shock are intended to be plugged into a ground-fault circuit-interrupting (GFCI) receptacle.

ADDITIONAL INFORMATION

For additional information, see Cord Sets and Power-supply Cords (ELBZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2438, "Outdoor Seasonal-Use Cord-Connected Wiring Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outdoor Seasonal Use Cord-connected Wiring Device."

SEASONAL-USE CORD SETS (ELEV)

USE

This category covers cord sets intended for indoor use only with Christmas tree and similar seasonal decorative-lighting outfits. They are provided with integral overcurrent protection and may incorporate outlet fittings that are factory assembled onto the flexible cord between the end fittings. They are not intended for permanent installation or for use with other than seasonal lighting products.

ADDITIONAL INFORMATION

For additional information, see Cord Sets and Power-supply Cords (ELBZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 817, "Cord Sets and Power-Supply Cords."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Seasonal Use Cord Set."

UTILITY SERVICE CORD SETS (ELFT)

The products covered in this category are Utility Service Cord Sets having an attachment plug of a unique, non-standard configuration intended for mating with a Utility Service Receptacle (see Guide RVNW) which utilizes the grounded neutral conductor of the supply as the equipment grounding conductor.

These cord sets are intended for use only by authorized utility company personnel in obtaining power from utility poles and as marked for example 125V, 15 amperes.

These cord sets were investigated in accordance with the requirements for Cord Sets and Power Supply Cords (UL 817) with regard to protection from the risk of electrical shock and their ability to function without overheating.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product is the only method provided by Underwriters Laboratories Inc. to identify products which have been produced under its Classification and Follow-Up Service.

UTILITY SERVICE CORD SET AS TO PROTECTION FROM ELECTRIC SHOCK AND ABILITY TO FUNCTION WITHOUT OVERHEATING

CORD SETS WITH LEAKAGE-CURRENT DETECTION AND INTERRUPTION (ELGN)

GENERAL

This category covers cord sets provided with leakage-current detection and interruption. These products are intended to sense leakage currents flowing between or from the conductors of the cord set and interrupt the circuit. Under certain conditions, if this leakage current is allowed to continue flowing from the conductors, risk of ignition of surrounding combustible materials may result.

When leakage current above a predefined limit is detected, the device removes the supply source from the cord either electronically or via "air break" contacts. The cord remains de-energized until the condition causing the excessive leakage current has cleared or the device has been manually reset.

"Test" and "Reset" buttons, if provided, are not intended for on/off control of the connected load unless specifically marked "ON/OFF."

These devices do not provide ground-fault protection of equipment as required by Article 426 of ANSI/NFPA 70, "National Electrical Code" (NEC), nor are these devices ground-fault circuit interrupters for personnel protection as defined by the NEC.

The ability of the devices to sense and interrupt leakage currents in locations other than the integral cord set has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1699, "Arc-Fault Circuit Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord Set with Leakage Current Detection and Interruption."

CORROSION-MEASURING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (ELHN)

USE AND INSTALLATION

This category covers corrosion-measuring equipment, including control units, indicators, sensors, probes and auxiliary devices used as part of corrosion-measuring systems

Certain products in this category are associated apparatus and are intended for installation in unclassified locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

UNEVALUATED FACTORS

The accuracy of the equipment covered in this category has not been investigated.

CORROSION-MEASURING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (ELHN)

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Corrosion Measuring Equipment for Use in Hazardous Locations" or "Corrosion Measuring Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

CORROSION-MEASURING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (ELHS)

USE AND INSTALLATION

This category covers corrosion measuring equipment, including control units, indicators, sensors, probes and auxiliary devices, used as part of corrosion measuring systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified (ordinary) locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Corrosion Measuring Equipment for Use in Hazardous Locations" or "Corrosion Measuring Equipment (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

CRANE AND HOIST ELECTRIFICATION SYSTEMS (ELPX)

GENERAL

This category covers crane and hoist electrification systems designed to provide electrical power from a fixed source to moving equipment.

Rigid electrification systems consist of insulated contact conductors, collectors and feed-in devices, together with supports by which the system may be mounted on tram rails, crane bridges or hoist runways.

Festoon electrification systems consist of moving carriers and feed-in devices that support separately supplied flexible cable and which may be mounted on tram rails, crane bridges or hoist runways with sufficient cable slack to allow moving equipment to travel a limited distance.

INSTALLATION

These systems are intended for installation in accordance with Article 610 of ANSI/NFPA 70, "National Electrical Code."

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, Authorities Having Jurisdiction and others concerned with the installation.

RATINGS

The maximum voltage rating is 600 V. Each system is rated in volts, frequency and continuous current. Some systems are duty cycle as well as continuous rated. These systems have been tested for a one minute "on," one minute "off" cycle. The applicable ampere ratings are marked on the contact conductor or its sheath. Conductor overcurrent protection should not exceed the duty cycle rating.

ENVIRONMENTAL CONDITIONS

Some rigid systems are suitable for outdoor use and are so marked on a main nameplate. See Electrical Equipment for Use in Ordinary Locations (AALZ) for additional information on environmental conditions and ratings.

SPECIAL CONSIDERATIONS

Crane and hoist electrification systems have not been investigated for mechanical load-carrying ratings. Systems marked with a mechanical load-

CRANE AND HOIST ELECTRIFICATION SYSTEMS (ELPX)

carrying rating also bear the following marking: "Mechanical load carrying ratings have not been investigated by Underwriters Laboratories Inc."

Crane and hoist electrification systems have not been investigated for use in corrosive atmospheres.

RELATED PRODUCTS

Festoon system flexible cable is covered under Wire, Special Purpose (ZMHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and UL 857, "Busways."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on each part or on the smallest unit container in which the complete system is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name on each part (e.g., "Conductor," "Collector," "Insulator") or the name "Crane and Hoist Electrification System" on the smallest complete system container.

CURRENT TAPS AND ADAPTERS (EMDV)

GENERAL

This category covers current taps and adapters for use in accordance with ANSI/NFPA 70, "National Electrical Code."

This category does not cover current taps or adapters rated at more than 200 A or for more than 600 V nor does this category directly apply to current taps wired to flexible cord or lampholder adapters, but supplements the standards for lampholder adapters covered in ANSI/UL 496, "Lampholders," and current taps that can be wired to flexible cord covered in ANSI/UL 498, "Attachment Plugs and Receptacles."

This category does not cover cord-connected, relocatable power taps intended only for indoor use as a temporary extension of a grounding, alternating-current branch circuit for general use, which are covered in UL 1363, "Relocatable Power Taps," nor does this category cover the current or voltage conversion circuitry capable of being used in travel adapters.

For purposes of this category, the following definitions apply:

Adapter — A device that adapts one blade or slot configuration to another (including a grounding adapter for a nongrounding receptacle). [See Attachment Plugs, Fuseless (AXUT) for Listings of similar products.]

Current Tap — A male and female contact device that, when connected to an outlet receptacle or cord set, provides multiple outlets or outlet configurations. An outlet configuration may consist of a slot configuration, or provision for the connection of flexible cord.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 498A, "Current Taps and Adapters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Current Tap," "Tap," "Cube Tap" or "Adapter."

CUSTOM-BUILT KIOSKS (EMHH)

GENERAL

This category covers kiosks, rated 240 V or less, normally found in malls, retail stores, offices and business establishments, educational facilities and other similar environments.

These kiosks are intended but not limited for business applications, electronic point-of-sale, information exchange, Internet access or ticket dispensing.

Kiosks consist of a cabinet that typically contains a power-supply adapter(s), monitor(s), computer(s), currency-processing equipment, printer(s), fan(s) and speaker(s).

Kiosks are provided with assemblies or subassemblies, consisting of components such as amplifiers, cabling, CD-ROM drive, floppy drive, clock, keyboard, CPU/monitor, DVD player or from a database on network-server computer, ethernet card (dial-up connection or network link), input devices: trackball, number pad, light-pen/stylus, (magnetic strip) card reader, bar

CUSTOM-BUILT KIOSKS (EMHH)

code reader, character keyboard (physical or virtual), Internet connectivity, a light sensor that enables automatic adjustment of the monitor intensity, modems, monitor (touch-screen capacity), movement detector used to call attention of passersby, multimedia machine with ample RAM and fast hard-drive access, power supply; **printers:** laser, dot matrix, thermal; serial ports (touch-screen), serial and printer ports for any peripheral devices, such as modems or ISDN boards for communications and digital or analog I/O board used to control different types of processes, stereo speakers, telecommunications, telephone accessories, "Watched" timer that can ensure the system resets in unlikely case of hang-ups, UPS or video graphics card.

EQUIPMENT TYPES

Assemblies and subassemblies may include but are not limited to central processing units (CPUs), disk drives, fiber optic transceivers, monitors, personal computers, plotters, printers, point-of-sale kiosks, scanners (including portable bar code scanners), tape drives, workstations; **multimedia equipment/accessories:** digital cameras, microphones, speakers, video conferencing systems, network connection equipment; **telecommunication equipment:** telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems; **reproduction equipment:** copiers, duplicating machines; **interconnecting cable assemblies:** cable assemblies intended for use within the kiosk.

INSTALLATION

Kiosks are intended to be installed in an indoor environment unless identified otherwise in the individual Listings. Kiosks have been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions. Kiosks may be cord-and-plug connected or configured for permanent wiring methods. Some kiosks may not be provided with a complete enclosure and are intended for building into a structure as specified in the equipment's installation instructions.

UNEVALUATED FACTORS

Kiosks have not been investigated for security (card readers, badge readers, currency-processing equipment and similar equipment) unless identified in the individual Listings. Kiosks are not intended to dispense merchandise.

The physiological effects of chemical substances used in or with this equipment have not been investigated. The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

RELATED EQUIPMENT

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems (TPEU).

ATMs that have not been investigated for security and burglary protection are covered under Bank Equipment (BALT).

Machines for vending nonrefrigerated food and beverages, general merchandise, etc., are covered under Vending Machines (YWXV).

Machines for vending refrigerated food and beverages are covered under Vending Machines, Refrigerated (SQMX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate the individual assembly and subassembly components in this category is ANSI/UL 60950, "Information Technology Equipment," or ANSI/UL 60950-1, "Information Technology Equipment Safety - Part 1: General Requirements."

The basic requirements used to investigate the overall product consisting of various assemblies and subassemblies enclosed in a cabinet in this category are contained in UL Subject 2361, "Outline of Investigation for Custom-Built Kiosks."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Custom-built Kiosk," or other appropriate product name as shown in the individual Listings.

DAMPERS FOR FIRE BARRIER AND SMOKE APPLICATIONS (EMME)

GENERAL

This category covers fire dampers, smoke dampers (leakage-rated dampers), combination fire and smoke dampers (fire and leakage-rated dampers), and corridor dampers.

Installation — All dampers covered under this category are intended to be installed in accordance with the installation instructions provided with the dampers. Authorities Having Jurisdiction should be consulted before installation. Unless otherwise indicated in the installation instructions, the annular space between the sleeves of fire dampers, combination fire and smoke dampers, or corridor dampers and the wall opening should not be filled with firestop materials such as fill, void or cavity materials.

DAMPERS FOR FIRE BARRIER AND SMOKE APPLICATIONS (EMME)

115

Air Flow and Pressure Ratings — Fire dampers for use in dynamic systems, smoke dampers, combination fire and smoke dampers, and corridor dampers are marked with the maximum air flow and static pressure HVAC system conditions for which the damper has been investigated. The air flow (velocity) ratings are established in increments of 1000 CFM/ft² of damper area (FPM), with the minimum being 2000 CFM/ft². The air flow ratings are established based on test conditions with the damper in the full open position. The static pressure ratings are established in increments of 2 in.WG, with the minimum being 4 in.WG. The static pressure ratings are established based on test conditions with the damper in the full closed position.

Sizes — The maximum sizes expressed in inches representing the maximum width and maximum height are shown in the individual Classifications for each fire damper model, for both single sections and multiple section assemblies.

Abbreviations — The following abbreviations are used in the individual Classifications:

Fire-resistance Rating

- HR Class — Hourly Classification

Damper-mounting Position

- V — Vertical
- H — Horizontal
- V, H — Vertical & Horizontal

Maximum Damper Size

- W — Width
- H — Height

FIRE DAMPERS

Fire dampers are intended for installation where air ducts penetrate or terminate at openings in walls or partitions; in air transfer openings in partitions; and where air ducts extend through floors as specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems." Fire dampers are prescribed for use by codes such as the "International Building Code" (IBC) and "International Mechanical Code" (IMC).

Fire dampers have been investigated for fire-resistance ratings of 1-1/2 or 3 h as indicated in the individual Classifications.

Fire Dampers for Use in Dynamic Systems — Fire dampers for use in dynamic systems are intended for use in dynamic HVAC systems that remain operational during a fire, and may also be employed in static systems.

Fire Dampers for Use in Static Systems — Fire dampers for use in static systems are intended for use only in static HVAC systems that are automatically shut down in the event of a fire.

SMOKE DAMPERS

Smoke dampers (leakage-rated dampers) are intended for the protection of openings in smoke barriers, or in engineered smoke control systems as specified in ANSI/NFPA 90A. Smoke dampers are prescribed for use by codes such as the IBC and IMC.

Leakage ratings for smoke dampers are identified as Class Designation I, II or III as shown in the following table. Leakage ratings of the dampers are established at a minimum differential pressure of 4 in. water gauge (WG), across the closed damper. Leakage rates may also be established at higher differential pressures, in increments of 2 in. water gauge.

Maximum Leakage (CFM/ft²)

Class	4 In. WG	6 In. WG	8 In. WG	10 In. WG	12 In. WG
I	8.0	9.5	11.0	12.5	14.0
II	20.0	24.0	28.0	31.5	35.0
III	80.0	96.0	112.0	125.0	140.0

Leakage ratings for smoke dampers are determined at elevated temperatures. The elevated temperatures are in increments of 100°F with the minimum temperature being 250°F. Leakage ratings of smoke dampers are established based on test conditions using heated air.

Classified dampers are marked with respect to the Leakage Class at elevated test temperature.

COMBINATION FIRE AND SMOKE DAMPERS

Combination fire and smoke dampers (fire and leakage-rated dampers) are intended for use in locations that are designated as both fire barriers and smoke barriers. These products can also be described as combination fire/smoke dampers as defined by the IBC. Combination fire and smoke dampers have been investigated for both a fire-resistance rating of 1-1/2 or 3 h, and a leakage rating as defined under **SMOKE DAMPERS**. Leakage ratings of combination fire and smoke dampers are determined at an elevated temperature 250°F or 350°F. Leakage ratings of combination fire and smoke dampers are established based on test conditions using heated air.

CORRIDOR DAMPERS

Corridor dampers are intended for use where air ducts penetrate or terminate at horizontal openings in the ceilings of interior corridors, as

DAMPERS FOR FIRE BARRIER AND SMOKE APPLICATIONS (EMME)

defined in the "City of Los Angeles Uniform Building Code," the "Uniform Building Code," or where permitted by the Authority Having Jurisdiction.

Corridor dampers have been investigated for, and are intended for, installation only in specific corridor ceiling constructions as defined in the installation instructions provided with each damper.

Corridor dampers have been investigated for both a fire-resistance rating of 1 h, and a Class I or II leakage rating as defined under **SMOKE DAMPERS**. Leakage ratings of corridor dampers are determined at an elevated temperature 250°F or 350°F. Leakage ratings of corridor dampers are established based on test conditions using air. Corridor dampers have also demonstrated acceptable closure performance when subjected to 150 fpm velocity across the face of the damper during fire exposure.

MAINTENANCE

Fire dampers, smoke dampers, and combination fire and smoke dampers may require periodic maintenance to ensure continued proper operation. The level of maintenance required is dependent on several factors including the product manufacturer's and system designer's recommendations, code requirements, and the complexity of the system in which the damper is installed.

It is recommended that periodic maintenance of dampers include at least the following:

- Removal of debris buildup from the damper and surrounding area
- Manual cycling of dampers released by fusible links
- Cycling of damper and actuator assemblies

Additional information on periodic testing can be found in ANSI/NFPA 92A, "Standard for Smoke-Control Systems Utilizing Barriers and Pressure Differences."

RELATED PRODUCTS

For dampers intended for installation in air handling openings penetrating fire resistive membrane ceilings, see Ceiling Dampers (CABS).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate fire dampers for use in dynamic systems and fire dampers for use in static systems in this category is ANSI/UL 555, "Fire Dampers."

The basic standard used to investigate smoke dampers in this category is ANSI/UL 555S, "Smoke Dampers."

Combination fire and smoke dampers, and corridor dampers are investigated to the applicable requirements of both ANSI/UL 555 and ANSI/UL 555S.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

DATA PROCESSING CABLE (EMRB)

GENERAL

This category covers Type DP data processing cable for use in computer rooms and under the raised floors of computer rooms in accordance with

DATA PROCESSING CABLE (EMRB)

Article 645 of ANSI/NFPA 70, "National Electrical Code". The cable consists of one or more insulated conductors that are covered with a nonmetallic jacket. The cable may contain grounding conductors and/or optical fiber members.

PRODUCT MARKINGS

Data processing cable is identified by marking on the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

DP-1 — Indicates cable rated 600 V in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

DP-1P — Indicates cable rated 600 V in conductor sizes 18 AWG to 1000 kcmil copper or 12 AWG to 1000 kcmil aluminum or copper-clad aluminum. This cable meets the requirements of NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

DP-2 — Indicates cable rated 300 V in conductor sizes 24 to 8 AWG copper or 12 to 8 AWG aluminum or copper-clad aluminum. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1581.

DP-2P — Indicates cable rated 300 V in conductor sizes 24 to 8 AWG copper or 12 to 8 AWG aluminum or copper-clad aluminum. This cable meets the requirements of NFPA 262.

DP-3 — Indicates cable with no voltage rating in conductor sizes 30 to 10 AWG copper for general use and copper-clad steel for use in coaxial conductors. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in UL 1581.

DP-3P — Indicates cable with no voltage rating in conductor sizes 30 to 10 AWG copper for general use and copper-clad steel for use in coaxial conductors. This cable meets the requirements of NFPA 262.

Type DP-3 and Type DP-3P cable is for use in circuits having maximum available ac voltage of 30 V, dc voltage of 60 V, peak voltage of 42.2 V, VA of 100 and current of 8 A or in circuits designated DP-3 in UL 60950, "Information Technology Equipment."

Cable with aluminum conductors is surface printed "AL."

Cable with copper-clad aluminum conductors is surface printed "AL (CU-CLAD)" or "Cu-Clad."

Type DP-1, DP-2 and DP-3 cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surfaced marked with the suffix "-LS."

The temperature rating of the cable is 60°C unless otherwise marked on the cable.

Cable containing optical fiber members is identified with the suffix "OF."

Type DP-1, DP-2 and DP-3 cable which has a damage height that does not exceed 4 ft. 11 in. when tested in accordance with the FT-4 Vertical-Tray Flame Test in UL 1581 may have the additional marking "FT-4" on the surface.

For conductor termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1690, "Data Processing Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Data Processing Cable, Type DP."

DATA PROCESSING EQUIPMENT, ELECTRONIC (EMRT)

This listing covers individual units and systems primarily electronic in function and design, which are intended to accumulate, process, or store data and are intended for use in computer rooms or other areas set aside for purpose.

Many of these units and systems require special installation such as separate transformer and branch circuit power, power supplies, special grounding methods, high frequency motor generator equipment, air conditioning, etc. Such features are covered in the manufacturers' installation instructions.

The individual units comprising a system installation are designed to be interconnected by means of one or more of the wiring methods outlined in Article 645 of the National Electrical Code (NFPA 70).

The physiological effects of chemical substances used in or with this equipment have not been evaluated.

Field-installed Accessories to Listed Equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either specific or generic Listed Equipment specified in the markings or instructions.

DATA PROCESSING EQUIPMENT, ELECTRONIC (EMRT)

Air conditioning equipment for use with computer rooms or other areas in which Data Processing Equipment is installed is listed under "Air Conditioning Equipment."

Fire resistant materials, sprinklers, extinguishers, and associated equipment recommended by NFPA 75 for computer rooms, are listed in either the Fire Protection Equipment Directory, Fire Resistance Directory or the Building Materials Directory.

Smoke detectors and other alarm equipment are to be found under "Signal Appliances" in the Fire Protection Equipment Directory.

Equipment associated with Data Processing but not intended for use in computer rooms may be found under "Graphic Arts Equipment," "Teaching and Instruction Equipment," "Office Appliances and Business Equipment," this "Medical and Dental Equipment, Professional" and "X-Ray Equipment" in this Directory.

Card readers, badge readers and similar identification equipment Listed in this category have not been investigated with respect to security Equipment evaluated with respect to security and equipment designed to resist burglary is Listed in the Burglary Protection Equipment Directory.

When Listed equipment intended for use with a detachable power supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit is to be separately provided.

The basic standard used to investigate products in this category is UL 478, "Electronic Data Processing Units and Systems."

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Data Processing Equipment," "Electronic Data Processing Equipment," "E.D.P. Equipment," "Card Punch," "Card Reader," "Computer," "Data Set," or the name of the specific type of product as shown in the individual Listing. The Listing Mark for Field-installed Accessories is provided with the additional word "Accessory".

DATA PROCESSING EQUIPMENT, ELECTRONIC FOR USE IN HAZARDOUS LOCATIONS (ENWS)

GENERAL

This category covers individual units and systems, primarily electronic in function and design, which are intended to accumulate, process or store data, and which are intended for use in or have circuits or system units intended for use in areas classified as hazardous locations.

Many of these units and systems require special installation, such as a separate transformer and branch circuit power, power supplies, special grounding methods, high-frequency motor generator equipment, etc. Such features are covered in the manufacturer's installation instructions.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Data Processing Equipment for Use in Hazardous Locations," "Electronic Data Processing Equipment for Use in Hazardous Locations" (or "E.D.P. Equipment for Use in Hazardous Locations"), "Data Processing Equipment with Circuits for Use in Hazardous Locations," "Electronic Data Processing Equipment with Circuits for Use in Hazardous Locations" (or "E.D.P. Equipment with Circuits for Use in Hazardous Locations"), "Data Processing Equipment (Associated Apparatus)," "Electronic Data Processing Equipment (Associated Apparatus)" (or "E.D.P. Equipment (Associated Apparatus)"), or the name of the specific type of product as shown in the individual Listings.

DATA PROCESSING EQUIPMENT, ELECTRONIC FOR USE IN
ZONE CLASSIFIED HAZARDOUS LOCATIONS (ENYB)

117

DATA PROCESSING EQUIPMENT, ELECTRONIC FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (ENYB)

GENERAL

This category covers individual units and systems, primarily electronic in function and design, which are intended to accumulate, process or store data, and which are intended for use in or have circuits or system units intended for use in areas classified as hazardous locations.

Many of these units and systems require special installation, such as a separate transformer and branch-circuit power, power supplies, special grounding methods, high-frequency motor-generator equipment, etc. Such features are covered in the manufacturer's installation instructions.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Data Processing Equipment for Use in Hazardous Locations," "Electronic Data Processing Equipment for Use in Hazardous Locations" (or "E.D.P. Equipment for Use in Hazardous Locations"), "Data Processing Equipment with Circuits for Use in Hazardous Locations," "Electronic Data Processing Equipment with Circuits for Use in Hazardous Locations" (or "E.D.P. Equipment with Circuits for Use in Hazardous Locations"), "Data Processing Equipment (Associated Apparatus)," "Electronic Data Processing Equipment (Associated Apparatus)" (or "E.D.P. Equipment (Associated Apparatus)"), or the name of the specific type of product as shown in the individual Listings.

DIELECTRIC MEDIUMS (EOUV)

USE

This category covers liquids intended for use as dielectric and cooling mediums. The liquids are not intended to replace mineral oil unless equipment is also designed for the specific liquid.

These products have been Classified as to their fire hazard only, using Underwriters Laboratories' method for Classification of the fire hazard of liquids. They have been rated on a numerical scale of hazard ranging from 0 to 100 as indicated in the table below:

General Classification	Numerical Classification
Diethyl ether	100
Gasoline	90 to 100
Ethyl alcohol	60 to 70
Kerosene	30 to 40 ^a
Paraffin oil	10 to 20 ^b
Water or nonflammable	0 or nonflammable

^a A standard kerosene of 100°F (37.8°C) flash point (closed cup) is rated 30 to 40.
^b A paraffin oil of 440°F (226.7°C) flash point (closed cup) is rated 10 to 20.

RELATED PRODUCTS

Liquids intended for use as dielectric and cooling mediums in electrical transformers are covered under Transformer Fluids (EOVK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 340, "Tests for Comparative Flammability of Liquids."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product container is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]
 CLASSED _____
 AS TO FIRE HAZARD ONLY
 Control No.

The Classification Mark may also include the following statement as appropriate:

MAY EVOLVE FLAMMABLE GASES WHEN DECOMPOSED BY AN ELECTRIC ARC

TRANSFORMER FLUIDS (EOVK)

USE

This category covers liquids intended for use as dielectric and cooling mediums in electrical transformers.

These products have been Classified as to their fire hazard using Underwriters Laboratories' method for Classification of the fire hazard of liquids. They have been rated on a numerical scale of hazard ranging from 0 to 100 as indicated in the table below:

General Classification	Numerical Classification
Diethyl ether	100
Gasoline	90 to 100
Ethyl alcohol	60 to 70
Kerosene	30 to 40 ^a
Paraffin oil	10 to 20 ^b
Water or nonflammable	0 or nonflammable
a A standard kerosene of 100°F (37.8°C) flash point (closed cup) is rated 30 to 40.	
b A paraffin oil of 440°F (226.7°C) flash point (closed cup) is rated 10 to 20.	

USE RESTRICTIONS

Products Classified as "less-flammable liquid" may have use restrictions on the product container. Certain fluids have fuse use restrictions which require that the fuse must be either a type which does not vent under normal operation, or it must be installed external to the transformer tank.

RELATED PRODUCTS

Liquids intended for use as dielectric and cooling mediums are covered under Dielectric Mediums (EOUV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 340, "Tests for Comparative Flammability of Liquids."

These products are also Classified as a "less-flammable liquid" or "non-flammable fluid" in accordance with Sections 450.23 or 450.24 of ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product container is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]
 CLASSED _____
 AS TO FIRE HAZARD ONLY
 Control No.

The Classification Mark may also include one or more of the following statements as appropriate:

MAY EVOLVE FLAMMABLE GASES WHEN DECOMPOSED BY AN ELECTRIC ARC

ALSO CLASSIFIED AS A "LESS-FLAMMABLE LIQUID" IN COMPLIANCE WITH THE NATIONAL ELECTRICAL CODE WITH THE FOLLOWING "USE RESTRICTIONS"

ALSO CLASSIFIED AS A "NONFLAMMABLE FLUID" IN COMPLIANCE WITH THE NATIONAL ELECTRICAL CODE WITH THE FOLLOWING "USE RESTRICTIONS"

DIMMERS (EOVZ)

DIMMERS, COMMERCIAL (EOXT)

USE

This category covers incandescent and fluorescent commercial dimmers intended for mounting in flush device boxes or on outlet box covers (wall box), unless otherwise stated in the individual Listings. They are intended for control of single- or multi-output lighting circuits. They are intended only for the control of permanently installed luminaires.

RELATED PRODUCTS

Dimmers intended for use in residential applications are covered under Dimmers, General Use Switch (EOYX). Additional special-application dimmers are covered under Dimmers, Theater (EPAR) and Dimmers, Theater, Controls (EPCT).

Dimmers, Commercial (EOXT)—Continued

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Dimmer."

DIMMERS, GENERAL USE SWITCH (EOYX)

GENERAL

This category covers dimmers for mounting in flush device boxes or on outlet box covers (wall box), unless otherwise stated in the individual Listings. They are intended only for the control of permanently installed luminaires.

RATINGS

Dimmers are rated maximum 600 V ac (120 V ac for touch dimmers) and are intended for installation on a 20 A or less branch circuit. Dimmers are rated for lamp or lamp control loads from 300 W or 300 VA to a maximum of 2000 W or 2000 VA. They have been investigated for use in nominal 25°C environments, unless otherwise stated in the individual Listings.

PRODUCT MARKINGS

Dimmers may include one or more of the following installation-related markings:

On the dimmer:

"For Control of Permanently Installed _____ Lamp Fixtures Only," or the equivalent. The blank identifies the type of lighting (luminaire) load, such as "Incandescent," "Fluorescent" or "Low Voltage."

"Use _____ wire only," where the blank indicates "copper" or "CU," "aluminum" or "AL," or both. If symbols are used, they shall be as follows:

For a terminal rated for copper wire only:

For a terminal rated for use with both copper and aluminum wire:

On the dimmer, on a separate instruction sheet packaged with the dimmer, or on the smallest unit packaging provided with the dimmer, the word "CAUTION" followed by one of the statements or equivalent as indicated below based upon the intended load:

For dimmers controlling a ballast — "To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, a Motor-operated Appliance, or a Transformer-supplied Appliance," or

For dimmers controlling a tungsten-filament load — "To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, a Motor-operated Appliance, a Fluorescent Lighting Fixture, or a Transformer-supplied Appliance," or

For dimmers controlling a low-voltage transformer — "To Reduce the Risk of Overheating and Possible Damage to Other Equipment, Do Not Install to Control a Receptacle, or a Motor-operated Appliance"

Additionally, one or more of the following markings may appear on the dimmer, on a separate instruction sheet packaged with the dimmer, or on the smallest unit packaging provided with the dimmer:

"For multiple ganged installations apply derating factor"

"For use with _____" where the blank identifies specific manufacturers and models of electronic ballast, electronic power supply or low-voltage supply.

"For use with magnetic ballast _____" where the blank identifies specific manufacturers and models. If no specific manufacturer or model is

DIMMERS (EOVZ)

Dimmers, General Use Switch (EOYX)—Continued

specified, the dimmer is rated for control of any magnetic ballast.

“For use with Class 2 supply only”

“For splicing _____ wires, sized _____ AWG, use the provided wire splicing connector. Strip conductors to _____ length” (or equivalent description), where the blanks indicate the number of conductors, maximum size and length of prepared striped conductor, respectively.

“For supply connection, use wires rated minimum 75°C”

RELATED PRODUCTS

Dimmers used for special applications are covered under Dimmers for Commercial Use (EOXT), Dimmers for Theater Use (EPAR) and Controls for Theater Dimming Equipment (EPCT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1472, “Solid-State Dimming Controls.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Dimmer,” “Outlet Box Lighting Control” or “Wall Box Dimmer,” or other appropriate product name as shown in the individual Listings.

DIMMERS, THEATER (EPAR)

USE

This category covers luminaire dimmers intended for use in motion picture and television studios, as well as theaters and similar locations. The dimmers may be intended for portable use, rack mounting, or be suitable for permanent installation. This category also covers theater dimming modules intended for mounting in theater switchboards.

RELATED PRODUCTS

Dimmers not intended for motion picture and television studio or theater stage use are covered under Dimmers, Commercial (EOXT).

Theater switchboards incorporating removable dimming modules are covered under Switchboards, Special Purpose (WFJX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, “Industrial Control Equipment,” and ANSI/UL 891, “Switchboards.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Theater Dimmer.”

Dimmers, Theater, Controls (EPCT)

GENERAL

This category covers control units intended to interface with stage, studio, and theater lighting dimming equipment.

These units may be provided with various user controls. The units are provided with a number of control outputs to operate different types of dimming equipment and associated equipment, such as moving luminaires and special effects equipment. They may be provided with integral computer systems.

OUTPUT CONNECTORS/CIRCUITS

Output circuits intended for local task lighting and the like are Class 2 circuits and are marked “Class 2.” All other output circuits, including those associated with the Universal Serial Bus (USB), IEEE 1394 bus, PS/2 connectors, MIDI and DMX512 are limited power circuits supplied by ANSI/UL 60950-1 limited power sources, unless:

the circuits are clearly telecommunication circuits (e.g., RJ series modular jack, 50-pin commercial connectors with insulation piercing terminals). These circuits are limited to telecommunication network voltages (TNV) and are suitable for connection to the telecommunication network and distribution wiring in accordance with Article 800 of ANSI/NFPA 70, “National Electrical Code” (NEC); or the circuits are marked, or otherwise identified in the installation and user instructions with the type of circuit (e.g., Class 1), intended cable type (e.g., DP-2) or specific equipment intended to be interconnected (e.g., mfg/model printer).

119

Dimmers, Theater, Controls (EPCT)—Continued

Limited power circuits of Listed ITE supplied by limited power sources are recognized by Section 725.41(A)(4) of the NEC as being equivalent to Class 2 circuits for purposes of applying Article 725 Class 2 wiring requirements.

ADDITIONAL INFORMATION

For additional information, see Dimmers, Theater (EPAR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, “Information Technology Equipment – Safety – Part 1: General Requirements.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Theater Lighting Control Console,” or other appropriate product name as shown in the individual Listings.

DIRECT PLUG-IN AND CORD-CONNECTED CLASS 2 POWER UNITS (EPBU)

USE

This category covers indoor and outdoor use Class 2 power supplies and battery chargers intended for use on alternating-current branch circuits with a maximum potential of 150 V to ground. Products covered are (1) portable and semipermanent mounted direct plug-in units provided with 15 A blade configurations for use on nominal 120 or 240 V branch circuits, and (2) cord-and plug-connected units provided with a 15 or 20 A attachment plug configuration. Units may also be provided with a direct-current input jack for being powered from a vehicle battery adapter.

These units utilize an isolating transformer and may incorporate components to provide an alternating- or direct-current output. These products have been investigated only for general use (unless otherwise marked) in unclassified (ordinary) locations. Each output complies with Class 2 voltage, current and volt-ampere limits as specified in ANSI/NFPA 70, “National Electrical Code.” Maximum output voltage does not exceed 42.4 V peak for alternating current, 60 V for continuous direct current.

Power supplies identified with an enclosure type designation or as “Rain tight” or “Rainproof” are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

Class 2 power units intended for use with specific end-use product types that may involve mechanical hazards (such as gardening appliances or tools) are covered as part of the Listed appliance or tool.

PRODUCT MARKINGS

If indicated for a specific end use in the individual Listings (such as for use with audio, radio, and television-type equipment), the products are so marked and have also been investigated to additional requirements found in the appropriate end-use product standard.

Class 2 power units marked “Backfeed Protected,” “BFP” or equivalent incorporate integral protection to inhibit backfeed of current from the load during a fault in the output circuit or wiring of the power unit.

RELATED PRODUCTS

Class 2 power units intended for permanent electrical connection to the supply source are covered under Power Supplies, Specialty (QQII) or Transformers, Class 2, Class 3 (XOKV). Class 2 transformers with a cord and plug for connection to the electrical supply are also covered under Transformers, Class 2, Class 3 (XOKV).

Class 2 power units intended for use with medical and dental equipment are covered under Power Supplies for Use in Health Care Facilities (KFCG).

Class 2 power units intended as components of fire-protective signaling systems and burglary-protective signaling systems are covered under their respective categories.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1310, “Class 2 Power Units.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this

**DIRECT PLUG-IN AND CORD-CONNECTED CLASS 2
POWER UNITS (EPBU)**

Directory) together with the word "LISTED," a control number, and one of the following product names: "Class 2 Power Supply," "Class 2 Transformer," "Class 2 Power Unit," "Class 2 Battery Charger," or other appropriate product name as shown in the individual Listings. The word "Transformer" may be abbreviated "XFMR," "XFRMR" or "XFORMER."

DISPENSING DEVICES (EPWR)

This category covers dispensing devices intended for flammable and combustible liquids and LP-gas in the liquid stage. Flammable and combustible liquids include the common gasoline and diesel engine fuels and the lighter heating oils.

These devices are intended for use in accordance with the applicable Standards of the National Fire Protection Association, including ANSI/NFPA 30, "Flammable and Combustible Liquids Code," and ANSI/NFPA 58, "Liquefied Petroleum Gas Code."

DISPENSING DEVICE ACCESSORIES (EQJZ)

Accessories included in the following listings are those designed specifically for use in conjunction with dispensing devices.

Retrofit Assemblies (ERKQ)

USE

This category covers retrofit assemblies, which are field-installed systems intended to convert equipment or conventional power-operated flammable liquid dispensing devices for operations, such as, but not limited to, automatic preset operation, self-service operation or operation for use with motor fuel vapor recovery or processing systems. Such assemblies converted for self-service operation may also include the control and monitoring devices and their accessories normally associated with self-service dispensing systems. The type of system is indicated in the individual Listings.

These assemblies require special installation precautions and are Listed by Report. Under this form of Listing, a Report is prepared that identifies and describes the complete assembly and includes instructions for proper installation. Copies of the Report are available from the Listee.

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 87, "Power-Operated Dispensing Devices for Petroleum Products."

UL MARK

The Listing Mark on the major component of the assembly includes the following:

UNDERWRITERS LABORATORIES INC.

LISTED [PRODUCT NAME*]

WHEN INSTALLED AND USED IN ACCORDANCE WITH

UL REPORT, REFERENCE NO. ___ DATED ___

Control No.

* SELF-SERVICE RETROFIT ASSEMBLY, AUTOMATIC PRESET RETROFIT ASSEMBLY, VAPOR RECOVERY RETROFIT ASSEMBLY, or other appropriate product name as shown in the individual Listings

POWER-OPERATED DISPENSING DEVICES (EWFY)

Power-operated dispensing devices are intended primarily for dispensing motor fuels or other flammable or combustible liquids at service stations.

They consist of power-operated pumping unit(s) contained in the device or remote from it, strainer(s), metering device(s), valve(s), single or multiple dispensing outlets, etc., with apparatus designed to monitor and control the discharge of liquid. They may comprise complete self-contained units mounted in a suitable pedestal and housing or separate assemblies with controls and other apparatus mounted on a panel or in a pedestal installed remote from pumping unit.

These devices are designed to comply with requirements for installation either inside or outside of buildings.

Flammable Liquid Dispensing Devices, Power Operated (EWTV)

USE

This category covers power-operated dispensing devices intended for dispensing motor fuels. Devices may be certified for use with petroleum products, defined as gasoline, gasoline/alcohol blends up to 15% ethanol or methanol, diesel fuel, fuel oil or lubricating oil; or they may be certified for use with gasoline/ethanol blends with ethanol content greater than 15% (commonly referred to as E85).

A power-operated dispensing device establishes hazardous locations in and around the product as a result of its design and construction and is not intended to be used in hazardous locations resulting from external factors,

DISPENSING DEVICES (EPWR)

Flammable Liquid Dispensing Devices, Power Operated (EWTV)—Continued

such as installation near aboveground tanks, LP-gas or CNG dispensers. The dispensing device has Class I, Group D, Division 1 and 2 locations within it but may also contain areas that are nonhazardous because of the dispenser construction. Dispensers with nonhazardous areas within them are not suitable for use in a Division 2 location that is based on external factors. Dispensers suitable for use in Division 2 locations that are based on external factors are marked to identify this use.

These products are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages."

RELATED PRODUCTS

Rebuilt dispensing devices are covered under Flammable Liquid Dispensing Devices, Power Operated, Rebuilt (EXAU).

ADDITIONAL INFORMATION

For additional information, see Power-operated Dispensing Devices (EWFY) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category for use with petroleum products, as defined above, is UL 87, "Power-Operated Dispensing Devices for Petroleum Products."

The basic requirements used to investigate products in this category intended for use with E85 are contained in UL Subject 87A, "Outline of Investigation for Power-Operated Dispensing Devices for Gasoline/Ethanol Blends with Ethanol Content Greater Than 15 Percent."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power-operated Dispensing Device for Flammable Liquids" or "Power-operated Dispensing Device for Flammable Liquids for Use in Class I, Group D, Division 2 Hazardous Locations."

Flammable Liquid Dispensing Devices, Power-operated, Rebuilt (EXAU)

GENERAL

This category covers rebuilt power-operated dispensing devices for use with motor fuels. Devices may be certified for use with petroleum products, defined as gasoline, gasoline/alcohol blends up to 15% ethanol or methanol, diesel fuel, fuel oil or lubricating oil; or they may be certified for use with gasoline/ethanol blends with ethanol content greater than 15% (commonly referred to as E85). A power-operated dispensing device establishes hazardous locations in and around the product as a result of its design and construction and is not intended to be used in hazardous (classified) locations resulting from external factors such as installation near aboveground tanks, LP-gas or CNG dispensers. The dispensing device has Class I, Group D, Division 1 and 2 locations within it but may also contain areas that are nonhazardous because of the dispenser construction. Dispensers with nonhazardous areas within them are not suitable for use in a Division 2 location that is based on external factors. Dispensers that are suitable for use in Division 2 locations that are based on external factors are marked to identify this use.

Rebuilt power-operated flammable liquid dispensing devices are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. These products are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts and are subject to the same requirements as new power-operated flammable liquid dispensing devices.

PRODUCT MARKINGS

Dispensers are marked with the manufacturer's name, model number and electrical ratings.

Dispensers are marked with the hose nozzle valves for which they are intended to be used.

ADDITIONAL INFORMATION

For additional information, see Power-operated Dispensing Devices (EWFY), Dispensing Devices (EPWR) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category for use with petroleum products, as defined above, is UL 87, "Power-Operated Dispensing Devices for Petroleum Products."

The basic requirements used to investigate products in this category intended for use with E85 are contained in UL Subject 87A, "Outline of Investigation for Power-Operated Dispensing Devices for Gasoline/Ethanol Blends with Ethanol Content Greater Than 15 Percent."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its

DISPENSING DEVICES (EPWR)

Flammable Liquid Dispensing Devices, Power-operated, Rebuilt (EXAU)—Continued

Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Power-Operated Dispensing Device for Flammable Liquids" or "Rebuilt Power-Operated Dispensing Device for Flammable Liquids for Use in Class I, Group D, Division 2 Hazardous Locations," as appropriate.

LP-gas Dispensing Devices, Power Operated (EXHT)

USE

This category covers power-operated dispensing devices intended to be installed outside of buildings and used at service stations for dispensing liquefied petroleum gas as an engine fuel. These products are intended for installation and use in accordance with ANSI/NFPA 58, "Liquefied Petroleum Gas Code," and ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Power-operated Dispensing Devices (EWFx) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 495, "Power-Operated Dispensing Devices for LP-Gas."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power-operated Dispensing Device for LP-Gas."

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FCHD)

PHOTOVOLTAIC MODULES AND PANELS FOR USE IN HAZARDOUS LOCATIONS (FCJU)

USE AND INSTALLATION

This category covers flat-plate photovoltaic modules and panels intended for mounting on buildings or on ground-supported frames.

Roof-mounted modules or panels are evaluated for one of three mounting methods: (1) integral to the roof of a building, (2) directly on a building's roof, or (3) on a rack with a space above the roof surface.

When mounted integral to a building's roof the module serves as the waterproof membrane. Direct-mounted panels are placed upon the building's waterproof membrane (shingles or the like). Rack-mounted styles are spaced away from the building's roof member. Rack-mounted styles may also be installed separate from buildings.

Installation of modules on or integral to a building's roof system may adversely affect the roof covering materials' resistance to external fire exposure if the module has a lesser or no fire resistance rating. Roof covering materials will not be adversely affected when the modules have an equal or greater fire resistance rating than the roof covering material.

Photovoltaic modules and panels are intended to be connected to electrical loads, controllers, or to static inverters that convert the dc power the modules or panels generate to other types of power compatible with the intended loads. In addition to their voltage, current and power ratings, modules and panels are marked to indicate terminal polarity, maximum series overcurrent device rating, and minimum acceptable diode bypassing (if needed). Installation of the modules and panels, including connection between the modules and the panels and the load, static inverters or controller is intended to be in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code." Authorities Having Jurisdiction should be consulted as to conformance with applicable building codes including the class of roof covering.

When applicable, modules or panels are identified as Class A, B or C to denote their Classification for resistance to external fire exposure. Modules or panels that have not been identified with respect to their resistance to external fire exposure are marked "Not Fire Rated." For significance of external fire exposure classes, see UL's Roofing Materials and Systems Directory.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

DISTRIBUTED GENERATION POWER SYSTEMS EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FCHD)

121

Photovoltaic Modules and Panels for Use in Hazardous Locations (FCJU)—Continued

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 1703, "Flat-Plate Photovoltaic Modules and Panels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of photovoltaic modules and panels that not only meet the appropriate requirements of UL but also have been investigated in accordance with one or more of the following design qualification standards:

1. IEEE 1262:(issue date), "IEEE Recommended Practice for Qualification of Photovoltaic (PV) Modules"
2. IEC 61215:(issue date), "Crystalline silicon terrestrial photovoltaic modules - Design qualification and type approval"
3. IEC 61646:(issue date), "Thin-film terrestrial photovoltaic modules - Design qualification and approval"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Photovoltaic Module for Use in Hazardous Locations" or "Photovoltaic Panel for Use in Hazardous Locations."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with IEC or IEEE design qualification standards. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one or more of the following:

1. IEEE 1262:(issue date)
2. IEC 61215:(issue date)
3. IEC 61646:(issue date)

DOOR OPERATORS FOR USE IN HAZARDOUS LOCATIONS (FCQU)

GENERAL

This category covers door operators for fire doors intended for installation in accordance with ANSI/NFPA 80, "Standard for Fire Doors and Fire Windows."

They are intended for single-slide and center parting level and inclined-track fire doors. These devices consist of an electric-powered operator that opens and closes the door during normal usage and a mechanical release which, under fire conditions, disconnects the door from the powered operator and permits it to close by either a Listed sliding-door closer or a system of suspended weights.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 325, "Door, Drapery, Gate, Louver, and Window Operators and Systems."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Door Operator for Use in Hazardous Locations."

DOOR, DRAPERY, GATE, LOUVER, AND WINDOW OPERATORS AND SYSTEMS (FDDR)

GENERAL

This category covers electrical and pneumatic door and gate systems, and door, drapery, gate, louver and window operators, together with controls and accessories for use with such operators, and similar devices.

DOOR, DRAPERY, GATE, LOUVER, AND WINDOW OPERATORS AND SYSTEMS (FDDR)

122

This category covers door operators that have been investigated from an electrical and casualty viewpoint only. For door operators that have been additionally investigated for use on fire doors, see Fire Doors (GSNV).

This category does not include the glass portions of the partitions, panels, or sections, associated with the operators and/or controls.

Door and gate systems include doors or gates, operators, and controls, tested as complete units. Components of a system are specifically designated in the installation instructions provided with the system.

Residential door operators are intended for intermittent use on counter-balanced doors, usually of the overhead type, in residential buildings of one to four single-family occupancies. When provided, external entrapment protection devices such as photoelectric sensors or door edge sensors must be installed in accordance with installation instructions provided. In addition all installation instructions, including the installation of warning labels adjacent to the wall mounted actuating switch, should be followed.

This category also covers residential garage door operators that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt residential garage door operators are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt residential garage door operators are subjected to the same requirements as new residential garage door operators.

Accessories for residential garage door operators, such as external entrapment protection devices, should be installed and used only on door operators for which they are intended as marked on installation instructions and/or packaging.

Commercial and industrial door operators should not be installed in applications where the load exceeds the maximum power in foot-pounds per second or the maximum pull in lbs marked on the appliance. Light-duty, commercial vehicular door or door operators should not be installed in locations where the number of operations per hour exceed that marked on the appliance.

Operators intended for use with other than counter-balanced types of doors, gates or windows are tested in conjunction with the doors, gates or windows for which they are designed.

Residential drapery operators are intended for intermittent use controlling a maximum drapery weight of one lb per foot, unless otherwise marked.

Commercial drapery operators are intended for intermittent use controlling drapery of the maximum weight marked on the assembly.

It has been determined that the casualty hazards inherent in the products covered by this category have been reduced to an acceptable degree. However, the ultimate safety is dependent upon proper installation, and the Authorities Having Jurisdiction should be consulted. Installation should be performed by a qualified installer using manufacturer's instructions. Special care should be exercised during installation of all Operators to insure that recommended safety devices such as photoelectric sensors or reversing edge switches are properly installed. When so marked, industrial door operators shall be mounted a minimum of 8 ft (2.44 m) above the floor.

RELATED PRODUCTS

This category does not cover door operators incorporated as integral parts of walk-in panel units for use with refrigerator cooler installations; see Door Panel Assemblies (FDIT).

This category does not cover door or gate systems or other assemblies including break out or hinged sections intended to facilitate safe egress of persons in case of emergency; see Exit Doors (FUXV), Panic Hardware (FVSR), Door Closers, Holders and Operators (GTBT) and Fire Door Operators with Automatic Closers (GUJY).

This category does not cover the burglary and theft protection features of vault doors or burglary-resistant electrically-operated door mechanisms intended to control opening and closing of cell doors in a prison or institution; see Burglary-resistant, Electrically-operated Door-locking Mechanisms (CVXJ) and Vault Doors, Burglary Resistant (YUSR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 325, "Door, Drapery, Gate, Louver, and Window Operators and Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Door Operator," "Gate Operator," "Drapery Operator," "Window Operator," "Louver Operator," or other appropriate product name as shown in the individual Listings.

The Listing Mark for rebuilt residential garage door operators additionally includes the word "Rebuilt," "Remanufactured" or "Reconditioned" preceding the product name.

DOOR HOLDERS FOR USE IN HAZARDOUS LOCATIONS (FDGF)**DOOR HOLDERS FOR USE IN HAZARDOUS LOCATIONS (FDGF)****GENERAL**

This category covers door holders for fire doors intended for installation in accordance with ANSI/NFPA 80, "Standard for Fire Doors and Fire Windows."

They are intended for use with swinging, sliding or rolling fire doors, as indicated in the individual Listings, and are designed to hold doors in the open position under normal usage and release the doors under fire conditions. They are intended to be used with a suitable door closer and automatic operating devices or systems.

Authorities Having Jurisdiction should be consulted to determine the acceptability of the door, door holders, door closer and automatic operating device or other combination of system units for any given location.

RELATED PRODUCTS

Automatic operating devices or systems consist of releasing devices of heat detectors for releasing device service, which are covered under Heat Detectors for Releasing Device Service for Use in Hazardous Locations (TBGR).

For information on door closers, see Fire Door Accessories (GVUW) and Fire Door Closers, Holders and Operators (GTBT).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is UL 228, "Door Closers-Holders, With or Without Integral Smoke Detectors."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Door Holder for Use in Hazardous Locations."

DOOR PANEL ASSEMBLIES (FDIT)**GENERAL**

This category covers "walk-in" and "reach-in" door panel assemblies and related auxiliary devices intended for use with environmental, freezer or cooler rooms and cabinets.

The equipment is intended for permanent connection to alternating current circuits rated at not more than 600 V.

Panel assemblies and auxiliary devices are provided with an electrical system which serves to provide one or more of the following functions: illumination, prevention of ice formation, prevention of condensation, motor drives for opening and closing doors, etc.

Door panel assemblies consist of the door and/or the door frame.

Auxiliary devices consist of equipment other than door panel assemblies associated with the foregoing apparatus or functions, including insulated panels with electrical components.

Door panel assemblies identified with an enclosure type designation or as "Rain tight" or "Rainproof" are intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

RELATED PRODUCTS

Refrigerated cabinets and cases are covered under Commercial Refrigerators and Freezers (SGKW). Nonelectrical insulated wall panels are covered under Building Units (BLBT). Refrigeration units are covered under Units, Refrigerating (SPYZ).

Factory assembled walk-in refrigerators and freezers are covered under Walk-in Units, Commercial (SQTV)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 471, "Commercial Refrigerators and Freezers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Door Panel Assembly" or "Auxiliary Insulated Panel."

DRILLING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FDJJ)

This category covers products specifically intended for installation on oil rigs and drilling platforms.

DRILLING INSTRUMENTATION FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FDJN)

USE AND INSTALLATION

This category covers drilling equipment consisting of instruments, sensors and transducers intended to measure, record and monitor drilling variables and to control the drilling process.

These products have been investigated for potential conformity to the installation and use provisions of ANSI/NFPA 70, "National Electrical Code," or United States Coast Guard Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electrical Systems – General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment."

Intrinsically-safe circuits and equipment are intended to be installed and interconnected in accordance with the instructions provided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 61010C-1, "Process Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drilling Instrumentation for Use in Hazardous Locations" or "Drilling Instrumentation (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

MARINE SHIPBOARD CABLE FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FDJR)

USE

This category covers cable termination fittings and combination cable termination and sealing fittings for threaded connection of marine shipboard cable to equipment. The termination and sealing fittings are intended for use only with the sealing compound as specified by the manufacturer in instructions furnished with the fittings. No splices of conductors are intended to be made in the fitting. Restrictions on application, position and/or location of the fitting are indicated in the manufacturer's instructions.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. The investigation of these fittings includes an evaluation for conformity to the installation and use provisions of United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electrical Systems – General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment," as applied by the Authority Having Jurisdiction.

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or on the smallest unit container in which the product is packaged with the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Shipboard Cable Fitting for Use in Hazardous Locations" or "Marine Shipboard Cable Sealing Fitting for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

DRILLING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FDJZ)

These Listings cover products specifically intended for installation on oil rigs and drilling platforms.

DRILLING INSTRUMENTATION FOR USE IN HAZARDOUS LOCATIONS (FDKX)

USE AND INSTALLATION

This category covers drilling equipment consisting of instruments, sensors and transducers intended to measure, record and monitor drilling variables and to control the drilling process.

These products have been investigated for potential conformity to the installation and use provisions of ANSI/NFPA 70, "National Electrical Code," or United States Coast Guard Electrical Engineering Regulations, Subchapter J, (Title 46CFR (Parts 110-113 inclusive), "Electrical Engineering."

Intrinsically safe circuits and equipment are intended to be installed and interconnected in accordance with the instructions provided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is UL 61010C-1, "Process Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Drilling Instrumentation for Hazardous Locations" or "Drilling Instrumentation (Associated Apparatus)," or other appropriate product name as shown in the individual Listings.

MARINE SHIPBOARD CABLE SEALING FITTINGS FOR USE IN HAZARDOUS LOCATIONS (FDLW)

USE

This category covers combination termination and sealing fittings for threaded connection of marine shipboard cable to equipment in hazardous locations. They are intended for use only with the sealing compound specified by the manufacturer in instructions furnished with the fittings. No splices of conductors are permitted to be made in the fitting. Restrictions on application, position, and/or location of the sealing fitting are indicated in the manufacturer's instructions.

These fittings are intended for use on mobile offshore oil rigs and drilling platforms. The investigation of these fittings includes an evaluation for conformity to the installation and use provisions of United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electrical Systems – General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment," as applied by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Shipboard Cable Sealing Fitting for Use in Hazardous Locations."

EARTHQUAKE-ACTUATED EQUIPMENT (FFPC)

USE AND INSTALLATION

This category covers products with earthquake sensing means that shut off gas flow or disconnect an electrical load from its source in the event of a seismic disturbance.

Earthquake actuated gas shutoff valves are intended for stationary installation and marked with the specific fluids, fluid temperature, ambient temperature and operating pressure.

Earthquake actuated electrical switches are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

See Earthquake Actuated Shutoff Systems (FFPH).

ADDITIONAL INFORMATION

For additional information, see Flammable and Combustible Liquids and Gases Equipment (AAPQ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

Earthquake actuated gas shutoff valves have been investigated to ANSI Z21.70(+), "Earthquake Actuated Automatic Gas Shutoff Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Services. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, one of the following product names as appropriate: "Earthquake Actuated Gas Shutoff System," "Earthquake Actuated Gas Shutoff Valve," "Earthquake Actuated Electrical Switch" or other appropriate product name as shown in the individual Listings, and "IN ACCORDANCE WITH ANSI Z21.70(+), Earthquake Actuated Automatic Gas Shutoff Systems."

ELECTRIC VEHICLE SYSTEMS (FFQM)

USE

This category covers products and systems intended for use with or installation on automotive type vehicles for highway use, such as passenger automobiles, buses, trucks, vans, and the like, primarily powered by an electric motor that draws current from a rechargeable storage battery. Battery charging equipment can be supplied by a utility source, a fuel cell, photovoltaic array, or other source of power.

The physiological effects of chemical substances or gases associated with the recharging of storage batteries have not been investigated.

ELECTRIC VEHICLE BATTERY PACKS (FFRW)

USE AND INSTALLATION

Electric Vehicle Battery Packs (FFRW)—Continued

This category covers battery packs investigated in accordance with Article 625 of ANSI/NFPA 70, "National Electrical Code" (NEC), to determine whether or not a forced-air ventilation system is required when a particular electric vehicle battery pack is charged using the specified charging system of the electric vehicle.

REBUILT PRODUCTS

This category also covers electric vehicle battery packs that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt electric vehicle battery packs are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt electric vehicle battery packs are subject to the same requirements as new electric vehicle battery packs.

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Electric vehicle battery packs employing non-vented batteries or batteries whose chemistry cannot produce hydrogen are investigated by inspection of the manufacturer's product.

Electric vehicle battery packs employing batteries that can emit hydrogen, such as valve regulated or vented lead-acid or nickel-metal hydride batteries, are subjected to investigation in accordance with SAE Recommended Practice J1718 (1994), "Measurement of Hydrogen Gas Emission From Battery-Powered Cars and Light Trucks During Battery Charging." Battery systems which do not produce hydrogen concentrations in excess of 1% (25% of the lower flammability limit) are considered in compliance with the requirements of Article 625 of the NEC.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELECTRIC VEHICLE BATTERY PACK

FOR CHARGING INDOORS WITHOUT MECHANICAL BUILDING VENTILATION IN [COMPANY NAME] ELECTRIC VEHICLE [MODEL, NAME]

Control No.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

ELECTRIC VEHICLE CABLE (FFSO)

GENERAL

This category covers electric vehicle cable constructed as described in, and Listed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code." Electric vehicle cable consists of two or more insulated conductors, with or without grounding conductors, with an overall jacket. The insulation and jacket are both thermoset on Types EVJ and EV, thermoplastic elastomer (TPE) on Types EVJE and EVE, and thermoplastic (PVC) on Types EVJT and EVT.

The cable is used to supply power, signal, and control to electric vehicles during the charging process. It is rated 60 to 105°C (140 to 221°F) dry; 60°C (140°F), 75°C (167°F), or 90°C (194°F) wet; 60°C (140°F) where exposed to oil, and for use where exposed to the direct rays of the sun. For cable so marked, a gasoline immersion rating is also assigned. The term "wet" indicates that the cable is acceptable for immersion in water. Electric vehicle cable employs flexible stranded copper conductors in a size range of 18 AWG to 500 kcmil.

Type EVJ — Rated 300 V, contains two to five 18-12 AWG thermoset-insulated circuit conductors, and may employ one or more insulated grounding conductors. The cable may contain hybrid data, signal, communications, and/or optical fiber cable in any AWG size.

Type EVJE — Rated 300 V, same as Type EVJ except that the cable employs thermoplastic elastomer-insulated conductors and jacket.

Type EVJT — Rated 300 V, same as Type EVJ except that the cable employs thermoplastic (PVC) insulated conductors.

Type EV — Rated 600 V, contains two or more 18 AWG to 500 kcmil thermoset-insulated circuit conductors, and may employ one or more insulated grounding conductors. The cable may contain hybrid data, signal, communications, and/or optical fiber cable in any AWG size.

Type EVE — Rated 600 V, same as Type EV except that the cable employs thermoplastic elastomer-insulated conductors.

Type EVT — Rated 600 V, same as Type EV except that the cable employs thermoplastic (PVC).

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Electric Vehicle Cable (FFSO)—Continued

The basic standards used to investigate products in this category are ANSI/UL 62, "Flexible Cord and Fixture Wire," and ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Vehicle Cable."

ELECTRIC VEHICLE CHARGING SYSTEM EQUIPMENT (FFTG)

USE AND INSTALLATION

This category covers charging system equipment, either conductive or inductive, intended for use with electric vehicles. The equipment can be located on or off board the vehicle. Off-board equipment is intended for indoor or outdoor use.

This equipment is rated 600 V or less. The equipment is intended to be connected to the vehicle by means of a flexible cord and an electric vehicle connector, and intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Portable type equipment with parts that are considered arcing or sparking, such as switches, relays, etc., are marked with the word "WARNING" and the following or equivalent: "This equipment employs parts, such as switches and relays, that tend to produce arcs or sparks and therefore, when used in a garage, locate in a room or enclosure provided for the purpose or not less than 18 inches (457.2 mm) above the floor."

RELATED PRODUCTS

See Battery Chargers, Automotive Type (BBGQ).

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2202, "Electric Vehicle (EV) Charging System Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Charging System Equipment," "Battery Charger," "Charge Port," "Charge Controller," or other appropriate product name as shown in the individual Listings, preceded by "Electric Vehicle" (or "EV").

ELECTRIC VEHICLE CHARGING SYSTEMS, INDOOR CHARGING WITHOUT VENTILATION (FFTY)

These electric vehicle charging systems, either inductive or conductive, have been investigated in accordance with the requirements of ANSI/NFPA 70, the National Electrical Code (NEC), Article 625, "Electric Vehicle Charging System Equipment," to determine whether mechanical ventilation is required during charging of the specified electric vehicle battery pack in an enclosed space.

Electric vehicle charging systems employing nonvented batteries or batteries whose chemistry cannot produce hydrogen are investigated by inspection of the manufacturer's product.

Electric vehicle charging systems employing batteries that can emit hydrogen, such as valve regulated or vented lead-acid or nickel-metal hydride batteries, are subjected to evaluation in accordance with SAE (Society of Automotive Engineers) Recommended Practice J1718 (1994), "Measurement of Hydrogen Gas Emission From Battery powered Cars and Light Trucks During Battery Charging." Battery systems which do not produce hydrogen concentrations in excess of 1% (25% of the lower flammability limit) are considered suitable for charging indoors without mechanical ventilation in accordance with the requirements of NEC Article 625.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the vehicle is the only method provided by Underwriters Laboratories Inc. to identify products produced under its Classification and Follow-Up Service.

Electric Vehicle Charging System
Classified by Underwriters Laboratories Inc.®

Electric Vehicle Charging Systems, Indoor Charging Without Ventilation (FFTY)—Continued

For indoor charging without mechanical building ventilation in accordance with the National Electric Code, NFPA 70-1996, Article 625 and SAE Recommended Practice J1718 1994 when used with a UL Classified electric vehicle battery pack marked for use with the:

(Company Name) (Model Name) electric vehicle.
(Control Number)

Note: The word "Inductive" or "Conductive" may be included in the product name.

ELECTRIC VEHICLE CHARGING SYSTEM PERSONNEL PROTECTION EQUIPMENT (FFUQ)

GENERAL

This category covers ground-fault protective devices, such as charging circuit interrupting devices and isolation monitor/interrupters, intended for use with electric vehicle charging systems in accordance with ANSI/NFPA 70, "National Electrical Code."

A charging circuit interrupting device is one whose function is to detect ground-fault current or other conditions that may be hazardous and cause interruption of the electric circuit to the charging system or the vehicle when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the circuit or, in some devices, when another hazardous condition, such as an open-circuited grounding conductor, is detected. A charging circuit interrupting device is intended to be used only in a circuit where one of the conductors is solidly grounded.

A Type CCID5 charging circuit interrupting device trips when the current to ground has a value in the range of 4 through 6 MIU. A Type CCID20 charging circuit interrupting device trips when the current to ground has a value of 20 MIU or greater. MIU (Measurement Indication Unit) is a value that corresponds to leakage current but accounts for the waveshape and frequency of the voltage.

A charging circuit interrupting device is marked to identify its suitability for use with a specific electric vehicle charging equipment or with power supplies with certain voltage, frequency and waveshape.

The acceptability of a Type CCID20 charging circuit interrupting device is based upon the voltage of the circuit and the level of insulation provided in the device to which it is intended to be connected.

An isolation monitor/interrupter is a device whose function is to detect a path to ground on an isolated circuit and cause interruption of the electric circuit to the vehicle if a path that would permit 5 MIU or greater current to flow is detected. An isolation monitor/interrupter is intended for use in a separately derived isolated (ungrounded) circuit.

A device of the enclosed type that has been found suitable for use where it will be exposed to rain is so marked.

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 2231-1, "Personnel Protection Systems for Electric Vehicle (EV) Supply Circuits; Part 1: General Requirements," and UL 2231-2, "Personnel Protection Systems for Electric Vehicle (EV) Supply Circuits; Part 2: Particular Requirements for Protection Devices for Use in Charging Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Charging Circuit Interrupter Device," "Ground Monitor/Interrupter" or "Isolation Monitor/Interrupter."

ELECTRIC VEHICLE POWER OUTLETS (FFWA)

USE

This category covers power outlets rated 600 V or less, intended for indoor or outdoor use where power is required for the recharging of electric vehicle storage batteries. These products include receptacles, vehicle inlets and connectors for use with electric vehicles in accordance with Article 625 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electric Vehicle Systems (FFQM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2231-1, "Personnel Protection Systems for Electric Vehicle (EV) Supply Circuits: General Requirements," and UL 2231-2, "Personnel Protection

Electric Vehicle Power Outlets (FFWA)—*Continued*

Systems for Electric Vehicle (EV) Supply Circuits: Particular Requirements for Protection Devices for Use in Charging Systems.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electric Vehicle Power Outlet” (or “EV Power Outlet”).

ELECTRICAL AND ELECTRONIC MEASURING AND TESTING EQUIPMENT (FHCW)

This listing covers equipment intended primarily for the metering and testing of electrical and electronic circuits such as ammeters, voltmeters, power meters, frequency counters, chart recorders, oscilloscopes, and the like. This listing also covers equipment designed to provide electrical or electronic signals for test purposes such as signal generators or injectors, and frequency synthesizers, and so forth.

It does not cover medical and dental or process control metering and testing equipment. Additional listings of metering and testing equipment may be found under “Laboratory Equipment.”

These products have been investigated with respect to risk of fire, electric shock, and personal injury. The accuracy of the equipment has not been investigated.

The basic standard used to investigate products in this category is UL 1244, “Electrical and Electronic Measuring and Testing Equipment”.

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Electrical and Electronic Measuring and Testing Equipment,” or the name of the specific type of product as shown in the individual Listings, or combinations of the preceding identities.

ELECTRICAL CIRCUIT PROTECTIVE SYSTEMS (FHIT)

GENERAL

This category covers electrical circuit protective systems consisting of components and materials intended for installation as protection for specific electrical wiring systems, with respect to the disruption of electrical circuit integrity upon exterior fire exposure.

Ratings apply only to the entire protective system assembly, constructed using the combination of components specified in the system. Individual components and materials are designated for use in a specific system(s) for which corresponding ratings have been developed, and are not intended to be interchanged between systems. Ratings are not assigned to individual system components or materials. For example, caulk or putty used from one system cannot be interchanged with the caulk or putty specified in another system.

Electrical circuit protective systems should be fastened to a concrete or masonry wall or a concrete floor-ceiling assembly. The fire rating of the wall or floor-ceiling assembly should be equal to or greater than the rating of the electrical circuit protective system. This is to ensure that the complete electrical circuit protective system will survive during fire and hose stream exposure.

SYSTEMS INCORPORATING CABLE PROTECTED WITH ELECTRICAL CIRCUIT PROTECTIVE MATERIALS

These protective systems are investigated with respect to fire exposure and with respect to water hose stream performance. Performance criteria are based on temperatures within the enclosure and visual examination after the water hose stream.

Classification of these protective systems contemplates installation in interior environments with representative heating and air conditioning, unless stated otherwise in the individual Classifications.

Where indicated in the system, the ampacity reduction due to the electrical circuit protection system has been determined for normal ambient temperature operating conditions in accordance with IEEE 848-1996, “IEEE Standard Procedure for the Determination of the Ampacity Derating of Fire-Protected Cables.” If not specified in the individual system, the effect of the electrical circuit protection system on the ampacity of the electrical conductors has not been investigated. The specifications for the protective system and its assembly are important details in the development of the ratings. Information concerning these details is described on the individual systems.

The products used in these systems are intended to be installed in accordance with the applicable accompanying instructions.

SYSTEMS CONSTRUCTED WITH FIRE-RESISTIVE CABLE

These protective systems are investigated with respect to fire exposure and water hose stream performance. ANSI/UL 2196, “Tests for Fire Resistive Cables,” describes two fire exposure conditions. The normal temperature rise (to ANSI/UL 263, “Fire Tests of Building Construction and Materials”) is intended to represent a fully developed interior building fire. The rapid temperature rise (to ANSI/UL 1709, “Rapid Rise Fire Tests of Protection Materials for Structural Steel”) is intended to represent a hydrocarbon pool fire. If not stated otherwise, it is assumed that the normal temperature rise exposure was used. There are two hose stream levels, normal and low impact. The low-impact fog nozzle hose stream is applied only to cable marked with the “-CI” suffix. The normal-impact hose stream, applied with a standard-taper, smooth-bore playpipe, is applied to all other types of cable. Performance criteria are based on functionality of the cable during the fire and after hose stream.

CI cable is tested on steel rings to simulate installation in free air. If CI cable is intended to be installed in a raceway it is so tested. CI cable that has been tested in a raceway will be specified in the UL system.

Each design of fire-resistive cable is tested per ANSI/UL 2196. One-conductor and multi-conductor constructions are tested separately, as well as shielded or unshielded, and stranded or solid conductors. The system contains the construction details of the tested configuration. The minimum conductor size, minimum number of conductors, UL Type, voltage rating, etc., are construction details that are also provided. Cable is UL Listed to a National Electrical Code Type and constructed to a UL Standard for the cable (such as Type MC per ANSI/UL 1569, “Metal-Clad Cables”; Type RHH/RHW to ANSI/UL 44, “Thermoset-Insulated Wires and Cables”; Type FPL per ANSI/UL 1424, “Cables for Power-Limited Fire-Alarm Circuits”; Type NPLF per ANSI/UL 1425, “Cables for Non-Power-Limited Fire-Alarm Circuits”; and Type TC per ANSI/UL 1277, “Electrical Power and Control Tray Cables with Optional Optical-Fiber Members”).

Cable is tested as a complete system. The system includes the cable or raceway support, couplings, boxes/conduit bodies, optional splices, vertical supports, grounds, pulling lubricants, cable tray, etc. Cable or raceway supports need to hold the cable in place during the fire and hose stream. The hardware, clamps, strut, etc., are generally stated to be made of steel.

Systems that require a raceway are tested with the minimum raceway diameter and the minimum raceway type with their respective coupling(s). Raceways having larger diameters are acceptable. Raceways with greater wall thickness are also acceptable. Intermediate metal conduit (IMC) or rigid metal conduit (RMC) are acceptable for use in systems where electrical metallic tubing (EMT) is specified.

The raceway should be connected together using the coupling type referenced in the system, such as steel setscrew type for EMT or threaded types of coupling for IMC and RMC. No other coupling should be used unless noted in the specific system. For example, a compression coupling should not be used in place of steel setscrew coupling for EMT unless otherwise specified in the system. If IMC or RMC is substituted where EMT is specified, the raceway should be connected together with threaded types of couplings.

If a box, conduit body, supports (such as a grip), splice or other components are tested, it is noted in the system. Otherwise, the hourly fire rating applies only to continuous lengths of cable and/or raceway with couplings passing completely through a fire zone and terminating a minimum of 12 inches beyond the fire-rated wall or floor bounding the fire zone. For systems installed in a raceway, ANSI/NFPA 70, “National Electrical Code” (NEC), requires not more than 360 degrees of bends without a pull point (such as conduit bodies or boxes). Therefore, for most practical installations, a conduit body or a box will be required. Items such as conduit bodies and boxes, if found acceptable, are described in the system. Since boxes are tested with a single raceway, each individual raceway should have an independent box used for pull points or splices. If a splice is tested, it is also described in the system. Boxes should be sized per the method described in the NEC.

The supports are an important part of the systems and each individual system has specific support requirements. The maximum distance between the supports is described in the individual systems and should not be exceeded even if an alternate raceway is used. For example, if 5-foot spacing between supports is specified for EMT, this same support distance should be used with any other raceway (IMC, RMC, etc.), unless stated otherwise in the system or a lesser support spacing is specified in the NEC. The type of support and the distance between the steel supports is unique to that specific system and is for all sizes/types of cable and/or conduit/raceway unless otherwise noted in a specific system. Spacing of the tray support should also be the same as the raceway support spacing unless otherwise noted.

The support requirements are for both the horizontal and vertical configuration unless otherwise noted in a specific system. The supports for both the vertical or horizontal configuration are intended to be the support to the cable/conductor. Cable installed in a vertical raceway is not supported by the raceway. This is in contrast to MI or MC cable, where a support on the

outside of the cable also supports the conductors. The ability of cable to support the equivalent cable weight of the distance specified in Table 300.19 of the NEC (or a lesser distance), without breaking the conductor, and compatibility/mechanical considerations of the support mechanism may be investigated in the test by simulating the weight of the vertical cable run. When so investigated, the vertical distance tested and the support mechanism are detailed in the system.

Compatibility of materials used in fire-rated systems is also a concern. Some materials can provide carbon residue that is conductive, or conductive gases that can cause premature failure. A dedicated raceway is the required configuration unless otherwise noted in the system (such as the option of bare ground wires or insulated ground wires). The bare or insulated ground wire may be of special manufacture to be compatible with the system. The system will specify the manufacturer of an allowable ground wire. If not specified, the ground should be the same as the fire-rated wire described in the system. Use of any other ground wire violates the system fire rating. For example, THHN ground wire should not be used with a fire-rated system unless specified in the system. If a pulling lubricant has been tested with the system, it will be so noted in the system.

These systems are intended to be installed in accordance with all provisions of the NEC and as amended by the details of each individual system (such as type of supports and distance between supports).

Authorities Having Jurisdiction should be consulted as to the specific requirements covering the installation and use of these systems.

RELATED PRODUCTS

Fire-resistive cable with the "CI" marking is also investigated to ANSI/UL 2196 and is covered under Power-limited Fire Alarm Cable (HNIR) and Nonpower-limited Fire Alarm Cable (HNHT).

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic requirements used to investigate systems incorporating cable protected with electrical circuit protective materials in this category are contained in UL Subject 1724, "Outline of Investigation for Fire Tests for Electrical Circuit Protective Systems."

The basic standard used to investigate systems constructed with fire-resistive cable in this category is ANSI/UL 2196, "Tests for Fire Resistive Cables."

UL MARK

System components identified by an (*) in the description text are Classified under the Classification and Follow-Up Service of Underwriters Laboratories Inc. Such components and names of manufacturers who are authorized to apply the Classification Mark are identified under the specific product category.

ELECTRICAL CIRCUIT PROTECTIVE MATERIALS (FHIY)

GENERAL

This category covers electrical circuit protective materials of proprietary composition, intended for installation in accordance with the application instructions provided with the product and as specified on the design card for an individual electrical circuit protective system. Properties of these materials, other than the degree of fire resistance provided to specific electrical wiring systems, have not been investigated.

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is UL Subject 1724, "Outline of Investigation for Fire Tests for Electrical Circuit Protective Systems."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**ELECTRICAL CIRCUIT PROTECTIVE MATERIALS
FOR USE IN ELECTRICAL CIRCUIT PROTECTIVE SYSTEMS
SYSTEM NO. _____
SEE UL BUILDING MATERIALS DIRECTORY
Control No.**

FIRE-RESISTIVE CABLE (FHJR)

USE AND INSTALLATION

This category covers fire-resistive cable, which is insulated electrical cable intended for installation as specified in the individual electrical circuit protective systems. This cable has been investigated for its ability to remain electrically functional during a fire exposure and after the impact, erosion and cooling effect of a water hose stream test.

Fire-resistive Cable (FHJR)—Continued

The cable as used in the specified systems has been investigated and found to comply with applicable electrical requirements.

This cable is intended to be installed in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code."

Authorities Having Jurisdiction should be consulted before installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Circuit Protective Systems (FHIT) and Fire Resistance Ratings (BXRH).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2196, "Tests for Fire Resistive Cables."

Data concerning the insulation resistance and leakage-current performance of the electrical cable during tests conducted in accordance with ANSI/UL 2196 are contained in the test report. Test reports are available from the Classified company.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**FIRE RESISTIVE CABLE

Issue No.**

ELECTRICAL METALLIC TUBING (FJMX)

GENERAL

This category covers electrical metallic tubing manufactured in trade sizes 1/2 to 4 (metric designators 16 to 103) inclusive, for installation of conductors in circuits rated above or below 600 V, nominal, and in accordance with Article 358 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Galvanized steel electrical metallic tubing installed in concrete on grade or above generally requires no supplementary corrosion protection. Galvanized steel electrical metallic tubing in concrete slab below grade level may require supplementary corrosion protection.

In general, galvanized steel electrical metallic tubing in contact with soil requires supplementary corrosion protection. Where galvanized steel electrical metallic tubing without supplementary corrosion protection extends directly from concrete encasement to soil burial, severe corrosive effects are likely to occur on the metal in contact with the soil.

Galvanized steel electrical metallic tubing that is provided with a metallic or nonmetallic coating, or a combination of both, has been investigated for resistance to atmospheric corrosion. Nonmetallic outer coatings that are part of the required resistance to corrosion have been additionally investigated for resistance to the effects of sunlight.

Nonmetallic outer coatings of greater than 0.010-in. thickness are investigated with respect to flame propagation detrimental effects to any underlying corrosion protection, the fit of fittings and electrical continuity of the connection of tubing to fittings.

Galvanized steel electrical metallic tubing with nonmetallic coatings has not been investigated for use in ducts, plenums, or other environmental air spaces in accordance with the NEC.

Galvanized steel electrical metallic tubing with or without a nonmetallic coating has not been investigated for severely corrosive conditions.

Aluminum electrical metallic tubing used in concrete or in contact with soil requires supplementary corrosion protection.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 797, "Electrical Metallic Tubing - Steel," and ANSI/UL 797A, "Electrical Metallic Tubing - Aluminum."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrical Metallic Tubing" (or "EMT").

ELECTRICAL METALLIC TUBING FITTINGS (FKAV)

GENERAL

This category covers electrical metallic tubing fittings from 1/2 to 4 (metric designators 16 to 103) inclusive trade sizes, intended for installation and use in accordance with the following information and the limitations specified in Electrical Metallic Tubing (FJMX).

Indentor Fittings — Indentor-type fittings are for use with metallic-coated electrical metallic tubing only and require a special tool supplied by the manufacturer for proper installation. Diametrically opposed indentor-type tools require two sets of indentations nominally 90° apart. Triple-indent tools require one set of indentations.

Grounding — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Fittings suitable for use in poured concrete or where exposed to rain are so indicated on the device or carton. The term "rain tight," "wet location" or the equivalent on the carton indicates suitability for use where directly exposed to rain. The term "concrete tight" or equivalent on the carton indicates suitability for use in poured concrete.

Fittings have been tested for use only with steel tubing unless marked on the device or carton to indicate suitability for use with aluminum or other material.

CARTON MARKINGS

A fitting that is taped completely (from the raceway to the box, or raceway to raceway) is concrete-tight when the product carton is marked "CONCRETE-TIGHT WHEN TAPED."

ADDITIONAL INFORMATION

For additional information, see Electrical Metallic Tubing (FJMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrical Metallic Tubing Fitting" (or "EMT Fitting"), "Connector" or "Coupling," or other appropriate product name as shown in the individual Listings.

ELECTRICAL NONMETALLIC TUBING (FKHU)

USE AND INSTALLATION

This category covers electrical nonmetallic tubing (ENT) in trade sizes 1/2 to 2 (metric designators 16 to 53) inclusive for installation in accordance with Article 362 of ANSI/NFPA 70, "National Electrical Code" (NEC). This tubing can be installed in residential attics up to 3 feet above the bottom of the ceiling joist.

Fittings — The outside diameters of ENT are such that standard connectors, couplings and outlet boxes for rigid PVC conduit can be employed for ENT that is also constructed of PVC. Installation instructions are provided with each bundle or coil of ENT outlining the procedure to be used when employing cemented-on PVC conduit fittings and outlet boxes. These techniques include the specific cement to be used as well as its application method. Other fittings are covered under Electrical Nonmetallic Tubing Fittings (FKKY).

ENT with mechanical fittings identified for the purpose or with cemented-on fittings is suitable for use in poured concrete.

ENT with cemented-on PVC fittings is suitable for use in:

1. Indoor locations where walls are frequently washed, and
2. Concrete slabs in direct contact with the earth.

PRODUCT MARKINGS

The product is provided with marking on the package, in combination with the UL Listing Mark (every 10 ft), specifying the wire temperature rating, minimum installation temperature of -4°F (-20°C), and maximum ambient temperature 122°F (50°C). Products Listed for 90°C wire insulation is suitable for use with 105°C rated GTO cable in accordance with Section 600-32(b) of the 1996 NEC. The product may be provided with a marking on the package and in combination with the UL Listing Mark (every 10 ft) which reads "105 C GTO Cable." The product may be provided with a marking on the package that reads "For use in residential attics up to 3 feet above the bottom of ceiling joist."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1653, "Electrical Nonmetallic Tubing."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrical Nonmetallic Tubing."

ELECTRICAL NONMETALLIC TUBING FITTINGS (FKKY)

GENERAL

This category covers electrical nonmetallic tubing (ENT) fittings made in trade sizes 1/2 to 2 (metric designators 16 to 53).

CARTON MARKINGS

Unless otherwise marked on the carton, fittings are suitable for use with any Listed ENT of the appropriate trade size. If a fitting is suitable for use with only specific manufacturer's ENT, the smallest unit carton of the fittings identifies the ENT manufacturer(s). This compatibility marking appends any compatibility marking on the fitting carton.

Fittings suitable for use in concrete are identified by a marking on the carton. A fitting that is taped completely (from the raceway to the box or raceway-to-raceway) is concrete-tight, when the product carton is marked "CONCRETE-TIGHT WHEN TAPED."

ADDITIONAL INFORMATION

For additional information, see Electrical Nonmetallic Tubing (FKHU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1653, "Electrical Nonmetallic Tubing."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrical Nonmetallic Tubing Fitting" (or "ENT Fitting").

ELECTRIC DISCHARGE LAMP CONTROL EQUIPMENT (FKOT)

DRIVERS FOR LIGHT-EMITTING-DIODE ARRAYS, MODULES AND CONTROLLERS (FKSZ)

GENERAL

This category covers light-emitting-diode (LED) drivers providing controlled output for an array or module of an LED, or a controller (control module) for an LED. The output may control LEDs connected in parallel or connected in series.

LED drivers are intended for connection to alternating-current-supply branch circuits rated 600 V or less in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), low-voltage supplies, or alternative sources, such as batteries, photovoltaic modules or fuel cells. Cord-and-plug-supply connection or a wiring compartment for direct connection to a branch circuit or other supply source may be provided.

LED drivers are provided with an enclosure and are generally intended for use within suitable enclosures of end-product luminaires or signs.

PRODUCT MARKINGS

LED drivers are marked with:

- a) Input voltage, either the supply (line) voltage or a low voltage (ac or dc)
- b) Input current
- c) Input wattage, power factor or both (optional)
- d) Output maximum voltage
- e) Output current (the maximum current that could be supplied by the driver)
- f) Output wattage, if not equal to the VA (optional)
- g) Output type (isolated or direct)
- h) Environmental location (dry, damp or wet)

The output type is used in determining the type of compatible LED array, a function of LED array construction. Output type "Isolated" refers to the output being electrically isolated from the supply circuit by insulation. Output type "Direct" refers to the output being electrically derived from the supply circuit without a separation by insulation.

LED drivers marked "Class 2" indicate that the output meets the voltage, current, and isolation criteria specified in ANSI/UL 1310, "Class 2 Power

ELECTRIC DISCHARGE LAMP CONTROL EQUIPMENT
(FKOT)Drivers for Light-emitting-diode Arrays, Modules and
Controllers (FKSZ)—Continued

Units," or Article 725 of the NEC, and that Class 2 wiring methods may be used. A driver may have one or more outputs marked "Class 2."

LED drivers marked "Class P" are intended for use in luminaires or signs and are provided with integral protection that prevents driver overheating. This protection has been investigated to the Class P test program in ANSI/UL 935, "Fluorescent-Lamp Ballasts."

LED drivers are marked for environmental locations as defined in the NEC and Electrical Equipment for Use in Ordinary Locations (AALZ). The marking indicates the following uses:

Dry location — Suitable for indoor, dry locations.

Damp (outdoor) location — Suitable for use in (1) luminaires intended for wet or damp locations, (2) wet location signs if the driver is within an overall electrical enclosure, or, (3) other equipment or appliances. The interior of a luminaire or sign intended for wet locations is considered a damp location. The LED drivers are also suitable for indoor use.

Wet location — Suitable for use where water or other liquid can drip, splash, or flow on or against the device. The LED drivers are also suitable for indoor or damp location use.

LED drivers marked "High Power Factor" operate at 90% or higher power factor under the intended operating conditions or otherwise indicate those conditions that result in less than 90% power factor. Drivers marked "Power Factor Corrected" indicates the value of the power factor.

RELATED PRODUCTS

Additional LED drivers may also be covered under:

Direct-plug-in and Cord-connected Class 2 Power Units (EPBU)
Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)
Power Supplies, General Purpose (QQFU)
Sign Accessories (UYMR2)

LEDs arrays, modules and controllers are also covered under:

Light-emitting-diode Arrays, Modules and Controllers (OOQA2)
Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 935, "Fluorescent-Lamp Ballasts," in addition to the requirements contained in UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "LED Driver."

FLUORESCENT LAMP BALLASTS (FKVS)**GENERAL**

This category covers fluorescent lamp ballasts for both alternating and direct current. The ballasts are high-frequency electronic, resistor, choke (reactor) coil, or transformer of the isolating or auto type, and are for controlling the starting and operating voltages and currents of a fluorescent lamp. These ballasts are intended for connection in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), to branch circuits rated 600 V or less. The output voltages are 2500 V or less.

Ballasts are investigated with their respective lamps and lampholders to determine the risk of electric shock during relamping.

Ballasts are generally provided with an enclosure but may be an open core-and-coil construction if the ballast is a simple-reactance type or an electronic type with various openings. Ballasts with openings are intended for use within suitable enclosures.

Some ballasts exhibit an inrush of current at the moment of initial operation, unless internal circuitry is provided to minimize the inrush. The inrush is similar to that exhibited in tungsten-filament incandescent lighting. Accordingly, it is recommended that lighting controls meet the tungsten-load requirement or be rated for use with the ballast in order to minimize incompatibility. (Refer to the particular lighting control category for more information on how the controls are marked regarding tungsten inrush.)

PRODUCT MARKINGS

Ballasts marked "Class P" are intended for use in luminaires or signs and provided with integral protection that prevents ballast overheating. This protection has been investigated to the Class P test program in ANSI/UL 935, "Fluorescent-Lamp Ballasts."

Ballasts marked "High Power Factor" operate at 90% or higher power factor under the intended operating conditions or otherwise indicate those conditions that result in less than 90% power factor. Ballasts marked "Power Factor Corrected" indicate the value of the power factor.

ELECTRIC DISCHARGE LAMP CONTROL EQUIPMENT (FKOT) 129

Fluorescent Lamp Ballasts (FKVS)—Continued

Ballasts are marked with an output voltage when the output is over 300 V. The output voltage will be the maximum voltage existing between any two lead wires. Ballasts may additionally be marked with the maximum voltage to ground when it would aid in selecting lampholders. The voltage to ground will be the maximum voltage existing in any one lampholder and should be less than the rating of the lampholder.

Ballasts marked "For Use in Portable Lamps" have an output voltage of 150 V or less and are intended for use in portable luminaires without grounding.

Ballasts marked "For Use in Permanently Connected (or Fixed) Equipment Only" are not intended for cord-connected equipment.

Ballasts marked "Type CC" are intended for use in commercial cabinets, either refrigerated or nonrefrigerated, and where the ballast circuit is designed to minimize arcing within the lampholder in the event lamps become loose in their lampholders.

Ballasts marked "Type HL" are intended for use in luminaires in Class I, Division 2 hazardous (classified) locations as defined in Article 500 of the NEC.

Ballasts with a nonmetallic enclosure and marked "Suitable for Air Handling Spaces" have enclosures that may be used in environmental air spaces as defined in Section 300.22(C)(2) of the NEC. These products have been investigated in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces."

Ballasts suitable for dimming fluorescent lamps are marked to indicate such use and, unless the dimming control leads are marked for connection to a Class 2 limited-energy circuit, the ballast is additionally marked with the catalog number of the dimming control for which the ballast is listed.

Fluorescent lamp ballasts are restricted in use as indicated below:

Indoor Ballasts — Indoor ballasts are suitable for use in indoor, dry locations only.

Outdoor Ballasts:

Type 1 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) outdoor signs if the ballasts are within an overall electrical enclosure. Ballasts of this type are marked "Type 1 Outdoor" or "Type 1."

These ballasts are also suitable for indoor use.

Type 2 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) outdoor signs if the ballasts, in addition to their own enclosure, are within an overall enclosure. Ballasts of this type are marked "Type 2 Outdoor" or "Type 2." These ballasts are also suitable for indoor use.

Weatherproof Ballasts — Weatherproof ballasts are suitable for use where completely exposed to the weather without an additional enclosure and are marked "Weatherproof" or "WP." These ballasts are suitable for indoor and outdoor use.

RELATED PRODUCTS

Devices for controlling HID lamps are covered under High-intensity-discharge Lamp Ballasts (FLCR).

Suitable controls intended for use with ballasts for dimming fluorescent lamps are covered under Dimmers, General Use Switch (EOYX) and Dimmers, Commercial (EOXT).

Ballasts within an integral enclosure with a compact fluorescent lampholder and a bi-pin or screw base are covered under Lamps, Self-Ballasted and Lamp Adapters (OOLR).

Devices for controlling electric sign gas tubes are covered under Neon Transformers and Power Supplies (PWIK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 935, "Fluorescent-Lamp Ballasts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fluorescent Lamp Ballast," or other appropriate product name as shown in the individual Listings.

**HIGH-INTENSITY-DISCHARGE LAMP
BALLASTS (FLCR)****GENERAL**

This category covers high-intensity-discharge (HID) lamp ballasts. The ballasts are high-frequency electronic, choke (reactor) coil, or transformer of the isolating or auto type, and are for controlling the starting and operating voltages and currents of one or more of the following lamp types: mercury vapor, metal halide, high-pressure sodium and low-pressure

**ELECTRIC DISCHARGE LAMP CONTROL EQUIPMENT
(FKOT)**

130

High-intensity-discharge Lamp Ballasts (FLCR)—Continued

sodium. These ballasts are intended for connection in accordance with ANSI/NFPA 70, "National Electrical Code," to branch circuits rated 600 V or less. The output voltages are 1000 V or less.

PRODUCT MARKINGS

Ballasts intended for remote mounting in recessed installations are: (1) thermally protected, (2) marked "Thermally Protected" or the equivalent, and (3) marked "Suitable for Recessed Use." These ballasts are intended to be installed in uninsulated or insulated ceilings with all insulation kept a minimum distance of 3 in. from the sides of the ballasts and not placed over the ballasts such that it would entrap the heat produced by the ballasts. The ballasts are provided with thermal protection to deactivate the ballasts should insulation be placed over or in contact with the ballasts.

Ballasts not intended for recessed installations may be provided with thermal protection. If the ballasts are provided with thermal protection, they are marked "Thermally Protected" or the equivalent. The effectiveness of such protection must be investigated in combination with the specific luminaire with which the ballast is used.

HID lamp ballasts are restricted in use as indicated below:

Indoor Ballasts — Indoor ballasts are suitable for use in indoor, dry locations only.

Outdoor Ballasts:

Type 1 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) an outdoor sign if the ballasts are within an overall electrical enclosure. Ballasts of this type are marked "Type 1 Outdoor" or "Type 1." These ballasts are also suitable for indoor use.

Type 2 outdoor ballasts are suitable for use in (1) outdoor equipment, (2) luminaires intended for wet or damp locations, or (3) an outdoor sign if the ballasts, in addition to their own enclosure, are within an overall enclosure. Ballasts of this type are marked "Type 2 Outdoor" or "Type 2." These ballasts are also suitable for indoor use.

Weatherproof Ballasts — Weatherproof ballasts are suitable for use where completely exposed to the weather without an additional enclosure and are marked "Weatherproof" or "WP." These ballasts are suitable for indoor and outdoor use.

RELATED PRODUCTS

Components associated with HID ballasts, such as lamp ignitors and other accessories, are covered under Electric Discharge Lamp Control Equipment, Specialty (FNFT2).

Devices for controlling fluorescent lamps are covered under Fluorescent Lamp Ballasts (FKVS).

Devices for controlling electric sign gas tubes are covered under Neon Transformers and Power Supplies (PWIK).

Power capacitors provided with HID ballasts are covered under Capacitors (CYWT2) or Capacitors, Construction Only (CZDS2); or the capacitor has been investigated as a part of the ballast.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1029, "High-Intensity-Discharge Lamp Ballasts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ballast" or "Mercury Lamp Ballast," or other appropriate product name as shown in the individual Listings.

**HOLDERS FOR AUTOMATIC STARTERS
(FLPZ)**
USE

This category covers separate holders for automatic starters that are intended for use with electric discharge (fluorescent) lamps. Unless otherwise noted, they are rated 660 W, 250 V.

RELATED PRODUCTS

Holders in combination with or designed to be assembled with lampholders are covered under Lampholders, Electric Discharge, 1000 V or Less (OKCT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing

and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Starter Holder."

STARTERS, AUTOMATIC (FMDX)
USE

This category covers automatic starters intended for use with electric discharge (fluorescent) lamps.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 542, "Fluorescent Lamp Starters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automatic Starter" or "Fluorescent Lamp Starter," or other appropriate product name.

STARTERS, MANUAL (FMRV)
USE

This category covers manual starter switches, and combinations of manual starter switches with line switches, intended for use with electric discharge (fluorescent) lamps.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 542, "Fluorescent Lamp Starters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manual Starter" or "Fluorescent Lamp Starter," or other appropriate product name.

**ELECTRIC DISCHARGE LAMP CONTROL
EQUIPMENT, SPECIALTY (FNFT)**
GENERAL

This category covers ballasts for special industrial lamps, controls for auxiliary tungsten lamps, electromagnetic interference filters, fluorescent ballast and lamp power reducers, fluorescent lamp life extenders, high-intensity-discharge (HID) lamp high-low dimmers, HID lamp ignitors, time-out circuits for HID lamp ballasts, and related devices. These devices are for factory or field installation, in accordance with their installation instructions, into Listed luminaires employing discharge lamps.

Fluorescent power-reducer devices are limited to installation only in luminaires employing thermally-protected ballasts, and are marked as such. The devices are designed for high-power-factor rapid-start ballasts, or high-power-factor instant-start ballasts, and marked as appropriate, unless marked for additional ballast types. These devices have not been investigated for use on emergency lighting equipment or with dimming ballasts, unless marked otherwise.

HID lamp high-low dimmers are limited to installation only in or with luminaires employing the lamp wattage and type, together with the ballast type and capacitor rating agreeing with the installation instructions provided with the dimmer.

RELATED PRODUCTS

Devices for controlling HID lamps are covered under High-intensity-discharge Lamp Ballasts (FLCR).

Devices for controlling fluorescent lamps are covered under Fluorescent Lamp Ballasts (FKVS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1029, "High-Intensity-Discharge Lamp Ballasts," or ANSI/UL 935, "Fluorescent-Lamp Ballasts," or the requirements contained in UL Subject 1029A, "Outline of Investigation for Ignitors and Related Auxiliaries for HID Lamp Ballasts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

ELECTRIC LAMP CONTROL
EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (FNTR)BALLASTS FOR USE IN HAZARDOUS
LOCATIONS (FOGZ)

USE

This category covers alternating-current ballasts for high-intensity-discharge lamps. The power factor indicated can be considered as the approximate power factor under normal operating conditions.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ballast for Use in Hazardous Locations."

ELECTRICALLY CONDUCTIVE
CORROSION-RESISTANT
COMPOUNDS (FOIZ)

USE

This category covers electrically conductive corrosion-resistant compounds for use on the threads of rigid metal conduit (RMC) and intermediate metal conduit (IMC). The compounds resist corrosion and provide electrical conductivity in accordance with Section 300.6(A) of ANSI/NFPA 70, "National Electrical Code", when used in accordance with the manufacturer's installation instructions.

These compounds have not been investigated for use in hazardous (classified) locations.

Reference should be made to the product label located on the smallest unit container for specific instructions as to the proper use of the compound.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2419, "Outline of Investigation for Electrically Conductive Corrosion Resistant Compounds."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Corrosion Resistant Compound."

ELECTROMAGNETIC INTERFERENCE
FILTERS (FOKY)

GENERAL

This category covers electromagnetic interference (EMI) filters factory installed in equipment connected to 600 V or lower potential circuits, and installed in accordance with ANSI/NFPA 70, "National Electrical Code."

ELECTROMAGNETIC INTERFERENCE FILTERS (FOKY) 131

Such filters are used to attenuate unwanted radio-frequency signals (such as noise or interference) generated from electromagnetic sources. These filters consist of capacitors and inductors used alone or in combination with each other and may be provided with resistors.

Included in this category are cord-connected filters, direct plug-in filters and facility filters.

This category does not cover transient-voltage surge suppressors (that is, devices for repeated limiting of voltage surges on power circuits such as silicone avalanche diodes, metal oxide varistors, and spark-gaps), or EMI filters for outdoor use.

Filter Types

Filters are designated one of the following types:

Cord-connected Filter — A filter provided with a supply cord having an attachment plug for connecting the filter to a branch circuit receptacle. It is also provided with a receptacle for distribution of the filtered voltage to an external (appliance or other equipment) load.

Direct Plug-in Filter — A filter provided with blades at the filter body that plug directly into a 15 A, 120 V branch circuit receptacle. It is also provided with a receptacle for the distribution of the filtered voltage to an external (appliance or other equipment) load.

Facility Filter — A filter installed as part of the service, feeders, or branch circuitry of a building wiring system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1283, "Electromagnetic Interference Filters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cord-connected EMI Filter," "Direct Plug-in EMI Filter" or "Facility EMI Filter."

ELECTROMAGNETS FOR USE IN
HAZARDOUS LOCATIONS (FOOM)

USE AND INSTALLATION

This category covers electromagnets, including electromagnetic separators, used to generate magnetic fields.

Special care should be taken to ensure suspended electromagnets are installed in accordance with the manufacturer's instructions, and that they are suspended from beams or cables with adequate strength.

Some types of electromagnetic separators use moving belts to move items out of the magnetic field. Special care should be taken to ensure that these products are installed in accordance with the manufacturer's instructions, and that guarding is provided on moving parts in accordance with local codes.

RELATED PRODUCTS

Electromagnetic interference filters used to attenuate unwanted radio frequency signals are covered under Electromagnetic Interference Filters (FOKY).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electromagnet for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

ELEVATOR EQUIPMENT (FQKR)

This category covers elevator controls and accessories, elevator control panels, elevator relays, elevator switches, elevator door-locking devices and contacts, passenger elevator car enclosures, and elevator oil buffers.

ELEVATOR CONTROLS AND ACCESSORIES (FQMW)

This category covers accessories and controllers for use in elevator applications and it includes elevator accessories such as push buttons, indicator lights, lighting fixtures and elevator controls such as power supplies (motor and door operators).

Equipment evaluated in accordance with the requirements of the American National Standard Safety Code for Elevators and Escalators, ASME A17.1, and American National Standard Safety Code for Elevator and Escalator Electrical Equipment, ANSI/ASME A17.5, is marked to that effect.

Some devices are open type (without enclosures). This means that such devices are for use as parts of Listed equipment where the acceptability of the combination has been determined by Underwriters Laboratories Inc. or where open type devices are acceptable.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 508 "Industrial Control Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word, "LISTED", a control number, and the following product name: "Elevator Control", "Elevator Accessory". Products additionally evaluated ANSI/ASME A17.1 and ANSI/ASME A17.5 may also be marked: "Also Evaluated In Accordance With ANSI/ASME A17.1 - (DATE) and A17.5 - (DATE)".

ELEVATOR CONTROL PANELS (FQPB)

USE

This category covers elevator control panels consisting of assemblies of equipment intended to control elevators, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment.

ADDITIONAL INFORMATION

For additional information, see Elevator Equipment (FQKR), Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product name "Open Elevator Control Panel" or "Enclosed Elevator Control Panel," and Statement No. 1 or No. 2 as applicable.

Statement No. 1: "As to electrical shock and fire hazard only. Classification does not include evaluation with respect to ANSI/ASME A17.1 or A17.5."

Statement No. 2: "As to electrical shock and fire hazard, and in accordance with ANSI/ASME A17.1 (date) and A17.5 (date)."

Equipment that has been investigated with respect to electrical shock and fire hazard only is marked with Statement No. 1.

Equipment that has been investigated in accordance with the requirements of ANSI/ASME A17.1, "American National Standard Safety Code for Elevators and Escalators" and ANSI/ASME A17.5, "American National Standard Safety Code for Elevator and Escalator Electrical Equipment" is marked with Statement No. 2.

ELEVATOR DOOR-LOCKING DEVICES AND CONTACTS (FQXZ)

GENERAL

This category covers devices designed for installation and operation in accordance with the requirements of the Safety Code for Elevators, Dumbwaiters, and Escalators and Moving Walks (ANSI/ASME A17.1).

Elevator hoist way door interlocks are intended to prevent the operation of the driving machine by the normal operating device unless the hoist way door is locked in the closed position, and to prevent the opening of the hoist way door from the landing side unless the car is within the landing zone and is either stopped or being stopped.

Retiring cams are not covered by these listings, and their acceptability must be determined at the point of installation by the Authority Having Jurisdiction.

Elevator hoist way door combination mechanical locks and electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the hoist way door is in the closed position, and to lock the hoist way door in the closed position and prevent it from being opened from the landing side unless the car is within the landing zone.

Elevator Door-locking Devices and Contacts (FQXZ)—Continued

Elevator hoist way door, car door or gate electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the door or gate is in the closed position.

These devices are investigated for misalignment conditions when properly installed as recommended by the manufacturer. Their acceptability is to be determined at the point of installation by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 104, "Elevator Door Locking Devices and Contacts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Elevator Interlock," "Elevator Interlock Retiring Cam Required," "Elevator Combination Mechanical Lock and Electric Contact," "Elevator Electric Contact," or other appropriate product name as shown in the individual Listings.

ELEVATOR OIL BUFFERS (FQZD)

These products are intended for installation under elevator cars having a rated speed in excess of 50 ft/min in order to stop a descending car beyond its normal limit of travel. They have been classified in accordance with the American National Safety Code For Elevators, Dumbwaiters, Escalators and Moving Walks (ANSI/ASME A17.1), paragraph 201.4g.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 104, "Elevator Door Locking Devices and Contacts".

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. (shown below) is the only method provided by Underwriters Laboratories Inc. to identify products which have been produced under its Classification and Follow-Up Service.

**CLASSIFIED BY UNDERWRITERS LABORATORIES INC.®

(CONTROL NUMBER)**

ELEVATOR SWITCHES (FRAH)

USE AND INSTALLATION

This category covers switches intended for use with elevator system cars or shafts. The switches are designed for installation and operation in accordance with ASME A17.1, "Safety Code for Elevators and Escalators."

These switches have been investigated for proper operation when installed as recommended by the manufacturer. Their acceptability is determined at the point of installation by the Authority Having Jurisdiction.

RELATED PRODUCTS

Elevator door-locking devices and contacts are covered under Elevator Door-locking Devices and Contacts (FQXZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 104, "Elevator Door Locking Devices and Contacts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Elevator Limit Switch" or "Elevator Slack Cable Switch," or other appropriate product name as shown in the individual Listings.

PASSENGER ELEVATOR CAR ENCLOSURES (FRBK)

GENERAL

This category covers passenger elevator car enclosures, which are factory-built assemblies of wall and ceiling panels intended to be secured to a car platform.

These factory-built enclosures incorporate materials and equipment such as decorative panels, suspended ceilings and luminaires which, after installation, may not be accessible for inspection at the installation site.

ELEVATOR EQUIPMENT (FQKR)

Passenger Elevator Car Enclosures (FRBK)—Continued

These factory-built enclosures may be shipped disassembled.

This category does not cover freight car enclosures, enclosures having glass panels in excess of 1 sq ft in area, enclosures having gates, weights, vertically sliding car doors, or padded linings for temporary use in passenger cars during the handling of freight.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Equipment investigated after March 23, 2001 has been investigated to the applicable paragraphs of Section 2.14 of the edition of ANSI/ASME A17.1, "Safety Code for Elevators and Escalators," noted in the individual Classifications.

Equipment investigated prior to March 23, 2001 has been investigated to Section 204 of the edition (1996 or earlier) of ANSI/ASME A17.1 noted in the individual Classifications.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**PASSENGER ELEVATOR CAR ENCLOSURE
IN ACCORDANCE WITH THE AMERICAN NATIONAL STANDARD
SAFETY CODE FOR ELEVATORS AND ESCALATORS
ANSI/ASME A17.1 [date of standard] SECTION 204
or**

**PASSENGER ELEVATOR CAR ENCLOSURE
IN ACCORDANCE WITH THE AMERICAN NATIONAL STANDARD
SAFETY CODE FOR ELEVATORS AND ESCALATORS
ANSI/ASME A17.1 [date of standard], SECTION 2.14**

The Classification Mark for passenger elevator car enclosures appears on the upper surface of the top of the car enclosure. Each knocked-down part of the enclosure bears the supplementary statement "Knock down Enclosure Part for Classified Elevator Enclosure."

ELEVATOR EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FRZV)

This category covers hoistway door interlocks, hoistway limit switches, hoistway-door combination mechanical locks and electric contacts, hoistway-door or car door or gate electric contacts, and elevator control panels.

ELEVATOR CONTROL PANELS FOR USE IN HAZARDOUS LOCATIONS (FSNA)**USE**

This category covers elevator control panels consisting of assemblies of equipment intended to control elevators, dumbwaiters, escalators, moving walks, inclined lifts, and their associated equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

Where indicated in the individual Classifications, elevator control panels have also been investigated to ANSI/ASME A17.1, "Safety Code for Elevators and Escalators," and ANSI/ASME A17.5, "Elevator and Escalator Electrical Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**ELEVATOR CONTROL PANEL FOR USE IN HAZARDOUS LOCATIONS
AS TO ELECTRICAL SHOCK AND FIRE HAZARD ONLY
Issue No.**

Where indicated in the individual Classifications, the Classification Mark will also include the statement:

**ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/ASME A17.1-(date)
AND ANSI/ASME A17.5-(date)**

ELEVATOR EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FRZV)

133

ELEVATOR DOOR-LOCKING DEVICES AND CONTACTS FOR USE IN HAZARDOUS LOCATIONS (FSNT)**GENERAL**

This category covers devices designed for use in elevators and intended for installation and operation in accordance with the requirements of ANSI/ASME A17.1, "Safety Code for Elevators and Escalators."

Elevator hoistway door interlocks are intended to prevent the operation of the driving machine by the normal operating device unless the hoistway door is locked in the closed position, and to prevent the opening of the hoistway door from the landing side unless the car is within the landing zone and is either stopped or being stopped.

Interlocks that do not require the use of a retiring cam bear the product name (A) under **UL MARK**.

Interlocks that require the use of a retiring cam bear the product name (B) under **UL MARK**.

This category does not cover retiring cams. Their acceptability must be determined at the point of installation by the Authority Having Jurisdiction.

Elevator hoistway door combination mechanical locks and electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the hoistway door is in the closed position, and to lock the hoistway door in the closed position and prevent it from being opened from the landing side unless the car is within the landing zone. These locks and contacts bear the product name (C) under **UL MARK**.

Elevator hoistway door, car door or gate electric contacts are intended to prevent operation of the driving machine by the normal operating device unless the door or gate is in the closed position. These contacts bear the product name (D) under **UL MARK**.

These devices have been investigated for misalignment conditions when properly installed as recommended by the manufacturer. Their acceptability is to be determined at the point of installation by the Authority Having Jurisdiction.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate:

- (A) "Elevator Interlock for Hazardous Locations"
- (B) "Elevator Interlock for Hazardous Locations – Retiring Cam Required"
- (C) "Elevator Combination Mechanical Lock and Electric Contact for Hazardous Locations"
- (D) "Elevator Electric Contact for Hazardous Locations"

ELEVATOR EQUIPMENT RELATING TO HAZARDOUS LOCATIONS (FSRA)**ELEVATOR CONTROL PANELS RELATING TO HAZARDOUS LOCATIONS (FSSA)****GENERAL**

This category covers elevator control panels consisting of assemblies of equipment intended to control elevators, dumbwaiters, escalators, moving walks, inclined lifts, and their associated equipment.

Elevator control panels relating to hazardous locations are intended for installation in unclassified locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and

ELEVATOR EQUIPMENT RELATING TO HAZARDOUS LOCATIONS (FSRA)

Elevator Control Panels Relating to Hazardous Locations (FSSA)—Continued

other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it non-intrinsically safe.

The investigation of elevator control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Elevator control panels for use in hazardous (classified) locations are covered under Elevator Control Panels for Use in Hazardous Locations (FSNA).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 698A, "Industrial Control Panels Relating to Hazardous (Classified) Locations."

Where indicated in the individual Classifications, elevator control panels have also been investigated to ANSI/ASME A17.1, "Safety Code for Elevators and Escalators," and ANSI/ASME A17.5, "Elevator and Escalator Electrical Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELEVATOR CONTROL PANEL RELATING TO HAZARDOUS LOCATIONS

WITH INTRINSICALLY SAFE CIRCUIT EXTENSIONS AS TO ELECTRICAL SHOCK AND FIRE HAZARD ONLY

Issue No.

Where indicated in the individual Classifications, the Classification Mark will also include the statement:

ALSO CLASSIFIED IN ACCORDANCE WITH ANSI/ASME A17.1-(date)
AND ANSI/ASME A17.5-(date)

EMERGENCY LIGHTING AND POWER EQUIPMENT (FTBR)

USE

This category covers electrical emergency lighting and power equipment for use in accordance with ANSI/NFPA 101, "Life Safety Code," Article 700 of ANSI/NFPA 70, "National Electrical Code," and the "International Building Code" (IBC).

Emergency power equipment is intended to supply sufficient electrical energy for emergency luminaire operation, or to distribute and manage the electrical energy for emergency luminaires from a remote emergency supply source. Emergency power equipment with batteries has a test switch and visible or audible indicators to report the readiness of the emergency supply.

Emergency lighting equipment is intended to illuminate the means of egress, or means of egress signage, under both normal and emergency conditions.

Equipment may contain both emergency power and lighting capability, or may provide only one of the two functions.

PRODUCT TYPES

This category covers emergency luminaires, exit signs, unit equipment, inverters, central station battery systems, load control relays, and related accessories that directly facilitate or supplement the function of these devices.

This category also includes inverter/charger packs intended for factory or field installation in UL Listed luminaires. These inverter/charger packs have been investigated by UL to determine that when installed in accordance with the manufacturer's instructions they do not adversely affect the operation of the installed luminaire. Electrical ratings, lamp compatibility, and wiring diagrams are marked on the packs and/or identified in the instructions provided. Inverter/charger packs are not suitable for installation in sealed or gasketed compartments unless investigated and marked for such applications.

RATINGS

All products have been investigated for use in dry locations only unless marked as suitable for damp or wet locations. Products marked as suitable for indoor damp or wet locations have not been investigated for UV exposure. All products have been investigated for use in ambient temperatures of 20 – 30°C (68 – 86°F) unless otherwise marked with an extended use temperature range.

Emergency power equipment with batteries provides 90 minutes (or more, if so marked) of rated operating power for emergency lighting equipment

EMERGENCY LIGHTING AND POWER EQUIPMENT (FTBR)

(integral or remote) sufficient to meet the illuminance performance requirements of ANSI/NFPA 101 and the IBC, when installed as part of a facility's emergency lighting system.

Exit signs have been investigated for visibility from 100 ft unless marked with a maximum viewing distance of 50 or 75 ft.

Exit signs investigated for installation near floor level have been subjected to an impact test and are marked "Suitable for Floor Proximity Installation."

RELATED PRODUCTS

Exit signs intended for connection to a single source of power only are covered under Exit Fixtures (FWBO). Exit signs with no connection to a source of electrical power are covered under Exit Signs, Self-luminous and Photoluminescent (FWBX).

Equipment intended to provide light or power when normal (utility) power is not available, but that has not been investigated for compliance with the applicable power or illumination performance requirements of ANSI/NFPA 101 or the IBC, is covered under Lighting and Power Equipment, Auxiliary (OUST).

Kits intended to convert exit signs from one type of internal light source to another are covered under Exit Sign Conversion Kits (FWCF) or Exit Sign Retrofit Kits (GGET).

Emergency lighting and power equipment intended for use on marine vessels is covered under Luminaires, Emergency Lighting, Marine (IGTC).

Equipment intended to transfer utilization equipment from the normal (utility) supply to an emergency supply, and back again, is covered under Automatic Transfer Switches for use in Emergency Systems (WPWR).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 924, "Emergency Lighting and Power Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Emergency Lighting Equipment" (or "Emer. Light Eq."), "Emergency Power Equipment" (or "Emer. Power Eq.") or "Emergency Lighting and Power Equipment" (or "Emer. Light & Power Eq.").

ENGINE GENERATORS (FTCA)

This category covers electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel fueled internal combustion engines, including microturbines. The products are provided as integrated systems rated 600 V or less and may be intended for portable, permanent or mobile installations. The systems are arranged to facilitate installation and use in unclassified (ordinary) locations in accordance with ANSI/NFPA 70, "National Electrical Code."

ENGINE GENERATORS FOR PORTABLE USE (FTCN)

GENERAL

This category covers internal-combustion-engine-driven generators rated 15 kW or less, 250 V or less, which are provided only with receptacle outlets for the ac output circuits. The generators may incorporate alternating- or direct-current generator sections for supplying energy to battery-charging circuits.

When a portable generator is used to supply a building wiring system:

1. The generator is considered a separately derived system in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).
2. The generator is intended to be connected through a permanently installed Listed transfer switch that switches all conductors other than the equipment grounding conductor.
3. The frame of a Listed generator is bonded to the grounding conductor of the generator. When properly connected to a building structure, the portable generator will be bonded to the building grounding electrode. Portable generators used other than to power building structures are intended to be bonded to ground in accordance with the NEC.

RELATED PRODUCTS

Engine generators intended for use in recreational vehicles are covered under Engine Generators for Recreational Vehicles (FTCZ).

Engine generators intended for stationary use are covered under Engine Generators (FTSR).

Engine generators for use in marine craft are covered under Engine-Generator Sets, Marine (FTSW).

Wind-driven generators are covered under Wind Turbine Generating System Subassemblies (ZGZ).

Motor generator sets and flywheel energy storage systems are covered under Motor-Generator Sets (PQYW).

Generators, also referred to as generator heads or alternators, intended for use in an engine generator are covered under Generators (JZGZ).

ENGINE GENERATORS (FTCA)

Engine Generators for Portable Use (FTCN)—*Continued*

ADDITIONAL INFORMATION

For additional information, see Engine Generators (FTCA), Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2201, "Outline of Investigation for Portable Engine-Generator Assemblies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Engine Generator for Portable Use."

ENGINE GENERATORS FOR RECREATIONAL VEHICLES (FTCZ)

GENERAL

This category covers electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal combustion engines. The systems are intended for installation in recreational vehicles.

Listed engine generators for recreational vehicles are investigated for compliance with the requirements of ANSI A198.1, "Safety Standard for Engine Generator Sets for Recreational Vehicles."

RELATED PRODUCTS

Engine generators intended for portable use are covered under Engine Generators for Portable Use (FTCN). Engine generators for use in marine craft are covered under Engine-Generator Sets, Marine (FTSW). Wind-driven generators are covered under Wind Turbine Generating Systems (ZGXW). Motor generator sets and flywheel energy storage systems are covered under Motor Generator Sets (PQYW). Generators, also referred to as generator heads or alternators, intended for use in an engine generator are covered under Generators (JZGZ).

ADDITIONAL INFORMATION

For additional information, see Engine Generators (FTCA), Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1248, "Engine-Generator Assemblies for Use in Recreational Vehicles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Engine Generator for Recreational Vehicles."

EMERGENCY LIGHTING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FTEV)

USE

This category covers automatic transfer switches designed for control of emergency lighting and power circuits in hazardous locations as required by Articles 500 – 503 and 700 of ANSI/NFPA 70, "National Electrical Code." The lighting circuit ratings do not exceed 250 V for tungsten lamps. The investigation of automatic transfer switches includes the determination of their suitability for transferring the load from a normal supply circuit to an immediately available emergency supply circuit.

This category also covers unit equipment, but not separate lamp heads or lighting fixtures (luminaires).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 924, "Emergency Lighting and Power Equipment," and ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Emergency Lighting Equipment for Use in Hazardous Locations."

EMERGENCY LIGHTING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (FTEV)

135

EMERGENCY LIGHTING EQUIPMENT FITTINGS FOR USE IN HAZARDOUS LOCATIONS (FTGT)

GENERAL

This category covers subassemblies of emergency lighting equipment fittings intended for final assembly into a unit in the field in accordance with the manufacturer's installation instructions.

Information restricting the use of these fittings is marked on the fitting or provided with the fitting.

The lighting circuit ratings do not exceed 250 V for tungsten lamps.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations," and Articles 500 – 503 and 700 of ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Emergency Lighting Equipment, Fittings, for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

EMERGENCY LIGHTING EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FTHR)

GENERAL

This category covers automatic transfer switches designed for control of emergency lighting and power circuits as required by Articles 500, 505 and 700 of ANSI/NFPA 70, "National Electrical Code." The lighting circuit ratings do not exceed 250 V for tungsten lamps. The investigation of automatic transfer switches includes the determination of their suitability for transferring the load from a normal supply circuit to an immediately available emergency supply circuit.

This category also covers unit equipment, but not separate lamp heads or lighting fixtures (luminaires).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 924, "Emergency Lighting and Power Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Emergency Lighting Equipment for Use in Hazardous Locations" or "Emergency Fluorescent Lighting Fixture for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

ENCLOSURES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FTQH)

GENERAL

This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with ANSI/NFPA 70, "National Electrical Code": Class I, Zone 0, 1 and 2.

This category covers only the enclosures. Devices that may be contained within these enclosures are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

**ENCLOSURES FOR USE IN ZONE CLASSIFIED
HAZARDOUS LOCATIONS (FTQH)**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory) and the following additional information:

**ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS
AS TO EXPLOSION AND FIRE HAZARD ONLY**
Control No.

**ENCLOSURES FOR METERING
EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (FTRQ)**
GENERAL

This category covers enclosures intended to house low-temperature metering equipment with no normally arcing or sparking parts in the hazardous location classes and groups indicated on the product, and as defined in ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosure for Metering Equipment for Use in Hazardous Locations."

**ENCLOSURES FOR USE IN
HAZARDOUS LOCATIONS (FTRV)**
GENERAL

This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with ANSI/NFPA 70, "National Electrical Code": Class I, Groups A, B, C and D; Class II, Groups E, F and G; and Class II, Groups F and G, Division 2 only.

This category covers only the enclosures. Devices that may be contained within these enclosures are not covered under this category.

Unless otherwise noted in the individual Classifications, enclosures are evaluated for enclosing electrical equipment intended for connection to circuits having a maximum available fault current of 10,000 rms symmetrical amperes.

RELATED PRODUCTS

Certain enclosures in this category have also been investigated for use aboard marine vessels in accordance with United States Coast Guard (USCG) Electrical Engineering Regulations 46CFR110, "General Provisions," 46CFR111, "Electrical Systems – General Requirements," 46CFR112, "Emergency Lighting and Power Systems," and 46CFR113, "Communication and Alarm Systems and Equipment." Such enclosures are identified by a Marine Listing Mark. Enclosures marked "For Use On Vessels Over 65 Feet" have not been subjected to shock and vibration tests. Enclosures that have been subjected to shock and vibration tests are not marked with a vessel length limitation and may be used on any size vessel.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate explosion-proof and dust-ignition-proof enclosures in this category is ANSI/UL 1203, "Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations."

The basic standard used to investigate dust-tight enclosures for Class II, Groups F and G, Division 2 is UL 1604, "Electrical Equipment for Use in Class I and II, Division 2, and Class III Hazardous (Classified) Locations," or ANSI/ISA-12.12.01, "Nonincendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations."

ENCLOSURES FOR USE IN HAZARDOUS LOCATIONS (FTRV)

UL Subject 2062, "Outline of Investigation for Enclosures for Use in Hazardous (Classified) Locations," is also used to investigate explosion-proof, dust-ignition-proof and dust-tight enclosures.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory) and the following additional information:

**ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS
AS TO EXPLOSION AND FIRE HAZARD ONLY**
Control No.

**ENCLOSURE ACCESSORIES FOR
USE IN HAZARDOUS LOCATIONS
(FTRX)**
GENERAL

This category covers enclosure bodies, flat, domed or window covers, window assemblies, threaded extensions, actuation mechanisms and similar subassemblies of enclosures. They are intended to be assembled at the factory or in the field to form a complete explosion-proof or dust-ignition-proof enclosure. Restrictions on the use and assembly of these devices are marked on each part.

RELATED PRODUCTS

ENERGY USAGE MONITORING SYSTEMS (FTRZ)

USE

This category covers products intended for use in metering of utility and nonutility electric power. The primary function of these devices is to monitor power consumption on a building main supply or separate branch circuits. These devices may communicate with other devices by means of power line carrier, satellite/radio frequency, telephone, cable or other means. Devices suitable for outdoor use are so marked.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 916, "Energy Management Equipment."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of watt-hour meters for use in metering of utilities that not only meet the appropriate requirements of UL but also have been investigated in accordance with standards or parts detailed below from the American National Standards Institute (ANSI):

1. ANSI/NEMA C12.1+, "Code for Electricity Metering"
 2. ANSI/NEMA C12.10+, "Physical Aspects of Watthour Meters"
 3. ANSI/NEMA C12.11+, "Instrument Transformers for Revenue Metering, 10 kV BIL through 350 kV BIL (0.6 kV NSV through 69 kV NSV)"
 4. ANSI/NEMA C12.20+, "Electricity Meters - 0.2 and 0.5 Accuracy Classes"
- + Issue date of standard or latest addendum

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Watt-hour Meter," "Energy Usage Monitor" or "Sub-metering Equipment," or other appropriate product name as shown in the individual Listings.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with one or more of the standards detailed below. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following additional information:

"ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one of the texts detailed below:

1. ANSI/NEMA C12.1+, Code for Electricity Metering
 2. ANSI/NEMA C12.10+, Physical Aspects of Watthour Meters
 3. ANSI/NEMA C12.11+, Instrument Transformers for Revenue Metering, 10 kV BIL through 350 kV BIL (0.6 kV NSV through 69 kV NSV)
 4. ANSI/NEMA C12.20+, Electricity Meters - 0.2 and 0.5 Accuracy Classes
- + Issue date of standard or latest addendum

ENGINE GENERATORS (FTSR)

GENERAL

This category covers electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal combustion engines.

Listed stationary engine generator assemblies are rated 600 V or less and are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 37, "Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines," ANSI/NFPA 99, "Standard for Health Care Facilities," and ANSI/NFPA 110, "Standard for Emergency and Standby Power Systems."

Listed stationary engine generator assemblies may be used in emergency and standby power systems, provided the installed system complies with applicable codes.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2200, "Stationary Engine Generator Assemblies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Stationary Engine Generator Assembly," or other appropriate product name as shown in the individual Listings.

ENGINE GENERATORS FUELED BY BIOGAS OR RAW NATURAL GAS (FTPU)

GENERAL

This category covers electrical generating equipment driven by internal combustion engines including gas turbines, fueled by biogas, nonsweet or raw sources of natural gas. These gases may contain unknown chemicals, contaminants and energy content. Biogas is produced by the anaerobic decomposition of organic matter. Raw and nonsweet natural gas is often a by-product of oil wells. This equipment has been Classified as to risk of electric shock and fire hazards only.

Classified stationary engine generators are rated 600 V or less and are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 37, "Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines," and other standards as applicable.

Due to the potential variable nature of these fuel sources, the equipment manufacturer, system designer, installer, Authority Having Jurisdiction, and service personnel need to ensure the equipment is sited, installed, operated and maintained in a manner appropriate for the equipment, installation location and fuel source. Special attention should be placed on the appropriateness of the gas train/fuel system components for the fuel type and the detection of potential gas leakage.

Authorities Having Jurisdiction should be consulted as to conformance with applicable codes.

UNEVALUATED FACTORS

The effects of undefined gases on this equipment have not been investigated. Additionally, the ability or inability of any interposed filtering or scrubbing equipment to mitigate the effects of the undefined gases has not been investigated. This includes, but is not limited to the operation of the equipment, degradation of the equipment, leakage of gases, etc.

RELATED PRODUCTS

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated to UL 1741, "Inverters, Converters, Controllers and Interconnection System Equipment for Use with Distributed Energy Resources," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are utility interactive, stand-alone, multimode inverters or converters, and interconnection system equipment.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2200, "Stationary Engine Generator Assemblies."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME]*

AS TO RISK OF ELECTRIC SHOCK AND FIRE HAZARDS ONLY
Control No.

* LANDFILL-GAS-FUELED ENGINE GENERATOR, BIOGAS-FUELED ENGINE GENERATOR, LANDFILL GAS MICROTURBINE, DIGESTER GAS MICROTURBINE, or other appropriate product name as shown in the individual Classifications

EQUIPMENT GROUND-FAULT PROTECTIVE DEVICES (FTTE)

This category covers Equipment Ground-Fault Protective Devices (EGFPD) which operate to disconnect the electric circuit from the source of supply when ground-fault current exceeds the ground-fault pick-up level marked on the device.

To aid the user in making proper selection of this equipment, the EGFPDs are marked with a ground-fault pick-up level in milliamperes and with a voltage and current rating. The ground-fault pick-up level is limited to the range above 6 mA to 50 mA. These devices are intended to operate upon a condition of excessive ground-fault leakage current from equipment, rather than minimize damage due to arcing faults in services.

EGFPDs are intended to be installed only on grounded alternating-current systems in accordance with the National Electrical Code ANSI/NFPA 70.

EGFPDs are intended for use in applications where ground-fault protection of equipment is required by the National Electrical Code, specifically Sections 426-28 and 427-22, or where such protection is deemed appropriate.

A two-wire device is not suitable for use in a multiwire branch circuit as defined in the National Electrical Code.

**EQUIPMENT GROUND-FAULT PROTECTIVE DEVICES
(FTTE)**

138

The devices covered by this category have not been evaluated to provide electric shock protection for personnel and they are not intended to be used in place of a ground-fault circuit interrupter (GFCI) where a GFCI is required by the National Electrical Code. See Ground-Fault Circuit Interrupters (KCXS) for further information.

The devices covered by this category are not intended to be used in electrical service entrance equipment where ground-fault sensing and relaying equipment, required by Section 230-95 of the National Electrical Code, is used. See Ground-Fault Sensing and Relaying Equipment (KDAX) for further information.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1053, "Ground-Fault Sensing and Relaying Equipment." Some requirements are also derived from UL 943, "Ground-Fault Circuit-Interrupters."

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Equipment Ground-Fault Protective Device" or "EGFPD."

**ENGINE CONTROL EQUIPMENT AND
ENGINE GENERATORS FOR USE IN
HAZARDOUS LOCATIONS (FTVV)**

This category covers engine control equipment, which is electrical equipment for use in the control and operation of stationary internal combustion engines and gas turbines in Class I, Division 2 hazardous locations.

This equipment is intended to be installed in accordance with ANSI/NFPA 37, "Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines."

This category also covers engine generators, which are electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal combustion engines or gas turbines for use in Class I, Division 2 hazardous locations.

Listed stationary engine generator assemblies are rated 600 V or less and are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 37. The protection method employed for installations in hazardous locations is Purging and Pressurization in accordance with ANSI/NFPA 496, "Standard for Purged and Pressurized Enclosures for Electrical Equipment."

**ENGINE GENERATORS FOR USE IN
HAZARDOUS LOCATIONS (FTWG)**
GENERAL

This category covers electrical generating equipment driven by gasoline, LP-gas, natural gas or diesel-fueled internal combustion engines or gas turbines for use in Class I, Division 2 hazardous locations.

Listed stationary engine generator assemblies are rated 600 V or less and are intended for installation and use in accordance with ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 37, "Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines." The protection method employed for installations in hazardous locations is Purging and Pressurization in accordance with ANSI/NFPA 496, "Standard for Purged and Pressurized Enclosures for Electrical Equipment."

Listed stationary engine generator assemblies investigated to ANSI/NFPA 99, "Standard for Health Care Facilities," or ANSI/NFPA 110, "Standard for Emergency and Standby Power Systems," are marked to indicate such usage. This equipment may be used in emergency and standby power systems, provided the installed system complies with applicable codes.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 2200, "Stationary Engine Generator Assemblies."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Stationary Engine Generator Assembly for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

**ENGINE CONTROL EQUIPMENT AND ENGINE GENERATORS
FOR USE IN HAZARDOUS LOCATIONS (FTVV)**
**IGNITION CONTROLS FOR USE IN
HAZARDOUS LOCATIONS (FTWL)**
USE AND INSTALLATION

This category covers ignition controls intended for use with stationary internal combustion engines and gas turbines in Class I, Division 2 hazardous locations. These devices are power supplies that provide a controlled high voltage output for igniters or other similar spark producing devices. The igniters or other spark producing devices are installed in the combustion chamber(s) of the engine or turbine.

This equipment is intended to be installed in accordance with ANSI/NFPA 37, "Standard for the Installation and Use of Stationary Combustion Engines and Gas Turbines." The input of line-powered equipment is provided with means for connection of one of the wiring methods permitted for Class I, Division 2 hazardous locations in ANSI/NFPA 70, "National Electrical Code." The ignition output (engine or turbine wiring) of all equipment is provided with means for connection of one of the wiring methods permitted in ANSI/NFPA 37.

The high output voltage levels of this equipment can produce electrical shock. Care should be taken to follow the installation instructions provided with the equipment, including proper grounding of the equipment and proper output connections. Operating personnel should be carefully instructed regarding its correct operation and maintenance.

UNEVALUATED FACTORS

This equipment has not been investigated for use with engines or turbines that provide critical functions, such as emergency power or fire protection.

ADDITIONAL INFORMATION

For additional information, see Engine Control Equipment for Use in Hazardous Locations (FTVV) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 1012, "Power Units Other Than Class 2."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ignition Control for Use in Hazardous Locations."

**EXIT SIGNS AND EXIT APPLIANCES
(FUDQ)**

This category covers exit signs and exit appliances as identified by the following specific product categories.

The installation and use of these devices are specified in NFPA 101, "Code for Safety to Life from Fire in Buildings and Structures."

These products have not been investigated with reference to fire resistance. Related devices that have been evaluated for fire resistance are covered in the Fire Resistance Directory.

EXIT DOORS (FUXV)
USE AND INSTALLATION

The category covers sliding doors incorporating a panel that can be manually opened to permit exit travel. Rules covering installation and use are contained in ANSI/NFPA 101, "Life Safety Code." The assembly consists of a frame, doors and necessary hardware.

This category does not cover the electrical and pneumatic door operators or the glass portions of the doors, partitions, panels or sections. Electrical and pneumatic door operators are covered under Door, Drapery, Gate, Louver, and Window Operators and Systems (FDDR).

RELATED PRODUCTS

See Fire Doors (GSNV).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1336, "Outline of Investigation for Exit Doors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sliding Exit Door" or "Swinging Exit Door."

EXIT FIXTURES (FWBO)

GENERAL

This category covers internally-illuminated exit signs intended to be connected to a single source of power in accordance with ANSI/NFPA 70, "National Electrical Code," ANSI/NFPA 101, "Life Safety Code," ANSI/NFPA 5000, "Building Construction and Safety Code," and/or the "International Building Code."

RATINGS

Exit fixtures have been investigated for use in dry locations only unless marked as suitable for damp or wet locations. Products marked as suitable for indoor damp or wet locations have not been investigated for UV exposure. All products have been investigated for use in ambient temperatures of 20–30°C (68–86°F) unless otherwise marked with an extended use temperature range.

Exit fixtures have been investigated for visibility from 100 ft.

RELATED PRODUCTS

Exit signs intended for connection to more than one source of power, or with an integral backup power source, are covered under Emergency Lighting and Power Equipment (FTBR). Exit signs with no connection to a source of electrical power are covered under Exit Signs, Self-luminous and Photoluminescent (FWBX).

Kits intended to convert exit signs from one type of internal light source to another are covered under Exit Sign Conversion Kits (FWCF) or Exit Sign Retrofit Kits (GGET).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 924, "Emergency Lighting and Power Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exit Fixture."

EXIT SIGNS, SELF-LUMINOUS AND PHOTOLUMINESCENT (FWBX)

USE AND INSTALLATION

This category covers exit signs that utilize a nonelectrical illumination power source, and includes exit signs containing self-luminous gases or with a photoluminescent surface activated by external illumination. These signs are intended for installation in accordance with ANSI/NFPA 101, "Life Safety Code," the "International Building Code," and other codes governing the marking of the means of egress.

These exit signs have been investigated only for dry, indoor locations unless otherwise marked. They are intended to be installed and operated in accordance with the product markings and installation instructions provided.

EXTERNAL ILLUMINATION

Exit signs whose visibility is dependent on external illumination (such as photoluminescent signs) are intended for installation only where such external illumination is deemed reliable and sufficient by the Authority Having Jurisdiction and where the lighting controls are accessible only to authorized personnel. Where compliance with the visibility requirements requires external illumination greater than 1 ft-c, these signs are marked, where visible after installation, for a minimum 5 ft-c illumination, measured on the face of the sign. If specific type(s) of lighting are needed to achieve the required visibility, the lighting type is also marked on the sign.

VIEWING DISTANCE

These exit signs have been investigated for visibility from 100 feet unless marked with a maximum viewing distance of 50 or 75 feet.

REPLACEMENT DATE

Exit signs whose visibility is expected to decline over time (such as those containing self-luminous gases) are marked, where visible after installation, with a replacement date.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 924, "Emergency Lighting and Power Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Self-luminous Exit Sign" or "Photoluminescent Exit Sign," or other appropriate product name as shown in the individual Listings.

EXIT SIGN CONVERSION KITS (FWCF)

GENERAL

This category covers exit sign conversion kits, which are parts and/or subassemblies intended for field installation in specific Listed exit fixtures (see Exit Fixtures [FWBO]) or exit lights (see Emergency Lighting and Power Equipment [FTBR]). They convert the light source from one type to another (e.g., incandescent to LED), primarily for energy-saving purposes. They have been investigated to determine that when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete exit sign. Their use is subject to the conditions indicated on the installation instructions provided with the kit.

Conversion kits are of one of the following type designations:

- **Type EFS (Exit Fixture Specific)** — A conversion kit intended for use with one or more specific exit fixture(s) identified by manufacturer and catalog number on the kit and in the installation instructions.
- **Type ELS (Exit Light Specific)** — A conversion kit intended for use with one or more specific exit light(s) identified by manufacturer and catalog number on the kit and in the installation instructions.

These kits are intended for installation into UL Listed products that bear the product identity "Exit Fixture" (for Type EFS) or "Emergency Lighting Equipment" (for Type ELS) as part of the Listing Mark.

Exit sign conversion kits are intended for use in indoor, dry locations unless marked "Suitable for Wet Locations," "Suitable for Indoor Wet Locations" or "Suitable for Damp Locations."

Exit sign conversion kits containing fluorescent or electroluminescent lamps and marked as being suitable for damp or wet locations are for use in an ambient temperature not less than that marked on the product.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 924, "Emergency Lighting and Power Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**EXIT SIGN CONVERSION KIT, TYPE +
FOR USE ONLY WITH EXIT ++ MODEL *
MANUFACTURED BY [Manufacturer's Name]
Control No.**

+ "EFS" or "ELS"

++ "FIXTURE" (for Type EFS) or "LIGHT" (for Type ELS)

* Additional model/manufacturer combinations may be noted

EXIT FIXTURE TO EXIT LIGHT CONVERSIONS, RETROFIT (FWCN)

These exit fixture to exit light conversions are parts and/or subassemblies intended for field installation in specific Listed exit fixtures identified by catalog numbers and company name. They are retrofit devices to convert specific exit fixtures to exit lights with integral battery providing emergency power, and may also convert the light source from one type to another (e.g., incandescent to light emitting diodes) when installed in accordance with the manufacturer's instructions.

These conversions have been investigated by UL to determine that when used in accordance with the manufacturer's instructions, the converted exit fixture complies with the applicable requirements for exit lights.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Building Materials (AABM).

The basic standard used to investigate the exit fixture to exit light conversions is UL 924, "Emergency Lighting and Power Equipment".

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product, together with a control number, is the only method provided by Underwriters Laboratories Inc. to identify products under its Classification and Follow-Up Service.

**CLASSIFIED BY
UNDERWRITERS LABORATORIES INC.
EXIT FIXTURE TO EXIT LIGHT CONVERSIONS, RETROFIT
FOR USE ONLY WITH EXIT FIXTURE
MODEL _____ MANUFACTURED BY _____ .**

EXIT SIGNS AND EXIT APPLIANCES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FWDD)

EXIT SIGNS AND MARKERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (FWDJ)

GENERAL

This category covers exit signs and markers intended for installation in accordance with ANSI/NFPA 101, "Life Safety Code," and other codes governing the marking of the means of egress.

Exit signs that do not comply with the visibility requirements from 100 ft are marked with a maximum viewing distance of 50 or 75 ft, and are intended only for installation in corridors or rooms where the distance to the exit sign cannot exceed the marked maximum distance.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 924, "Emergency Lighting and Power Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Exit Sign for Use in Hazardous Locations" or "Exit Marker for Use in Hazardous Locations."

EXIT SIGN RETROFIT KITS (GGET)

USE AND INSTALLATION

This category covers exit sign retrofit kits, which are parts and/or subassemblies intended for field installation in Listed Exit Fixtures (FWBO) or Listed Exit Lights (FTBR), employing not more than two light sources. They convert the light source from one type to another (e.g., incandescent to LED), primarily for energy-saving purposes. They have been investigated by UL to verify that the converted exit sign retains visibility comparable to and does not otherwise adversely affect the operation of the original sign. Their use is subject to the conditions indicated on the installation instruction provided with the kit.

Retrofit kits are one of the following type designations:

Type EFG (Exit Fixture General) — A retrofit kit intended for use only in single or double faced stencil exit fixtures having a legend not exceeding 6 in. (152 mm) in height. Replacement diffusers are included. Type EFG kits are suitable for use with UL Listed exit fixtures of the following interior dimensions: 6-1/4 to 8-7/8 in. high, 9-1/2 to 13-7/16 in. wide, and 7/8 to 3-1/4 in. deep.

Type EFI (Exit Fixture Independent) — A retrofit kit that includes a light source, light reflecting media enclosure, diffuser, legend, and two directional indicators, intended to retrofit any UL Listed exit fixture having a legend not exceeding 6 in. (152 mm) in height. Type EFI kits are self-contained assemblies that are independent of the original exit fixture except for mechanical support and electrical supply.

Type ELG (Exit Light General) — Same as Type EFG except intended for use only in UL Listed exit lights, which are energized by an ac power source in the normal mode and by an internal or external dc power source in the emergency mode.

Type ELI (Exit Light Independent) — Same as Type EFI except intended for use Listed exit lights energized by an ac power source in the normal mode and by an internal or external dc power source in the emergency mode.

Exit sign retrofit kits are intended for use in indoor, dry locations unless marked "Suitable for Wet Locations," "Suitable for Indoor Wet Locations" or "Suitable for Damp Locations" (see FTBR).

Exit sign retrofit kits containing fluorescent or electroluminescent lamps and marked as being suitable for damp or wet locations are for use in an ambient temperature not less than that marked on the product.

These kits are intended for installation into UL Listed products that bear the product identity of "Exit Fixture" (for Types EFG and EFI) or "Emergency Lighting Equipment" (for Types ELG and ELI) as part of the Listing Mark.

These devices have not been investigated as replacement light sources in edge-illuminated exit signs.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 924, "Emergency Lighting and Power Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

EXIT SIGN RETROFIT KIT

TYPE +

FOR USE ONLY WITH EXIT ++ MODEL *

MANUFACTURED BY _____

Control No.

+ EFG, EFI, ELG or ELI

++ "FIXTURE" (for Types EFG and EFI) or "LIGHT" (for Types ELG and ELI)

* Additional model/manufacture combinations may be noted

FACTORY AUTOMATION EQUIPMENT (GPNY)

USE AND INSTALLATION

This category covers production equipment for attended and unattended assembly of products and subassemblies. This equipment is designed to be programmed for a specific manufacturing application, such as assembly of components, packaging, sorting, or counting of parts, or hole punching or cutting. The equipment may also incorporate manufacturing processes involving heating or cooling, drying, or gluing of parts.

This equipment is intended to be installed in accordance with ANSI/NFPA 79, "Electrical Standard for Industrial Machinery," and Article 670 of ANSI/NFPA 70, "National Electrical Code."

Special Considerations

This equipment is not intended for the handling of hazardous materials in unattended applications, or intended for fire protection service.

RELATED PRODUCTS

Robotics and associated control equipment are covered under Robots and Robotic Equipment (TETZ).

Industrial control panels are covered under the category of the same name (NITW).

Equipment intended primarily for measurement of physical or chemical properties of materials, measurement of the functional performance of a piece of equipment, qualitative or quantitative constituent analysis of substances, or preparation of materials for further analysis or measurements is covered under Laboratory Use Electrical Equipment (OGTK).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2011, "Outline of Investigation for Factory Automation Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Factory Automation Equipment."

FAN PARTS (GPPF)

USE

This category covers fans and blowers for use in commercial and industrial applications intended to move air for the purposes of air circulation or ventilation. These products are investigated as complete assemblies but are Listed as fan heads and fan stands/mounting assemblies with unique model designations. This category covers commercial/industrial fan head assemblies, pedestals, wall-mounting brackets and ceiling-mounting brackets.

This category does not cover fans intended for household or residential use, motors, blade assemblies, fan guards or grills.

PRODUCT MARKINGS

Fan parts covered under this category are marked "For Commercial or Industrial Use Only."

Fan heads covered under this category are marked "CAUTION: To Reduce the Risk of Personal Injury, Use Only With Stand/Mounting Assembly Models ___, Manufactured by ___."

FAN PARTS (GPPF)

Fan stands/mounting assemblies covered under this category are marked "CAUTION: To Reduce the Risk of Personal Injury, Use Only With Fan Head Assembly Model _____, Manufactured by _____."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 507, "Electric Fans."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fan Part," or other appropriate product name as shown in the individual Listings.

FANS, CEILING SUSPENDED (GPRT)

GENERAL

This category covers:

Ceiling-suspended fans intended to be mounted to a ceiling outlet box or ceiling building structure, and whose blades rotate below the ceiling to move air for the purpose of air circulation.

Light kits intended for use with ceiling-suspended fans.

Ceiling-suspended fans and accessories intended for permanent installation are provided with means for connection to permanent wiring systems.

This category does not cover ceiling-suspended fans intended to be used in hazardous (classified) locations as defined by ANSI/NFPA 70, "National Electrical Code," or intended to be installed over solvents or chemically flammable liquids or vapors or located in a chemically corrosive environment.

PRODUCT MARKINGS

Ceiling-suspended fans intended for mounting beneath a ceiling structure, such as provided on porches or patios, have been subjected to a water-spray test and are marked as being acceptable for such use.

Ceiling-suspended-fan light kits are provided with a marking on the light kit, on the packaging carton, and in the instructions to indicate the fan models with which they are suitable.

RELATED PRODUCTS

Fan-speed controllers for use with fans are covered under Fan-speed Controllers (GQHG).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 507, "Electric Fans."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ceiling Fan," "Ceiling Suspended Fan" or "Fan Accessory," or other appropriate product name as shown in the individual Listings.

FANS, ELECTRIC (GPVW)

GENERAL

This category covers:

Fans and blowers intended to move air for the purpose of air circulation, ventilation, exhaust, blending or recirculation

Dryer-type fans used for drying carpets or floors

Residential rangehoods for permanent connection to the power supply or for cord connection to the power supply, remote blowers intended for residential cooking-area exhaust, and self-contained downdraft ventilators

Low-pressure fan-type inflators not intended for use with inflatable bouncing toys or similar children's products.

This category does not cover:

Fans intended to be used in hazardous (classified) locations as defined by ANSI/NFPA 70, "National Electrical Code" (NEC), or intended to be installed over solvents or chemically flammable liquids or vapors or located in a chemically corrosive environment

Air heaters incorporating fans, heating-ventilating units, or blowers comprised of such equipment as furnaces, mechanical-refrigeration equipment or air conditioners

Fans and accessories intended for permanent installation are provided with means for connection to permanent wiring systems.

FANS, ELECTRIC (GPWW)

141

These fans have not been investigated for installation in fire walls or from the standpoint of their effect on venting in case of fire. Their location should be determined after consultation with Authorities Having Jurisdiction.

These fans have not been investigated for installation or use in plenum space or "other spaces used for environmental air," as defined by the NEC.

Fans and accessories intended for use over cooking equipment are investigated to determine the effect of grease on electrical parts. These units are for use over residential gas and electric ranges or ovens only and include hood fans intended for use over (but not mounted directly on) ranges, separate hoods provided with lights or other wiring and intended for use over ranges in conjunction with wall or ceiling insert fans, and oven ventilators for use over wall insert ovens.

Fans intended for use over eye-level ranges have been investigated for use when mounted separately above a representative eye-level range.

Some wall-insert and ceiling-insert fans have been investigated for use in conjunction with separate hoods over cooking equipment (see above) and are so marked.

Fans intended for mounting directly on cooking equipment are investigated in conjunction with the cooking appliance and Listed as a part of the accessory to the cooking appliance.

Filters provided on fans intended for use over cooking equipment are investigated with respect to flammability and smoke propagation.

Fans installed in an area in close proximity to a stove, range or oven where fumes, grease-laden air or the like may be present and intended to discharge air away from the cooking area are intended to be installed in such a manner as to discharge the air to the exterior of the building and not into concealed walls or ceiling spaces or into the attic. Ductless fans intended for use in cooking areas are not required to discharge air to the building exterior.

Ventilating hood fan shelves intended for use over ranges and incorporating a shelf or a compartment to accommodate a microwave oven are marked for such use.

Except for fans over gas ranges and ovens, none of the fans covered under this category have been investigated for use over cooking appliances that use fuel.

Although ceiling-insert fans, wall-insert fans, and ceiling-insert fan/light combinations employ an internal plug-and-receptacle connection for the motor and light, they are not considered cord-and-plug connected to the source of supply. These internal connections are provided to facilitate rough-in installation of the permanently-wired housing while protecting electrical components (motor and light) until the finishing stage.

PRODUCT MARKINGS

Fans intended for use in barns, poultry houses, dairy barns or the like, as covered by Article 547 of the NEC, are marked "For Use in Agricultural Buildings" or with an equivalent statement.

Ceiling-insert fans, wall-insert fans, and ceiling-insert fan/light combinations intended to be mounted over bathtubs, showers, or within the zone above the bathtub and shower area as defined by Article 410 of the NEC, are marked "Acceptable for use over a bathtub or shower when installed in a GFCI protected branch circuit." These products are investigated to determine the effects of moisture (dampness or wetting), such as shower spray.

Fans intended for mounting beneath a ceiling structure, such as provided on porches or patios, have been subjected to a rain test and are marked as being acceptable for such use.

Fans intended for use where they will be exposed to weather are investigated to determine the effect of rain on electrical components and are marked "Outdoor Use." Roof-mounted fans are investigated to determine the effect of rain on electrical components, but are not required to be marked for outdoor use. Gable-mounted attic fans are normally installed with shutters and are not subjected to a rain test; similarly, wall insert fans are not subject to a rain test, if marked to indicate that shutters are to be provided. Fans intended for mounting in interior walls or ceilings are marked to indicate the intended use, unless the design is such as to make the intended method of installation obvious.

Fans intended for use in damp-location cooking areas have been subjected to a water spray test and are marked "Suitable for use in damp locations when installed in a GFCI protected branch circuit."

Ceiling-insert fan/light combinations are not intended for use in an insulated ceiling unless marked "Type IC - Inherently Protected" or "Type IC - Thermally Protected."

When an appliance consists of two or more subassemblies shipped separately, each subassembly or packaging is marked to indicate those other subassemblies that may be used to complete an assembly, if the installation is not obvious.

RELATED PRODUCTS

Fans and blowers intended to move heated or conditioned air are covered under Ventilators, Power (ZACT).

Fans that include filters or means to control humidity or cool air are covered under Air Filtering Appliances (AEDX), Humidifiers (AHIV) or Evaporative Coolers (AGNY).

Hand dryers incorporating heaters are covered under Heaters, Specialty (KSOT).

Accessory kits to adapt a rangehood intended for permanent connection to the power supply to a cord-connected rangehood are covered under Rangehood Cord-connection Kits (GQFM).

Rangehoods and power ventilators intended for commercial applications are covered under Power Ventilators for Commercial Kitchen Exhaust (YZHW), Exhaust Hoods Without Exhaust Dampers (YYCW), Exhaust Hoods with Exhaust Dampers (YXZR) and Hoods/Recirculating Systems for Use with Specified Commercial Cooking Appliances (YZCT).

Microwaves employing cooking-area ventilation are covered under Microwave Cooking Appliances (KQSQ).

Compressor-type inflators are covered under Compressors, Vacuum Pumps and Paint Sprayers (QDGS).

Fan-type deodorizers and fan-type air fresheners are covered under Deodorizers and Air Fresheners (EOGX).

Ionizers and fans employing ionizers are covered under Ion Generators (OETX).

Fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AGGZ).

Fans intended to be mounted to a ceiling outlet box or ceiling building structure and whose blades rotate below the ceiling to move air are covered under Fans, Ceiling Suspended (GPRT).

Light kits for ceiling-suspended fans are covered under Fans, Ceiling Suspended (GPRT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 507, "Electric Fans."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fan," "Electric Fan" or "Fan Accessory," or other appropriate product name as shown in the individual Listings.

RANGEHOOD CORD-CONNECTION KITS (GQFM)

USE AND INSTALLATION

This category covers rangehood cord-connection kits intended to adapt specific rangehoods for cord connection to the power supply. These rangehood cord-connection kits are limited to installation with specific makes and models of rangehoods as indicated on the rangehood cord-connection kit packaging and in the installation instructions.

ADDITIONAL INFORMATION

See Fans, Electric (GPWV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 507, "Electric Fans."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RANGEHOOD CORD-CONNECTION KIT

FOR USE WITH LISTED RANGEHOOD SPECIFIED IN MARKINGS ON THE PACKAGING
Control No.

FAN-SPEED CONTROLS (GQHG)

GENERAL

This category covers semiconductor, capacitive type, and inductive-type fan-speed controls for regulating the speed of the motor of a fan. In some cases the devices also control the starting and stopping of the fan motor.

Fan-speed controls are intended for use only with single or multiple fans in parallel where the total controlled load is not in excess of the rating of the controller.

These products may be outlet box-mounted, cord-and-plug connected, or intended for mounting in the fan canopy. Cord-and-plug-connected controls are intended for control of cord-and-plug-connected fans only.

PRODUCT MARKINGS

Controls marked "Ceiling Fan" or "Paddle Fan" are intended only for use with one or more fans of this type.

Controls marked "General Use" are intended to be used with any motor-driven fan, including ceiling-suspended fans, as permitted by instructions provided with the fan.

Fan-speed controls using semiconductors for regulation are marked "Solid-State Fan Speed Control."

Fan-speed controls using capacitors or inductors for speed control may be marked to indicate the method of speed control.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1917, "Solid-State Fan Speed Controls."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fan Speed Control" or "Solid-State Fan Speed Control."

FANS, PORTABLE ELECTRIC FOR USE IN HAZARDOUS LOCATIONS (GQJA)

GENERAL

This category covers portable electric fans for use in hazardous locations. Motors are sealed from terminal compartments which have provision for connection of three-conductor, flexible, extra-hard-usage cord having a grounding conductor.

Connections to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, Listed for the specified hazardous locations. The flexible cord connected to the units should be frequently examined and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which this portable equipment will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Portable Electric Fan for Hazardous Locations."

FANS, PORTABLE PNEUMATIC FOR USE IN HAZARDOUS LOCATIONS (GQJX)

GENERAL

This category covers portable pneumatic fans for use in hazardous locations. Air-supply lines should be made of electrically conductive material in accordance with ANSI/NFPA 77, "Recommended Practice on Static Electricity," and/or any other applicable code. Ground terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which this portable equipment will be permitted for use. Portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

FANS, PORTABLE PNEUMATIC FOR USE IN HAZARDOUS LOCATIONS (GQJX)

together with the word "LISTED," a control number, and the product name "Portable Pneumatic Fan for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

FC CABLE (GQKT)

USE AND INSTALLATION

This category covers Type FC cable which is an assembly of three or four parallel 10 AWG special stranded copper wires formed integrally with an insulating material web. Type FC cable is intended for installation in accordance with Article 322 of ANSI/NFPA 70, "National Electrical Code."

The cable is marked with the size of the maximum branch circuit to which it may be connected, the cable type designation, manufacturer's identification, maximum working voltage, conductor size and temperature rating.

Type FC cable is not intended to be installed outdoors or in wet or damp locations unless identified for use in wet locations.

A marking accompanying the cable on a tag or reel indicates the special metal raceways and specific FC cable fittings with which the cable is intended to be used. Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "FC Cable."

FC CABLE FITTINGS (GQRS)

USE AND INSTALLATION

This category covers power tap and cable termination fittings intended for use with FC cable installed in accordance with ANSI/NFPA 70, "National Electrical Code."

A fitting is suitable for use only with cable identified for use with that fitting.

Installation instructions are provided by the manufacturer.

ADDITIONAL INFORMATION

For additional information, see FC Cable (GQKT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 498, "Attachment Plugs and Receptacles," and UL 486A-486B, "Wire Connectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "FC Cable Fitting," "Power Tap" or "Cable Feed," or other appropriate product name as shown in the individual Listings.

FENCE CONTROLLERS, ELECTRIC (GQYR)

GENERAL

This category covers electric fence controllers intended for use with conductive fences installed in rural locations, insulated from ground, for the containment of livestock. The fire and electric shock hazards incident to the use of these fences have been reduced to a reasonable degree, provided installation and operation are in accordance with the name plate information.

Requirements for the operation of electric fence controllers provide for intermittent energizing of the fence when currents of sufficient magnitude to prevent voluntary breaking of contact are involved. An "off" period between impulses is provided in which voluntary muscular control can be regained and contact with the fence broken. It should be recognized that failure to break contact with the fence, due to other than electrical causes, may dangerously increase the hazard related to the use of these devices.

Electric fence controllers are classified according to the source of supply of the unit and the intended installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

FENCE CONTROLLERS, ELECTRIC (GQYR)

143

The basic standard used to investigate products in this category is UL 69, "Electric Fence Controllers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Fence Controller."

FIRE DOORS (GSNV)

GENERAL

This category covers fire doors Classified in the following categories: Access, Bullet-Resisting, Chute, Curtain, Dumbwaiter, Freight Elevator, Passenger Elevator, Rolling Steel, Service Counter, Sliding, Special Purpose, Swinging, and Swinging, Positive Pressure Tested Type Doors.

Fire doors are designed for the protection of openings in walls and partitions against fire when installed in accordance with ANSI/NFPA 80, "Standard for Fire Doors and Fire Windows."

For the protection of paper records against loss by fire, see Vault Doors, Class 350, Insulated (RZNR) and File Room Doors, Class 350, Insulated (RWWR).

The rating of 4-, 3-, 1-1/2-, 1-, 3/4-hours, 30 or 20 minutes indicates the duration of exposure to fire. As indicated in the individual Classifications, some manufacturers can furnish sliding and swinging type doors that are Classified for 4 hours.

Classification Marks with 3 h ratings have replaced the "Fire Door for Opening in Fire Wall" and "A" Classification Marks; the 1-1/2 h and 1 h Classification Marks have replaced the "Fire Door for Opening in Vertical Shaft" and "B" Classification Marks; the 3/4 h Classification Marks have replaced the "Corridor and Room Partition" and "C" Classification Marks; the 1-1/2 h Classification Marks have also replaced the "Fire Door for Opening in Exterior Wall," the "Fire Shutter for Opening in Exterior Wall" and the "D" Classification Marks; the 3/4 h Classification Marks have replaced the "Fire Door for Opening to Exterior Fire Escape" and "E" Classification Marks.

A temperature rise rating of 250°F, 450°F or 650°F on the Classification Mark applies to the temperature rise developed on the unexposed surface of the door after the first 30 min of fire exposure. Classification Marks which do not indicate a temperature rise are for doors which develop a temperature rise in excess of 650°F on the unexposed surface of the door. All doors with glass lights in excess of 100 sq in. are not eligible for a temperature rise rating. Doors with glass light panels of 100 sq in. or less carry the same rating as similar doors without glass vision panels.

Glazing materials covered under this category are Classified as to fire resistance only. The glazing materials are intended to be installed in the fire doors in accordance with NFPA 80 and the installation instructions provided by the manufacturer of the door, glass light frame or glazing material. See Fire Door Glass Light Frames (GVVX) and Fire-protection-rated Glazing Materials (KCMZ).

A door prepared at the factory for a glass light includes the glazing members (frame) but normally does not include the glazing itself. Glazing materials are usually provided by other than the door manufacturer and installed at the time of the door installation.

The protection of an opening depends not only upon the use of fire doors, but also upon the use of Listed door frames and other Listed accessories as specified under each door type. Prospective users should first ascertain from Authorities Having Jurisdiction which door type, mounting, Listed hardware, Listed door frame, and Listed closing mechanism are acceptable for a specific location.

While doors of the freight elevator type, rolling steel type, and sliding or swinging steel-covered composite type, hollow-metal type, metal-clad (Kalamein) type, sheet-metal type and tin-clad type exceeding the sizes recorded in the tabulations under their respective types have not been subjected to fire tests, a Certificate for Oversized Fire Door can be provided for door assemblies in compliance (except for size), with all requirements for design, materials and construction. The Oversize Certificate can be a separate certificate or a label certificate affixed to the door assembly.

Similarly, an attached or separate Certificate for Passenger Elevator Fire Door Frame Assemblies incorporating a transom panel can be provided when such frame/transom panel assemblies, designed for use with specific Classified Passenger Elevator Fire Doors and Listed Passenger Elevator Fire Door Hardware, exceed the maximum heights which have been subjected to Standard Fire Tests. As with the oversize doors described above, prospective users should first ascertain from the Authority Having Jurisdiction whether the oversize frame assembly is acceptable for any given location.

FIRE TEST METHODS

Fire door assemblies are tested in accordance with ANSI/UL 10B or ANSI/UL 10C. The furnace pressure is neutral during tests conducted in

accordance with ANSI/UL 10B. The furnace pressure is positive during tests conducted in accordance with ANSI/UL 10C (UBC Standard 7-2, Part I, 1997).

POSITIVE PRESSURE FIRE DOORS

To assist in selecting components of fire door assemblies tested under positive pressure, eight categories, identified as A through J, were established.

Category A Doors — A fire door that does not require the addition of other components such as edge seals to comply with positive pressure requirements. It also includes doors that have been prepared with edge seals in the manufacturing process. See Swinging Type Fire Doors, Positive Pressure Tested (GSZN) for the individual Classifications.

Category B Doors — A fire door that requires the addition of an edge seal to comply with the positive pressure requirements. The edge seals are added to the door edge or to the frame. See Swinging Type Fire Doors, Positive Pressure Tested (GSZN) for the individual door Classifications. See Gasketing and Edge Sealing Materials for Fire Doors, Positive Pressure Tested (GVYI) for the Category G Edge Sealing Systems individual Classifications.

Category C Frames — A fire door frame that plays an integral part in the door assembly in complying with the positive pressure requirements. Three-sided hollow metal frames are generally not required to be positive pressure tested. See Door and Window Frames (GVTV) for a listing of those manufacturers that can provide steel frames.

Category D Door/Frame Assemblies — A door and frame assembly that is labeled as assembly. Category D door and frame assemblies are Listed under Special Purpose Type Fire Doors (GSXZ).

Category F Light Kits — Light kits that have been investigated for positive pressure. See Fire Door Glass Light Frames (GVVX) for the Listings of the positive pressure glass light frames investigated to positive pressure.

Category G Edge Sealing Systems — Edge seals that are surface applied to frames or doors. These seals may or may not have an effect on meeting the leakage requirements for the smoke ("S") rating. See Gasketing and Edge Sealing Materials for Fire Doors, Positive Pressure Tested (GVYI) for the Category G Edge Sealing Systems individual Classifications.

Category H Smoke and Draft Control Gasketing — Gasketing materials that are added to a door assembly to comply with the requirements of UBC 7-2 Part II (1997). See Gasketing and Edge Sealing Materials for Fire Doors, Positive Pressure Tested (GVYI) for the Category H Smoke and Draft Control Gasketing for the individual Classifications.

Category J Gaskets — Gasketing materials that are added to a door assembly for purposes other than Category G Edge Seals and Category H Smoke and Draft Control Gaskets. They are used for purposes such as weather stripping and for sound control. They meet the requirements for positive pressure tests and can be used on these assemblies. These gasket materials do not contribute to the doors meeting the positive pressure fire test. They are only investigated so that they do not contribute to flaming when tested to the positive pressure test requirements.

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 10B, "Fire Tests of Door Assemblies."

The basic standard used to investigate products Listed under Swinging Type Doors, Positive Pressure Tested (GSZN) is ANSI/UL 10C, "Positive Pressure Fire Tests of Door Assemblies."

FIRE ALARM CABLE (HNGV)

Fire Alarm cable is intended for use in accordance with Article 760 of the National Electrical Code.

NONPOWER-LIMITED FIRE ALARM CABLE (HNHT)

USE AND INSTALLATION

This category covers nonpower-limited fire alarm cable for use in nonpower-limited circuits in accordance with Article 760 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Unless a higher temperature rating is marked on the cable, nonpower-limited fire alarm cable is intended for use where the operating temperature does not exceed 60°C. The marked voltage rating is 150 V.

PRODUCT MARKINGS

Nonpower-limited fire alarm cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

NPLF — Indicates cable intended for use within buildings in accordance with Section 760.53(B)(4) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

NPLFR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 760.53(B)(3) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

Nonpower-limited Fire Alarm Cable (HNHT)—Continued

NPLFP — Indicates cable intended for use within buildings in other spaces used for environmental air in accordance with Section 760.53(B)(2) of the NEC. This cable exhibits a maximum peak optical density of 0.50, a maximum average optical density of 0.15, and a maximum flame spread distance of 5.0 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

Cable marked "wet" or "wet location" is suitable for use in wet locations.

Cable marked "direct burial," "for direct burial" or "dir bur" is suitable for direct burial in the earth.

Cable marked "CI (max voltage ___)" is suitable for use as circuit integrity cable at the maximum voltage to ground indicated, in accordance with Section 760.176(F) of the NEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1425, "Cables for Non-Power-Limited Fire-Alarm Circuits."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonpower-limited Fire Alarm Cable."

POWER-LIMITED FIRE ALARM CABLE (HNIR)

USE AND INSTALLATION

This category covers power-limited fire alarm cable intended for use in power-limited circuits in accordance with Article 760 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Unless a higher temperature rating is marked on the cable, power-limited fire alarm cable is intended for use where operating temperature does not exceed 60°C. The voltage rating is 300 V but is not marked.

PRODUCT MARKINGS

Power-limited fire alarm cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

FPL — Indicates cable intended for use within buildings in accordance with Section 760.154(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test in ANSI/UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

FPLP — Indicates cable intended for use within buildings in ducts or plenums or other spaces used for environmental air in accordance with Section 760.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

FPLR — Indicates cable intended for use within buildings in vertical shafts in accordance with Section 760.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

Power-limited Fire Alarm Cable — Indicates cable suitable for use within buildings (1) where the cable is enclosed in a raceway, or (2) in nonconcealed spaces where the exposed length of cable does not exceed 10 ft, in accordance with Sections 760.154(C)(2) and (3) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581.

Listed Type FPLP cable that is additionally marked "Also Classified NYC CERT Fire Alarm Cable" has been evaluated in accordance with the requirements of the Fire Alarm Code of the Department of Buildings of the City of New York.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable marked "direct burial," "for direct burial" or "dir bur" has been investigated and found suitable for direct burial in the earth.

Power-limited Fire Alarm Cable (HNIR)—Continued

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

Cable marked "CI (max voltage ___)" is suitable for use as circuit integrity cable at the maximum voltage to ground indicated, in accordance with Section 760.179(G) of the NEC.

Cable marked "wet" or "wet location" is suitable for use in wet locations. Cable marked "-30C," "-40C," "-50C," "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1424, "Cables for Power-Limited Fire-Alarm Circuits."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power-limited Fire Alarm Cable."

In addition, the Listing Mark for cable also Classified for use in accordance with the requirements of the Fire Alarm Code of the Department of Buildings of the City of New York includes the statement "Also Classified for Use as Fire Alarm Cable in New York City."

LUMINAIRES AND FITTINGS (HYXT)**USE**

This category covers complete luminaires intended for general and special-purpose illumination, and component fittings and retrofits intended for field assembly to or into complete units.

SPECIAL-USE LUMINAIRES

Cooking Hood Luminaires — Luminaires intended for use in nonresidential occupancies in exhaust ducts or hoods above cooking equipment are marked "SUITABLE FOR USE WITHIN COMMERCIAL COOKING HOODS" and "MOUNT A MINIMUM OF 1.2 M (4 FT) ABOVE COOKING SURFACE." Such luminaires are for installation in accordance with ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations," and Section 410.4(C) of ANSI/NFPA 70, "National Electrical Code" (NEC).

Recessed cooking hood luminaires are additionally marked with a minimum spacing marking: "INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___ INCHES; B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___ INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___ INCHES." The recessed cooking hood is intended to be installed in a hood that maintains these minimum spacings.

Air-handling Luminaires — Luminaires suitable for air handling use are marked "SUITABLE FOR AIR HANDLING USE." For information on the use of air-handling luminaires in fire-rated ceiling constructions, reference should be made to the design information section under Fire Resistance Ratings (BXUV). For applicable requirements covering air-handling installations, reference should be made to ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems."

Some recessed air-handling luminaires are restricted to certain applications because of certain features and are marked as follows: "VENTILATING OR COOLING AIR ONLY," "ONLY FOR USE IN CEILING PLENUM OF NONCOMBUSTIBLE CONSTRUCTION OR WITH AIR HANDLING PARTS THAT COVER VENT OPENINGS" or "INSTALL ONLY IN ENVIRONMENTAL AIR HANDLING SPACES WHERE A COMPLETE METAL ENCLOSED WIRING SYSTEM IS PROVIDED."

LUMINAIRE INSTALLATION MARKINGS

Unless otherwise indicated under the category for a specific type of luminaire, all luminaires are marked indicating the location where they can be used:

Luminaires marked "DRY LOCATIONS ONLY" are intended to be installed in indoor dry locations.

Luminaires marked "SUITABLE FOR DAMP LOCATIONS" are intended to be installed in damp or dry locations.

Luminaires marked "SUITABLE FOR WET LOCATIONS" are intended to be installed in wet, damp or dry locations.

The locations are defined in Electrical Equipment for Use in Ordinary Locations (AALZ) and the NEC.

Luminaires investigated for or restricted to a particular mounting location for suitability to wet locations are additionally marked "SUITABLE FOR MOUNTING WITHIN 1.2 M (4 FT) OF THE GROUND," "SUITABLE FOR GROUND-MOUNTED RECESSED," "LIMIT RANGE OF ADJUSTMENT TO (instruction)" or "COVERED CEILING MOUNT ONLY."

Luminaires investigated for or restricted to a particular mounting location are marked "WALL MOUNT ONLY," "FOR CEILING MOUNTING ONLY" or "MOUNTING ORIENTATION" (such as "This End Up").

Luminaires are marked with a supply wire temperature rating "MIN ___C SUPPLY CONDUCTORS," if intended for greater than 60°C supply wiring. Luminaires rated for over 90°C supply wiring are additionally marked "NOT FOR USE IN DWELLING."

Luminaires that include an integral raceway intended to comply with Exception No. 1 of Section 410.31 of the NEC are marked "SUITABLE FOR USE AS RACEWAY," and are additionally marked to include the maximum number, size and type of conductors they are intended to accommodate. See Surface Metal Raceways (RJBT) for raceways that can be assembled and installed as lighting units.

Some luminaires are only suitable for use with specific lamp types and are so marked. However, luminaires are not investigated or intended for use with sun lamps.

Luminaires containing components that require the luminaire to be connected only to an alternating-current circuit are marked "60 Hz" or "AC ONLY."

Luminaires designed for connection to a proprietary wiring system will specify the name and part number of the proprietary system and all cautionary or other markings required for the system. These systems are covered under Manufactured Wiring Systems (QQVX).

Luminaires designed for connection to other than nominal 120 V supply and/or a 2-wire branch circuit are marked to identify the voltage supply or type of branch circuit or both.

RELATED PRODUCTS

Fire-resistant Luminaires — Luminaires intended for recessed installation in ceilings that have been shown to provide a degree of fire resistance with the floor or roof assembly with which they have been tested are covered under Luminaires and Luminaire Assemblies Classified for Fire Resistance (CDHW).

Emergency Lighting — Luminaires intended for simultaneous connection to normal and emergency power circuits, as well as luminaires with integral batteries for emergency illumination, are covered under Emergency Lighting and Power Equipment (FTBR).

Exit Lighting — Luminaires that illuminate an integral legend "Exit" and are intended for installation in accordance with the NEC and ANSI/NFPA 101, "Life Safety Code," are covered under Exit Fixtures (FWBO).

Electric Signs — Products that illuminate an integral legend other than "Exit" are covered under Signs (UXYT).

Suntan Lamps — Lighting products that employ suntan lamps are covered under Sun and Heat Lamps (QPDY) or Personal Sun and Heat Equipment (QGRX).

Submersible Luminaires — Luminaires intended for installation under water in accordance with Article 680 of the NEC are covered under Submersible Luminaires (IFEV) if intended for decorative fountains and similar locations, or Luminaires and Forming Shells (WBBDT) if intended for installation in swimming pools and similar locations.

LUMINAIRES AND FITTINGS, SPECIAL PURPOSE, MISCELLANEOUS (IETR)**GENERAL**

This category covers special-purpose luminaires and fittings that are parts and/or subassemblies of special-purpose luminaires intended for final assembly into special-purpose luminaires in the field.

PRODUCT MARKINGS

All luminaires and fittings are marked indicating the location where they can be used:

Luminaires and fittings marked "DRY LOCATIONS ONLY" are intended to be installed in indoor, dry locations.

Luminaires and fittings marked "SUITABLE FOR DAMP LOCATIONS" are intended to be installed in damp or dry locations.

Luminaires and fittings marked "SUITABLE FOR WET LOCATIONS" are intended to be installed in wet, damp or dry locations.

All luminaires and fittings bear a model, catalog or series number (or similar designation) adjacent to the Listing Mark.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the

Luminaires and Fittings, Special Purpose, Miscellaneous (IETR)—Continued

product name "Miscellaneous Luminaire," "Floodlight" or "Inspection Light," or other appropriate product name as shown in the individual Listings.

LUMINAIRE CONVERSIONS, RETROFIT (IEUQ)

GENERAL

This category covers retrofit devices or kits consisting of parts and/or sub-assemblies intended for field installation in UL Listed luminaires, office furnishing luminaires or portable luminaires. These products have been investigated to determine that, when used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete unit.

This category includes reflector kit retrofits and other retrofit devices. Reflector kits are intended to be used to add or replace reflectors in fluorescent luminaires and may also involve relocation, removal or replacement of wiring, lampholders and ballasts. Reflector kits are not to be installed on luminaires used as air handling registers unless the accompanying reflector kit installation instructions specify this combination as suitable.

RELATED PRODUCTS

Retrofit devices used to convert incandescent exit luminaires to fluorescent exit luminaires are covered under Exit Sign Conversion Kits (FWCF).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1598, "Luminaires," ANSI/UL 1598B, "Supplemental Requirements for Luminaire Reflector Kits for Installation on Previously Installed Fluorescent Luminaires," and ANSI/UL 153, "Portable Electric Luminaires."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LUMINAIRE CONVERSION, RETROFIT FOR USE ONLY WITH + IDENTIFIED IN MANUFACTURER'S INSTRUCTIONS

Control No.

The Classification Mark for retrofit devices that are other than reflector kits includes the Classification Mark elements detailed above and the following additional information:

LUMINAIRE CONVERSION, RETROFIT (WITH RESPECT TO [nature of hazard] ONLY)*

FOR USE WITH (+ identification of unit with which retrofit is to be used) ONLY

Control No.

+ FLUORESCENT LUMINAIRES, INCANDESCENT LUMINAIRES, HID LUMINAIRES, OFFICE FURNISHING LUMINAIRES or PORTABLE LUMINAIRES

The parenthetical information identified by the "*" is provided only if found applicable by Underwriters Laboratories Inc. The parenthetical information identified by the "+" is always provided.

LUMINAIRE POLES (IEUR)

USE

This category covers poles for support of luminaires in accordance with Article 410 of ANSI/NFPA 70, "National Electrical Code." Included are poles that exceed 12 feet in length, measured from the bottom of the base, or from the intended grade level of poles for installation partially in ground. The poles are investigated with respect to suitability of the enclosure for supply conductors, provision of equipment grounding and bonding means, and a means of access to wiring.

These poles have not been investigated for mechanical strength or wind loading.

Poles are investigated for use in wet locations.

PRODUCT MARKINGS

Poles that are greater than 100 feet in length and not provided with conductor support are marked "FOR USE ONLY WITH A LUMINAIRE WITH INTEGRAL CONDUCTOR SUPPORT."

RELATED PRODUCTS

Poles that do not exceed 12 feet in length are covered under Luminaire Fittings (IFFX).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

Luminaire Poles (IEUR)—Continued

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LUMINAIRE POLE WITH RESPECT TO ELECTRICAL HAZARDS ONLY — NOT FOR MECHANICAL STRENGTH OR WIND LOADING

Control No.

FLUORESCENT LAMP-TYPE LUMINAIRES (IEUT)

This category covers surface and recessed luminaires containing only fluorescent lamps or fluorescent and incandescent lamps. Luminaires that contain HID lamps in combination with fluorescent lamps are Listed under HID Lamp Type Luminaires (IEWX).

All luminaires employ a Class P thermally protected ballast except that luminaires intended for use with straight tubular lamps and/or marked for "OUTDOOR USE ONLY" incorporate a Class P thermally protected or a non-Class P ballast of the simple reactance type.

For additional information see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

SPECIAL USE LUMINAIRES

Luminaires intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Low Voltage Luminaires for Recreational Vehicle Use (IFDQ).

Luminaires intended for use with germicidal lamps (germicidal lamps should not be used in ordinary luminaires) are marked "THIS LUMINAIRE IS DESIGNED FOR USE WITH GERMICIDAL LAMPS AND MUST BE INSTALLED IN COMPLIANCE WITH COMPETENT TECHNICAL DIRECTIONS SO THAT THE USER'S EYE AND BARE SKIN WILL NOT BE SUBJECTED TO INJURIOUS RAYS."

LUMINAIRE INSTALLATION MARKINGS

All luminaires except those intended for use with a remote ballast are marked with their electrical ratings excluding any convenience receptacle provided, stating the voltage, current or volt-amperes and frequency.

As an alternative to a marked volt-ampere rating, the luminaire line volt-amperes can be determined by the following markings: "FOR LINE VOLT-AMPERES MULTIPLY TOTAL LAMP WATTAGE BY 1.5" for luminaires with high power factor preheat or rapid start ballasts; "FOR LINE VOLT-AMPERES MULTIPLY TOTAL LAMP WATTAGE BY 2.5" for luminaires with low power factor preheat or rapid start ballasts; or "FOR LINE VOLT-AMPERES MULTIPLY ALL LAMPS IN INCHES BY ___" for luminaires with instant start ballasts and where the blank corresponds to a multiplying factor based on supply voltage.

Luminaires with a ballast output circuit voltage exceeding 1000 V are marked "NOT FOR USE IN DWELLING."

Luminaires intended to be field connected to a remote ballast are marked "USE BALLAST FOR ___ WATT ___ TYPE LAMP" and "USE THERMALLY PROTECTED BALLAST FOR TYPE LAMPS."

Luminaires are suitable for use with 60C field wiring unless (1) the field wiring is routed within 3 inches of the ballast, in which case 90C rated wire is to be used, or (2) the luminaire is marked with a supply wire rating.

Fluorescent Surface-mounted Luminaires (IEUZ)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, and pole-mounted luminaires. Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

LUMINAIRE INSTALLATION MARKINGS

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked "WALL MOUNT ONLY" are not acceptable for mounting on ceilings, and (2) luminaires marked "NON-COMBUSTIBLE SURFACE ONLY."

All luminaires provided with a power-supply cord are intended for chain, hook, or similar suspension means only and are marked "FOR CHAIN OR HOOK SUSPENSION ONLY."

Luminaires intended for undercabinet mounting are marked "SUITABLE FOR UNDER-CABINET MOUNT."

Luminaires intended for continuous-row mounting are marked "SUITABLE FOR CONTINUOUS ROW MOUNTING."

Luminaires weighing more than 50 lbs and intended for outlet box connection are marked "THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX."

Fluorescent Surface-mounted Luminaires (IEUZ)—Continued

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Fluorescent," "Wired Fluorescent Channel" or "Wired Fluorescent Reflector" adjacent to the Listing Mark.

ADDITIONAL INFORMATION

For additional information, see Fluorescent Lamp-type Luminaires (IEUT), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

Fluorescent Recessed Luminaires (IEVV)**GENERAL**

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, "National Electrical Code" (NEC).

TYPES OF RECESSED LUMINAIRES

TYPE IC LUMINAIRE — Luminaires marked "TYPE IC" may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire.

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity not closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "FOR USE IN CONCRETE ONLY."

A Type IC or non-IC luminaire that is sealed to prevent the entry of concrete may be installed in concrete providing it is marked "SUITABLE FOR USE IN POURED CONCRETE."

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires, except those marked for use in concrete only, are suitable for use in suspended ceilings and may be marked "SUITABLE FOR SUSPENDED CEILING."

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410.16(C) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."

A ground-mounted recessed luminaire suitable for installation in non-fire resistant mediums such as a wooden deck is marked "SUITABLE FOR GROUND-MOUNTED RECESSED."

LUMINAIRE INSTALLATION MARKINGS

A luminaire with an integral junction box or wiring compartment and investigated for any heat contribution added by branch-circuit conductors is marked "MAXIMUM OF ___ NO. ___ AWG BRANCH CIRCUIT CONDUCTORS SUITABLE ___ C PERMITTED IN BOX." A luminaire suitable for branch-circuit conductors, but not for pulling wires through conduit, is additionally marked "FOR CABLE USE ONLY — NOT FOR PULLING WIRES."

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked "ACCESS ABOVE CEILING REQUIRED," "ACCESS BEHIND WALL REQUIRED" or "ACCESS NONCOMBUSTIBLE CEILING PLENUM ONLY."

Luminaires provided with polymeric recessed housings are marked "FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY" and "FOR USE IN NON-FIRE RATED INSTALLATIONS ONLY."

Fluorescent Recessed Luminaires (IEVV)—Continued

Luminaires provided with recessed housings with openings that do not close off the room side to ceiling opening are marked "FOR USE IN NON-FIRE RATED INSTALLATIONS ONLY."

Luminaires that consist of 1) a luminaire housing and trims or 2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

1) For luminaire housing and trims, the housing is marked "USE WITH [manufacturer's name] [catalog number] TRIMS" and each trim is marked with the manufacturer's name and catalog number;

2) For rough-in and finishing sections, the rough-in section is marked "ROUGH-IN SECTION FOR USE WITH FINISHING SECTION ___" where the blank refers to the type or catalog number. The finishing section is marked in the same manner stating "FINISHING SECTION FOR USE WITH ROUGH-IN SECTION ___."

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Recessed Fluorescent," "Recessed Fluorescent Channel," "Wired Recessed Fluorescent Luminaire Reflector," "Wired Recessed Fluorescent Channel" or "Wired Fluorescent Recessed Section" adjacent to the Listing Mark.

ADDITIONAL INFORMATION

For additional information, see Fluorescent Lamp-type Luminaires (IEUT), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

Light Diffusers and Lenses for Air-handling Luminaires, Fluorescent (IEWR)

This category covers light diffusers consisting of metal frames and panels of nonmetallic light diffusing material, other than glass. They are for use on luminaires that are designed to handle return air in a heating or air conditioning system. The method of mounting in the metal frame, the frame dimensions and the panel material used are so designed that the panel drops out of the frame under most fire conditions and, if the panel material ignites while in the frame, it will not propagate flame to adjacent light diffusers.

ADDITIONAL INFORMATION

For additional information, see Fluorescent Lamp Type Luminaires (IEUT), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Light Diffuser for Air Handling Luminaires."

HIGH INTENSITY DISCHARGE LAMP-TYPE LUMINAIRES (IEWX)**GENERAL**

This category covers surface- and recessed-lighting luminaires containing high-intensity-discharge lamps and may contain fluorescent and incandescent lamps.

LUMINAIRE INSTALLATION MARKINGS

All luminaires except those intended for use with a remote ballast are marked with their electrical ratings, excluding any convenience receptacle provided, stating the voltage, current or volt-amperes and frequency.

Luminaires intended to be field connected to a remote ballast are marked "USE BALLAST FOR ___ WATT ___ TYPE LAMP" and "USE THERMALLY PROTECTED BALLAST FOR TYPE LAMPS."

Luminaires intended for use with metal halide lamps and not provided with a suitable lamp containment barrier, are marked "CAUTION — RISK OF FIRE, DO NOT USE A LAMP IDENTIFIED FOR USE IN ENCLOSED LUMINAIRES."

High-intensity-discharge Surface-mounted Luminaires (IEXT)**GENERAL**

High-intensity-discharge Surface-mounted Luminaires (IEXT)—Continued

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, and pole-mounted luminaires. Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked "SUITABLE FOR OPERATION IN AMBIENTS NOT EXCEEDING __ C," where the blank is filled in with the intended elevated ambient.

LUMINAIRE INSTALLATION MARKINGS

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked "WALL MOUNT ONLY" are not acceptable for mounting on ceilings, and (2) luminaires marked "NON-COMBUSTIBLE SURFACE ONLY."

All luminaires provided with a power-supply cord are intended for chain, hook, or similar suspension means only and are marked "FOR CHAIN OR HOOK SUSPENSION ONLY."

Luminaires intended for undercabinet mounting are marked "SUITABLE FOR UNDER-CABINET MOUNT."

Luminaires intended for continuous-row mounting are marked "SUITABLE FOR CONTINUOUS ROW MOUNTING."

Luminaires weighing more than 50 lbs and intended for outlet box connection are marked "THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX."

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "HID" or "Wired HID Section" adjacent to the Listing Mark.

ADDITIONAL INFORMATION

For additional information, see High Intensity Discharge Lamp-type Luminaires (IEWX), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

High-intensity-discharge Recessed Luminaires (IEXZ)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, "National Electrical Code" (NEC).

TYPES OF RECESSED LUMINAIRES

TYPE IC LUMINAIRE — Luminaires marked "TYPE IC" may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire.

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the lamp(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked "INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: __ INCHES; B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: __ INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: __ INCHES." The marked-spacing luminaire is intended to be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 3 in. from the luminaire, and other structural support members

High-intensity-discharge Recessed Luminaires (IEXZ)—Continued

may be in the cavity area above the luminaire, provided (1) they are not closer than 1/2 in. from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity sidewalls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "FOR USE IN CONCRETE ONLY."

A Type IC or non-IC luminaire that is sealed to prevent the entry of concrete may be installed in concrete providing it is marked "SUITABLE FOR USE IN POURED CONCRETE."

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires, except those marked for use in concrete only, are suitable for use in suspended ceilings and may be marked "SUITABLE FOR SUSPENDED CEILING."

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410.16(C) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."

A ground-mounted recessed luminaire that is suitable for installation in non-fire resistant mediums, such as a wooden deck, is marked "SUITABLE FOR GROUND-MOUNTED RECESSED."

LUMINAIRE INSTALLATION INSTRUCTIONS

All recessed luminaires, except those marked "FOR USE IN POURED CONCRETE ONLY," are marked "BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING."

Luminaires that produce temperatures in excess of 90°C at points of mounting to the building structure are marked "INSTALL IN BUILDINGS OF FIRE-RESISTIVE CONSTRUCTION — MOUNT ON NONCOMBUSTIBLE MATERIAL."

Only those luminaires with an integral junction box or wiring compartment marked "MAXIMUM OF NO. __ AWG BRANCH CIRCUIT CONDUCTOR SUITABLE FOR __ C PERMITTED IN BOX," have been investigated for any heat contribution added by branch-circuit conductors.

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked "ACCESS ABOVE CEILING REQUIRED" or "ACCESS BEHIND WALL REQUIRED."

Luminaires provided with polymeric recessed housings are marked "FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY" and "FOR USE IN NON-FIRE RATED INSTALLATIONS."

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

- (1) For luminaire housing and trims, the housing is marked "USE WITH [manufacturer's name] [catalog number] TRIMS" and each trim is marked with the manufacturer's name and catalog number;
- (2) For rough-in and finishing sections, the rough-in section is marked "ROUGH-IN SECTION FOR USE WITH FINISHING SECTION," where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label. The finishing section is marked in the same manner stating "FINISHING SECTION FOR USE WITH ROUGH-IN SECTION."

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Recessed HID," "Recessed HID Type IC," "Rough-In Section for Recessed HID," "Rough-In Section for Recessed HID Type IC," "Finishing Section for Recessed HID" or "Wired Recessed HID Section" adjacent to the Listing Mark.

ADDITIONAL INFORMATION

For additional information, see High Intensity Discharge Lamp-type Luminaires (IEWX) Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products

High-intensity-discharge Recessed Luminaires (IEXZ)—Continued

includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

INCANDESCENT LAMP-TYPE LUMINAIRES (IEYV)

GENERAL

This category covers surface and recessed lighting luminaires containing only incandescent lamps.

Luminaires provided with electrical loads other than lampholders directly connected to a 120 V, 2-wire branch circuit supply are marked with the total current rating for the luminaire excluding any convenience receptacle provided.

Luminaires provided with medium or mogul base lampholders are investigated for use with Types A or PS lamps unless marked otherwise. Also, some luminaires are only suitable for use with specific lamp types and are so marked.

Luminaires intended for use with tungsten-halogen lamps and not provided with a suitable lamp containment barrier are marked "CAUTION — RISK OF FIRE, DO NOT USE A LAMP IDENTIFIED FOR USE IN ENCLOSED LUMINAIRES."

Luminaires are not intended for use with infrared or grow lamps unless so marked.

RELATED PRODUCTS

Luminaires that contain fluorescent or HID lamps in combination with incandescent lamps are Listed under Fluorescent Lamp Type Luminaires (IEUT) and HID Lamp Type Luminaires (IEWX), respectively.

Luminaires intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Low Voltage Luminaires for Recreational Vehicle Use (IFDQ).

ADDITIONAL INFORMATION

For additional information see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1598, "Luminaires."

Incandescent Surface-mounted Luminaires (IEZR)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, and pole-mounted luminaires.

Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked "SUITABLE FOR OPERATION IN AMBIENTS NOT EXCEEDING ___ C," where the blank is filled in with intended elevated ambient.

LUMINAIRE INSTALLATION MARKINGS

If the required rating of the field wiring supplying the luminaire requires the installer to push the supply conductors from the luminaire into the outlet box, the luminaire is marked "PUSH CONDUCTORS INTO JUNCTION BOX."

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked "WALL MOUNT ONLY" are not acceptable for mounting on ceilings, and (2) luminaires marked "NON-COMBUSTIBLE SURFACE ONLY."

Luminaires intended for undercabinet mounting are marked "SUITABLE FOR UNDER-CABINET MOUNT."

Luminaires intended for continuous-row mounting are marked "SUITABLE FOR CONTINUOUS ROW MOUNTING."

Luminaires weighing more than 50 lbs and intended for outlet box connection are marked "THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX."

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the word "Incandescent" adjacent to the Listing Mark.

ADDITIONAL INFORMATION

For additional information, see Incandescent Lamp-type Luminaires (IEYV), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

Incandescent Surface-mounted Luminaires (IEZR)—Continued

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

Incandescent Recessed Luminaires (IEZX)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, "National Electrical Code" (NEC).

SPECIAL-USE LUMINAIRES

Recessed-type luminaires suitable for optional use with infrared heating lamps are marked and rated for 250 W reflector-type lamps. Recessed units suitable only for use with one or more infrared heating lamps are covered under Air Heaters, Room, Fixed and Location-dedicated (KKWS).

TYPES OF RECESSED LUMINAIRES

TYPE IC LUMINAIRE — Luminaires marked "TYPE IC" may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire. Type IC luminaires are provided with thermal protection to deactivate the lamp should the luminaire be mislamped.

INHERENTLY-PROTECTED LUMINAIRE — A recessed luminaire which does not exceed temperatures greater than 90°C on outside surfaces even when covered with insulation and mislamped or overlapped is identified by being marked "INHERENTLY PROTECTED."

TYPE NON-IC LUMINAIRE — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an uninsulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the lamp(s) should insulation be placed over or in contact with the luminaire.

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked "INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___ INCHES; B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___ INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___ INCHES." The marked-spacing luminaire is intended to be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 3 in. from the luminaire and other structural support members may be in the cavity area above the luminaire provided (1) they are not closer than 1/2 in. from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity side-walls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

CONCRETE-ONLY LUMINAIRE — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "FOR USE IN CONCRETE ONLY."

A Type IC or Non-IC luminaire sealed to prevent the entry of concrete may be installed in concrete providing it is marked "SUITABLE FOR USE IN POURED CONCRETE."

SUSPENDED-CEILING LUMINAIRE — All recessed luminaires except those marked for use in concrete only are suitable for use in suspended ceilings and may be marked "SUITABLE FOR SUSPENDED CEILING."

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410-16(c) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

GROUND-MOUNTED RECESSED LUMINAIRE — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."

Incandescent Recessed Luminaires (IEZX)—Continued

A ground-mounted recessed luminaire suitable for installation in non-fire-resistant mediums, such as a wooden deck, is marked "SUITABLE FOR GROUND-MOUNTED RECESSED."

LUMINAIRE INSTALLATION MARKINGS

All recessed luminaires, except those marked "FOR USE IN POURED CONCRETE ONLY," are marked "BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING."

Luminaires that produce temperatures in excess of 90°C at points of mounting to the building structure are marked "INSTALL IN BUILDINGS OF FIRE RESISTANT CONSTRUCTION."

Only those luminaires with an integral junction box or wiring compartment marked "MAXIMUM OF NO. ___ AWG BRANCH CIRCUIT CONDUCTOR SUITABLE FOR ___ C PERMITTED IN BOX," have been investigated for any heat contribution added by branch circuit conductors.

Luminaires which, by their construction, do not permit access to or inspection of field wiring connections from the front of the luminaire, after installation, are marked "ACCESS ABOVE CEILING REQUIRED" or "ACCESS BEHIND WALL REQUIRED."

Luminaires that are provided with polymeric recessed housings are marked "FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY" and "FOR USE IN NON-FIRE RATED INSTALLATIONS."

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

- (1) For luminaire housing and trims, the housing is marked "USE WITH [manufacturer's name] [catalog number] TRIMS" and each trim is marked with the manufacturer's name and catalog number.
- (2) For rough-in and finishing sections, the rough-in section is marked "ROUGH-IN SECTION FOR USE WITH FINISHING SECTION," where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label. The finishing section is marked in the same manner stating "FINISHING SECTION FOR USE WITH ROUGH-IN SECTION."

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Recessed Incandescent," "Recessed Incandescent Type IC," "Rough-In Section for Recessed Incandescent," "Rough-In Section for Recessed Incandescent Type IC" or "Finishing Section for Recessed Fixture" adjacent to the Listing Mark.

RELATED PRODUCTS

See Incandescent Recessed Luminaires, Convertible, Non-IC/IC (IFAH).

ADDITIONAL INFORMATION

For additional information, see Incandescent Lamp-type Luminaires (IEYV), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

Incandescent Recessed Luminaires, Convertible, Non-ic/ic (IFAH)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, "National Electrical Code."

These products may be installed in either IC or non-IC applications. The same rough-in section or luminaire housing is used for both IC and non-IC applications. The choice of finishing section/trim and light source (lamp) determine whether the completed luminaire is suitable for Type IC installations or non-IC installations.

Details for making the proper choice of finishing section/trim and lamp appropriate for the application are contained in the installation instructions packaged with the rough-in section/luminaire housing. All luminaires employ a thermal protective device to deactivate the lamp(s) in the event increased temperature conditions result where the installation instructions are not followed.

TYPE IC INSTALLATIONS — Refer to Incandescent Recessed Luminaires (IEZX) sections entitled "Type IC Luminaires."

Incandescent Recessed Luminaires, Convertible, Non-ic/ic (IFAH)—Continued

TYPE NON-IC INSTALLATIONS — Refer to Incandescent Recessed Luminaires (IEZX) sections entitled "Type Non-IC Luminaires."

LUMINAIRE INSTALLATION MARKINGS

The rough-in section or the luminaire housing of a convertible recessed luminaire is marked with the following two statements:

- A. "BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING"
- B. "DO NOT INSTALL INSULATION WITHIN 76 MM (3 IN.) OF ANY PART OF THE LUMINAIRE"

The label in item B is on a peel-off label that is removed when the luminaire is installed in a Type IC installation.

Luminaires that consist of (1) a luminaire housing and trims or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

- (1) For luminaire housing and trims, the housing is marked "USE WITH [manufacturer's name] [catalog number] TRIMS," and each trim is marked with the manufacturer's name and catalog number.
- (2) For rough-in and finishing sections, the rough-in section is marked "ROUGH-IN SECTION FOR CONVERTIBLE RECESSED LUMINAIRE" and a correlation marking for the trims "TYPE IC TRIMS/FINISHING SECTIONS: AA, BB, CC, etc." or "TYPE IC/NON-IC TRIMS/FINISHING SECTIONS: AA, BB, CC, etc." The finishing section is marked in the same manner stating "FINISHING SECTION FOR USE WITH ROUGH-IN SECTION ___."

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) or the words "Recessed Incandescent Convertible Non-IC/IC," "Recessed Incandescent Convertible Non-IC/IC Rough-In Section" or "Recessed Incandescent Convertible Non-IC/IC Finishing Section" adjacent to the Listing Mark.

RELATED PRODUCTS

See Incandescent Recessed Luminaires (IEZX).

ADDITIONAL INFORMATION

For additional information, see Incandescent Lamp-type Luminaires (IEYV), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

LIGHT-EMITTING-DIODE LUMINAIRES (IFAK)

GENERAL

This category covers surface- and recessed-lighting luminaires containing only light-emitting-diode (LED) light sources.

Luminaires are not intended for use with infrared or ultraviolet LED light sources unless so marked.

RELATED PRODUCTS

Luminaires that contain incandescent lamps in combination with an LED light source are covered under Incandescent Surface-mounted Luminaires (IEZR), Incandescent Recessed Luminaires (IEZX) and Incandescent Recessed Luminaires, Convertible, Non-IC/IC (IFAH).

Luminaires that contain fluorescent lamps in combination with an LED light source are covered under Fluorescent Surface-mounted Luminaires (IEUZ), Fluorescent Recessed Luminaires (IEVV) and Light Diffusers and Lenses for Air-handling Luminaires, Fluorescent (IEWR).

Luminaires that contain high-intensity discharge lamps in combination with an LED light source are covered under High-intensity-discharge Surface-mounted Luminaires (IEXT) and High-intensity-discharge Recessed Luminaires (IEZX).

Luminaires with an LED light source intended to be connected to a nonintegral power source rated 30 V ac (60 V dc) or less are covered under Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR).

Luminaires with an LED light source connected to a nonintegral power source rated 15 V ac (30 V dc) or less and intended to be part of a low-voltage landscape lighting system are covered under Landscape Lighting Systems, Low Voltage (IFDH).

Luminaires with an LED light source intended for connection only to a 24 V or less input and for use in recreational vehicles are covered under Low-voltage Luminaires for Recreational Vehicle Use (IFDQ).

Light-emitting-diode Surface-mounted Luminaires (IFAM)

GENERAL

This category covers surface-mounted luminaires, including floor-, wall-, ceiling-, undercabinet- and pole-mounted luminaires.

Ceiling-mounted luminaires include cord-, stem-, chain- and cable-suspended luminaires, in addition to outlet-box-mounted luminaires.

SPECIAL-USE LUMINAIRES

Luminaires suitable for continuous operation in an elevated ambient, such as a boiler room, foundry, etc., are marked "SUITABLE FOR OPERATION IN AMBIENT NOT EXCEEDING _ C," where the blank is filled in with the intended elevated ambient.

LUMINAIRE INSTALLATION MARKINGS

If the required rating of the field wiring supplying the luminaire requires the installer to push the supply conductors from the luminaire into the outlet box, the luminaire is marked "PUSH CONDUCTORS INTO JUNCTION BOX."

All ceiling- and wall-mounted luminaires are acceptable for mounting on an insulated ceiling or wall. Exceptions: (1) luminaires obviously not designed for ceiling use or if marked "WALL MOUNT ONLY" are not acceptable for mounting on ceilings, and (2) luminaires marked "NON-COMBUSTIBLE SURFACE ONLY."

Luminaires intended for undercabinet mounting are marked "SUITABLE FOR UNDER-CABINET MOUNT."

Luminaires intended for continuous-row mounting are marked "SUITABLE FOR CONTINUOUS ROW MOUNTING."

Wall-mounted luminaires weighing more than 11.3 kg (25 lbs) and ceiling-mounted luminaires weighing more than 22.7 kg (50 lbs) intended for outlet box connection are marked "THIS LUMINAIRE MUST BE MOUNTED OR SUPPORTED INDEPENDENTLY OF AN OUTLET BOX."

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number or similar designation.

RELATED PRODUCTS

Cord-connected undercabinet light-emitting-diode (LED) luminaires with an attachment plug or a direct-plug-in power supply are covered under Light-emitting-diode Luminaires, Portable (QOVZ).

LED cabinet luminaires are covered under Portable Cabinet Light-emitting-diode Luminaires (QOVA).

ADDITIONAL INFORMATION

For additional information, see Light-emitting-diode Luminaires (IFAK), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires," in addition to the requirements contained in UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

Light-emitting-diode Recessed Luminaires (IFA0)

GENERAL

This category covers luminaires intended for installation in recessed cavities in walls, ceilings and similar locations in accordance with Article 410, Parts XI and XII of ANSI/NFPA 70, "National Electrical Code" (NEC).

RECESSED LUMINAIRE TYPES

Type IC Luminaire — Luminaires marked "TYPE IC" may be installed such that insulation and other combustible materials are in contact with, and over the top of, the luminaire. Type IC luminaires are provided with thermal protection to deactivate the lamp should the luminaire be mislamped.

Inherently-protected Luminaire — A recessed luminaire that does not exceed temperatures greater than 90°C on outside surfaces even when covered with insulation and mislamped or overlapped is identified by the marking "INHERENTLY PROTECTED."

Type Non-IC Luminaire — Recessed luminaires, except those identified as Type IC or for use in concrete only, are intended to be installed in an un-insulated or insulated ceiling (or wall), with all insulation kept a minimum distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire. Other combustible materials are spaced, except at the points of support, at least 1/2 in. from the luminaire.

Type Non-IC luminaires are provided with thermal protection to deactivate the light source(s) should insulation be placed over or in contact with the luminaire.

Light-emitting-diode Recessed Luminaires (IFA0)—Continued

For proper heat dissipation, Type Non-IC luminaires are intended to be installed in a cavity as follows: If not marked with any spacing information, the luminaire is intended to be installed not closer than 1/2 in. from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 in. from adjacent luminaires.

Luminaires intended for marked-spacing installation are marked "INSTALL WITH MINIMUM SPACINGS BETWEEN A) CENTER-TO-CENTER OF ADJACENT LUMINAIRES: ___ INCHES; B) TOP OF LUMINAIRE AND AN OVERHEAD BUILDING MEMBER: ___ INCHES; AND C) LUMINAIRE CENTER TO SIDE BUILDING MEMBER: ___ INCHES." The marked-spacing luminaire is intended to be installed in a cavity that maintains these minimum spacings.

Individual obstructions, such as ceiling joists, barriers to maintain thermal insulation 3 in. from the luminaire, and other structural support members may be in the cavity area above the luminaire, provided (1) they are not closer than 1/2 in. from any part of the luminaire (except for points used in support of the luminaire), and (2) they do not seal off the luminaire from the remaining portion of the cavity. More than one marked-spacing luminaire may be installed in the same cavity, provided the marked spacings are maintained from each luminaire to cavity side-walls and to adjacent luminaires. Spacings between adjacent luminaires are measured center to center, based upon the geometric center of the luminaire at the ceiling line.

Concrete-only Luminaire — A recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "FOR USE IN CONCRETE ONLY."

A Type IC or Non-IC luminaire sealed to prevent the entry of concrete may be installed in concrete providing it is marked "SUITABLE FOR USE IN POURED CONCRETE."

Suspended-ceiling Luminaire — All recessed luminaires except those marked for use in concrete only are suitable for use in suspended ceilings and may be marked "SUITABLE FOR SUSPENDED CEILING."

Recessed luminaires intended for use in suspended ceilings and provided with integral clips are marked for use with particular grid systems. When installed in accordance with this marking they comply with 410.16(C) of the NEC. Instructions for using clips to secure the luminaire to the grid are provided with the luminaire. The ability of these clips to withstand seismic disturbances has not been investigated.

Ground-mounted Recessed Luminaire — A ground-mounted recessed luminaire exempted from being thermally protected because it is intended for use only in a fire-resistant medium is marked "SUITABLE FOR GROUND-MOUNTED RECESSED ONLY."

A ground-mounted recessed luminaire suitable for installation in non-fire-resistant mediums, such as a wooden deck, is marked "SUITABLE FOR GROUND-MOUNTED RECESSED."

LUMINAIRE INSTALLATION MARKINGS

All recessed luminaires, except those marked "FOR USE IN POURED CONCRETE ONLY," are marked "BLINKING LIGHT OF THIS THERMALLY PROTECTED LUMINAIRE MAY INDICATE OVERHEATING."

Luminaires that produce temperatures in excess of 90°C at points of mounting to the building structure are marked "INSTALL IN BUILDINGS OF FIRE RESISTANT CONSTRUCTION."

Only those luminaires with an integral junction box or wiring compartment marked "MAXIMUM OF NO. ___ AWG BRANCH CIRCUIT CONDUCTOR SUITABLE FOR ___ C PERMITTED IN BOX," have been investigated for any heat contribution added by branch circuit conductors.

Luminaires which, by their construction, do not permit access to or inspection of field-wiring connections from the front of the luminaire, after installation, are marked "ACCESS ABOVE CEILING REQUIRED" or "ACCESS BEHIND WALL REQUIRED."

Luminaires provided with polymeric recessed housings are marked "FOR USE IN ONE- AND TWO-FAMILY DWELLINGS ONLY" and "FOR USE IN NON-FIRE RATED INSTALLATIONS."

Luminaires that consist of (1) a luminaire housing and trims, or (2) a rough-in section and finishing sections are marked on each separable part with correlation markings:

- (1) For luminaire housing and trims, the housing is marked "USE WITH [manufacturer's name] [catalog number] TRIMS" and each trim is marked with the manufacturer's name and catalog number.
- (2) For rough-in and finishing sections, the rough-in section is marked "ROUGH-IN SECTION FOR USE WITH FINISHING SECTION," where the blank spaces are filled in with a) type or catalog number or b) refers to the type or catalog number located elsewhere on the label. The finishing section is marked in the same manner stating "FINISHING SECTION FOR USE WITH ROUGH-IN SECTION."

Luminaires that consist of separate wired luminaire sections are marked on each separable part with correlation markings.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number or similar designation.

ADDITIONAL INFORMATION

Light-emitting-diode Recessed Luminaires (IFA0)—Continued

For additional information, see Light-emitting-diode Luminaires (IFAK), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires," in addition to the requirements contained in UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

SPECIAL-PURPOSE LUMINAIRES (IFAT)**Canopy Luminaires (IFAW)****GENERAL**

This category covers luminaires for installation in cavities in outdoor canopies and marquees, such as used over gas station pumping islands and similar locations, in accordance with Article 410 of ANSI/NFPA 70, "National Electrical Code."

These luminaires are not intended for indoor use or in outdoor installations where thermal insulation would be installed.

PRODUCT MARKINGS

Canopy luminaires are marked "CANOPY LUMINAIRE – NOT THERMALLY PROTECTED."

All luminaires are suitable for wet locations and may be subjected to water and precipitation from the back side unless marked "FOR COVERED CEILING MOUNT ONLY."

A recessed canopy luminaire is intended to be installed not closer than 1/2 inch from any surface forming the cavity behind the recessed portion of the luminaire and not closer than 1 inch from adjacent luminaires. A recessed canopy luminaire marked "OPEN CEILING MOUNT ONLY" is intended for an uncovered ceiling only.

All luminaires bear a model, catalog or series number (or similar designation) or the words "Incandescent Canopy," "Fluorescent Canopy" or "HID Canopy," or other appropriate product type adjacent to the Listing Mark.

RELATED PRODUCTS

Luminaires intended for recessed indoor use, or areas where thermal insulation could be installed, are covered under Fluorescent Recessed Luminaires (IEVV), High Intensity Discharge Recessed Luminaires (IEXZ) and Incandescent Recessed Luminaires (IEZX).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire."

Electric Discharge Lighting Systems, Cold Cathode (IFAY)**USE**

This category covers lighting systems that incorporate electric discharge tubing with ferrule type end caps, commonly referred to as cold cathode lighting, which is electrically connected to the output of a transformer, power supply or ballast by ferrule type lampholders. Each transformer or power supply in the system is not rated more than 120 mA operating current (150 mA rated output current) when the open circuit voltage is over 7500 V, and not more than 240 mA operating current (300 mA rated output current) when the open circuit voltage is 7500 V or less. These systems are for installation in accordance with Article 410 of NFPA 70, "National Electrical Code" (NEC).

These lighting systems may incorporate transformers, power supplies or ballasts that have a marked output voltage greater than 1000 V. Such systems are not intended for use in dwellings in accordance with Article 410 of the NEC.

Electric Discharge Lighting Systems, Cold Cathode (IFAY)—Continued

These lighting systems provide general illumination in accordance with Article 410 of the NEC.

INSTALLATION

Electric discharge lighting systems are provided as a system of parts that are field installed. These systems are installed using tools and techniques available only to an electrician. The systems are provided with installation instructions which define the scope of the system and method for installation. It is intended that the system installation instructions be retained with the installation to which they apply.

The Listing of a lighting system does not constitute approval of the design which is the responsibility of the manufacturer and the Authority Having Jurisdiction nor approval of the installation. The final acceptance of the field-installed lighting system is the responsibility of the Authority Having Jurisdiction.

PRODUCT MARKINGS

These lighting systems may incorporate ballasts that have marked output voltages 1000 V or less. Such systems are intended for use in dwellings and other premises when provided with circuit interrupting lampholders that de-energize the circuit during lamp replacement, unless they are marked "Not for Dwelling Use."

These systems are intended for permanent installation in indoor, dry locations unless marked in combination with the Listing Mark "Suitable for Damp Locations" or "Suitable for Wet Locations."

RELATED PRODUCTS

This category does not cover neon tubing for display windows, outline lighting or signs which are covered under Signs (UXYT).

This category does not cover field assembled neon systems in display windows, outline lighting, or skeletal neon signs which are covered under Skeletal Neon Sign and Outline Lighting Systems, Field Assembled (UZBL).

This category does not cover field installed neon outline lighting systems that outline or call attention to architectural details of a room or building. Those products are covered under Field Installed Neon Outline Lighting Systems (UYAM).

Outline lighting of the incandescent, HID or fluorescent type fabricated in factory-built sections is covered under Signs (UXYT).

Lighting systems operating at 1000 V or less are covered under Fluorescent Luminaires (IEUZ), HID Luminaires (IEXT) and Incandescent Luminaires (IEZR).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 48, "Electric Signs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on each transformer and transformer enclosure, and the containers in which the remaining lighting system parts are packaged, or on the remaining lighting system parts themselves, referencing a specific field-installed System Number, is the only method provided by UL to identify these lighting systems covered under its Listing and Follow-Up Services. The Listing Mark for these systems includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," an issue number, "Field-Installed Electric Discharge Lighting System Part," and the words "The Listing of this lighting system is contingent upon installation according to the specifications of (Listee's Name), System No. ____ and the National Electrical Code."

Landscape Lighting Systems, Low Voltage (IFDH)**USE**

This category covers low-voltage landscape lighting systems and individual components. A lighting system consists of a power unit, a number of luminaires (lighting units), connectors, and the interconnecting cable for the low-voltage circuit. The individual components include Listed power units, luminaires (lighting units), and all other items needed to install a complete system in accordance with product ratings, instructions and markings.

Recessed luminaires (lighting units) intended for installation in a building wall or similar application are provided with a means to connect conduit and may be installed such that insulation (and other combustible materials are) is in contact with the luminaire (lighting unit).

Listed components from the same company or from different companies may be used to form a complete lighting system as long as the components are used in accordance with the product ratings, markings and instructions.

The low-voltage wire or cable extending from the power unit output circuit to, and between, the individual luminaires (lighting units) and fittings should be Listed SPT-3, SPT-2-W, underground low-energy circuit cable, or other wire or cable specified in the installation instructions provided with the power unit or luminaires (lighting units).

RATINGS

Landscape Lighting Systems, Low Voltage (IFDH)—Continued

Each power unit output circuit is rated 15 V rms ac (24.2 V peak) or less, 25 A or less, and 300 VA or less. The total load connected to each output circuit of the power unit, determined by adding the wattages of the individual luminaires (lighting units), should not exceed the marked maximum permitted total lamp wattage. Two or more output circuits from the same or different power units should not be connected in parallel or series.

PRODUCT MARKINGS

Power units marked "Indoor Use Only" are for use only in indoor applications and are provided with a means for connections of the luminaires (lighting units) to the secondary circuit by a wiring system in accordance with Chapter 3 of ANSI/NFPA 70, "National Electrical Code" (NEC). Power units marked "Outdoor Use Only" are for use only in outdoor applications and are provided with a terminal block or factory-connected length of cord for connecting the low-voltage wiring or cable. Power units marked "Indoor/Outdoor Use" are for use in indoor or outdoor applications and are provided with a means for connection of the luminaires (lighting units) to the secondary circuit by a wiring system in accordance with Chapter 3 of the NEC.

Power units, if located outdoors, are intended to be connected to a receptacle outlet with a cover assembly marked suitable for wet locations while in use. The luminaires (lighting units) are intended for certain indoor applications, such as atriums or shopping malls, and outdoor wet-location installations.

For power units marked "For Use with Submersible Fixtures or Submersible Pumps," the transformer complies with Section 680.23(A)(2) of the NEC. These power units may be used to energize low-voltage submersible fixtures and pumps identified for use in decorative fountains or ponds not intended for swimming or wading in accordance with Section 680.50, Part V of the NEC.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1838, "Low Voltage Landscape Lighting Systems."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the word "Landscape" followed by the product name "Power Unit," "Lighting Unit," "Luminaire" or "Fitting," or other appropriate product name as shown in the individual Listings.

Luminaires and Luminaire Assemblies Classified for Fire Resistance (IFDL)**USE**

This category covers luminaires and luminaire assemblies investigated for use in fire-resistance designs as detailed in Fire Resistance Ratings – ANSI/UL 263 (BXUV). The luminaires and assemblies are intended for recessed installation in ceilings in accordance with ANSI/NFPA 70-2005, "National Electrical Code." They have been shown to provide a degree of fire resistance with the floor or roof assemblies with which they have been tested.

These luminaires and luminaire assemblies have been investigated and found to comply with applicable electrical requirements and are so labeled.

RELATED PRODUCTS

For information on related products, see Fire Resistance Ratings – ANSI/UL 263 (BXUV).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 263, "Fire Tests of Building Construction and Materials," and ANSI/UL 1598, "Luminaires."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

Low-voltage Luminaires for Recreational Vehicle Use (IFDQ)**USE**

This category covers incandescent and fluorescent lamp type luminaires rated 24 V or less, ac or dc, intended for use in recreational vehicles, supplied by a transformer, battery, converter or similar power supply source and installed in accordance with the National Electrical Code.

PRODUCT MARKING

These luminaires are intended for use in dry locations only, unless marked "Suitable for Wet Locations."

These luminaires have been investigated for ceiling mounting as surface or recessed types. Luminaires for either ceiling or wall mounting are marked "Ceiling/Wall Mount." Luminaires limited to wall mounting are marked "Wall Mount Only," unless so constructed that they are obviously intended for wall mounting.

These luminaires are marked with the minimum temperature rating for supply conductors, except when integral lead wire is provided for connection to the supply conductors. The integral leads are of sufficient length for field splices to be located behind the ceiling or wall panel. After field splices are completed, it is intended the splices be positioned in a space not affected by the luminaire lamp heat.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 234, "Low Voltage Lighting Fixtures for Use in Recreational Vehicles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number and the product name "Low Voltage RV Luminaire" or other appropriate product name as shown in the individual Listing.

Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)**USE**

This category covers low-voltage luminaires, low-voltage lighting power units, and low-voltage luminaire systems. This category also covers luminaire fittings that are parts and/or subassemblies intended for final assembly into low-voltage luminaires in the field.

These luminaires and fittings are rated 30 V (42.4 V peak) or less, for connection to an isolating type power unit covered under this category. Sets of low-voltage luminaires may include the power unit and interconnecting cabling to make up a low-voltage luminaire system.

This category also covers low-voltage lighting systems incorporating luminaires which may be repositionable along the bare supply conductors that also support the luminaire. The power unit for these systems is provided with integral protection that de-energizes the output upon overloading or inadvertent shorting of exposed uninsulated live parts of the system.

INSTALLATION INSTRUCTIONS

The products covered under this category are intended for installation in accordance with Article 411 of ANSI/NFPA 70, "National Electrical Code" (NEC). Installation instructions accompanying the product describe the wiring method intended to be used to supply the luminaires and power units.

Certain lighting systems are designed and investigated for the luminaire to be supplied and supported by an exposed conductor, cord, rail or track. The wiring method intended for all other luminaires is (a) that required for Class 2 circuits in Article 725 of the NEC when the circuit is supplied by a Class 2 power unit, or (b) fixed wiring in accordance with Chapter 3 wiring methods of the NEC.

Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)—Continued

Power units intended to supply Class 2 luminaire circuits or an exposed conductor, cord, rail or track that supports the luminaires are intended to be connected to the branch circuit either with a factory-connected power-supply cord or by fixed wiring. These power units are intended to be connected to the output circuit by (a) wiring means consistent with that involved with the supplied luminaire, or (b) fixed wiring. All other power units are designed for connection to the branch circuit and the output circuit with a fixed wiring means.

Luminaires intended for recessed or undershelf installation into a cabinet are provided with installation instructions depicting the intended use.

Some lighting systems include track or rail types of sections that (a) support and provide power to low-voltage luminaires, and (b) are intended to be bent by the installer as needed for the installation. Care should be taken to bend these system parts following the method identified in the installation instructions and so that no part damage occurs. The radii of bends should be no less than specified by the manufacturer.

Care should be taken to adhere to all manufacturer-specified minimum spacings between a luminaire and a nearby object or surface that can be damaged from heat from the luminaire or that can adversely affect natural air movement around the luminaire. Examples include the ceiling above a wall-mounted luminaire, the adjoining wall of an inside corner, the wall near a ceiling-mounted luminaire, alcove surfaces, a valance, and curtains. Where minimum spacings are not specified by the manufacturer or the specific field configuration of a nearby wall, ceiling, or other object is not addressed in the manufacturer's installation instructions, care should be taken to minimize the heating of nearby objects and maximize air movement around the luminaire.

PRODUCT MARKINGS

Luminaires and fittings restricted for connection to a Class 2 power-limited source of supply are identified by product markings or installation instructions, and either provided with a Class 2 power unit or correlation markings.

These luminaires and fittings are intended for surface mounting, suspended or recessed installation and are marked for either dry, damp or wet locations. A luminaire or fitting marked for wet locations is rated 15 V (21.2 V peak) maximum unless live parts are made inaccessible to contact during normal use. See Luminaires and Fittings (HYXT) for additional installation markings.

Recessed units (luminaires and power units) marked "Type IC" or "Inherently Protected" may be installed in accordance with Section 410.66 of the NEC, such that insulation and other combustible materials are in contact with and over the top of the unit.

All recessed units not marked "Type IC" or "Inherently Protected" are intended to be installed such that insulation is not placed over the top or within 3 inches of the sides of the unit, and other combustible materials are spaced, except at the points of support, at least 1/2 inch from the unit.

Power units shipped separately from the bare conductor lighting system are marked to identify the associated bare conductor system series number and manufacturer.

RELATED PRODUCTS

Low-voltage landscape lighting systems consisting of a remote power supply source, flexible cord, interconnecting means and relocatable outdoor use lighting assemblies are covered under Landscape Lighting Systems, Low Voltage (IFDH).

Luminaires incorporating an integral transformer or power supply for supplying the luminaire's low-voltage lamp are covered under Luminaires, Portable (QOWZ), or Portable Cabinet Luminaires (QOVJ) if portable, and Incandescent Surface-mounted Luminaires (IEZR) if not portable.

Low-voltage luminaires intended for connection only to 24 V or less source of supply in recreational vehicles are covered under Low-voltage Luminaires for Recreational Vehicle Use (IFDQ).

Low-voltage flexible lighting products are covered under Flexible Lighting Products (ILGJ).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate 1) low-voltage lighting power units, 2) low-voltage exposed conductor lighting systems and low-voltage luminaires incorporating exposed conductors, and 3) Class 2 low-voltage lighting systems in this category is ANSI/UL 2108, "Low Voltage Lighting Systems."

The basic standard used to investigate other low-voltage lighting products in this category is ANSI/UL 1598, "Luminaires."

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products

Low-voltage Lighting Systems, Power Units, Luminaires and Fittings (IFDR)—Continued

includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Low Voltage Luminaire," "Low Voltage Recessed Luminaire," "Low Voltage Cabinet Luminaire," "Low Voltage Luminaire Power Supply," "Low Voltage Lighting System," "Low Voltage Luminaire System," "Low Voltage Luminaire Fitting," or other appropriate product name as shown in the individual Listings.

The term "Fixture" may be used in lieu of "Luminaire" in the product name.

Medical-dental Luminaires (IFDT)

GENERAL

This category covers task-lighting products, such as examination room lights, illuminated eye charts and the like, intended for installation and use in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, outside the defined patient vicinity. The patient vicinity is defined as areas in which patients are normally cared for, and it is the space with surfaces likely to be contacted by the patient or an attendant who can touch the patient. Patient vicinity includes a space within the room 6 ft (1.83 m) beyond the perimeter of the bed (examination table, dental chair, treatment booth, and the like) in its intended location, and extending vertically 7-1/2 ft (2.29 m) above the floor.

These lighting products have been investigated from the standpoint of electrical, fire and casualty hazards only. Lighting products investigated as patient care equipment, with respect to the isolation and leakage current requirements of UL 60601-1, "Medical Electrical Equipment, Part 1: General Requirements," are covered under Medical Equipment (PIDF). Other hazards, including those which may result from use of this equipment in the presence of flammable anesthetics, have not been investigated. The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

PRODUCT MARKINGS

All luminaires bear a model, catalog or series number (or similar designation) adjacent to the Listing Mark.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Examining Room Light" or "Eye Chart," or the name of the specific type of product as shown in the individual Listings.

Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ)

USE

This category covers stage and studio luminaires, accessories and connector strips rated 600 V or less, for use in theaters, studios and similar locations in accordance with Articles 520 and 530 of ANSI/NFPA 70, "National Electrical Code." Connector strips are defined as a wireway mounted on rigging or to the building structure above or adjacent to the luminaires it supplies. Stage and studio luminaires, accessories and connector strips are not intended for residential use.

LUMINAIRE INSTALLATION MARKINGS

Stage and studio luminaires, accessories and connector strips are marked "Not For Residential Use."

Some stage luminaires are marked with a lamp replacement marking stating "CAUTION — Risk of Fire — Use With Max ___ Watt Lamp" where the space is filled in with a number specifying the maximum wattage.

Stage luminaires intended for use with a pressurized tungsten-halogen lamp with an integral outer envelope and not requiring a separate containment enclosure are marked "WARNING — Risk of fire," and either "Use only lamp type ___" or "Use double envelope tungsten-halogen lamp that is marked on the lamp or carton as suitable for use without an additional shield."

Stage luminaires using high-pressure lamps may be marked with one or more of the following:

"WARNING — Risk of possible lamp explosion. Service and maintenance should be performed only by qualified personnel as determined by the high-pressure luminaire manufacturer. Protective clothing and procedures as outlined in the manufacturer's manual must be followed."

Stage and Studio Luminaires, Accessories and Connector Strips (IFDZ)—Continued

“WARNING — Risk of possible lamp explosion. Allow lamp system to remain unenergized and to cool for minimum ___ minutes before opening lamp access door.”

“CAUTION — Use only high-pressure lamp of proper size and type in this lamp system.”

“CAUTION — Serious injury may result from the generation of ozone by this lamp system. A proper means of venting must be provided.”

Some stage luminaires are intended to be mounted within a restricted range of mounting or adjustment means and are marked “WARNING — Risk of fire and electric shock,” followed by a description of the mounting or adjustment restrictions.

ADDITIONAL INFORMATION

For additional information, see Special-purpose Luminaires (IFAT), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1573, “Stage and Studio Luminaires and Connector Strips.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Stage Lighting Unit,” “Stage Luminaire,” “Stage Border Lighting Unit,” “Stage Border Luminaire,” “Stage Luminaire Accessory,” “Connector Strip,” or other appropriate product name as shown in the individual Listings.

Submersible Luminaires (IFEV)

USE

This category covers submersible luminaires intended for installation in accordance with Article 680 of ANSI/NFPA 70, “National Electrical Code,” in fountains and similar water-containing vessels not intended to accommodate the complete or partial immersion of persons. For Listings of luminaires intended for use in swimming pools, spas, hot tubs and other vessels intended to accommodate persons, see Luminaires and Forming Shells (WBDT).

This category also covers submersible junction boxes intended for use with submersible luminaires and other submersible fountain equipment.

Luminaires investigated for operation only while submerged in water are marked “Submerge Before Lighting,” or with equivalent wording, and such marking is visible after installation of the luminaire.

Submersible luminaires have been investigated for both outdoor and indoor use.

Dry-niche Submersible Luminaire — These luminaires are intended for permanent installation only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are designed for servicing from the rear in a passageway behind the fountain wall or, if mounted in the bottom of the fountain, in a tunnel underneath the fountain. For purposes of installation, maintenance or servicing, the luminaire may consist of two separable parts. One part includes a factory-installed length of flexible cord terminating in an attachment plug, and the second part includes a receptacle for the attachment plug and a splice compartment in which the branch-circuit conductors are connected.

Wet-niche Submersible Luminaire — These luminaires are intended to be installed only in the wall of a fountain unless accompanying installation instructions describe the additional option of installation in the bottom of the fountain. These luminaires are intended for installation in a permanently installed luminaire housing (forming shell) in which the luminaire will be completely surrounded by water. These luminaires are marked to indicate the proper housings with which they are to be used, and the luminaire housings are marked to indicate the luminaires with which the housings are to be used. These luminaires are provided with a factory-installed, permanently attached flexible cord with an exposed length of not less than 12 ft. The flexible cord is confined in the luminaire housing by the luminaire and permits the luminaire to be removed from the luminaire housing and to be lifted to the fountain deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 12 ft long cord will not permit luminaire removal from the luminaire housing and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored in the luminaire housing.

Forming Shell (Housing) for Wet-niche Submersible Luminaires — These are structures designed to support a mating wet-niche luminaire, for mounting in a fountain structure. Forming shells are designed to require the supply end of the conduit connected to the forming shell to be directly con-

Submersible Luminaires (IFEV)—Continued

nected to a Listed swimming pool junction box (see WCEZ). This forming shell-connected conduit may alternatively be connected directly to other equipment (such as Swimming Pool and Spa Transformers (WDGV), Ground-fault Circuit Interrupters (KCCXS), Panelboards (QEUY), or pool or spa control equipment) only when such other equipment has been investigated for this use, as indicated by the marking “Suitable for direct conduit connection to a wet-niche or no-niche luminaire,” or the equivalent.

No-niche Submersible Luminaire — These luminaires are intended to be installed only on the walls of a fountain unless accompanying installation instructions describe the additional option of installation on the bottom of the fountain. These luminaires are mounted to a bracket permanently secured in or on the wall or bottom with the luminaire completely surrounded by water. These luminaires are provided with a factory-installed, permanently attached flexible cord with an exposed length of not less than 12 ft that is confined by the luminaire and fountain wall or bottom. The flexible cord permits the luminaire to be removed from the mounting bracket and to be lifted to the fountain deck for servicing without lowering the water level or disconnecting the luminaire from the branch-circuit conductors. Luminaires with longer cords are available for installations where the junction box or splice enclosure is so located that a 12 ft long cord will not permit luminaire removal from the mounting bracket and placement on the deck for servicing. To reduce the risk of product damage, any cord length in excess of that necessary for servicing should be trimmed from the supply end rather than stored between the luminaire and fountain wall.

Mounting Brackets for No-niche Submersible Luminaires — These are structures designed to support a mating no-niche luminaire, for mounting in or on a fountain structure. Mounting brackets are designed to require the supply end of the conduit connected to the mounting bracket to be directly connected to a Listed swimming pool junction box (see WCEZ). The information provided above about alternate supply-end termination of conduit connected to forming shells also applies to supply-end termination of conduit connected to the mounting brackets of no-niche luminaires.

Special Use Submersible Luminaire — These luminaires are intended to rest directly on the fountain floor or may be otherwise located in the fountain. The luminaires are provided with a permanently attached exposed flexible cord intended to be routed into a submersible junction box, or the luminaires have other means for permanent connection to the supply circuit.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 676, “Luminaires and Submersible Junction Boxes.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Mounting Bracket for No-Niche Luminaire,” “Housing for Wet-Niche Luminaire,” “Wet-Niche Submersible Luminaire,” “Dry Niche Submersible Luminaire,” “No-Niche Submersible Luminaire,” “Special Use Submersible Luminaire” or “Submersible Junction Box,” or other appropriate product name as shown in the individual Listings. Alternatively, the luminaires may be designated “Submersible Luminaire, (Wet-) (Dry-) (No-) Niche Type,” as appropriate.

Track Lights and Tracks (IFFR)

USE

This category covers track lighting systems for installation on or recessed into ceilings and walls and intended to be connected to a source of supply by a fixed wiring method only in accordance with Article 410, Part R of ANSI/NFPA 70, “National Electrical Code.”

These track lighting systems are intended for installation in dry locations only.

Track lighting systems consist of the following parts, each bearing a Listing Mark: 1) track sections, 2) connectors to connect track sections together and/or track sections to the supply, 3) end caps that insert into the last track sections in a run, 4) lighting assemblies, 5) electrical accessory parts, such as low-voltage adapters, and 6) accessory parts, such as mounting hardware, track section hooks and fixture assembly light deflectors.

The following components are not part of the Listed track lighting system and are not acceptable for use with a Listed track lighting system: 1) receptacle adaptors that when inserted into a track section will accommodate attachment plug-connected products and 2) power supply cord con-

Track Lights and Tracks (IFFR)—*Continued*

nectors that when inserted into the end of a track section enables the track system to serve as a power supply cord connected to its source of supply.

INSTALLATION INSTRUCTIONS

Each smallest unit package or carton is provided with installation instructions that contain a) a product description, b) a statement to identify the track system, c) description of the part or parts intended to be used with and d) instructions describing how the part or parts are to be installed to the track system.

Each track section is provided with installation instructions that identify the track system series number or model name and model or catalog number of the track. The installation instructions also specify the electrical ratings of the track system and identify the intended type of mounting (pendant or surface) and distance between mounting clips, screws and stems.

Additional instructions and limitations of use for track lighting systems are specified in the Important Safety Instructions provided with each track section.

Those track systems with track sections that may be cut to length in the field by the installer are provided with installation instructions that indicate the proper method of cutting.

Those track systems intended to have the mounting holes in each track section drilled by the installer are provided with a drill guide in the center of each track section and include in the accompanying installation instructions the proper location of the mounting holes.

INSTALLATION MARKING

Track systems that are designed only for use with mounting clips are identified by marking on each track section "For Clip Mounting Only."

Track systems that are intended only for nonpendant mounting are identified by marking each track section "Do not pendant mount this track such as by stems or wires."

Track systems that are intended for recessed installation are marked "Suitable for Use in Poured Concrete," or "For use in _____" if intended to be an integral part of a suspended ceiling grid. The blank space is filled in with the manufacturer's name and catalog number or product description of the structural building system with which the track system is to be used.

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1574, "Track Lighting Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Track Lighting Fitting."

The complete four-element Listing Mark will appear on the smallest unit container in which the product is packaged when the product is of such a size that only the UL logo can be applied to the product.

LUMINAIRE FITTINGS (IFFX)**GENERAL**

This category covers luminaire fittings, which are incomplete parts and/or subassemblies of luminaires, intended for final assembly into luminaires in the field. Completely assembled luminaires incorporating luminaire fittings may be submitted to UL as part of the Factory Inspection and Follow-Up Service Program for Fluorescent, Incandescent and High Intensity Discharge Luminaires and, if found suitable, Listed as luminaires. Smoothness and thickness of wireways, methods for connection to a recognized wiring system, suitability of splice enclosure and means for inspecting splices are typical considerations given to the completed luminaire which cannot be judged until the fittings are assembled into a complete luminaire.

This category also covers luminaire poles that do not exceed 12 ft in length, measured from the bottom of the base, or from the intended grade level of poles for installation partially in ground.

A complete luminaire assembled from Listed luminaire fittings will bear the luminaire Listing Mark appropriate to the luminaire category if produced under UL's Factory Inspection and Follow-Up Service Program. The determination of the acceptability of an assembly not so labeled rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

All fittings are marked indicating the location where they can be used:

Fittings marked "DRY LOCATIONS ONLY" are intended to be installed in indoor, dry locations.

Fittings marked "SUITABLE FOR DAMP LOCATIONS" are intended to be installed in damp or dry locations.

Fittings marked "SUITABLE FOR WET LOCATIONS" are intended to be installed in wet, damp or dry locations.

The locations are defined in Electrical Equipment for Use in Ordinary Locations (AALZ) and in ANSI/NFPA 70, "National Electrical Code."

Luminaire Fittings (IFFX)—*Continued*

All luminaire fittings bear a model, catalog or series number (or similar designation) adjacent to the Listing Mark.

RELATED PRODUCTS

Certain devices in the categories of Sign Accessories (UYMR), Surface Metal Raceways (RJBT), Surface Nonmetallic Raceways (RJTX), Surface Metal Raceway Fittings (RJPR) and Surface Nonmetallic Raceway Fittings (RJYT) are also suitable for use with luminaire fittings.

Luminaire poles exceeding 12 ft in length are covered under Luminaire Poles (IEUR).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1598, "Luminaires," in addition to standards applicable to the device(s) constituting the fitting.

Products employing LED light sources are additionally investigated to UL Subject 8750, "Outline of Investigation for Light Emitting Diode (LED) Light Sources for Use in Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Luminaire Fitting," "Swivel Joint" or "Disconnect Fitting," or other appropriate product name as shown in the individual Listings.

Fixture Fittings for Track Lighting (IFGT)**USE**

This category covers fixture fittings that are parts and/or subassemblies intended for field installation in specific track lighting systems, identified by catalog number and company name. They include track lighting fixture units intended for installation in specific existing field-installed tracks of another manufacturer in accordance with the fixture unit manufacturer's instructions.

These fittings have been investigated to determine that, when installed and used in accordance with the manufacturer's instructions, they do not adversely affect the operation of the complete track lighting system.

ADDITIONAL INFORMATION

For additional information, see Luminaire Fittings (IFFX), Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1574, "Track Lighting Systems."

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. (shown below) on the product, together with a control number, is the only method provided by UL to identify products under its Classification and Follow-Up Service.

FIXTURE FITTING FOR TRACK LIGHTING**CLASSIFIED BY UNDERWRITERS LABORATORIES INC.**

FOR USE ONLY WITH TRACK LIGHTING MODEL _____

MANUFACTURED BY _____

RECESSED LUMINAIRE TRIMS (IFGW)**USE**

This category covers trims intended for field installation in specified recessed incandescent luminaires. These products have been evaluated by UL to determine that, when used in accordance with the manufacturer's instructions, they comply with the appropriate requirements for the complete luminaire.

This category covers trims for use with newly installed luminaires and as retrofit devices intended to be used to replace existing trims. The specified luminaires with which the trims have been evaluated are identified in the Classification Marking on the trim.

PRODUCT MARKING

Each trim is marked with its catalog number and manufacturer. Each trim is also marked with the Lamp Replacement Markings, and may include the blinking light warning marking.

RELATED PRODUCTS

Reflector retrofit kits used to add or replace reflectors in fluorescent luminaires are covered under Luminaire Conversions, Retrofit (IEUQ). Retrofit devices used to convert incandescent exit fixtures to fluorescent exit fixtures are covered under Exit Sign Conversion Kits (FWCF), and Exit Sign Retrofit Kits (GGET).

ADDITIONAL INFORMATION

For additional information, see Luminaires and Fittings (HYXT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

Recessed Luminaire Trims (IFGW)—*Continued*

REQUIREMENTS

The basic standard used to investigate retrofit luminaire trim conversions is UL 1598, "Luminaires."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

RECESSED LUMINAIRE TRIM
FOR USE WITH [identification of which trims are to be used] ONLY
Control No.

LUMINAIRES AND FITTINGS FOR USE IN HAZARDOUS LOCATIONS (IFGZ)

LUMINAIRES FOR USE IN HAZARDOUS LOCATIONS (IFUX)

USE AND INSTALLATION

This category covers incandescent lamp, fluorescent lamp, high-intensity-discharge lamp, or surgical-type luminaires for use in hospital operating rooms, and luminaires for use with germicidal lamps.

Seals are provided in the luminaires for Class I, Division 1 hazardous locations between lamp chambers and wiring chambers for supply line connections. The luminaires have been tested with respect to safe maximum external temperatures.

Luminaires Listed for use in any of the groups under Class II, Division 1 and 2 hazardous locations have been tested for dusttightness and safe operation in the presence of the specific combustible dusts. The equipment should be kept clean and should be carefully maintained so as not to allow combustible dust to accumulate on equipment or in buildings. The operating temperature of any parts which may be in contact with the combustible dust is marked on the luminaire if this temperature exceeds 100°C.

Luminaires for Class I, Division 2 only, of no specific hazardous location groups or of one or more of the hazardous location groups are included below. Such Listings are under hazardous location group headings with the suffix "Division 2 only" or under the heading "Class I, Division 2 only."

Luminaires without guards should be used only where not subject to breakage.

Luminaires intended for use with germicidal lamps are marked with a caution notice regarding their installation so that users will not be subjected to injurious radiations.

Luminaires suitable for locations having deposits of readily combustible paint residue are so marked.

Luminaires requiring supply wiring with certain temperature ratings are so marked.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Electric Lighting Fixture for Hazardous Locations," "Electric Fixture for Hazardous Locations," "Electric Luminaire for Hazardous Locations" or "Luminaire for Hazardous Locations."

LUMINAIRES, PAINT SPRAY BOOTH FOR USE IN HAZARDOUS LOCATIONS (IFYJ)

USE AND INSTALLATION

This category covers incandescent lamp and electric discharge lamp-type luminaires intended for flush-mounted installation in the ceiling or wall of a down-draft paint spray booth using liquid coating systems as defined in ANSI/NFPA 33, "Standard for Spray Application Using Flammable or Combustible Materials." When the luminaire is limited to a specific mounting location, the luminaire is marked with the intended mounting location, such as "For Wall Mounting Only" or "For Ceiling Mounting Only." When the luminaire is intended for wall and ceiling mounting, the luminaire is not marked with its intended mounting location.

These luminaires have been investigated for deposits of readily combustible paint residues only on the side of the luminaire that forms the interior ceiling or wall surface of the spray booth.

Luminaires, Paint Spray Booth for Use in Hazardous Locations (IFYJ)—*Continued*

These luminaires have been investigated for Class I, Division 2 areas since they may be located within 3 ft of an opening in the paint spray booth and are so marked.

These luminaires are intended to be installed in uninsulated or insulated single- or double-skin sheet-metal ceilings or walls with all insulation kept a min distance of 3 in. from the sides of the luminaire and not placed over the luminaire such that it would entrap the heat produced by the luminaire.

The minimum spacings between adjacent luminaires, to side walls, to the ceiling above the luminaire, and to the floor below the luminaire are outlined in the installation instructions provided with each luminaire. The space between the flush-mounted luminaire and the adjacent ceiling, floor or walls of the building which are located behind the luminaire must contain relatively unobstructed air space around the luminaire equal to the marked spacings. No allowance has been made for any heat contributed by external heat sources such as steam pipes, heating ducts, and the like.

These luminaires may be accessed for relamping and servicing from either (1) the interior or (2) the exterior of the paint spray booth. If the luminaire is intended to be accessed from the interior of the paint spray booth and is wall mounted, a door or frame interlock switch is provided. This switch is intended to be connected to the control circuit of the spray booth such that if the luminaire door or frame is not closed properly, painting operations cannot be conducted. A ceiling-mounted luminaire that is intended to be accessed from the interior of the spray booth is also provided with a door or frame interlock switch or is marked "Caution — Do Not Operate Paint Spray Booth When Luminaire Frames Are Open. Keep Luminaire Frame Tightly Closed While Paint Spray Booth Is Operating."

Each luminaire is marked with the rated ambient temperature. A luminaire may be marked with two ambient temperatures, indicating that the luminaire has been investigated for a higher ambient on the lens side, for example "Ambient 60 C Front, 25 C Rear." If the marked ambient for the lens side is less than the ambient temperature within the spray booth during the baking mode, the luminaire should be connected to the control circuit of the spray booth such that the luminaire is de-energized during the baking mode. Independent of the marked ambient temperature, installation instructions provided with each luminaire specify the maximum ambient temperature for the luminaire. For example, the luminaire may be marked 25°C ambient and the installation instructions specify maximum installation ambient of 60°C. Consequently, (1) the luminaire is to be de-energized during the baking mode and (2) the maximum ambient temperature within the spray booth during the baking mode is 60°C.

Unless the luminaire is marked "Maximum of ___ No. ___ AWG branch circuit conductors suitable for at least ___ C (___ F) permitted in junction box," no allowance has been made for any heat contributed by branch-circuit conductors which pass through, or supply and pass through, an outlet box or other splice compartment which is part of the luminaire.

Luminaires that include raceways are marked, in combination with the Listing Mark, "Suitable for use as Raceways" and are marked to indicate the maximum number, size and type conductors they intend to accommodate.

Each luminaire is provided with installation and maintenance instructions. The maintenance instructions outline procedures to be followed for lens cleaning and gasket replacement. Cleaning and servicing of the luminaires must be performed only when the interior of the spray booth is nonhazardous and only when the ventilation system is operating.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 844, "Luminaires for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Paint Spray Booth Lighting Fixture for Hazardous Locations" or "Paint Spray Booth Luminaire for Hazardous Locations."

LUMINAIRES, RECESSED TYPE FOR USE IN HAZARDOUS LOCATIONS (IGBW)

USE AND INSTALLATION

This category covers incandescent lamp and electric discharge lamp-type luminaires intended for recessed installation in walls and ceilings of hazardous locations in accordance with the provisions of ANSI/NFPA 70,

Luminaires, Recessed Type for Use in Hazardous Locations (IGBW)—Continued

“National Electrical Code.” Unless marked “Suitable for damp locations” or “Suitable for wet locations,” recessed luminaires are only suitable for dry locations.

Recessed luminaires are marked with the required minimum temperature rating of wiring supplying the luminaire. Unless marked “maximum of ____ No. ____ AWG branch circuit conductors suitable for at least ____ C (____ F) permitted in junction box,” no allowance has been made for any heat contributed by branch-circuit conductors which pass through, or supply and pass through, an outlet box or other splice compartment which is part of the luminaire. The operating temperature is marked on the luminaire if this temperature exceeds 100°C.

Recessed luminaires Listed for any of the groups under Class I, Divisions 1 and 2 hazardous locations are designed to operate without causing ignition of surrounding flammable gas or vapor-air atmosphere covered by the group under which it is Listed. Seals are provided in luminaires for Class I, Division 1 hazardous locations between lamp chambers and wiring chambers for supply line connections. The luminaires have been tested with respect to maximum external operating temperatures.

Recessed fluorescent luminaires which include raceways are marked, in combination with the Listing Mark, “Suitable for use as Raceways” and are marked to indicate the maximum number, size, and type conductors they are intended to accommodate.

Recessed luminaires suitable for such use may be marked “Suitable for installation in poured concrete” except that recessed luminaires suitable only for installation in poured concrete are marked “For installation only in poured concrete.”

Recessed luminaires known to produce temperatures in excess of 90°C at a distance of 1/2 in. from the enclosure walls, and which therefore are only suitable for installation in fire-resistive constructions are marked “This luminaire is suitable for installation only in buildings of fire-resistive construction, where the luminaire is not mounted on or adjacent to combustible material.”

Listings of recessed luminaires for Class I, Division 2 only, of no specific hazardous location groups or of one or more of the hazardous location groups are included below. Such Listings are under hazardous location group headings with the suffix “Division 2 only” or under the heading “Class I, Division 2 only.” The luminaire should not be installed in any location where the ignition temperature of the gas of vapor-air mixture which may be present is less than the operating temperature marked on the luminaire.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Recessed Type Electric Lighting Fixture for Hazardous Locations,” “Recessed Type Electric Fixture for Hazardous Locations,” “Recessed Type Electric Luminaire for Hazardous Locations” or “Recessed Type Luminaire for Hazardous Locations.”

LUMINAIRE FITTINGS FOR USE IN HAZARDOUS LOCATIONS (IGIV)**USE**

This category covers subassemblies of luminaires intended for final assembly into luminaires in the field. Information or instructions are provided specifying the subassemblies that may be used to assemble a luminaire in the field.

This category also covers conduit boxes and bodies with threaded hubs, adjustable hangers, and flexible luminaire fittings with threaded hubs, for support of luminaires. Information on restrictions in the use of these fittings and as applicable to the assembled luminaire is marked on the fittings or provided with the fittings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations,” in conjunction with the hazardous (classified) locations standards referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

Luminaire Fittings for Use in Hazardous Locations (IGIV)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names: “Fixture Fitting for Hazardous Locations,” “Luminaire Fitting for Hazardous Locations,” “Electric Lighting Fixture for Hazardous Locations When Completely Assembled With UL Listed Fixture Fittings for Hazardous Locations,” “Luminaire for Hazardous Locations When Completely Assembled With UL Listed Luminaire Fittings for Hazardous Locations,” or other appropriate product name as shown in the individual Listings.

LUMINAIRE FITTINGS FOR USE WITH SPECIFIED FITTINGS FOR USE IN HAZARDOUS LOCATIONS (IGMX)**USE**

This category covers luminaire fittings intended for field installation only with specified compatible Listed luminaire fittings (see IGIV) to form complete luminaires as identified on the product.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 844, “Luminaires for Use in Hazardous (Classified) Locations.”

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

+ FITTING FOR HAZARDOUS LOCATIONS
FOR USE WITH LISTED + FITTINGS SPECIFIED
IN MARKINGS IN OR ON THE PRODUCT

Control No.

+ LUMINAIRE or FIXTURE

LIGHTING UNIT FITTINGS, AUXILIARY FOR USE IN HAZARDOUS LOCATIONS (IGOY)**USE AND INSTALLATION**

This category covers subassemblies of lighting units, battery packs, charging sections and control devices intended for final assembly into battery-powered auxiliary lighting units in the field.

This unit equipment is intended to provide auxiliary light from included light sources only, when the normal power supply to the equipment is disconnected or otherwise interrupted.

The lighting circuit ratings do not exceed 250 V for tungsten lamps. The investigation of automatic transfer devices includes the determination of their suitability for the auxiliary supply circuit. Information or instructions are provided specifying the subassemblies that may be used to assemble an auxiliary lighting unit in the field.

The unit equipment has not been investigated to determine its conformity with Article 700 of ANSI/NFPA 70, “National Electrical Code,” covering emergency lighting.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 844, “Electric Lighting Fixtures for Use in Hazardous (Classified) Locations,” and applicable sections of ANSI/UL 924, “Emergency Lighting and Power Equipment.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Auxiliary Lighting Unit Fitting for Use in Hazardous Locations,” “Auxiliary Lighting Unit When Completely Assembled with UL Listed Luminaire (or Fixture) Fittings for Hazardous Locations” or “Auxiliary Lighting Unit When Completely Assembled with UL Listed Auxiliary Lighting Unit Fittings for Hazardous Locations.”

LUMINAIRES AND FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IHRV)

LUMINAIRE FITTINGS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IHSN)

USE

This category covers subassemblies of luminaires intended for final assembly into luminaires in the field. Information or instructions are provided specifying the subassemblies that may be used to assemble a luminaire in the field.

Also included are conduit boxes and bodies with threaded hubs, adjustable hangers, and flexible luminaire fittings with threaded hubs, for support of luminaires. Information on restrictions in the use of these fittings and as applicable to the assembled luminaire is marked on the fittings or provided with the fittings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged with or without the UL symbol on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Fixture Fitting for Hazardous Locations," "Luminaire Fitting for Hazardous Locations," "Electric Lighting Fixture for Hazardous Locations When Completely Assembled With UL Listed Fixture Fittings for Hazardous Locations" or "Luminaire for Hazardous Locations When Completely Assembled With UL Listed Luminaire Fittings for Hazardous Locations."

LUMINAIRES FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IHTF)

USE

This category covers incandescent lamp, fluorescent lamp, high-intensity-discharge lamp or surgical type luminaires.

Luminaires without guards should be used only where not subject to breakage.

Luminaires suitable for wet locations are so marked.

Luminaires marked "Suitable for use in suspended ceilings," in combination with the Listing Mark, are intended to be mounted in openings of a suspended ceiling. They are marked with the minimum spacings between adjacent luminaires to side walls and to the structural ceiling above the luminaires. The space between the suspended ceiling and the structural ceiling must contain relatively unobstructed air space around the luminaires equal to the marked spacings. Fluorescent lamp type luminaires are suitable for end-to-end mounting. The test conditions do not anticipate external heat sources in the ceiling area such as steam pipes, heating ducts, and the like.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 1598, "Luminaires."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Lighting Fixture for Hazardous Locations" or "Luminaire for Hazardous Locations."

FLASHLIGHTS AND LANTERNS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (IJRF)

USE

This category covers flashlights and lanterns for use in any of the groups under Class I, Zone classified hazardous locations. They have been investigated with respect to use in the presence of specific flammable gas or vapor-air atmospheres. The tests have been conducted using specific lamp and battery combinations. The lamp designation and the number, type, size and voltage of the batteries to be used are marked on the product.

Safety of operation in the presence of explosive mixtures may be endangered if replacement parts other than those specified on the product are used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flashlight for Use in Hazardous Locations" or "Lantern for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

FLASHLIGHTS AND LANTERNS FOR USE IN HAZARDOUS LOCATIONS (IKBR)

GENERAL

This category covers battery-powered flashlights and lanterns. They have been investigated using the specific lamp and battery combinations specified by the manufacturer. The lamp designation and the number, type, size and voltage of the batteries intended to be used is marked on the product.

Flashlights and lanterns that utilize incandescent lamps are provided with a filament-disconnect mechanism or other type of construction to protect against ignition of the specified hazardous atmosphere. The filament-disconnect mechanism is intended to disconnect the lamp bulb from the circuit when the glass bulb or envelope surrounding the lamp filament is broken.

Intrinsically safe flashlights and lanterns are so marked on the device.

The safety of operation in the presence of explosive mixtures may be compromised if replacement parts other than those specified on the product are used.

Flashlights and lanterns are not intended for use in hospital operating rooms unless so marked on the device.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 783, "Electric Flashlights and Lanterns for Use in Hazardous (Classified) Locations," or ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flashlight for Use in Hazardous Locations" or "Lantern for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

FLAT CONDUCTOR CABLE, TYPE FCC (IKKT)

GENERAL

This category covers flat conductor cable, Type FCC, which is an assembly of three or more solid, flat, parallel, insulated copper conductors. The cable is intended for installation in accordance with Article 324 of ANSI/NFPA 70, "National Electrical Code." The cable is marked for use with specific fittings [see Flat Conductor Cable Fittings (IKMW)] to make up a particular flat conductor cable, Type FCC, wiring system.

The cable is marked on both sides with the manufacturer's identification, wire size in AWG, Type FCC, 300 V, temperature rating and ampacity. Type FCC cable always has one conductor identified as the grounding conductor and one conductor identified as the grounded conductor. The identification means shall be printing or striping the conductor green (grounding) or white (grounded).

Installation instructions are supplied by the manufacturer for use by the general contractor, erector, electrical contractor, electrical inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flat Conductor Cable, Type FCC."

FLAT CONDUCTOR CABLE FITTINGS (IKMW)

USE AND INSTALLATION

This category covers flat conductor cable fittings, which include all those items needed to install flat conductor cable, Type FCC (see IKKT) in accordance with Article 324 of ANSI/NFPA 70, "National Electrical Code." This category includes top and bottom shields, connectors, transition assemblies and insulators.

A fitting is suitable for use with a specific Type FCC cable in a particular flat conductor cable wiring system and is so identified.

Installation instructions are supplied by the manufacturer for the use of the general contractor, erector, electrical contractor, electrical inspector and others concerned with the installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 498, "Attachment Plugs and Receptacles," and ANSI/UL 486A-486B, "Wire Connectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flat Conductor Cable Fitting."

FLATIRONS AND GARMENT-FINISHING APPLIANCES (IKOZ)

GENERAL

This category covers household and commercial flatirons and garment-finishing appliances.

Records show that nonautomatic flatirons, when left with the power on, are frequent causes of fire. All flatirons, with the exception of the commercial tailoring types, are either of the automatic type or have an inherent protection means for safeguarding against this possible hazard.

Flatirons and garment-finishing appliances of the automatic type are provided with a form of automatic temperature control (usually a thermostatic control) which operates automatically, within predetermined temperature limits, to open and close the heating element circuit.

Garment-finishing appliances may be of the automatic or nonautomatic type.

Most products covered under this category are limited to use on alternating current and the limitation is marked on the nameplate.

Garment-finishing appliances are investigated from the standpoint of personal injury as well as electrical hazards. To reduce the likelihood of accidents, rotary-type devices, as a prerequisite to Listing, are required to employ a readily-operable safety release mechanism which is independent of the connection of the machine to the electrical power supply.

Some garment-finishing appliances use steam and/or air for the purpose of forming and/or removing wrinkles from garments. The steam is supplied by electric steam generators integral with the unit or from external steam lines.

This category also covers devices provided with mechanical and/or air-inflatable forms to form garments during the steaming operation.

Motors used in permanently-connected equipment and intended for continuous-duty operation are prevented from hazardous overheating by thermal protectors, overcurrent protective devices, or inherent impedance.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 141, "Garment Finishing Appliances," and ANSI/UL 1005, "Electric Flatirons."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

FLEXIBLE LIGHTING PRODUCTS (ILGJ)

USE

This category covers flexible lighting products intended for decorative use, consisting of nonreplaceable lamps connected in series/parallel strings and enclosed within a flexible polymeric tube or extrusion.

Flexible lighting products are provided with an attachment plug for connection to a nominal 120 V, 15 or 20 A branch circuit. These lights do not have provisions for permanent mounting to a building or structure and should not be installed in a manner that can cut or damage the outer insulation. They are intended to only be connected as a complete unit and not field cut. These flexible lighting products have not been investigated for use within another enclosure.

This category also covers flexible light sculptures, which are intended for decorative use and consist of a polymeric or rigid frame to which a flexible lighting product is attached. The flexible lighting product attached to the light sculpture provides outline lighting of the figure or object created by the frame. Flexible lighting sculptures whose primary purpose is to be a sign (not decorative) are not covered under this category.

This category also covers low-voltage flexible lighting products that are intended for use with a low-voltage transformer or power supply.

Flexible lighting products are intended for dry and indoor use unless marked for damp or wet locations.

RELATED PRODUCTS

Electric signs are covered under Signs (UXYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2388, "Flexible Lighting Products."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Light" or "Flexible Light Sculpture."

FLEXIBLE METALLIC TUBING (ILJW)

GENERAL

This category covers flexible metallic tubing in trade sizes 3/8, 1/2 and 3/4 (metric designators 12, 16 and 21) for installation in accordance with Article 360 of ANSI/NFPA 70, "National Electrical Code."

Flexible metallic tubing is intended for installation where not subject to physical damage such as above suspended ceilings.

Flexible metallic tubing is permitted to be used in lengths of six ft or less, in dry locations, in accessible locations when protected from physical damage or concealed, to contain branch-circuit conductors at a maximum potential of 1000 V and when terminated in suitable fittings.

Flexible metallic tubing should not be used underground for direct earth burial or in duct which is buried, or embedded in poured concrete or aggregate or in direct contact with the earth or where subjected to corrosive conditions or in direct contact with masonry or in damp locations. Flexible metallic tubing containing circuit conductors protected by overcurrent devices rated 20 A or less is suitable as a grounding means.

RELATED PRODUCTS

See Fittings, Flexible Metallic Tubing (ILNR) with respect to fittings suitable as a grounding means.

FLEXIBLE METALLIC TUBING (ILJW)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1652, "Outline of Investigation for Flexible Metallic Tubing."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Metallic Tubing."

FITTINGS, FLEXIBLE METALLIC TUBING (ILNR)

GENERAL

This category covers flexible metallic tubing fittings in trade sizes 3/8, 1/2 and 3/4 (metric designators 12, 16 and 21).

Grounding — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code." The conduit used with the connectors should contain conductors protected by overcurrent devices rated 20 A or less.

PRODUCT MARKINGS

Fittings have been tested for use only with steel tubing unless marked on the device or carton to indicate suitability for use with aluminum or other material.

ADDITIONAL INFORMATION

For additional information, see Flexible Metallic Tubing (ILJW) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Metallic Tubing Fitting," "Connector" or "Coupling," or other appropriate product name as shown in the individual Listings.

FLEXIBLE STAGE AND LIGHTING POWER CABLE (ILPH)

USE AND INSTALLATION

This category covers flexible stage and lighting power cable constructed for use in accordance with Article 400 of ANSI/NFPA 70, "National Electrical Code" (NEC). Flexible stage and lighting cable consists of either a single insulated conductor or two or more insulated conductors, with or without fully insulated equipment grounding conductors, with an overall jacket.

RATINGS

The cable is rated 600 V, 60°C, 75°C, 90°C or 105°C. The cable is intended for use at ampacities in accordance with Table 400.5(B) of the NEC. Cable rated 105°C has the same ampacities assigned to 90°C rated cable in Table 400.5(B) and is so marked.

Flexible stage and lighting power cable employs flexible stranded copper conductors in a size range of 8 AWG to 250 kcmil and is designated as Type SC (thermoset insulation and jacket), Type SCT (thermoplastic insulation and jacket) and Type SCE (thermoplastic elastomer insulation and jacket).

PRODUCT MARKINGS

Cable marked "Oil Resistant 60°C" is suitable for exposure to oil at 60°C. Cable marked "Oil Resistant 75°C" is suitable for exposure to oil at 75°C.

Cable marked "water resistant" is suitable for immersion in water.

This cable may be marked "-40C." If so marked, the cable complies with a bend test (not a suppleness test) at -40°C. Cable marked "-50C," "-60C" or "-70C" complies with a bend test (not a suppleness test) at -50°C, -60°C or -70°C, as applicable.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 1680, "Outline of Investigation for Stage and Lighting Cables."

UL MARK

FLEXIBLE STAGE AND LIGHTING POWER CABLE (ILPH)

161

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Flexible Stage and Lighting Power Cable."

FLOOR CLEANERS FOR USE IN HAZARDOUS LOCATIONS (ILQV)

GENERAL

This category covers floor cleaners consisting of an aqueous solution of detergents and certain other materials. These cleaners have been Classified as to use on electrically conductive floorings Listed by Underwriters Laboratories.

The use of these floor cleaners on Listed floorings does not adversely affect their electrical conductivity or their ability to dissipate electrostatic charges on persons and conductive equipment electrically contacting them.

These floor cleaners are free from any tendency to heat spontaneously under use conditions.

The manufacturer's instructions for use of these floor cleaners should be followed.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 779, "Electrically Conductive Floorings."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[TRADE NAME]

AS TO ELECTRICAL CONDUCTIVITY AND SPONTANEOUS HEATING

WHEN USED ON CONDUCTIVE FLOORS FOR USE WITH LISTED ELECTRICALLY CONDUCTIVE FLOORING OF THE * TYPE

Control No.

* Type of flooring, such as vinyl and/or linoleum

FLOORING, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (INFZ)

USE

This category covers electrically conductive floorings intended for use in industrial plants, arsenals, hospital operating rooms, and similar locations where it is necessary to reduce the risk of accumulation of static electricity.

Tests indicate that these floorings, when installed and maintained in accordance with the manufacturer's instructions, are moderately electrically conductive and dissipate electrostatic charges on persons and conductive equipment making electrical contact with the floorings, and that the electrical resistance conforms to ANSI/NFPA 99, "Standard for Health Care Facilities."

Conductive footwear on personnel, and conductive equipment fitted with conductive bases, leg tips, or casters making electrical contact with the flooring are required in order to make conductivity of the flooring effective in equalizing electrostatic charges. A grounding connection to the flooring may be provided.

To dissipate static electrical charges that may be present on persons or movable equipment before entering the hazardous area, these floorings should extend into rooms and corridors immediately serving or communicating with the hazardous area.

Insulating floor waxes should not be used on these floorings.

When flammable solvents or adhesives are used during application of the flooring, precaution should be taken to obtain adequate ventilation and to avoid sources of ignition.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

FLOORING, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (INFZ)

162

The basic standard used to investigate products in this category is UL 779, "Electrically Conductive Floorings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Flooring Relating to Hazardous Locations," "Electrically Conductive Floor Material Relating to Hazardous Locations" or "Floor Tile Relating to Hazardous Locations."

FLOORING, STATIC DISSIPATIVE, RELATING TO HAZARDOUS LOCATIONS (INTX)

USE

This category covers static dissipative flooring intended for use where it is necessary to reduce the risk of accumulation of static electricity.

Tests indicate that these floorings, when installed and maintained in accordance with the manufacturer's instructions, dissipate electrostatic charges, and the surface resistivity conforms to the requirements of Department of Defense Military Handbook No. 263B, "Electrostatic Discharge Control Handbook for Protection of Electrical and Electronic Parts, Assemblies and Equipment (Excluding Electrically Initiated Explosive Devices)."

Insulating floor waxes should not be used on these floorings.

When flammable solvents or adhesives are used during application of the flooring, precaution should be taken to obtain adequate ventilation and to avoid sources of ignition.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic document used to investigate products in this category is Department of Defense Military Handbook No. 263B (MIL-HDBK-263B), "Electrostatic Discharge Control Handbook for Protection of Electrical and Electronic Parts, Assemblies and Equipment (Excluding Electrically Initiated Explosive Devices)" (July 31, 1994).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

STATIC DISSIPATIVE FLOORING
DOD MIL-HDBK-263B
SEE INSTRUCTIONS
Control No.

FOOD-PREPARING MACHINES (IPNX)

FOOD-PREPARING MACHINES, COMMERCIAL (IPST)

USE AND INSTALLATION

This category covers electrically-operated machines intended for use in commercial kitchens associated with restaurants, hospitals or other business establishments where they are not ordinarily accessible to the general public. They are used in the processing or combination processing and serving of foods and food products and may be provided with such miscellaneous attachments as bowls, sieves, droppers, etc., not involving moving or cutting parts. Attachments that perform functions other than intended by the basic design have not been investigated unless specifically noted in the individual Listings and covered in the installation and use instructions.

In general, the intended application of the product is such as to render the product inappropriate for household use, unless the product has also been Listed under Food-preparing Machines, Household (IPWZ).

Commercial food-preparing machines such as meat- and bread-slicing machines, choppers, meat saws, etc., employing knives, screw- or worm-type feeding mechanisms, etc., are investigated for risk of personal injury, electric shock and fire. These machines are required to employ, in varying degrees, guards, safety releases, interlocks, markings, etc., to reduce the risk of accidents. In determining the need for protection against the risk of personal injury, consideration is given to the required utility of the product in a commercial application and the fact that experienced operators will most likely use the product.

FOOD-PREPARING MACHINES (IPNX)

Food-preparing Machines, Commercial (IPST)—Continued

Some products in this category have cutting or moving parts, presenting certain risks of personal injury that cannot be wholly eliminated by practical design features; such risks have been reduced to an acceptable degree.

If a product is suitable for built-in installation, side-by-side mounting or stacking, it is so indicated in the installation instructions.

If a product is of a type designed for permanent connection to water supply or waste disposal lines at the point of installation, Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection.

Some equipment may be designed to accept accessories in the field. In such cases, both the commercial food-preparing machine and the accessory (attachment) are marked to relate the two for proper installation.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, warnings or special instructions are on the equipment visible after installation and during use where applicable.

REBUILT PRODUCTS

This category also covers commercial motor-operated food-preparing machines that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial motor-operated food-preparing machines are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial motor-operated food-preparing machines are subject to the same requirements as new commercial motor-operated food-preparing machines.

UNEVALUATED FACTORS

The sanitation of these products has not been investigated. See Commercial Powered Food Preparation Equipment, Sanitation (DUIA) for more information.

RELATED PRODUCTS

Accessories for use with commercial food-preparing machines are covered under Food-preparing Machine Accessories, Commercial (IPUW).

Refrigerated beverage and/or ice dispensers are covered under Beverage Coolers and Beverage Cooler-Dispensers (SFYW).

Refrigerated ice cream makers are covered under Ice Cream Makers (SINX).

Custom-built food-preparation or serving equipment consisting of drop-in components, shelf heaters, plate warmers or heated food displays, etc., is covered under Commercial Cooking Appliances (KNGT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 763, "Motor-Operated Commercial Food Preparing Machines."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Food-preparing Machine" or "Meat Slicer," or other appropriate product name as shown in the individual Listings.

Parts or devices that supplement or modify the basic operation of the commercial food-preparing machine bear the product name "Accessory for Commercial Food-preparing Machine," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

FUEL CELL EQUIPMENT (IRGN)

USE AND INSTALLATION

This category covers fuel cell type power systems with input/output rated 600 V or less and intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code." These products are marked for indoor or outdoor use. Authorities Having Jurisdiction should be consulted regarding the use of this equipment before installation.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

FUEL CELL POWER SYSTEMS FOR USE IN INDUSTRIAL TRUCKS (IRGQ)

USE AND INSTALLATION

This category covers fuel cell power systems intended to be installed in Type E, EE and ES industrial trucks used in locations as defined in ANSI/NFPA 505, "Fire Safety Standard for Powered Industrial Trucks Including Type Designations, Areas of Use, Conversions, Maintenance, and Operations," and ANSI/NFPA 70, "National Electrical Code."

Fuel Cell Power Systems for Use in Industrial Trucks (IRGQ)—Continued

These fuel cell power systems are self-contained (that is, a complete system incorporated into its own housing that is intended to replace or be combined with a battery system to power an industrial truck).

These products are intended for use in equipment as described in ANSI/UL 583, "Electric-Battery-Powered Industrial Trucks."

These products have an output rating of 150 V or less, and are fueled with hydrogen.

This category does not cover fuel cell power systems intended for use in on-road vehicles.

PRODUCT MARKINGS

These products are marked to indicate the manufacturer's name, model number, type of fuel required including service pressure and maximum operating pressure, output electrical ratings, rated ambient temperature range, weight of the fuel cell system, and center of gravity of the fuel cell power system.

Products intended to be used in locations with elevated wind speeds are marked with the maximum wind speed in mph. Products investigated for a minimum IP rating may be marked with that IP rating.

RELATED PRODUCTS

Stationary fuel cell systems are covered under Stationary Fuel Cell Systems (IRGZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2267, "Fuel Cell Power Systems for Installation in Industrial Electric Trucks."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuel Cell Power System for Use in Industrial Trucks."

HAND-HELD OR HAND-TRANSPORTABLE FUEL CELL POWER UNITS AND DISPOSABLE FUEL CARTRIDGES (IRGU)

USE AND INSTALLATION

This category covers hand-held or hand-transportable direct methanol fuel cell power systems intended to provide a dc electrical power source not exceeding 60 V ac and 240 VA, and accessory removable methanol fuel cartridges with a fuel capacity not exceeding 950 mL.

This category also covers hand-held or hand-transportable alkaline (direct borohydride) fuel cell power systems intended to provide a dc electrical power source not exceeding 60 V ac and 240 VA, and accessory single-use borohydride fuel cartridges with a liquid fuel capacity not exceeding 1 L.

Removable methanol fuel cartridges transporting hazardous fuels for use with the direct methanol fuel cell systems are intended to comply with the requirements of the U.S. Department of Transportation (DOT) in accordance with 49CFR172, "Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements."

PRODUCT MARKINGS

Direct Methanol Systems

Direct methanol fuel cell power systems are marked with the manufacturer's name, model designation and fuel type. These products are also marked with the following (or equivalent wording): "WARNING: This Product Contains Methanol, Which is an Eye, Skin, and Respiratory Tract Irritant. Methanol May Cause Blindness or Death if Swallowed. If Methanol is Exposed, Contain and Dispose of Methanol. Use in Well-Ventilated Areas. Read and Understand All Instructions Before Use. Keep Out of Reach of Children."

Fuel cell power systems found to provide limited power output in accordance with UL Subject 2265A, "Outline of Investigation for Hand-Held or Hand-Transportable Fuel Cell Power Units with Disposable Methanol Fuel Cartridges for Use in Original Equipment Manufacturer's Information Technology Equipment," are additionally marked "Limited Power Supply" (or "LPS").

Removable fuel cartridges are marked with the manufacturer's name, model number, type of fuel, and the statement "For Use with ___ Model ___ Fuel Cell Power System" (or equivalent).

Removable fuel cartridges are also marked with the following (or equivalent wording): "WARNING: This Product Contains Methanol, Which is an Eye, Skin, and Respiratory Tract Irritant. Methanol May Cause Blindness or Death if Swallowed. If Methanol is Exposed, Contain and Dispose of Methanol. Keep Out of Reach of Children. Never Expose to Heat Above 140°F

Hand-held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU)—Continued

(60°C) or to Prolonged Sunlight. Never Puncture or Put in Fire. Do Not Crush, Disassemble or Mutilate. Read and Understand All Instructions Before Use."

Fuel cartridges for hand-held or hand-transportable fuel are marked with appropriate identifying information for products containing methanol, as outlined in 49CFR106, "Rulemaking Procedures."

Alkaline (Direct Borohydride) Systems

A borohydride fuel cartridge and single-use alkaline system is marked with the following (or equivalent wording): "WARNING: Contents are Corrosive and Toxic. Do Not Disassemble. Avoid Contact with Contents. Do Not Expose to Flame or Heat Above 50C (122F). Do Not Expose to Acids, Oxidizers, Alcohol or Household Cleaning Products. Follow Usage Instructions. In the Case of Contact with Contents, Seek Medical Attention."

Fuel cell power systems found to provide limited power output in accordance with UL Subject 2265C, "Outline of Investigation for Hand-Held or Hand-Transportable Alkaline (Direct Borohydride) Fuel Cell Power Units and Borohydride Fuel Cartridges for Use with Consumer Electronics or Information Technology Equipment," may additionally be marked "Limited Power Supply" (or "LPS").

Fuel cell power systems and fuel cartridges are marked with the manufacturer's name, model number, fuel composition and amount of fuel. Fuel cell systems are additionally marked with their electrical output ratings.

RELATED PRODUCTS

Component fuel cell modules intended for use in a portable application, but not intended for use with hand-held or hand-transportable equipment are covered under Fuel Cell Modules (IRGR2).

ADDITIONAL INFORMATION

For additional information, see Fuel Cell Equipment (IRGN) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate direct methanol systems in this category are contained in UL Subject 2265A, "Outline of Investigation for Hand-Held or Hand-Transportable Fuel Cell Power Units with Disposable Methanol Fuel Cartridges for Use in Original Equipment Manufacturer's Information Technology Equipment."

The basic requirements used to investigate alkaline (direct borohydride) systems in this category are contained in UL Subject 2265C, "Outline of Investigation for Hand-Held or Hand-Transportable Alkaline (Direct Borohydride) Fuel Cell Power Units and Borohydride Fuel Cartridges for Use with Consumer Electronics or Information Technology Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Direct Methanol Fuel Cell Power Unit" (or "DM Fuel Cell Power Unit") or "Methanol Fuel Cartridge" for methanol systems, or "Alkaline Fuel Cell Power Unit," "Direct Borohydride Fuel Cell Power Unit" or "Borohydride Fuel Cartridge" for alkaline fuel cell systems, or other appropriate product name as shown in the individual Listings.

STATIONARY FUEL CELL SYSTEMS (IRGZ)

USE AND INSTALLATION

This category covers stationary fuel cell power systems intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These products have an input/output rating of 600 V or less, and are intended for use as marked with the appropriate fuel. These products are intended for permanent connection to the source of supply and for installation in accordance with the manufacturer's installation instructions. Products rated more than 50 kW are intended for installation in accordance with Chapters 1 – 8, and products rated 50 kW or less are intended for installation in accordance with Chapter 9 of ANSI/NFPA 853, "Standard for the Installation of Stationary Fuel Cell Power Systems."

PRODUCT MARKINGS

These products are marked to indicate the manufacturer's name, model number, serial number, type of fuel required and required delivery pressure, fuel consumption at rated electrical output, input and output electrical ratings, and rated ambient temperature range.

Products intended for outdoor installation only are marked "For Outdoor Installation Only." Products intended for indoor installation only are marked "For Indoor Installation Only."

RELATED PRODUCTS

This category does not cover any factory- or field-installed integral or interconnected equipment provided, such as an inverter, to change the fuel cell stack output voltage or frequency, or to serve as a utility interac-

Stationary Fuel Cell Systems (IRGZ)—Continued

tive connection means. Products associated with this equipment for these purposes are covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH).

ADDITIONAL INFORMATION

For additional information, see Fuel Cell Equipment (IRGN), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/CSA America FC 1, "Stationary Fuel Cell Power Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Stationary Fuel Cell Power System," and the statement "In Accordance with ANSI/CSA America FC 1-(+)(++)."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

FUEL GAS BOOSTER COMPRESSOR EQUIPMENT (IUXX)

GENERAL

This category covers fuel gas booster compressor equipment designed to increase the pipeline pressure of a fuel gas, such as natural gas, from a low-fuel gas pressure (nominally 1/4 to 5 psig) to a higher outlet pressure (such as 30 to 115 psig). This higher-pressure fuel gas is then supplied to an external product, such as a microturbine. The equipment is intended for either indoor or outdoor use.

The equipment consists of a motor-compressor or an open-type compressor, internal gas piping, wiring and a combination of associated electrical and mechanical assemblies and controls on a common frame in an overall enclosure.

Equipment containing a motor-compressor connected to a flammable fuel gas piping system has been investigated to determine that flame will not propagate beyond the inlet and outlet fuel gas connections of the equipment, should an electrical fault occur within the motor-compressor when a flammable gas/air mixture is present.

These units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 60335-2-34, "Household and Similar Electrical Appliances, Part 2: Particular Requirements for Motor-Compressors," and ANSI/UL 2200, "Stationary Engine Generator Assemblies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuel Gas Booster" or "Fuel Gas Booster Compressor."

FURNISHINGS (IYMR)

GENERAL

This category covers electrical (rated 600 V ac or less) and/or nonelectrical furnishings, and includes:

1. Motor-operated furniture, such as motor-operated beds and chairs, merchandise displays and furniture-mounted video support systems
2. Electrified furniture, such as lighted curio cabinets, microwave carts and bed headboards
3. Nonseasonal electrical decorations, such as wave machines, lava lamps and neon sculptures
4. Home and individual office furnishings, such as study carrels, consoles and desks
5. Commercial product and informational displays, such as shelving units, motorized carpet displays and product platforms
6. Electrified building components, such as windows
7. Other similar miscellaneous furnishings intended for use in dwelling units or commercial environments

USE AND INSTALLATION

Products marked for household or residential use are intended to be used in dwelling units and guest rooms of hotels and motels. Hotel common

areas such as the lobby or restaurant are considered commercial. Household or residential furnishings may be used in commercial settings, such as individual offices, where the number of people using the furnishings will be limited.

Products marked for commercial use are used where business is transacted, such as an office building, factory, warehouse, or similar location, and which is not a dwelling unit. These locations are where a large number of different people may be using the furnishings or are near the furnishings (such as customers near a display furnishing).

Products covered under this category are provided with installation and use instructions.

These units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

UNEVALUATED FACTORS

The physiological or psychological effects on a person, beneficial or otherwise, which may be produced through the use of this equipment either singularly or with any other apparatus have not been investigated.

RELATED PRODUCTS

Office furnishings are covered under Office Furnishings (QAWZ).

Cord-connected multiple-outlet strips intended for general use (e.g., relocatable power taps) are covered under Relocatable Power Taps (XBYS).

Cord-connected multiple-outlet strips intended for permanent mounting (e.g., furniture power distribution units) are covered under Furniture Power Distribution Units (YINC).

Lighted display cases and cabinets used in commercial applications are covered under Wired Cabinets (ZNXR). Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated (AAVU).

Furnishings used for patient care are covered under Medical and Dental Equipment, Professional (KFBO) and Medical Equipment (PIDF).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, and the like are covered under Custom-built Kiosks (EMHH).

Furnishings intended for support of audio or video equipment and provided with casters or secured to the building structure are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV) or Carts, Tall Institutional (CZWK).

Portable lamps are covered under Luminaires, Portable (QOWZ) or Portable Cabinet Luminaires (QOVJ).

Decorative products intended for seasonal, temporary use such as lighted sculptures, molded figurines, and the like are covered under Outfits, Decorative (DGXW). Decorative lighting strings or electric ornaments intended for seasonal use are covered under Strings, Decorative Lighting (DGZZ) and Electric Ornaments (DGXC).

BUILDING COMPONENTS (IYMT)

GENERAL

This category covers building components, such as heated windows, electrochromatic windows, motorized structure-mounted mirrors, and nonmotorized structure-mounted shelving and shelving support systems.

For commercial units that (1) have a surface area greater than 10 sq. ft. and are intended to be adjacent to other furnishings, or (2) are greater than 20 sq. ft. and intended to stand alone, the surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

These building components have not been investigated for use as components of fire-resistive assemblies.

These products are provided with installation and use instructions.

These units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

These products are marked with the Listee's name, trademark or UL File Number, a unique model designation, a date code, and any electrical ratings.

Products intended for use only in dwelling units are marked "Household Use Only"; products intended for use only in commercial settings are marked "Commercial Use Only." If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962, "Household and Commercial Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the follow-

Building Components (IYMT)—Continued

ing product names as appropriate: "Building Component," "Heated Glazing," "Electrified Glazing," "Shelving System" or "Articulating Mirror."

COMMERCIAL DISPLAYS (IYMX)**USE AND INSTALLATION**

This category covers commercial merchandise displays, such as lighted and powered shelving units, luminary store displays, motorized rotating merchandise displays and motorized carpet flooring displays. A commercial display is a furnishing other than a showcase or cabinet that is used in a commercial establishment to display jewelry or similar merchandise.

Commercial merchandise displays may be permanently connected or may be cord-and-plug connected with up to two power-supply cords.

For commercial units that (1) have a surface area greater than 10 sq. ft. and are intended to be adjacent to other furnishings, or (2) units that are greater than 20 sq. ft. and intended to stand alone, the surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

These products are provided with installation and use instructions.

These units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

UL Listed Commercial Displays are marked "Certification of this Listed Commercial Display does not include the products that are on display."

Products intended for use only in commercial settings are marked "Commercial Use Only."

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

RELATED PRODUCTS

Illuminated display showcases and cabinets used in commercial applications are covered under Wired Cabinets (ZNXR).

Nonilluminated advertising displays are covered under Advertising Displays, Nonilluminated (AAVU).

Custom-built commercial products, such as ticket machines, electronic point-of-sale products, Internet communication stands and the like are covered under Custom-built Kiosks (EMHH).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962, "Household and Commercial Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Display."

DECORATIVE FURNISHINGS (IYNA)**USE AND INSTALLATION**

This category covers furnishings intended to be used year-round (nonseasonal) that exist for aesthetic enjoyment or an ornamental purpose, such as lava lamps, low-wattage illuminated sculptures, glitter lamps, scrolling scenes, neon sculptures, strobe lamps, mirror balls, plasma lighting globes, motorized sculptures, optical fiber sculptures and wave machines.

These products are typically portable cord-and-plug connected but may be permanently connected.

These products are provided with use instructions and, if permanently connected, installation instructions are also provided.

These products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked "Household Use Only"; products intended for use only in commercial settings are marked "Commercial Use Only." If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

RELATED PRODUCTS

This category does not cover portable lamps (cord-connected portable luminaires (lamps), whose primary function is task or ambient illumination, and that can be moved to a new location without the use of tools). Tiffany-type portable lamps and similar lighted decorative lamps are portable lamps rather than a decorative furnishing. Portable lamps are covered under Luminaires, Portable (QOWZ) and Portable Cabinet Luminaires (QOVJ).

This category does not cover decorative outfits intended for seasonal, temporary use, not to exceed 90 days per year, providing a seasonal theme, such as wreaths, stars, tree-top units, sprays, light sculptures, molded figures, such as a pumpkin or a snowman, candles or candle sets without

Decorative Furnishings (IYNA)—Continued

lamp shades, tree stands, and motorized decorative displays having illumination or other decorative effects. Decorative-lighting strings provided with lamp shades or diffusers over the lamps are also considered decorative outfits. Decorative outfits are intended for connection to a receptacle by means of an attachment plug and are portable. Seasonal, temporary use decorative products are covered under Outfits, Decorative (DGXW).

This category does not cover fountains. Fountains are covered under Fountains, Small Decorative (IQRW) or Architectural and Floating Fountains (AWEG).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 962, "Household and Commercial Furnishings," ANSI/UL 153, "Portable Electric Luminaires," and UL 2161, "Neon Transformers and Power Supplies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Decorative Furnishing."

FURNITURE POWER DISTRIBUTION UNITS (IYNC)**USE AND INSTALLATION**

This category covers cord-connected furniture power distribution units rated 250 V ac or less, 16 A ac or less, intended for indoor use. These units consist of single or multiple-outlet wiring devices that provide power for and are intended to be installed in commercial or household (residential) portable or stationary furnishings only. These units provide outlet receptacles for computers, audio and video equipment, and other equipment that is mounted on or in commercial or household (residential) portable or stationary furnishings. These units are provided with an attachment plug cap and a flexible cord terminated in an enclosure in which are mounted one or more receptacles, which could include power, phone, data or video receptacles.

Furniture power distribution units may be provided with suitable fuses or other supplementary overcurrent protection, switches and indicator lights singularly or in any combination. These units may also employ surge suppression components (TVSS), electromagnetic interference (EMI) filter components and/or uninterruptible power supply components. These units are intended only to be used by original equipment manufacturers (OEMs).

These units are not intended to function as general use relocatable power taps (RPTs), nor are they intended for use in fixed furnishings.

These units are intended to be directly connected to a branch circuit receptacle, and are not intended to be series connected (daisy chained) to other furniture power distribution units, extension cords, or similar devices.

Furniture power distribution units have not been investigated and are not intended for use with general patient care areas or critical patient care areas of health care facilities as defined in Article 517 of ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Cord-connected multiple-outlet strips intended for general use (e.g., relocatable power taps) are covered under Relocatable Power Taps (XBYS).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962A, "Furniture Power Distribution Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Furniture Power Distribution Unit," or other appropriate product name as shown in the individual Listings.

FURNITURE, POWERED AND NONPOWERED (IYNE)**USE AND INSTALLATION**

This category covers furnishings provided with or without power for such items as lighting and convenience receptacles. They include lighted

Furniture, Powered and Nonpowered (IYNE)—Continued

make-up mirrors, study carrels, consoles, lighted curio cabinets, entertainment centers, headboards, bookcases, desks, and the like.

For commercial units that (1) have a surface area greater than 10 sq. ft. and are intended to be adjacent to other furnishings, or (2) are greater than 20 sq. ft. and intended to stand alone, the surface burning characteristics of building materials employed in these assemblies are judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

These products are provided with use instructions and installation instructions when intended for permanent connection.

These units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked "Household Use Only"; products intended for use only in commercial settings are marked "Commercial Use Only." If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

RELATED PRODUCTS

Furnishings intended for support of audio or video equipment and provided with casters or secured to the building structure are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV) or Carts, Tall Institutional (CZWK).

Furnishings intended to be used in an office environment and that must be connected together both mechanically and electrically are covered under Office Furnishings (QAWZ).

Interconnected tables provided with convenience receptacle outlets are covered under Powered Table Systems (IYNI).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962, "Household and Commercial Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Powered Furniture" or "Nonpowered Furniture."

MOTORIZED FURNISHINGS (IYNG)**GENERAL**

This category covers motor-operated furniture, such as nonpatient care beds, lift chairs, video display mounts incorporated as part of a furnishing (CRT, plasma, LCD and the like) intended to rest directly on the floor without casters, wheels, etc.

These products are provided with installation and use instructions when intended for permanent connection.

These units are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked "Household Use Only"; products intended for use only in commercial settings are marked "Commercial Use Only." If a product marking is not provided, the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

RELATED PRODUCTS

Furnishings with casters or wheels intended for use with audio/video equipment are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV).

Tall carts with casters or wheels intended for use with audio/video equipment are covered under Carts, Tall Institutional (CZWK).

Furnishings supplied with all of the video and/or audio components by the manufacturer of those components are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) and Audio/Video Apparatus (AZSQ).

Furnishings used for patient care or an individual under medical care are covered under Medical and Dental Equipment, Professional (KFBQ) and Medical Equipment (PIDF).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962, "Household and Commercial Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its

Motorized Furnishings (IYNG)—Continued

Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motorized Chair," or other appropriate product name as shown in the individual Listings.

POWERED TABLE SYSTEMS (IYNI)**USE AND INSTALLATION**

This category covers tables intended to be electrically interconnected with each other (two or more) and frequently reconfigured. These tables are provided with receptacles for communication, power and/or video connection. They are used in conference rooms, in an office, library, or school setting.

The surface burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on-site construction. Finished surfaces are of materials having a flame spread rating of 200 or less unless otherwise marked.

This category also covers powered table systems with powered tables connected to one 15 A, 120 V branch circuit, intended for use in unclassified (nonhazardous) locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

These units are provided with installation and use instructions, and are intended to be installed in accordance with the NEC.

PRODUCT MARKINGS

Finished surfaces having a flame spread rating of 200 or less and a smoke developed rating of more than 450 are marked "Smoke Developed Index Over 450."

Each powered table system component (such as a table top or electrical accessory that is shipped separately from the major powered table unit to which it is to be connected) is identified with respect to its intended use and interrelationship with the powered table system (e.g., "For Use with Powered Table System Series ____"). If separable components are factory assembled and shipped together, only the complete assembly and not the component is marked.

These products are marked "Commercial Use Only."

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962, "Household and Commercial Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Powered Table System" or "Powered Table System Part for Use with [Company name] Powered Table System."

FUMIGANT-DISPENSING EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (IYNK)**GENERAL**

This category covers equipment intended for dispensing fumigant pellets. The equipment consists of an assembly of UL Listed, Classified and Recognized parts.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fumigant Dispensing Equipment for Hazardous Locations" or "Fumigant Dispenser for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

FURNISHINGS, HOUSEHOLD AND COMMERCIAL (IYQX)**USE**

This category covers miscellaneous furnishings intended for use in homes and/or commercial establishments.

This equipment has been investigated solely from the standpoint of electrical, fire and accident hazards.

PRODUCT MARKINGS

Products intended for use only in dwelling units are marked "Household Use Only"; products intended for use only in commercial settings are marked "Commercial Use Only." If there is no marking, then the product may be used in both dwelling units and commercial settings.

Products suitable for outdoor use are marked "Suitable for Outdoor Use."

RELATED PRODUCTS

Furnishings intended for installation in building structures or equivalent locations are covered under Building Components (IYMT).

Furnishings intended for the display of merchandise are covered under Commercial Displays (IYMX).

Furnishings intended to be used year-round (nonseasonal) that exist for an aesthetic enjoyment or ornamental purpose, such as lava lamps, low-wattage illuminated sculptures, glitter lamps, scrolling scenes, neon sculptures, strobe lamps, mirror balls, plasma lighting globes, motorized sculptures, optical fiber sculptures and wave machines are covered under Decorative Furnishings (IYNA).

Furnishings provided with or without power for such items as lighting and convenience receptacles incorporated within study carrels, consoles, curio cabinets, entertainment centers, headboards, bookcases, desks, and the like are covered under Furniture, Powered and Nonpowered (IYNE).

Motor-operated furniture, such as nonpatient care beds, lift chairs, video display mounts incorporated as part of a furnishing (CRT, plasma, LCD and the like) intended to rest on the floor and not incorporating casters, wheels, etc., is covered under Motorized Furnishings (IYNG).

Furnishings with casters or wheels intended for use with audio/video equipment are covered under Carts and Stands for Household, Commercial and Professional Use (CZUV).

Tall carts with casters or wheels intended for use with audio/video equipment are covered under Carts, Tall Institutional (CZWK).

Furnishings supplied with all of the video and/or audio components by the manufacturer of those components are covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) and Audio/Video Apparatus (AZSQ).

Furnishing tables intended to be electrically interconnected with each other (two or more) and frequently reconfigured and provided with receptacles for communication, power and/or video connection, for use in conference rooms, in an office, library, or school setting are covered under Powered Table Systems (IYNI).

Equipment intended for use in hospitals or equivalent locations is covered under Medical and Dental Equipment, Professional (KFBQ).

Other types of furnishings are covered under Tables, Utility (WWJT) and Massage and Exercise Machines (PGXX).

ADDITIONAL INFORMATION

For additional information, see Furnishings (IYMR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 962, "Household and Commercial Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

FUSED POWER-CIRCUIT DEVICES (IYSR)

GENERAL

This category covers the following devices:

- Enclosed fused power-circuit devices in which the switch is integral with the enclosure
- Open-type fused power-circuit devices intended for mounting in other equipment, such as switchboards, or in a separately shipped enclosure
- Enclosures intended for mounting open-type fused power-circuit devices

These fused power-circuit devices are either bolted-pressure contact switches or high-pressure butt-type contact switches, each defined as follows:

Bolted-pressure contact switch — A device in which the blade-jaw connections have an additional pressure or clamping action provided at both ends of the switch blades when the blades are in the fully closed position.

High-pressure butt-type contact switch — A device having butt-type contacts and a spring-charged mechanism.

USE AND INSTALLATION

Fused power-circuit devices suitable for use as service switches are marked "Suitable for Use as Service Equipment."

Some fused power-circuit devices incorporate neutrals factory bonded to the frame or enclosure. Such units are marked "Suitable Only for Use as Service Equipment."

Fused power-circuit devices marked for use at services may also be used to provide the main control and means of cutoff for a separately derived system, or for a second building.

Electrically tripped and/or operated fused power-circuit devices may be provided with ground-fault sensing and relaying equipment.

Devices suitable for ground-fault protection but the ground-fault protection sensors or relaying equipment (or both) are located in a separate enclosure are marked "Suitable for Ground Fault Protection When Combined with Class ____ (or Manufacturer and Cat. No.) Ground Fault Sensing Element" or the equivalent.

Devices for use with Class I ground-fault sensing and relaying equipment include those that are capable of interrupting 12 times their rated current or that have integral means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability.

Devices for use with Class II ground-fault sensing and relaying equipment are capable of interrupting 10 times their rated current and are intended for use in ground-fault protection systems where means to prevent disconnecting at levels of fault current exceeding their contact-interrupting capability are incorporated within the ground-fault sensing and relaying equipment.

Fused power-circuit devices have been investigated for connection to either busbars or pressure wire connectors. Unless the switch is marked "For busbar connection only" or the equivalent, it is provided with pressure wire connectors or marked for use with specific pressure wire connectors. Terminals are intended for use with copper conductors only unless the device is marked to indicate that terminals are also suitable for aluminum conductors.

RATINGS

These devices accommodate Class L or T fuses rated 600 V or less (ac or dc) and have been investigated for use at 100% of their marked ampere rating. The continuous-current rating of a fused power-circuit device is 800, 1200, 1600, 2000, 2500, 3000, 4000, 5000 or 6000 A.

These devices are intended for use on circuits having available fault currents of 100,000, 150,000 or 200,000 rms symmetrical amps or 20,000, 50,000, 100,000, 150,000 or 200,000 amps dc as indicated on the device.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 977, "Fused Power-Circuit Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Fused Power Circuit Device," "Enclosed Fused Power-Circuit Device," "Enclosed Fused Power-Circuit Device Suitable for Use as Service Equipment" or "Fused Power-Circuit Device Enclosure."

On fused power-circuit devices with integral enclosures the Listing Mark is applied to the enclosure. On devices for use in other enclosures (open type) the Listing Mark is applied to the switching unit.

FUSEHOLDERS (IYXV)

FUSEHOLDERS, CARTRIDGE FUSE (IZLT)

GENERAL

This category covers fuseholders intended for use with Class CC, G, H, J, K, R, T, special purpose and supplementary cartridge fuses.

A Class CTL (current-limiting) cartridge fuseholders has the physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, is designed to prevent the installation of more fuseholder poles than the number for which the assembly is designed and rated.

An interrupting rating on a fuseholder included in a piece of equipment does not automatically qualify the equipment in which the fuseholder is installed for use on circuits with higher available currents than the rating of the equipment itself.

PRODUCT MARKINGS

Fuseholders are plainly and legibly marked to indicate:

1. The manufacturer's name, trademark, or other descriptive marking by which the organization responsible for the product may be identified

Fuseholders, Cartridge Fuse (IZLT)—Continued

2. The current and voltage ratings
3. The withstand rating in rms symmetrical amperes
4. The catalog number (or equivalent)

Fuseholders intended for Class G, J, R, T or CC fuses are marked "Use Class ___ fuses."

Fuseholders with wiring terminals intended for use with copper and aluminum conductors are marked "USE COPPER OR ALUMINUM WIRE" or with the abbreviations "CU" and "AL."

Fuseholders with terminals intended for copper wire only are marked "USE COPPER WIRE ONLY" (or "CU ONLY"). If the terminals are intended for aluminum wire only, the fuseholder is marked "USE ALUMINUM WIRE ONLY" (or "AL ONLY").

Fuseholders rated 100 A having terminals intended to secure a maximum 1 AWG (42.4 mm²) conductor, if marked as being acceptable for aluminum wire, are also marked "FOR ALUMINUM USE NO. 1, 75C WIRE ONLY."

Fuseholders are marked in a readily visible location to indicate the required temperature rating of all field-installed conductors.

Fuseholders are marked to indicate the specific tightening torque in pound-inches or pound-feet for each wire connector in the fuseholder that is intended for field wiring. If different connectors are used for line or load, the specific torques to be applied to each connector are clearly indicated. The torque marking may be provided in a written format or pictorially.

Class CTL cartridge fuseholders may be identified by the words "Class CTL" or "CTL" on the fuseholder as part of the marking.

RELATED PRODUCTS

For information regarding the use of fuses with interrupting ratings in equipment, see Cartridge Fuses, Nonrenewable (JDDZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 512, "Fuseholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuseholder" or "Cartridge Fuseholder."

FUSEHOLDERS, SPECIAL PURPOSE (IZND)**USE AND INSTALLATION**

This category covers fuseholders intended for use with Listed special purpose fuses.

These fuseholders are designed for special purpose applications. They incorporate dimensional or other rejection features to prevent the installation of other Listed classes of renewable and nonrenewable cartridge fuses.

PRODUCT MARKINGS

Special purpose fuseholders are marked with their voltage and current rating. When the fuseholders are investigated for use in circuits capable of delivering in excess of 10,000 rms symmetrical amps, fuseholders are marked with their withstand rating. When not so marked, the withstand rating is 10,000 A. A fuseholder marked for use in circuits capable of delivering in excess of 10,000 rms symmetrical amps does not qualify the equipment in which it is installed for use in circuits with higher available currents than may be indicated by the equipment markings.

Fuseholders in this category are designed for use with specific fuses, and are marked with the manufacturer and catalog number of the fuse it is intended to accommodate.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 512, "Fuseholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Special Purpose Fuseholder."

FITTINGS FOR FUSEHOLDERS (IZZR)**GENERAL**

This category covers fuse reducers designed for use in cartridge fuse fuseholders to permit the insertion of fuses of smaller rating, Type S fuse adapters designed for use in Edison-base fuseholders to permit the insertion of

Fittings for Fuseholders (IZZR)—Continued

Type S fuses, and special adapters designed to permit the use of miscellaneous plug fuses in Edison-base fuseholders to provide supplementary overcurrent protection.

Fuse reducers are primarily intended for use with open fuseholders. The use of fuse reducers in enclosed switches, panelboards, or other enclosures may introduce a hazard due to reduced spacings. Consideration should be given to spacings when fuseholders are used within enclosures.

PRODUCT MARKINGS

Fittings for fuseholders are plainly and legibly marked to indicate:

1. The manufacturer's name, trademark, or other descriptive marking by which the organization responsible for the product may be identified
2. The current and voltage ratings
3. The catalog number (or equivalent)

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 512, "Fuseholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuseholder Fitting," "Fuse Reducer" or "Fuse Adapter," or other appropriate product name as shown in the individual Listings.

FUSEHOLDERS, PLUG FUSE (JAMZ)**GENERAL**

This category covers fuseholders for Edison base and Type S fuses. Some of these fuseholders are intended for use in panelboards and may include separately Listed snap switches.

Fuseholders may be provided on a cover plate for mounting to outlet boxes. These fuseholders are provided with grounding means so that the plate can be grounded when installed on nonmetallic outlet boxes.

Class CTL plug fuseholders may be identified by the words "Class CTL" or "CTL" on the fuseholder as part of the marking.

Class CTL plug fuseholders have physical size, configuration or other means which, in conjunction with the physical means provided in a Class CTL assembly, are designed to prevent the installation of more fuseholder poles than the number for which the assembly is designed and rated.

RELATED PRODUCTS

Fuseholders that are an integral part of a snap switch are covered under Snap Switches (WJQR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 512, "Fuseholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuseholder" or "Plug Fuseholder" or other appropriate product name as shown in the individual Listings.

FUSES (JCQR)**BRANCH CIRCUIT FUSES (JCSA)**

This category covers fuses suitable to provide protection for branch and feeder circuits as defined by ANSI/NFPA 70, "National Electrical Code." These fuses include:

- Cartridge Fuses, Nonrenewable (JDDZ)
- Cartridge Fuses, Renewable (JDRX)
- Plug Fuses (JEFV)

Cartridge Fuses, Nonrenewable (JDDZ)**GENERAL**

This category covers nonrenewable cartridge-enclosed fuses, rated as follows:

FUSES (JCQR)

Cartridge Fuses, Nonrenewable (JDDZ)—Continued

250 V	0 – 600 A
300 V	0 – 1200 A
600 V	0 – 6000 A

The fuse classes are further categorized as follows:

Class	In (A)	V	DC Rating	Interrupting Rating (kA)		Time Delay	Current-limiting	Body Sizes
				DC	AC			
CA	0–30	600	Optional	10, 20, 50, 100, 150 or 200	200	No	Yes	1
CB	0–60	600	Optional	10, 20, 50, 100, 150 or 200	200	No	Yes	2
CC	0–30	600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	1
CD	31–60	600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	1
G	0–20 21–60	600 480	Optional	10, 20, 50 or 100	100	Optional	Yes	4
H	0–600	250 or 600	Optional	10	10	Optional	No	6
J	0–600	600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	6
K	0–600	250 600	Optional	10, 20, 50, 100, 150 or 200	50, 100 or 200	Optional	No	6 6
L	601–6000	600	Optional	20, 50, 100, 150 or 200	200	Optional	Yes	9
R	0–600	250 600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	6 6
T	0–1200 0–800	300 600	Optional	10, 20, 50, 100, 150 or 200	200	Optional	Yes	8 7

These fuses are intended for use on ac circuits only, unless also marked with a dc voltage rating. These fuses are suitable for branch circuit, feeder and service overcurrent protection in accordance with ANSI/NFPA 70, "National Electrical Code."

The term "current-limiting" indicates that a fuse, when tested on a circuit capable of delivering a specific short-circuit current (rms amps symmetrical) at rated voltage, will start to melt within 90 electrical degrees and will clear the circuit within 180 electrical degrees (1/2 cycle).

Because the time required for a fuse to melt is dependent on the available current of the circuit, a fuse that may be current-limiting when subjected to a specific short-circuit current (rms amps symmetrical) may not be current-limiting on a circuit of lower maximum available current.

Class K fuses incorporate dimensional features equivalent to, and are thus interchangeable with, Class H fuses.

Class R fuses incorporate features that permit their insertion into Class H and K fuseholders. They are also provided with a feature that allows their insertion into rejection-type fuseholders designed to accept only Class RK1 or RK5 fuses.

All classes covered under this category (with the exception of Class H) are further classified as to their maximum peak let-through current (I_p) and maximum clearing ampere-squared seconds (I^2t) as follows. These tables indicate the maximum permissible let-through values obtained when the fuse is connected to a circuit capable of providing the indicated available current.

Maximum Peak Let-through Current (I_p , amperes) and Clearing I^2t (ampere-squared seconds)

Class CA Fuses	Rating (A)	$I_p \times 10^3$ (A)	$I^2t \times 10^3$
	0–60	8	6

Class CB Fuses	Rating (A)	$I_p \times 10^3$ (A)	$I^2t \times 10^3$

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer's name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes
5. The device class or classification

When a fuse has a dc rating, it is marked with the dc voltage and interrupting rating.

Cartridge Fuses, Nonrenewable (JDDZ)—Continued

Class K and R fuses investigated for use in protecting trailing cables for dc circuits in mines are marked "Mine Duty" and have an interrupting rating of 20,000 A, dc.

Equipment (a switch, motor starter, panelboard, etc.) investigated for use with these fuses is marked with the class of fuse intended to be used in the equipment, and available current rating applicable to that piece of equipment. The equipment, with these fuses installed, is suitable for use on circuits having a maximum available fault current up to the short-circuit rating of the equipment, or the interrupting rating of the fuse, whichever is lower.

An interrupting rating on a fuse included in a piece of equipment does not automatically qualify the equipment in which the fuses are installed for use on circuits with higher available currents than the rating of the equipment itself.

Fuses investigated for their current-limiting characteristics are marked "Current-limiting."

Classes CC, CD, G, H, J, K, L, R and T fuses may be marked "Time Delay," indicating that they have a time-delay characteristic. This is the only designation that indicates that the fuse has been investigated in accordance with the time-delay requirements of the standard.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- ANSI/UL 198M, "Mine-Duty Fuses"
- ANSI/UL 248-1, "Low-Voltage Fuses – Part 1: General Requirements"
- ANSI/UL 248-3, "Low-Voltage Fuses – Part 3: Class CA and CB Fuses"
- ANSI/UL 248-4, "Low-Voltage Fuses – Part 4: Class CC Fuses"
- ANSI/UL 248-5, "Low-Voltage Fuses – Part 5: Class G Fuses"
- ANSI/UL 248-6, "Low-Voltage Fuses – Part 6: Class H Nonrenewable Fuses"
- ANSI/UL 248-8, "Low-Voltage Fuses – Part 8: Class J Fuses"
- ANSI/UL 248-9, "Low-Voltage Fuses – Part 9: Class K Fuses"
- ANSI/UL 248-10, "Low-Voltage Fuses – Part 10: Class L Fuses"
- ANSI/UL 248-12, "Low-Voltage Fuses – Part 12: Class R Fuses"
- ANSI/UL 248-15, "Low-Voltage Fuses – Part 15: Class T Fuses"
- UL Subject 2126, "Outline of Investigation for Low-Voltage Fuses – Class CD Fuses" (dated June 25, 1997)

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse."

Cartridge Fuses, Renewable (JDRX)

GENERAL

This category covers renewable, cartridge-enclosed fuses, rated as follows:

Class	In (A)	V	DC Rating		Interrupting Rating		Time Delay	Current-limiting	Body Sizes
			Optional	DC	(kA)	AC			
H	0–600	250 600	Optional	DC	10	10	Optional	No	6 6

These fuses are intended for use on ac circuits only unless also marked with a dc voltage rating.

These fuses are suitable for branch circuit, feeder and service overcurrent protection in accordance with ANSI/NFPA 70, "National Electrical Code."

Renewable fuses of a given voltage rating or current rating range are not interchangeable in the same fuseholder with fuses of a different voltage rating or current rating range.

Each line of renewable links has been investigated only with the same line of fuses from the same manufacturer.

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer's name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes
5. The device class or classification
6. The word "Renewable"

In addition, each renewal element covered under this category is marked with:

1. The manufacturer's name or trademark (or both)
2. The current rating
3. The voltage rating

When a fuse has a dc rating, it is marked with the dc voltage and interrupting rating.

These fuses may be marked with the designation "Time Delay," indicating that they have a time delay characteristic. This is the only designation

Cartridge Fuses, Renewable (JDRX)—Continued

which indicates that the fuse has been investigated in accordance with the time-delay requirements of the Standard.

Equipment (a switch, motor starter, panelboard, etc.) that has been investigated for use with these fuses is marked with the class of fuse intended to be used in the equipment, and available current rating applicable to that piece of equipment. The equipment, with these fuses installed, is suitable for use on circuits having a maximum available fault current up to the short-circuit rating of the equipment, or the interrupting rating of the fuse, whichever is lower.

An interrupting rating on a fuse included in a piece of equipment does not automatically qualify the equipment in which the fuses are installed for use on circuits with higher available currents than the rating of the equipment itself.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 248-1, "Low-Voltage Fuses – Part 1: General Requirements," and UL 248-7, "Low-Voltage Fuses – Part 7: Class H Renewable Fuses."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse" or "Fuse Renewal."

The Listing Mark for fuses is marked on the product; the Listing Mark for fuse renewals is marked on each carton containing fuse renewals, with or without the UL symbol on the renewal.

Plug Fuses (JEFV)

GENERAL

This category covers nonrenewable, Edison base, Type C and Type S plug fuses.

These fuses have the following characteristics:

Type	I_N (A)	V	DC Rating	Interrupting Rating (kA)	Time Delay	Current-limiting	Body Types
Edison base	0–30	125	Optional	10	Optional	No	1
Type C							3
Type S							3

PRODUCT MARKINGS

The devices covered under this category, at a minimum, are marked with:

1. The manufacturer's name or trademark (or both)
2. The device current rating
3. Plug fuses designated as time-delay fuses are identified by the symbol "D" at least 1/8-in. in height, stamped, molded or printed in a location visible after installation of the fuse.

In addition, these devices are not marked "Current-limiting." Devices rated 15 A or less have a prominent hexagonal feature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 248-1, "Low-Voltage Fuses – Part 1: General Requirements," and UL 248-11, "Low-Voltage Fuses – Part 11: Plug Fuses."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse."

DEFINED-USE FUSES (JDUA)

This category covers fuses intended for specific and defined use. These fuses include:

- Special-purpose Fuses (JFHR)
- Fuses, Automobile (FHXT)
- Cable Limiters (CYMT)
- Marine Miniature Fuses (PFAU)

Cable Limiters (CYMT)

GENERAL

This category covers cable limiters of the nonrenewable type, rated 600 V maximum. These cable limiters are intended for use on ac circuits only,

PRODUCT CATEGORIES BY CATEGORY CODE

Cable Limiters (CYMT)—Continued

unless also marked with a dc voltage rating. They have a current interrupting rating of up to 200,000 rms symmetrical amperes. They are suitable for use with copper or aluminum cable when the wire terminals are so marked.

These cable limiters are intended for supplementary overcurrent protection. They are intended for use, where multiple wires per phase are used, to isolate an individual wire should it become faulted. They are not intended to be used as branch circuit or feeder protection and have not been investigated for those purposes. Similarly, they have not been investigated to determine their ability to provide overload protection or protection for cable and equipment connected to the load side of the cable limiter. They are not current limiting and will be marked as such.

PRODUCT MARKINGS

These devices are marked with the manufacturer's name or trademark (or both), catalog number, voltage rating, interrupting rating (200,000 or 200 kA), and the cable size with "CU," "AL" or "CU/AL" (as appropriate) following.

Those devices investigated and intended to be secured to conductors by crimping are additionally marked to identify the required crimp tool, die, and number of crimps.

Unless marked to indicate otherwise, these devices are intended for use only in dry locations.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 248-1, "Low-Voltage Fuses - Part 1: General Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Cable Limiter."

Fuses, Automobile (FHXT)

USE

This category covers glass tube or blade type fuses intended for use in automotive circuits of not more than 32 V.

PRODUCT MARKINGS

These devices are marked with the manufacturer's or private labeler's name or identifying symbol and the device ampere rating. The ampere rating may take the form of color coding in the case of blade type fuses.

Blade type fuses are additionally marked to indicate the voltage rating.

If the manufacturer produces fuses at more than one factory, each fuse carries a marking identifying the factory of manufacture.

ADDITIONAL INFORMATION

For additional information, see Mechanical Equipment and Associated Products (AAME).

REQUIREMENTS

The basic standard used to investigate glass tube fuses is UL 275, "Automotive Glass-Tube Fuses."

The basic requirements used to investigate blade type fuses are contained in Subject 275A, "Outline of Investigation for Automotive Blade Type Fuses."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Automotive Fuse."

Special-purpose Fuses (JFHR)

GENERAL

This category covers fuses rated 0 - 6,000 A, 0 - 1,000 V with interrupting ratings up to 300,000 A. These fuses are designed for special purpose applications such as in combination with low-voltage power circuit breakers, in combination with TVSS devices or in combination with capacitors. If they do not incorporate dimensional or other rejection features that make them noninterchangeable with Listed classes of renewable and nonrenewable fuses, then they have been investigated and found to comply with all of the performance requirements applicable to Listed classes of renewable and nonrenewable fuses for which they may be substituted.

PRODUCT MARKINGS

All devices covered under this category are marked with:

1. The manufacturer's name or trademark (or both)
2. The current rating
3. The voltage rating
4. The interrupting rating in rms symmetrical and/or dc amperes (when

Special-purpose Fuses (JFHR)—Continued

not so marked, the interrupting rating is 10,000 A (rms symmetrical)

5. The words "Time Delay" (for qualifying fuses only)
6. The words "Current-limiting" (for qualifying fuses only)
7. These devices may also be marked to indicate if their performance is dependent upon the equipment with which they are designed to be used
8. Fuses that comply with all of the dimensional and performance requirements applicable to a Listed class of cartridge fuse may be marked "This fuse may substitute for a Listed Class ___ Fuse," where the appropriate fuse class is placed in the blank
9. Fuses that comply with all of the performance requirements applicable to a Listed class of cartridge fuse, but do not comply with the dimensional requirements for that fuse may be marked "This fuse meets the performance specifications for a Class ___ Fuse," or the equivalent

RELATED PRODUCTS

For classes of renewable and nonrenewable fuses, see Cartridge Fuses, Nonrenewable (JDDZ), Cartridge Fuses, Renewable (JDRX) and Plug Fuses (JEFV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 248-1, "Low-Voltage Fuses - Part 1: General Requirements."

Additional standards may be used as follows:

Where additional standards are used, they are identified in the individual Listings or marked on the product.

UL MARK

FUSES (JCQR)

173

Special-purpose Fuses (JFHR)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse."

Marine Miniature Fuses (PFAU)

GENERAL

This category covers fuses having maximum ratings of 30 A and 32 V and maximum dimensions of 1-7/16 in. (36.1 mm) in length and 9/32 in. (7.1 mm) in diameter.

These fuses are intended to be used in the protection of wiring, and equipment on boats regulated by the Federal Boat Safety Act of 1971. These fuses are also intended to be used as supplementary protection to provide individual protection for components or internal circuits in utilization equipment on inspected vessels.

These fuses are intended for installations in accordance with manufacturer's instructions and the applicable requirements of the USCG, the American Boat and Yacht Council Inc. and/or NFPA 302, "Fire Protection Standard for Pleasure and Commercial Motor Craft."

PRODUCT MARKINGS

These devices are marked with:

1. The manufacturer's name or trademark (or both)
2. The voltage rating
3. The current rating
4. The catalog number

In addition to items 1 through 4 above, the smallest package is marked to include:

1. The interrupting rating
2. The words "Ignition Protected"

ADDITIONAL INFORMATION

For additional information, see Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 248-1, "Low-Voltage Fuses – Part 1: General Requirements."

Devices marked "ignition protected" have additionally been investigated to 33CFR183, Subpart I, "Boats and Associated Equipment; Electrical Systems."

These devices have also been investigated to 46CFR111, "Electrical Systems – General Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marine Miniature Fuse."

FUSE ACCESSORIES (JDVS)

GENERAL

This category covers nonrenewable signal-indicating/alarm-actuating devices and fuse covers that are suitable for use with specific Listed fuses. The combination is used for branch circuit, feeder and service overcurrent protection in accordance with ANSI/NFPA 70, "National Electrical Code."

These devices have a maximum rating of 600 V ac. They are intended to be used with fuses with an interrupting rating of 10 kA rms or less unless specifically investigated for a higher rating.

Accessories are not intended to be used as branch circuit and service overcurrent protection or supplementary overcurrent protection.

Signal-indicating/Alarm-actuating Devices

These devices are intended to provide actuation of remote Listed or Recognized signaling devices, or to provide a visual indication that a fuse has opened. Their operation is concurrent with that of the fuse, and after operation there is essentially no electrical continuity between the line and load sides of the fuse accessory.

Fuse Covers

These devices are intended to be used with Listed branch circuit fuses. They may be nonindicating, or may be provided with an electrical or electromechanical indicator that operates when a fuse has opened. Fuse covers are intended to provide additional protection against incidental contact with live parts of the fuseholder assembly. The covers are not intended to be used in lieu of spacings in the equipment in which they are used.

PRODUCT MARKINGS

Products covered under this category are marked either on the device or on the smallest unit carton with the class of fuse, fuse amperage rating and the voltage rating of the fuse with which they are intended to be used.

Fuse covers may be designed so that they snap-fit onto the fuse body when the fuse is already installed, or they may be designed such that the

FUSES (JCQR)

Fuse Accessories (JDVS)—Continued

fuse is installed in the cover before being inserted into the fuseholder. When the fuse cover is of the latter design, it is not intended to be used to remove a fuse under load, and it is marked "DO NOT OPERATE UNDER LOAD" or the equivalent.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- UL 248-1, "Low-Voltage Fuses – Part 1: General Requirements"
- UL 248-2, "Low-Voltage Fuses – Part 2: Class C Fuses"
- UL 248-3, "Low-Voltage Fuses – Part 3: Class CA and CB Fuses"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Fuse Accessory."

FUSES, SUPPLEMENTAL (JDYX)

USE

This category covers supplemental fuses, which are also described as miscellaneous, miniature, and micro fuses. These fuses provide supplemental protection in end-use equipment to provide protection for components or internal circuits. They are not suitable for branch or feeder circuit use.

Physical dimensions are not specified, but dimensional limitations apply to prevent insertion of supplementary protection fuses into branch or feeder circuit fuseholders intended to accommodate branch or feeder circuit fuses of the Class CA, CB, CC, CD, G, H, J, K, L, R or T Type.

Micro fuses are supplemental fuses with no principal dimension (length, width, height or diameter) exceeding 10 mm (excluding leads).

The devices covered under this category are rated as follows:

Type	I _N (A)	V	DC Rating	Min Interrupting Rating (kA)	Time Delay	Current-limiting
Miscellaneous or Miniature fuse	0 - 60	<125	Optional	>I _N	Optional	No
Miscellaneous or Miniature fuse	0 - 60	125	Optional	10, 50 or 100	Optional	No
Miscellaneous or Miniature fuse	0 - 1	125/250	Optional	10, 50 or 100 at 125 V 0.035 at 250 V	Optional	No
Miscellaneous or Miniature fuse	1.1 - 3.5	125/250	Optional	10, 50 or 100 at 125 V 0.10 at 250 V	Optional	No
Miscellaneous or Miniature fuse	3.6 - 10	125/250	Optional	10, 50 or 100 at 125 V 0.20 at 250 V	Optional	No
Miscellaneous or Miniature fuse	10.1 - 15	125/250	Optional	10, 50 or 100 at 125 V 0.75 at 250 V	Optional	No

FUSES (JCQR)

Fuses, Supplemental (JDYX)—Continued

Type	I _N (A)	V	DC Rating	Min Interrupting Rating (kA)	Time Delay	Current-limiting
Miscellaneous or Miniature fuse	15.1 - 30	125/250	Optional	10, 50 or 100 at 125 V 1.5 at 250 V	Optional	No
Miscellaneous or Miniature fuse	30 - 60	125/250	Optional	10, 50 or 100 at 125 V 10, 50 or 100 at 250 V	Optional	No
Micro fuse	0 - 60	Any	Optional	0.050	Optional	No

PRODUCT MARKINGS

Devices covered under this category are marked as follows:

Type	Required Fuse Markings	Required Smallest Package Markings
Miscellaneous or Miniature fuse	Manufacturer's name or trademark (or both) Device current rating Device voltage rating Device interrupting rating The words "Time Delay" or the letter "D" if device is a time delay type	Manufacturer's name or trademark (or both) Device current rating Device voltage rating Device interrupting rating The words "Time Delay" or the letter "D" if device is a time delay type
Micro fuse	Device current rating	Manufacturer's name or trademark (or both) Device current rating Device voltage rating Device interrupting rating The words "Time Delay" or the letter "D" if device is a time delay type

If a color code is used to mark a micro fuse to designate voltage, interrupting rating or time delay type, the color code scheme is marked on the smallest package.

Devices covered under this category are not marked "Current-limiting."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 248-1, "Low-Voltage Fuses – Part 1: General Requirements," and UL 248-14, "Low-Voltage Fuses – Part 14: Supplemental Fuses."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Supplemental Fuse," "Miscellaneous Fuse," "Miniature Fuse" or "Micro Fuse."

FUSES CERTIFIED TO INTERNATIONAL STANDARDS (JECA)

This category covers fuses certified to international standards. These fuses include:

FUSES (JCQR)

Fuses Certified to International Standards (JECA)—Continued

Low-voltage Fuses Classified in Accordance with IEC Publications (JEFA)
 Universal Modular Fuses (JGFI)

Low-voltage Fuses Classified in Accordance with IEC Publications (JEFA)

USE

This category covers fuses incorporating enclosed current-limiting fuse links intended for protecting power-frequency ac circuits or dc circuits. These fuses are intended for use by authorized persons as referenced in IEC 60269-2-1, and are intended mainly for industrial applications.

PRODUCT TYPES

These fuses are defined by size and operating characteristics. The available sizes are 000, 00, 0, 1, 2, 3, 4, and 4a.

These fuses are also defined by their utilization category as follows:

gG – indicates fuse links with a full-range breaking capacity for general applications

gM – indicates fuse links with a full-range breaking capacity for the protection of motor circuits

aM – indicates fuse links with a partial range breaking capacity for the protection of motor circuits

gD – indicates time delay fuse links with a full-range breaking capacity

gN – indicates non-time-delay fuse links with a full-range breaking capacity

RATINGS

The standard values of rated ac voltages are 400 V, 500 V and 690 V. The rated dc voltages are 250 V and 440 V.

Fuses covered under this category have ampere ratings related to size as follows:

Fuse Size	Ampere Range
000	10 to 315
00	6 to 160
0	6 to 160
1	80 to 250
2	125 to 400
3	315 to 630
4	500 to 1000
4a	500 to 1250

PRODUCT MARKINGS

The following information is marked on all fuse-links where practicable: manufacturer's name or trademark, manufacturer's identification reference, size, rated voltage, rated current, breaking range, utilization category, kind of current, and rated frequency (if applicable).

When the size of the fuse link makes it impracticable to include all markings on the fuse link, the manufacturer's name or trademark, manufacturer's identification reference, size, rated voltage, and rated current will be marked.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to evaluate products in this category is International Electrotechnical Commission (IEC) 60269-2, "Low-voltage fuses, Part 2-1: Supplementary requirements for fuses for use by authorized persons (fuses mainly for industrial application)" – Sections I to V: Examples of types of standardized fuses.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

LOW-VOLTAGE FUSE
 IN ACCORDANCE WITH IEC 60269-2-1
 Control No.

Universal Modular Fuses (JGFI)

GENERAL

This category covers universal modular fuses (UMF) that provide supplemental protection in end-use equipment to provide protection for components or internal circuits. They are not suitable for branch or feeder circuit use.

UMFs have opening characteristics that are different from supplemental fuses (see JDYX). UMFs may or may not be suitable for substitution in applications where supplemental fuses are used.

CHARACTERISTICS AND RATINGS

FUSES (JCQR)

Universal Modular Fuses (JGFI)—Continued

These devices have the following characteristics and ratings:

Mounting	Operating Characteristics	I _N (A)	AC (V)	DC (V)	Interrupting Rating (A)
Through-hole or surface mount	FF – Very quick acting	0.032 – 6.3	32	32 (optional)	The greater of 35 or 10 x I _N
	F – Quick acting				
	T – Time delay		63	63 (optional)	
	TT – Long time delay		125	125 (optional)	
			250	250 (optional)	The greater of 50 or 10 x I _N L – 100 I – 500 H – 1,500

PRODUCT MARKINGS

Devices rated 250 V are marked on the device itself and on the smallest package with the following information:

1. The manufacturer's name or trademark (or both)
2. The rated current
3. The rated voltage

Note: When the voltage rating is followed by "ac," the UMF is suitable for alternating current circuits only.

4. One of the following operating characteristic symbols: "FF," "F," "T," "TT"
 5. Devices rated 250 V are marked with one of the following symbols denoting breaking capacity: "L," "I," "H"
 6. The UMF symbol 
 7. The statement "IN ACCORDANCE WITH IEC 60127-1-(issue date) and IEC 60127-4-(issue date)" on the product package only
- Devices rated less than 250 V are so marked only on the smallest package.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are International Electrotechnical Commission (IEC) 60127-1, "Miniature Fuses," and IEC 60127-4, "Universal Modular Fuse-links."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Universal Modular Fuse" (or "UMF") or the UMF symbol.

FUSES OVER 600 VOLTS (JEEG)

GENERAL

This category covers power and distribution fuses with voltage ratings above 600 V.

These fuses are intended to provide overcurrent protection in accordance with ANSI/NFPA 70, "National Electrical Code," and are intended for installation in specific metal-enclosed switchgear.

These fuses are not intended to be interchanged with other manufacturers' fuses or with other classes of Listed fuses. Each fuse is intended to only be replaced with a fuse of the same manufacturer, type and ratings. The melting times at specified overcurrents are shown by each manufacturer's published time-current curves, which may vary between manufacturers, and between fuse types and/or models.

Where used, the term "current-limiting" indicates a relationship between the cutoff (peak let-through) current to prospective available current, within the current-limiting range of the fuse, in accordance with characteristic curves published by the manufacturer. When operated within its current-limiting range, a current-limiting fuse introduces a high resistance to reduce current magnitude and duration, resulting in subsequent current interruption.

This category covers two major classes of fuses:

Power class fuses are generally used in three-phase applications, in substations, cabinets, or electrical vaults where a large amount of electrical power is being supplied to a distribution system. They are normally used where fault currents are high, X/R ratios are high, and/or severe transient recovery voltages (TRV) are anticipated.

Distribution class fuses are generally used in single-phase applications on a distribution line on single-phase taps or for protecting single-phase transformers. They are suitable for use in three-phase applications where the high capabilities of the power class fuse are not required.

Each of these classes is further subdivided into three types:

Fuses Over 600 Volts (JEEG)—Continued

Back-up current-limiting fuses provide fault current interrupting duty only between their maximum interrupting rating and their minimum interrupting rating. They must be coordinated with other overcurrent protective device(s) which will interrupt below that level.

General purpose current-limiting fuses are not intended to interrupt currents below the current that causes melting of the fuse in not less than 1h. This current is their rated low current, which may be referred to as their rated minimum interrupting rating. They must be coordinated with other overcurrent protective device(s) which will interrupt below that level.

Full range current-limiting fuses are intended to interrupt any current between the minimum current that can cause melting of its elements (at the highest ambient specified by the manufacturer) and its maximum interrupting rating.

Specific devices covered under this category are as follows:

E-rated Fuses

Characteristics — E-rated fuses are current-limiting power fuses in the voltage range of 2.8 kV through 38 kV, intended for use on ac circuits only. E-rated fuses may have either full range or general-purpose characteristics, as designated in the individual Listings.

E-rated fuses have the following melting-time performance characteristics:

An E-rated fuse rated 100 A or less will melt in 300 seconds at an rms current within the range of 200 to 240% of its continuous current rating.

An E-rated fuse rated greater than 100 A will melt in 600 seconds at an rms current within the range of 220 to 264% of its continuous current rating.

The melting times at higher overcurrents are shown by each manufacturer's published time-current curves, which may vary between manufacturers and between fuse types and/or models.

Markings — Each fuse is marked with the manufacturer's name or trademark, manufacturer's type or identification number, rated continuous current, rated maximum voltage, rated frequency, rated maximum interrupting current, and "E" following the continuous current rating (e.g., 100E).

General Purpose Fuses

Characteristics — General purpose fuses are current-limiting power fuses in the voltage range of 2.8 kV through 38 kV, intended for use on ac circuits only. General purpose fuses have general purpose characteristics only.

Markings — Each fuse is marked with the manufacturer's name or trademark, manufacturer's type or identification number, rated continuous current, rated maximum voltage, rated frequency, rated maximum interrupting current, and rated low current.

Fuse Links

Characteristics — Type K and Type T distribution fuse links are for voltages up to 38 kV, intended for use on ac circuits only.

Markings — Each link is marked with the manufacturer's name or trademark and rated continuous current followed by the type identification (e.g., 40K).

The smallest shipping container is required to be marked with the manufacturer's name or trademark, the manufacturer's type or identification number, and rated continuous current, followed by the type identification.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- ANSI/IEEE C37.40-1993, "IEEE Standard Service Conditions and Definitions for High-Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories"
- IEEE C37.41-2000, "IEEE Standard Design Tests for High-Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories"

In addition to the standards specified in items a and b above, the basic standard used to investigate general purpose current-limiting power fuses and E-rated fuses is ANSI C37.46-2000, "American National Standard for High Voltage Expulsion and Current-Limiting Type Power Class Fuses and Fuse Disconnecting Switches."

In addition to the standards specified in items a and b above, the basic standard used to investigate fuse links is ANSI C37.42-1996, "American National Standard Specification for High-Voltage Expulsion Type Distribution Class Fuses, Cutouts, Fuse Disconnecting Switches and Fuse Links."

All fuses covered under this category are intended to be applied as specified in ANSI/IEEE C37.48-1997, "IEEE Guide for Application, Operation, and Maintenance of High-Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Accessories".

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with

Fuses Over 600 Volts (JEEG)—Continued

the word "LISTED," a control number, and the product name "E-rated Fuse," "General Purpose Fuse" or "Fuse Link."

The Listing Mark is marked on the fuse for E-rated and general purpose fuses; the Listing Mark is marked on each package for fuse links, with or without the UL symbol on the fuse link.

GARAGE EQUIPMENT (JGWV)**USE AND INSTALLATION**

This category covers electrically operated equipment, rated 600 V or less, intended primarily for use in servicing and repairing automobiles. Such equipment is intended to be used mainly in commercial garages and gasoline dispensing and service stations. Unless specifically marked for hazardous locations use, products are intended for use in an area that is considered unclassified based on the classification in the National Electrical Code, NFPA 70 (NEC).

Some of the equipment covered under this category incorporates parts that tend to produce arcs or sparks and, therefore, when installed in commercial garages and gasoline dispensing and service stations, should be in areas or enclosures suitable for the purpose in accordance with the provisions of the NEC. Products incorporating arcing or sparking parts located above 18 inches from floor level (i.e. in an area considered unclassified by the NEC) are provided with instructions which specify that the equipment is not to be installed in a recessed floor area. Products incorporating arcing or sparking parts located below 18 inches from the floor, such as dynamometers, are marked for use in a Class I, Division 2 location, or the equipment should be located where there is mechanical ventilation providing a minimum of 4 air changes per hour in accordance with Section 511-3 of the NEC. If the equipment is intended to be located below grade level, such as a pit, the product should be marked for Class I, Division 1, or should be located in an area with exhaust ventilation at a rate of 1 cfm/ft² of floor area at all times when the building is occupied or when vehicles are parked over the equipment. The exhaust should be taken from a point within 12 inches of the floor of the pit, in accordance with Table 514-2 of the NEC. In addition, consideration should be given to the surrounding area and its classification in accordance with the NEC. If reliance is placed on ventilation requirements, the installation instructions for the product should specify the necessary ventilation requirements, and the suitability of ventilation should be determined at the installation.

RELATED PRODUCTS

Automotive lifts are covered under Automotive Lifts (BACL). Battery chargers are covered under Battery Chargers, Nonautomotive Type (BBML). Refrigerant recyclers and air conditioning charging stations are covered under Refrigerant Recovery/Recycling Equipment, Automotive (SCMA).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 201, "Garage Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory), together with the word "LISTED," a control number, and the appropriate product name as shown in the individual Listings.

GAS APPLIANCE ELECTRIC ACCESSORIES (JHYR)**GENERAL**

This category covers electric accessories for use solely on or with gas appliances and that can be applied without alteration to the appliance. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code."

Electric accessories suitable for use in gas appliances but also suitable for use in electric and/or oil appliances are included under the category applicable to the specific accessory.

PRODUCT MARKINGS

Gas appliance electric accessories are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual Listing reports.

RELATED PRODUCTS

Safety controls for gas- and oil-fired appliances, electric central furnaces, boilers and duct heaters are covered under Controls, Limit (MBPR), Controls, Primary Safety (MCCZ) or Switches (MFHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

GAS APPLIANCE ELECTRIC ACCESSORIES (JHYR)

REQUIREMENTS

The basic standards used to investigate products in this category are one or more of the following:

- UL 353, "Limit Controls"
- UL 372, "Primary Safety Controls for Gas- and Oil-Fired Appliances"
- ANSI Z21.20, "Automatic Gas Ignition Systems and Components"
- ANSI Z21.77/CSA 6.23, "Manually Operated Piezo-Electric Spark Gas Ignition Systems and Components"
- ANSI Z21.92/CSA 6.29, "Manually Operated Electric Gas Ignition Systems and Components"

The standard designation is noted in the individual Listing reports.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Gas Appliance Electric Accessory," or other appropriate product name as shown in the individual Listings.

GAS DETECTORS, RESIDENTIAL AND RECREATIONAL VEHICLES (JKIS)

USE AND INSTALLATION

This category covers gas detectors intended to detect natural gas and LP-gas (propane) that may be present in residential buildings or recreational vehicles as a result of gas leaking from gas-fired equipment. These devices are intended to sound an alarm at or below 25% of the lower flammable limit of natural gas or LP-gas (propane).

Installation limitations, if any, are marked on the device. Reference should also be made to the manufacturer's installation and use instructions accompanying the product.

These devices are not suitable for installation in hazardous (classified) locations as defined in ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Each product is marked to indicate its intended use. This consists of the term "Residential Gas Detector" or "Recreational Vehicle Gas Detector."

UNEVALUATED FACTORS

These devices have not been investigated for use as smoke or fire detectors.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1484, "Residential Gas Detectors."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Emergency Signaling Equipment" or "Emergency Signaling Subassembly."

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- E – Emergency Signaling Equipment

GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (JLVG)

GAS AND VAPOR DETECTION EQUIPMENT CLASSIFIED FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (JLVV)

USE

This category covers gas and vapor detectors and associated equipment used for detecting specific gases and vapors that may be present in the atmosphere incidental to operations or from accidental release and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance

GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (JLVG)

177

Gas and Vapor Detection Equipment Classified for Use in Zone Classified Hazardous Locations (JLVV)—Continued

with ANSI/NFPA 70, "National Electrical Code," or (3) intended for installation in panel assemblies in accordance with the instructions provided.

These gas and vapor detectors have been investigated for risk of explosion, fire and electric shock only. They have not been investigated for performance relative to their ability to detect gases or vapors.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY

Control No.

or

[PRODUCT IDENTITY*] FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Control No.

* (COMBUSTIBLE) GAS DETECTOR or (COMBUSTIBLE) VAPOR DETECTOR (the word "Combustible" in the product identity is optional)

GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (JTNQ)

GAS AND VAPOR DETECTION EQUIPMENT ENCLOSURES FOR USE IN HAZARDOUS LOCATIONS (JTOL)

USE

This category covers enclosures intended for use in one or more of the following hazardous locations, as indicated on the individual product, in accordance with ANSI/NFPA 70, "National Electrical Code": Class I, Groups A, B, C and D; Class II, Groups E, F and G.

This category covers only the enclosures. Gas sensors or other devices that may be contained within these enclosures are not covered under this category.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1203, "Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ENCLOSURE FOR USE IN HAZARDOUS LOCATIONS AS TO EXPLOSION AND FIRE HAZARD ONLY

Control No.

GAS AND VAPOR DETECTION EQUIPMENT CLASSIFIED FOR USE IN HAZARDOUS LOCATIONS (JTPD)

USE AND INSTALLATION

This category covers gas and vapor detectors and associated equipment designed for detecting specific gases and vapors that may be present in the atmosphere, incidental to operations or from accidental release, and for determining the extent of such release. They may be (1) of the por-

AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY

Control No.

*(COMBUSTIBLE) GAS DETECTOR or (COMBUSTIBLE) VAPOR
DETECTOR (the word "Combustible" in the product identity is optional)

**GAS AND VAPOR DETECTION EQUIPMENT
LISTED FOR USE IN HAZARDOUS
LOCATIONS (JTPX)**

GENERAL

This category covers gas and vapor detectors and associated equipment intended for detecting specific gases and vapors that may be present in the atmosphere incidental to operations or from accidental release and for determining the extent of such release. They may be (1) of the portable type powered by batteries, (2) intended for permanent installation in accordance with ANSI/NFPA 70, "National Electrical Code," or (3) intended for installation in panel assemblies in accordance with the instructions provided.

Gas and vapor detectors in any of the groups under Class I hazardous locations have been tested with respect to safety of operation of the instrument in the presence of flammable and explosive mixtures of representative gases and vapors with air. The flame arresters provided in the intake and suction lines of these instruments have been tested in the presence of flammable and explosive mixtures representative of the gases and vapors that the instruments are designed to detect and of the hazardous locations for which the detector has been Listed. Associated equipment may not necessarily be suitable for use in hazardous locations.

These instruments, when installed, maintained and operated in compliance with the manufacturer's instructions, indicate the percentage of concentration or percentage of the lower flammable limits of the specific gases and vapors. In some cases, meter readings must be interpreted in accordance with calibration data furnished by the manufacturer.

Gas and vapor detectors should be calibrated and inspected by the operator in compliance with the manufacturer's instructions, as performance of the instruments will depend on proper maintenance. The instruments should be calibrated with known gas- or vapor-air mixtures at intervals, and particularly after replaceable sensors incorporated in the detecting unit are replaced. Certain gases and vapors may adversely affect (poison) the sensors, and the use of the instruments in sampling atmospheres containing gases or vapors for which they have not been previously calibrated should, therefore, be avoided.

Minor variations in the flow of sample aspirated to the detecting unit do not affect the operation of these instruments to any great extent. However, as the instruments become inoperative in the event of clogging of sampling lines, flame arresters or filters, precautions should be taken to keep these components clean and free from obstructions. Where condensation of vapors occurs in the detecting unit, or in the sampling lines and fittings, erroneously low indications by the instrument may result. Absorption of appreciable amounts of certain gases and vapors by nonmetallic tubing used as sampling lines may also result in incorrect indications by the instrument.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**GAS AND VAPOR DETECTION EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (JTNQ)**

Hazardous Locations (JTPX)—*Continued*

REQUIREMENTS

The basic unclassified (ordinary) locations standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," and ANSI/ISA-12.13.01, "Performance Requirements for Combustible Gas Detectors."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "(Combustible) Gas Detector for Hazardous Locations" or "(Combustible) Vapor Detector for Hazardous Locations," or other appropriate product name as shown in the individual Listings. The word "Combustible" in the product name is optional.

GENERATORS (JZGZ)

GENERAL

This category covers generators, also referred to as generator heads. They are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS/INSTALLATION INSTRUCTIONS

An enclosed type generator has the enclosure type designation marked on the generator for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The generator may also be marked "Raintight" or "Rainproof."

An enclosed type generator is not intended to be installed in an enclosure unless a marking on the generator, the installation instructions, or a stuffer sheet provided with the generator states that the generator may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open type generator is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the generator, provided in the installation instructions, or as a stuffer sheet provided with the generator.

A generator that has running heating and locked-rotor protection is marked "Thermally Protected."

Generators are marked for use in a 40°C (104°F) or higher ambient.

All generators are provided with installation instruction information, which indicate the proper methods to secure the generator, electrically connect the generator to the prime mover, and connect it to the generator drive. The instructions also provide information concerning the load rating at which the generator can operate.

FIELD EVALUATED PROVISIONS

Suitability of guards for the shaft or other moving parts must be determined in the end-use application.

If a generator does not have thermal protection as described above, protection needs to be provided in the end-use application such as an overload relay. The generator has a marking indicating that the generator is not provided with thermal protection.

RELATED PRODUCTS

Electric generators for use in marine applications are covered under Alternators, Generators and Motors, Electric, Marine (ARDY).

Electric generators for use in hazardous (classified) locations are covered under Generators for use in Hazardous Locations (PSPT).

Electric generators used in combination with an engine for use with recreational vehicles are covered under Engine Generators (FTSR).

Motor generator sets and frequency converters intended for use in unclassified (ordinary) locations are covered under Motor Generator Sets (PQYW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1004, "Electric Motors" and UL 2111, "Overheating Protection for Motors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Generator" or "Electric Generator Head."

GROUND-FAULT CIRCUIT INTERRUPTERS (KCXS)

GENERAL

This category covers ground-fault circuit interrupters (GFCI) for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

A GFCI is a device whose function is to interrupt the electric circuit to the load when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the circuit.

GFCIs are intended to be used only in circuits where one of the conductors is solidly grounded.

Class A GFCIs trip when the current to ground has a value in the range of 4 through 6 mA. Class A GFCIs are suitable for use in branch and feeder circuits, including swimming pool circuits. However, swimming pool circuits installed before local adoption of the 1965 NEC may include sufficient leakage current to cause a Class A GFCI to trip.

Class B GFCIs trip when the current to ground exceeds 20 mA. These devices are suitable for use with underwater swimming pool luminaires installed before the adoption of the 1965 NEC.

GFCIs of the enclosed type that have not been found suitable for use where they will be exposed to rain are so marked.

The "TEST" and "RESET" buttons on the GFCIs are only intended to check for the proper functioning of the GFCI. They are not intended to be used as "ON/OFF" controls of motors or other loads unless the buttons are specifically marked "ON" and "OFF." Products with "ON" and "OFF" markings have been additionally Listed under Motor Controllers, Mechanically-operated and Solid-state (NMFT).

Receptacle GFCIs

Some GFCIs include flush receptacles and are intended to be installed in an outlet box for fixed installation on a branch circuit similar to a conventional receptacle.

Receptacle-type GFCIs for use in wet and damp locations in accordance with Articles 406 of the NEC are identified by the words "Weather Resistant" or the letters "WR" where they will be visible after installation with the cover plate secured as intended.

Weather-resistant receptacle-type GFCIs installed in wet locations are intended to be installed with an enclosure that is weatherproof, whether or not the attachment plug cap is inserted.

Receptacle-type GFCIs for use in dwelling units in accordance with Section 210.52 of the NEC, or pediatric patient care areas in accordance with Article 517 of the NEC, are identified by the words "Tamper Resistant" or the letters "TR" where they will be visible after installation with the cover plate removed.

Receptacle-type GFCIs that have additionally been found to meet appropriate receptacle requirements are marked "Hospital Grade" and/or "CO/ALR."

Receptacle-type GFCIs with receptacles rated 15 or 20 A that are provided with more than one set of terminals for the connection of line and neutral conductors are suitable for through wiring on 20 A branch circuits.

The standard horsepower ratings for specific general-use receptacle configurations are also applicable to the receptacle portion of a GFCI employing the same receptacle configuration.

See Receptacles for Plugs and Attachment Plugs (RTRT) for further information.

Portable GFCIs

This category also covers portable GFCIs. These are plug-in type ground-fault circuit interrupters provided with male blades or an integral power-supply cord for connection to a receptacle outlet. Portable GFCIs are also provided with one or more receptacle outlets located on the GFCI or on a cord-connector body at the end of a length of flexible cord.

REBUILT PRODUCTS

This category also covers rebuilt or refurbished portable GFCIs that are rebuilt or refurbished by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt or refurbished portable GFCIs are rebuilt or refurbished to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt or refurbished portable GFCIs are subject to the same requirements as new portable GFCIs.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 943, "Ground-Fault Circuit-Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground-fault Circuit Interrupter."

For portable GFCIs, the word "Portable" precedes the product name, and the Listing Mark may be of the flag type applied to the cord.

For rebuilt products the word "Rebuilt" or "Refurbished" precedes the product name.

SPECIAL-PURPOSE GROUND-FAULT CIRCUIT INTERRUPTERS (KCYC)

USE

This category covers ground-fault circuit interrupters for use in applications where equipment grounding is provided or is required by ANSI/NFPA 70, "National Electrical Code," or where the voltage to ground is greater than 150 V.

PRODUCT CHARACTERISTICS

These ground-fault circuit interrupters trip when the current to ground has a value in the range of 15 through 20 mA. Let-go protection is not provided by the ground-fault circuit interrupter; however, a person touching the protected equipment and earth would have a low-impedance equipment grounding path in parallel with the person's body.

These ground-fault circuit interrupters rely upon equipment grounding for let-go protection. The reliability of the grounding circuit may be demonstrated by a system that monitors the grounding path to the service and to the load, such that an unacceptable increase in the resistance of the grounding path will cause the circuit to be opened, or by some other method that demonstrates, by investigation, that the grounding circuit is reliable or that faults are unlikely because of the level of insulation that is provided (double insulation).

CLASSES

These ground-fault circuit interrupters are divided into classes based upon voltage rating and the quality of the grounding circuit. Some may be used in circuits where grounding is not provided to the load but double insulation is provided.

A Class C ground-fault circuit interrupter (GFCI) is intended to be used in circuits with voltage not exceeding 300 V AC to ground on any conductor. The Class C GFCI is intended to be used in circuits where reliable equipment grounding or double insulation is provided or is required by the National Electrical Code.

A Class D GFCI is intended to be used in circuits with one or more conductors over 300 V to ground, where specially sized reliable equipment grounding, to provide a low impedance path so that the voltage across the body during a fault does not exceed 150 V, is provided for the protected equipment in the system.

A Class E GFCI is intended to be used in circuits with one or more conductors over 300 V to ground but with conventional equipment grounding or double insulation provided for the protected equipment in the system. These GFCIs respond rapidly to open the circuit before the magnitude and duration for the current flowing through a person's body exceeds the limits for ventricular fibrillation.

RELATED PRODUCTS

For additional information, see Ground-fault Circuit Interrupters (KCXS) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 943, "Ground-Fault Circuit Interrupters," as modified by UL Subject 943C, "Outline of Investigation for Special Purpose Ground-Fault Circuit Interrupters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Class ___ Ground-Fault Circuit Interrupter, Special Purpose."

GROUND-FAULT CIRCUIT INTERRUPTERS FOR USE IN HAZARDOUS LOCATIONS (KCYN)

GENERAL

This category covers ground-fault circuit interrupters (GFCI) intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These devices are mounted in explosion-proof and/or dust-ignition-proof enclosures.

GFCIs interrupt the electric circuit to the load when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the circuit.

GFCIs are intended to be used only in circuits where one of the conductors is solidly grounded.

Class A GFCIs trip when the current to ground has a value in the range of 4 through 6 mA. Class A GFCIs are suitable for use in branch and feeder circuits.

GROUND-FAULT CIRCUIT INTERRUPTERS FOR USE IN HAZARDOUS LOCATIONS (KCYN)

180

The "TEST" and "RESET" buttons on GFCIs are only intended to check for the proper functioning of the GFCI. They are not intended to be used as "ON" and "OFF" controls of motors or other loads unless the buttons are specifically marked "ON" and "OFF."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 943, "Ground-Fault Circuit Interrupters."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Fault Circuit Interrupter for Use in Hazardous Locations" or "Ground-Fault Interrupter for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

GROUND-FAULT SENSING AND RELAYING EQUIPMENT (KDAX)

This category covers ground fault current sensing devices, relaying equipment, or combinations of ground fault current sensing devices and relaying equipment, rated 600 volts maximum, which will operate to cause a disconnecting means to function at predetermined values of ground fault current in accordance with the National Electrical Code, ANSI/NFPA 70.

This equipment is intended to provide ground-fault protection of equipment at services and feeders.

This equipment is intended to operate devices with shunt trip coils such as fused power circuit devices, molded case circuit breakers, molded case switches and the like which constitute the disconnecting means. It is necessary that ground fault sensing and relaying equipment be coordinated with a disconnecting device to prevent the disconnecting device from interrupting a fault current that exceeds the interrupting capability of the disconnecting means.

To aid the user in making the proper selection of disconnecting means and sensing and relaying equipment, the sensing and relaying devices are designated as Class I or Class II.

Class I ground fault sensing and relaying equipment does not incorporate means to prevent opening of a disconnecting device at any level of fault current. This Class is suitable for use with a disconnecting device that is capable of interrupting the maximum available fault current of the system on which it is used. Examples of such disconnecting devices are (1) circuit breakers or fused circuit breakers used within their interrupting ratings, (2) fused switches having integral means to prevent the switch from opening at levels of fault current exceeding the interrupting capability of the switch and thus permitting the fuses to clear the circuit, (3) fused switches having an interrupting capability not less than 12 times their amp rating and which are capable of interrupting the levels of fault current that may exist before the fuses open.

Class II ground fault sensing and relaying equipment incorporates means to prevent initiation of opening of the disconnecting device if the fault current exceeds the contact interrupting capability of the disconnecting device with which it is intended to be used, such as in the case of a fused switch that does not have an interrupting capability of at least 12 times its amp rating.

Ground fault sensing and relaying equipment is marked to indicate the maximum inrush and sealed current ratings of the output circuit. These values should be compatible with the ratings of the tripping coils of the associated disconnecting devices.

Ground fault sensing and relaying equipment is marked to indicate the maximum available fault currents it is capable of withstanding without damage.

This listing covers enclosed equipment and also open type equipment which is intended for use in Listed equipment such as panelboards, switchboards, and the like where the acceptability of the combination has been determined by Underwriters Laboratories Inc.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1053, "Ground-Fault Sensing and Relaying Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word

GROUND-FAULT SENSING AND RELAYING EQUIPMENT (KDAX)

"LISTED", a control number, and the following product name: "Ground Fault Sensing and Relaying Equipment".

GROUNDING AND BONDING EQUIPMENT (KDER)

USE

This category covers bonding devices, ground clamps, grounding and bonding bushings and locknuts, ground rods, armored grounding wire, protector grounding wire, grounding wedges, ground clips for securing the ground wire to an outlet box, water meter shunts, and similar equipment.

Some devices are to be assembled to wire using a special tool specified by the manufacturer. Such special tooling is identified by appropriate marking on or within the device shipping carton.

Armored Grounding Wire — Armored grounding wire consisting of a single corrosion-resistant copper, aluminum or copper-clad aluminum conductor within helically-formed steel armor is marked with the size of the conductor "Bare Armored Grounding Wire."

Ground Rods — Ground rods and pipe electrodes are suitable for use as grounding electrodes in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and are also suitable for use in installation of lightning protection equipment.

Ground rods are solid copper, solid stainless steel, copper-jacketed steel, stainless-steel jacketed, galvanized steel, and chemically charged. They are not less than 1/2 in. diameter and not less than 8 ft long and capable of being driven to a depth of 8 ft. If other than circular, they have a periphery not less than 1.6 in. and a minimum thickness of not less than 3/8 in.

Ground rods are marked with the rod length, and manufacturer's name and catalog number within 12 in. of the top of the rod.

The ground rods of a sectional ground rod kit consisting of two four-foot sections of ground rods, a driving sleeve, and a ground rod coupling are marked with the manufacturer's name, catalog number, rod size and length, and "Sectional Ground Rod" within 12 in. of the top of each rod.

Ground rod couplings are intended for connection of two ground rods and are suitable for direct burial.

Ground Clamps — Strap-type ground clamps are not suitable for attachment of the grounding conductor of an interior wiring system to a grounding electrode.

Ground clamps and other connectors suitable for use where buried in earth or embedded in concrete are marked for such use. The marking may be abbreviated "DB" (for "Direct Burial").

Ground clamps are also suitable for telecommunication applications, such as telephone, radio, CATV and the like, in accordance with Articles 800, 810, 820 and Section 250.94 of the NEC, in addition to those covered under Grounding and Bonding Equipment, Communication (KDSH).

Ground clamps are intended for use with ground rods and/or pipe electrodes in accordance with the NEC and are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked "Copper Water Tubing," or the equivalent, preceded or followed by the size of tubing. Ground rods, pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.

Ground clamps intended for use with re-bar are marked with the size of re-bar with which the clamp is intended. Re-bar sizes may be specified in fractions, such as 1/2, 5/8, etc., or a number, such as 3, 4, 5, etc., where the number represents the numerator of the fraction when stated in eighth-inch increments, e.g., 4 = 4/8.

Grounding and Bonding Bushings — Bonding bushings for use with conduit fittings, tubing (EMT) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit are provided with means (usually one or more set screws) for reliably bonding the bushing (and the conduit on which it is attached) to the metal equipment enclosure or box. They provide the electrical continuity required by the NEC at service equipment and for circuits rated over 250 V. Means for connecting a grounding or bonding conductor are not provided and if there is need for such a conductor a grounding bushing should be used.

Grounding bushings for use with conduit fittings, tubing (EMT) fittings, threaded rigid metal and intermediate metal conduit, or unthreaded rigid metal and intermediate metal conduit have provision for the connection of a bonding or grounding wire or have means for mounting a wire connector available from the manufacturer. Such a bushing may also have means (usually one or more set screws) for reliably bonding the bushing to the metal equipment enclosure or box in the same manner that this is accomplished by a bonding bushing. Grounding bushings provide the electrical continuity required by the NEC at service equipment and for circuits rated over 250 V. They may be used with or without a bonding or grounding conductor as determined by the bonding or grounding function that is intended to be accomplished.

Insulating throat liners in grounding or bonding bushings are suitable for temperatures of 150°C if they are black or brown in color. Unless otherwise marked, insulating throat liners of any other color are suitable for temperatures of 90°C.

GROUNDING AND BONDING EQUIPMENT (KDER)

Grounding and Bonding Locknuts — Grounding and bonding locknuts serve in a manner similar to grounding and bonding bushings except they do not provide abrasion protection for the conductor at the end of the conduit.

Ground Clips — Ground clips are intended to be pressed on the flat surface of a square, rectangular, or octagonal box to hold a grounding conductor against the side wall of the box. Ground clips are typically used for connecting the grounding conductor of various wiring methods to outlet boxes or for connecting the bonding jumper from a receptacle or switch to an outlet box.

Ground Mesh — The ground mesh consists of a copper wire mesh that is intended to be installed in ground or embedded in concrete and bonded to the grounding electrode system for the purpose of improving ground planes, such as an equipotential plane as described in Sections 547.2, 547.10 and 680.26 of the NEC. Ground mesh is not intended to serve as a required grounding electrode as described in Article 250 of the NEC.

Fittings — A fitting such as a hub, bushing or locknut intended to provide a raintight or liquidtight connection is marked "Raintight," "Type 3R," "Type 4" or "Wet Locations."

Protector Grounding Wires — Protector grounding wires are intended for use in accordance with Article 800 of the NEC. They are marked with the manufacturer's name, size, and "Protector Grounding Wire."

Water Meter Shunts — Consists of a 4 AWG or larger solid copper wire connected between two ground clamps that comply with requirements for such ground clamps.

Miscellaneous Devices — Grounding and bonding equipment not specifically mentioned above, such as bonding locknuts, gaskets, grounding wedge lugs, adapters, grounding grids and the like, are investigated under the intent of the requirements in the standard.

PRODUCT MARKINGS

Some of the markings referred to above may be on a tag attached to the product.

Grounding and bonding devices are intended for use only with copper conductors unless they are marked "AL" or "AL-CU."

RELATED PRODUCTS

Hospital grounding jacks and grounding cord assemblies are covered under Hospital Ground Jacks and Grounding Cord Assemblies (KEVX).

Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment, Communication (KDSH).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 467, "Grounding and Bonding Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, on a tag securely attached to the product or container, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Grounding Equipment," "Bonding Equipment," "Bonding Jumper," "Ground Clamp," or other appropriate product name as shown in the individual Listings.

GROUNDING AND BONDING EQUIPMENT, COMMUNICATION (KDSH)

USE

This category covers grounding devices intended for use in telecommunication applications, such as telephone, radio, CATV and the like, in accordance with Articles 800, 810, 820 and Section 250.94 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Strap-type ground clamps constructed of perforated or expanded metal are suitable for grounding conductor connections to electrodes for indoor telecommunications purposes only. Where permitted by the NEC, they are also suitable in both indoor and outdoor applications when used for bonding purposes only.

Strap-type ground clamps are intended for use with pipe electrodes in accordance with the NEC and are marked with the size of electrode and electrode grounding conductor with which the clamp is intended to be used. Clamps suitable for use on copper water tubing are marked "Copper Water Tubing" or the equivalent, preceded or followed by the size of tubing. Pipe electrodes and water tubing trade sizes are stated in fractions, such as 1/2, 5/8, etc.

PRODUCT MARKINGS

Some of the required markings may be on a tag attached to the product.

GROUNDING AND BONDING EQUIPMENT, COMMUNICATION
(KDSH)

181

RELATED PRODUCTS

Ground clamps covered under Grounding and Bonding Equipment (KDER) are also suitable for use in applications as specified in this category.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 467, "Grounding and Bonding Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, on the smallest unit container in which the product is packaged, or on a tag securely attached to the product or container, is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ground Clamp – Communication."

GROUNDING EQUIPMENT, NEUTRAL GROUNDING DEVICES, OVER 600 VOLTS (KDZC)

GENERAL

This category covers neutral grounding devices intended for use on systems having ac voltage ratings from 601 V to 38 kV. Neutral grounding devices are used for the purpose of controlling the ground current or the potentials to ground of an alternating-current system.

These devices are grounding transformers, ground-fault neutralizers, resistors, reactors, capacitors, or a combination of these. In addition, these devices may include current sensors, relays, audible and visual signaling and similar accessories.

PRODUCT MARKINGS

Devices suitable for outdoor use are marked "Outdoor."

Enclosures are marked to indicate the exposure category (A, B or C) for which they are intended. Enclosures marked "Category A" are intended to be installed in areas accessible to the unsupervised general public; enclosures marked "Category B" are intended to be installed in areas accessible to authorized personnel only; enclosures marked "Category C" are intended for use in areas accessible to qualified personnel only.

Devices covered under this category are marked with the following information: Name of manufacturer, serial number, name of device, type designation, impedance (except resistors), number of phases as applicable, rated current, rated frequency, rated time, rated voltage, BIL of line, indoor or outdoor service, weight, volume of oil (as applicable), instruction book number or equivalent.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/IEEE 32-1972, "IEEE Standard Requirements, Terminology, and Test Procedure for Neutral Grounding Devices," and ANSI/IEEE C37.20.3-2001, "Metal-Enclosed Interrupter Switchgear."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Neutral Grounding Resistor" or "Neutral Grounding Reactor," or other appropriate product name as shown in the individual Listings.

HEALTH CARE FACILITIES EQUIPMENT (KEVQ)

GENERAL

This category covers appliances, utilization equipment and construction materials which have been judged to be particularly applicable to a health care facility as defined by Article 517 of NFPA 70, "National Electrical Code."

The general information under the specific categories indicate the areas in which the individual Listings are intended to apply in health care facility installations.

This equipment, unless otherwise indicated, is for installation in unclassified (ordinary) areas of health care facilities.

HOSPITAL GROUND JACKS AND GROUNDING CORD ASSEMBLIES (KEVX)

USE

This category covers hospital ground jacks and mating grounding cord assemblies intended for use in hospital rooms or other in health care facilities to connect equipment to a patient grounding point or other appropriate reference grounding point.

The visible face of a grounding jack is green.

PRODUCT MARKINGS

The cover of a hospital grounding jack having a twist-to-lock configuration is marked "Locked – for Grounding" or "Twist to Lock – for Grounding."

RELATED PRODUCTS

General equipment for grounding and bonding is covered under Grounding and Bonding Equipment (KDER).

Equipment for grounding and bonding for telecommunication applications is covered under Grounding and Bonding Equipment, Communication (KDSH).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 467, "Grounding and Bonding Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Grounding Jack" or "Grounding Cord Assembly," or other appropriate product name as shown in the individual Listings.

ISOLATED POWER SYSTEMS EQUIPMENT (KEVV)

These listings include isolated power centers which incorporate complete assemblies of isolation transformers and one or more isolated secondary circuits terminated in integrally mounted grounding type load receptacles in an overall enclosure which are intended for use in health care facilities where it is considered desirable to minimize available leakage and short-circuit currents.

Line isolation monitors may be included in the assembly to indicate the "condition" of the isolated circuit and its connected components with respect to electrical ground.

Other distribution panels listed as isolated power panelboards incorporate the same features as described above except that they may be supplied with power from a separate isolation transformer. They are connected by an approved wiring method to remote receptacles located in operating rooms or other anesthetizing location areas of health care facilities.

Accessory equipment, such as terminal assemblies located in patient care areas, are also included in these listings.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1047, "Isolated Power Systems Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Power Systems Equipment".

ISOLATED POWER WALL MODULES (KEXS)

These listings include Isolated Power Wall Modular Sections for use in, within, or as part of, health care facilities, and may be part of a building structure. They are designed for permanent connection to the building wiring in accordance with the provisions of Article 517 of the National Electrical Code.

These sections incorporate factory installed wiring and equipment comprising part of an isolated power system such as the components of an isolated power center or an isolated power panelboard, or accessory equipment such as terminal assemblies located in patient care areas. In addition they may incorporate various combinations of gas outlets, lighting fixtures, elapsed time indicators, clocks, intercommunication equipment, etc.

These sections do not contain any grounded power systems except that necessary for connection to the primary of an isolating transformer, if provided. Sections which are intended for use with grounded power systems are Listed under the classification of Prefabricated Buildings and Assemblies, Sections and Units.

Isolated Power Wall Modules (KEXS)—Continued

The pre-installed components and wiring of a prefabricated section may be concealed and except for the branch circuit connections, may not be accessible for inspection at the inspection site.

The isolated power wall module sections have not been investigated to determine conformance with one or more Model Building or Plumbing Codes. They have been investigated to determine compliance with the National Electrical Code. These wall modular sections are intended for installation subject to approval by the authority having jurisdiction.

The maximum available leakage current to the enclosure and primary grounded circuit conductor from either isolated circuit conductor has been investigated to determine that it is less than 100 microamperes with no loads connected to the isolated circuit.

Fire hazard classification of the building materials used in the wall module sections, including the resistance of any plywood to delamination under fire exposure, has been investigated. The fire hazard classification of the building materials used in prefabricated assemblies has the following maximum ratings applied to the finished panel and to core material (if used) in comparison with asbestos cement boards as zero and untreated red oak lumber as 100:

A. Flame spread rating 75

B. Smoke developed 200

See also general information under Isolated Power Systems Equipment, Guide KEVV.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1047, "Isolated Power Systems Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Isolated Power Wall Module".

PREFABRICATED MEDICAL HEADWALLS AND MEDICAL SUPPLY UNITS (KEZR)

USE

This category covers prefabricated medical headwalls and medical supply units that are factory-built assemblies for use in, within, or part of health care facilities, and may be part of a building structure. These assemblies may incorporate pre-installed materials and Listed equipment which is usually concealed and may not be accessible for inspection at the installation site. The Listed equipment incorporated in these assemblies includes, but is not limited to, receptacles, switches, clocks, timing devices, patient monitors, vacuum stations and gas fittings.

These assemblies, including any field wiring for units that are not factory wired, are intended for installation subject to approval by the Authority Having Jurisdiction.

INSTALLATION CODES

Materials, including the methods used for the installation of electrical, mechanical, heating, and plumbing equipment included in these assemblies by the manufacturer of the assemblies, have been judged under UL requirements which are based on the National Electrical Code, National Fire Code, and Model Building, Plumbing and Mechanical Codes.

RATINGS

The fire hazard of building materials employed in the assemblies is judged to be no greater than that of ordinary lumber used in site-constructed buildings. Finished surfaces are of materials having flame spread and smoke developed ratings of 200 or less. Products with a rating less than 200 indicated in the individual Listings may be included as part of the product marking.

Structural requirements vary with type of building construction and occupancy, and stability is to a large measure dependent upon the attachment of the assemblies to field-erected or existing structures. Therefore, Authorities Having Jurisdiction should be consulted with respect to local requirements.

RELATED EQUIPMENT

Prefabricated assemblies for use in locations other than health care facilities are covered under Prefabricated Assemblies, Sections and Units (QXX) and Wiring Assemblies (QQYZ).

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in ANSI/NFPA 70, "National Electrical Code."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name,

Prefabricated Medical Headwalls and Medical Supply Units (KEZR)—Continued

such as “Medical Headwall,” “Medical Supply Unit,” “Dental Unit,” or proprietary descriptive product name with further description where necessary.

One Listing Mark is applied to each assembly.

MEDICAL AND DENTAL EQUIPMENT, PROFESSIONAL (KFBQ)

This listing covers equipment which, unless otherwise noted, is designed for professional use by personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities.

This category also covers medical and dental equipment which is rebuilt by the original manufacturer or any other party that has the necessary facilities, technical knowledge, and skills.

Rebuilt medical and dental equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt medical and dental equipment is subject to the same requirements as new medical and dental equipment.

This equipment has been investigated from the standpoint of electrical, fire, and accident hazards. Other hazards, including those which may result from use of this equipment in the presence of flammable anesthetics have not been investigated. The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

Some listings of Medical and Dental Equipment, Professional are predicated on the provision of one of two alternate attachment plug caps specifically referred to in the listing of “Attachment Plugs-Fuseless.” One is a locking type cap identified by the marking “Hospital Only” and the other is a nonlocking type ANSI Standard configuration grounding type cap identified by the marking “Hospital Grade” and a green dot on the body of the cap. The identification is visible after installation on the flexible cord.

Baby incubators, and similar equipment for use with oxygen enriched atmospheres, have been investigated with respect to the increased hazard resulting from the presence of oxygen and electrical parts within the equipment. Motor operated beds are marked if they are suitable for use with oxygen. It is not possible to make devices such as these inherently safe from external sources of ignition. This hazard is greatly increased by the presence of oxygen, which makes materials easier to ignite and greatly increases the burning rate. Accordingly, for safety, it is essential that all possible sources of ignition be kept away from these devices. Possible sources of ignition against which precautions should be taken include open flames, matches, cigarettes, accumulations of static electricity, and reducing valves on oxygen tanks which occasionally project flame or sparks due to ignition or explosion of rubber valve seats.

Oil bath sterilizers and similar equipment have been investigated with respect to their use with oils such as are recommended by the sterilizer manufacturers.

For listings of medical and dental equipment including refrigerated components, such as refrigeration therapy equipment, refer to Refrigeration Equipment.

Equipment which has been investigated to determine its suitability or safety for use where a flammable anesthetic is likely to be present may be found in Underwriters Laboratories Inc. Hazardous Location Equipment Directory under Medical Equipment.

Household health care equipment is listed in the product category “Personal Hygiene and Health Care Appliances.”

Heating pads are listed in the product category “Heating Pads, Electric.”

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 544, “Electric Medical and Dental Equipment.”

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and one of the following product names as appropriate: “Medical Equipment,” “Dental Equipment,” or the name of the specific type of product as shown in the individual Listing or the word “Rebuilt” or “Remanufactured” followed by the following product names as appropriate: “Medical Equipment,” “Dental Equipment,” or the name of the specific type of product as shown in the individual Listing.

MEDICAL WASTE DISPOSAL SYSTEMS, EQUIPMENT AND ACCESSORIES (KFCC)

GENERAL

This category covers products that neutralize or collect biological or medical waste as indicated by the manufacturer. These products are intended for

Medical Waste Disposal Systems, Equipment and Accessories (KFCC)—Continued

use in hospitals, nursing homes, medical care centers, medical and dental offices and similar professional health care facilities. They include, but are not limited to syringe destroyers, waste disposers and similar equipment.

Approval to market these products in the United States is regulated by the Federal Food, Drug, and Cosmetic Act, P.L.94-295, and the code of Federal Regulations, Title 21, Parts 800-895. Underwriters Laboratories Inc.’s investigation is, therefore, limited to Classification as to electrical shock, fire and mechanical hazards only. The environmental impact and health aspects associated with the use of these products and their ability to collect, identify, or neutralize biological and medical waste have not been investigated by UL. This limitation is specified in the instruction manual for all products covered under this category.

Unless otherwise noted, these products have not been investigated for use in the presence of flammable materials. Equipment which has been investigated to determine its suitability for use in hazardous locations as defined by NFPA 70, “National Electrical Code” may be found in UL’s Hazardous Locations Equipment Directory.

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 61010A-1, “Electrical Equipment for Laboratory Use: Part 1: General Requirements” and UL 430, “Waste Disposers.”

Equipment for use in patient environments as defined in IEC 60601-1-1, “Medical Electrical Equipment, Part 1: General Requirements for safety, 1. Collateral standard: Safety requirements for medical electrical systems” is also investigated to applicable requirements in UL 2601-1, “Medical Electrical Equipment, Part 1: General Requirements for Safety.”

Equipment intended for household use is also investigated to the applicable requirements in UL 1431, “Personal Hygiene and Health Care Appliances.”

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), a control number, the appropriate product name, and the statement: “AS TO ELECTRICAL SHOCK, FIRE AND MECHANICAL HAZARDS ONLY.”

POWER SUPPLIES FOR USE IN HEALTH CARE FACILITIES (KFCG)

USE

This category covers indoor-use power supplies having input ratings not more than 600 V, direct and alternating current, intended for use with professional medical and dental equipment in unclassified (ordinary) locations of health care facilities in accordance with ANSI/NFPA 70, “National Electrical Code.”

Power supplies not provided with standard output receptacles are marked for use with the intended end-use equipment, the combination of which has been investigated for compliance with the relevant standards of this category as noted below. Consideration should be given for the combination of products to be investigated under Medical Equipment (PIDF).

REBUILT PRODUCTS

This category also covers power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt power supplies are subject to the same requirements as new power supplies.

UNEVALUATED FACTORS

The investigation of a device covered under this category does not include the effects it may have on the system or equipment connected thereto.

RELATED PRODUCTS

Power supplies not provided with standard output receptacles and not marked for use with intended end-use equipment are covered under Power Supplies, Medical and Dental (QQHM2).

Power supplies intended to isolate the secondary output from ground are covered under Isolated Power Systems Equipment (KEWV).

ADDITIONAL INFORMATION

For additional information, see Health Care Facilities Equipment (KEVQ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1012, “Power Units Other Than Class 2,” and UL 544, “Medical

Power Supplies for Use in Health Care Facilities (KFCG)—Continued

and Dental Equipment," or UL 60601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety."

Some certifications are based on UL 544 or UL 2601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety," instead of UL 60601-1. UL 2601-1 (2nd edition) is identical in content to UL 60601-1 (1st edition). Certifications based on UL 544 will be withdrawn as of January 1, 2010.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Power Supply," "Power Conditioner," etc., preceded by "Hospital," "Health Care Facility," "Medical" or "Dental," as appropriate.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

TELEVISION/VIDEO EQUIPMENT FOR USE IN HEALTH CARE FACILITIES (KFCV)

GENERAL

This category covers power-operated television and video equipment intended for entertainment purposes in unclassified (ordinary) locations of health care facilities. Equipment suitable for use in oxygen-enriched atmospheres is so indicated in the individual Listings.

Entertainment centers consisting of combinations of a television receiver and a radio receiver and/or other audio or video equipment are investigated to the requirements for television equipment.

This category also covers accessory equipment, including carts, stands, supporting arms and/or wall-mounting brackets, intended for use with television and video equipment in health care facilities.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1492, "Audio-Video Products and Accessories," or UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use," or ANSI/UL 60065, "Audio, Video and Similar Electronic Apparatus – Safety Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "TV," "TV Stand," etc., preceded by "Hospital" or "Health Care Facility."

UNINTERRUPTIBLE POWER SUPPLIES FOR USE IN HEALTH CARE FACILITIES (KFFG)

USE

This category covers indoor use uninterruptible power supplies that may be portable, stationary or fixed. The equipment is rated not more than 600 V ac, and intended for use with professional medical and dental equipment in a health care facility in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

An uninterruptible power supply is used to provide alternating-current power to a load for a period of time marked on the unit in the event of a utility power failure. In addition, it may provide a more constant voltage and frequency supply to the load, reducing the effects of utility voltage and frequency variations.

Uninterruptible power supplies provided with nonstandard output receptacles are marked for use with the intended end-use equipment.

Unless marked "Essential Electrical System," these uninterruptible power supplies have not been investigated with respect to the requirements for essential electrical systems as defined in Article 517 of the NEC.

REBUILT PRODUCTS

This category also covers uninterruptible power supplies that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt uninterruptible power supplies are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt uninterruptible power supplies are subject to the same requirements as new uninterruptible power supplies.

UNEVALUATED FACTORS

The investigation of these devices does not include the effects it may have on the system or equipment connected thereto.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Uninterruptible Power Supplies for Use in Health Care Facilities (KFFG)—Continued

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1778, "Uninterruptible Power Supply Equipment," and either UL 544, "Medical and Dental Equipment," or UL 2601-1/60601-1, "Medical Electrical Equipment, Part 1: General Requirements for Safety."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Uninterruptible Power Supply," preceded by "Hospital," "Health Care Facility," "Medical" or "Dental," as appropriate.

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT)

HEATERS, AIR FOR USE IN HAZARDOUS LOCATIONS (KFVR)

GENERAL

This category covers air heaters of the natural convection, radiant heating, and fan-assisted types. Heaters for surface mounting are intended to be installed in a horizontal position and should not be recessed, obstructed, or placed on or under shelves. Installation is intended to be in accordance with the instructions furnished with the heater.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 823, "Electric Heaters for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Air Heater for Hazardous Location."

ELECTRICAL RESISTANCE HEAT TRACING CABLE SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (KGFR)

USE

This category covers heat tracing cable systems intended for pipe line or vessel heat tracing. A heat tracing system is composed of heat tracing cable and connection kits, which are used for connecting power, connecting multiple heat tracing cables, terminating cables or other product specific uses as described in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 515, "Electrical Resistance Heat Tracing for Commercial and Industrial Applications."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Tracing Cable Set for Use in Hazardous Locations" or "Heat Tracing Cable System for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

HEATERS, INDUSTRIAL AND LABORATORY FOR USE IN HAZARDOUS LOCATIONS (KGIZ)

GENERAL

This category covers paint heaters, ovens, hot plates, and other types of heaters as described in the individual Listings.

HEATERS FOR USE IN HAZARDOUS LOCATIONS (KFHT)**Heaters, Industrial and Laboratory for Use in Hazardous Locations (KGIZ)—Continued**

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of the National Electrical Code must be observed in installation or use, the necessary instructions are marked on the equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 823, "Electric Heaters for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial and Laboratory Heater for Use in Hazardous Locations," "Industrial Heater for Use in Hazardous Locations" or "Laboratory Heater for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

HEATERS, MISCELLANEOUS FOR USE IN HAZARDOUS LOCATIONS (KGWX)**GENERAL**

This category covers miscellaneous heaters, including immersion heaters, motor enclosure space heaters, and heaters for compressed air and water hose reels.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 823, "Electric Heaters for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heater for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

SURFACE HEATERS FOR USE IN HAZARDOUS LOCATIONS (KHCM)**USE**

This category covers surface heaters intended for pipeline or vessel heating.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 515, "Electrical Resistance Heat Tracing for Commercial and Industrial Applications."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Surface Heater for Use in Hazardous Locations."

HEATERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KHTG)**ELECTRICAL RESISTANCE HEAT TRACING CABLE SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KIHP)****USE****HEATERS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KHTG)**

185

Electrical Resistance Heat Tracing Cable Systems for Use in Zone Classified Hazardous Locations (KIHP)—Continued

This category covers heat tracing cable systems intended for pipe line or vessel heat tracing. A heat tracing system is composed of heat tracing cable and connection kits, which are used for connecting power, connecting multiple heat tracing cables, terminating cables or other product specific uses as described in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 515, "Electrical Resistance Heat Tracing for Commercial and Industrial Applications."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Heat Tracing Cable Set for Use in Hazardous Locations" or "Heat Tracing Cable System for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

HEATERS, INDUSTRIAL AND LABORATORY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (KIKU)**PRODUCT TYPES**

This category covers paint heaters, ovens, hot plates, and other types of heaters as described in the individual Listings.

INSTALLATION INSTRUCTIONS

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of the National Electrical Code must be observed in installation or use, the necessary instructions are marked on the equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial and Laboratory Heater for Use in Hazardous Locations," "Industrial Heater for Use in Hazardous Locations" or "Laboratory Heater for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

HEATERS AND HEATING EQUIPMENT (KKBV)

This category covers equipment rated over 300 V intended primarily for industrial or commercial installations.

Listings of appliances intended for use with conventional types of detachable heater cord sets may cover the appliance only.

Units suitable for outdoor installation are noted in the individual Listings. Units not designated as suitable for outdoor installation are for indoor use only.

AIR HEATERS, MOVABLE AND WALL OR CEILING HUNG (KKPT)**USE AND INSTALLATION**

This category covers cord-and-plug-connected air heaters of the natural convection and fan-assisted movable types, wall-hung (other than at the baseboard level), and ceiling-hung types.

Movable and wall- or ceiling-hung heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area.

Air Heaters, Movable and Wall or Ceiling Hung (KKPT)—Continued

Some movable and wall- or ceiling-hung heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. In accordance with product markings and instructions for the user, such heaters should be placed so as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Use that does not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

Certain air heaters subjected to the equivalent of a beating rain are considered to be acceptable for outdoor installation and are marked "Outdoor Use."

RELATED PRODUCTS

Fixed and location-dedicated electric room heaters are covered under Air Heaters, Room, Fixed and Location Dedicated (KKWS).

Permanently-mounted heaters having provisions for drawing in outside air are Listed as room fan heater units under Heating and Cooling Equipment (LZFE).

Portable baseboard heaters and accessories are covered under Baseboard Heaters (KLDR) and Baseboard Heater Accessories (KLQZ), respectively.

These heaters have not been investigated for their acceptability when used in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications. Steam and dry-bath units are covered under Steam Bath Equipment (KQBZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1278, "Movable and Wall- or Ceiling-Hung Electric Room Heaters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Movable Heater," "Movable Fan Type Heater," "Wall-Hung Heater," "Ceiling-Hung Heater," "Wall- or Ceiling-Hung Heater," "Movable Radiant Glass Heater," "Movable Floor Mounted Air Heater," or other appropriate product name as shown in the individual Listings.

AIR HEATERS, ROOM, FIXED AND LOCATION DEDICATED (KKWS)

USE AND INSTALLATION

This category covers electric air heaters of the fixed and location-dedicated room type for residential, commercial and industrial applications. These heaters are of the radiant, natural convection and fan-assisted types intended for mounting in various positions, such as on or in a wall, (except at the baseboard level), on, in or suspended from a ceiling or inserted in a floor. Combination units that include lights have been investigated with regard to their suitability for use as fixtures. Commercial-industrial types include heaters intended to be suspended from a ceiling or wall, or to provide an air curtain in a doorway.

These air heaters are intended to act as sources of heat for the purpose of raising or maintaining the comfort level in a desired area. These units have not been investigated for their acceptability when installed in confined areas and operated at elevated temperatures for heat treatment or steam and dry-bath applications.

Some air heaters may present fire hazards if they come in contact with combustible materials, such as draperies, furniture, carpeting, bedding and the like, or if they are covered or blocked in any manner. Such heaters are intended to be installed as to provide safeguards against such contact and should not be located where they can be covered or blocked, for example, at the baseboard level. Installations that do not result in a fire hazard may still cause discoloration or scorching (but no glowing embers or flaming) of adjacent materials.

Certain room heaters have been investigated for outdoor use and are marked accordingly. All other heaters have been investigated for indoor installation only. The acceptability of such heaters when installed in semi-protected or otherwise shielded locations is determined by the Authority Having Jurisdiction.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

RELATED PRODUCTS

Movable and wall- or ceiling-hung heaters are covered under Air Heaters, Movable and Wall or Ceiling Hung (KKPT).

Air Heaters, Room, Fixed and Location Dedicated (KKWS)—Continued

Heaters having provisions for drawing in outside air are Listed as room fan heater units under Heating and Cooling Equipment (LZFE).

Portable baseboard heaters and accessories are covered under Baseboard Heaters (KLDR) and Baseboard Heater Accessories (KLQZ), respectively.

Steam and dry-bath units are covered under Steam Bath Equipment (KQBZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standard used to investigate products in this category is UL 2021, "Fixed and Location-Dedicated Electric Room Heaters."

REQUIREMENTS

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Room Heater," or other appropriate product name as shown in the individual Listings.

BASEBOARD HEATERS (KLDR)

USE AND INSTALLATION

This category covers space heaters of the portable and permanently-mounted types intended to be positioned or installed on or in the wall at the baseboard level, or on the floor.

Baseboard heaters have been investigated and found to incorporate suitable safeguards against establishment of fire hazards that might result from contact with draperies, furniture, carpeting, bedding and the like; however, discoloration or scorching (but no glowing embers or flaming) may result on adjacent materials.

Heaters, other than those marked to indicate that they are not for residential use, have been investigated to determine that the accessible surface temperatures are low enough to reduce the likelihood of burns from accidental contact.

Electrical cords, drapes, and other furnishings should be kept away from baseboard heaters. To reduce the likelihood of cords contacting the heater, the heater should not be located beneath electrical receptacles. Receptacle accessories for use with individual manufacturers' baseboard heaters are covered under Baseboard Heater Accessories (KLQZ).

Baseboard-mounted equipment consists of two types: (1) Complete units intended for individual mounting in specific locations, and (2) complete systems, which include accessories to enable the heating units to be interconnected around the perimeter of a room (see KLQZ). With reference to these systems, each manufacturer is required to furnish detailed instructions covering the assembly of the basic units and accessories, and indicating the method in which ground continuity is intended to be maintained between adjacent sections.

Electrical fittings are provided with each heater of a system to ensure ground continuity between adjacent units and to protect interconnecting wiring, unless investigation shows that standard fittings that are available in the field will accomplish the same result.

A system which is factory furnished with all interconnecting wiring, fittings, raceways, etc., to complete the installation is considered suitable for connection to a single-outlet branch circuit.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1042, "Electric Baseboard Heating Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Baseboard Heater."

Baseboard Heater Accessories (KLQZ)

USE AND INSTALLATION

This category covers accessories intended to be used in conjunction with individual manufacturers' Listed baseboard heater systems (see KLDR). Accessories include wiring components for interconnection of individual units, corner, blank and filler sections, to facilitate perimeter installation, temperature-regulating components and other general- and special-use receptacle and switch components to be mounted in line with baseboard heater installations.

Baseboard Heater Accessories (KLQZ)—Continued

Attachment plug receptacle sections of baseboard heating systems provided for installation, together with the other components of baseboard air heating systems, are intended to be supplied by means of conventional wiring methods from separate branch circuits not interconnected with the heating system.

Combination transfer switch-receptacle sections of baseboard heating systems which permit use of either the heating system by itself, or a separate room air conditioner by itself, are intended to be connected to a single branch circuit of appropriate size.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1042, "Electric Baseboard Heating Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Baseboard Heater Accessory."

CLOTHES DRYERS (KMEX)**USE AND INSTALLATION**

This category covers clothes dryers intended for use only where water has been used as the cleaning agent. Unless specifically marked, the clothes dryers are intended for freestanding installation with no spacing required between the back and any side to combustible wall surfaces, but are not intended to be operated in closets, alcoves, or other confined areas, nor stacking one unit above another.

A wall-insert clothes dryer is intended to be mounted permanently in a wall or other vertical surface of a building, or in a cabinet.

A recess clothes dryer is intended to (1) be supported by the floor, (2) rest against a wall in the rear, (3) rest against a wall, a cabinet, or another appliance on one side, and (4) rest against a cabinet or other appliance on the other side. If the design permits, a countertop may cover the clothes dryer and the adjacent cabinets and appliances. A recess clothes dryer is not intended for permanent attachment to the building structure or to adjacent cabinets or appliances.

A wall-insert clothes dryer is suitable for installation as a recess clothes dryer, or as a freestanding clothes dryer. A recess clothes dryer is suitable for installation as a freestanding clothes dryer.

Clothes dryers are provided with means of connection of the metallic parts of the enclosure to ground, and all clothes dryers intended for nominal 120-240 V three-wire operation may be provided with grounding facilities to permit the frame of the appliance to be connected directly to the neutral conductor in accordance with the provisions of ANSI/NFPA 70, "National Electrical Code" (NEC).

Motor-overcurrent protection is included in motor-operated dryers if adequate protection would not be provided by branch circuits to which they would properly be connected.

The normal use of clothes dryers creates a large volume of humid air that is sometimes vented to the room interior. Unless the appliance is properly oriented this moisture could affect electrical wiring or other electrical devices in the vicinity.

The operation of condenser-type clothes dryers is such that air from the heater of the dryer is circulated across the clothes and then across a condenser. The condenser transforms the vapor to water, which collects in a reservoir in the clothes dryer. As the vapor changes to a liquid, it carries the lint with it to an internal reservoir. The air that passes across the condenser then recirculates across the heater in the clothes dryer in a continuous operation until the clothes are dry. There is no venting of moisture/lint-laden air to the outside. All moisture/lint-laden air is continuously recirculated.

Provision should be made for the periodic removal of accumulation of lint that results from normal operation of this type of equipment.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, the necessary special instructions are provided on or with the equipment. An individual branch circuit should be provided for each clothes dryer.

Listed clothes dryer transition ducts may be used to connect the clothes dryer to an existing permanent duct system provided as part of the building structure. Listed clothes dryer ducts are covered under Clothes Dryer Transition Ducts (KMIK).

The burglary and theft protection features of coin-operated machines have not been investigated, unless specifically indicated by a marking on the machine.

RELATED PRODUCTS

Clothes Dryers (KMEX)—Continued

For dryers other than electrically heated types, see Dryers (LEFZ), Gas-fired Clothes Dryers, Type 1 (LETA) and Gas-fired Clothes Dryers, Type 2 (LETX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 2158, "Electric Clothes Dryers" and UL 1240, "Electric Commercial Clothes-Drying Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clothes Dryer."

Clothes Dryer Transition Ducts (KMIK)**USE**

This category covers clothes dryer transition ducts intended for venting the exhaust air of electric and gas clothes dryers of household or commercial type.

These ducts are rigid or flexible metal types. Flexible types are a maximum 8 ft. long for use in single lengths only. These ducts are intended for use only in connecting a clothes dryer to permanent ducting provided as a part of the building structure.

These ducts are intended for installation in accordance with the installation instructions provided with the product.

ADDITIONAL INFORMATION

For additional information, see Clothes Dryers (KMEX), Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2158A, "Outline of Investigation for Clothes Dryer Transition Ducts."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Clothes Dryer Transition Duct."

Laundry Equipment Accessories Classified for Use in Specified Equipment (KMKD)

The products covered in this category are investigated for use with household clothes dryers of the electric and gas type.

Refill kits intended to replace disposed components of the accessory are investigated for use with the basic product.

Laundry equipment accessories for installation on specific models of laundry equipment are classified under the category Laundry Equipment Accessories, Classified for Use in Specified Equipment (OOWK)

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standards used to investigate products in this category are Subject 2365, "The Outline of Investigation for Laundry Equipment Accessories," the "Standard for Electric Clothes Dryers", UL 2158, and the "ANSI Standard for Gas Clothes Dryers", Z21.5.1.

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by Underwriters Laboratories Inc. to identify products produced under its Classification and Follow-Up Service. The Classification Marking includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory); "Clothes Dryers Accessory"; "FOR USE IN HOUSEHOLD ELECTRIC OR GAS DRYERS"; and a control number.

Refill kits for the product that are intended to treat dry-clean clothing in household clothes dryers are marked with the Classification Marking which includes: the UL symbol; the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory); "Clothes Dryer Refill Kit"; "FOR USE WITH CLASSIFIED CLOTHES DYER ACCESSORIES FOR USE IN HOUSEHOLD ELECTRIC OR GAS DRYERS"; and a control number.

CONTROL PANELS, REMOTE, FOR ELECTRIC DUCT HEATERS (KMLW)**USE AND INSTALLATION**

Control Panels, Remote, for Electric Duct Heaters (KMLW)—Continued

This category covers electrical panels incorporating control and/or overcurrent protective devices intended specifically for remote use with electric duct heaters. Overcurrent protective devices in these panels are intended to provide overcurrent protection in accordance with Section 424.22(C) of ANSI/NFPA 70, "National Electrical Code."

Unless otherwise specified in the manufacturer's installation instructions, these panels are intended to be mounted remote from the electric duct heaters, in a location where they will not be affected by heat or condensation from operation of the equipment.

The proper installation of these panels requires careful consideration of the individual manufacturer's installation instructions and wiring diagrams.

General-purpose panels are not limited to use with specific makes and models of electric duct heaters. These panels are provided with installation instructions and wiring diagrams showing supply connections, connections to the electric duct heaters, and control circuit connections to be completed at the time of installation.

Panels intended to be used only with specific Listed equipment is so identified and the equipment marked to require the particular panel. The installation instructions and wiring diagrams for these panels may be provided with the panel or may be provided only with the Listed electric duct heaters.

RELATED PRODUCTS

General-purpose panels containing only overcurrent protective devices or only magnetically-operated switching devices are covered under Panelboards (QEUY) and Switches, Industrial Control (NRNT), respectively.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1996, "Electric Duct Heaters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "General Purpose Control Panel for Electric Space Heating Equipment" or "Control Panel for Specific Electric Space Heating Equipment — See equipment nameplate and installation instructions."

HEATERS, COOKING APPLIANCES (KMSV)

Commercial Cooking Appliances (KNGT)

USE AND INSTALLATION

This category covers cooking equipment intended for commercial indoor use, such as coffee machines, espresso coffee makers (single or grouped dispensers), conductive cookers, food warmers including heated food servers, fryers, griddles, nut warmers, ovens, popcorn machines, steam kettles, ranges, and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is dispensed.

This category also covers custom-built food preparation and/or serving equipment consisting of drop-in components, shelf heaters, plate warmers, lighted and/or heated food displays, etc.

These appliances are intended for commercial use in unclassified (ordinary) locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and are intended to be installed in accordance with ANSI/NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

If a product is suitable for built-in installation, side-by-side mounting or stacking, it is indicated in the installation instructions.

Certain appliances covered under this category have also been investigated for use aboard marine vessels over 65 ft in length as covered by USCG, Electrical Engineering Regulations Subchapter J, CG-259, (46 CFR Parts 110-113). Such appliances are identified by UL's Marine Listing Mark.

REBUILT PRODUCTS

This category also covers commercial cooking equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt commercial cooking equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt commercial cooking equipment is subject to the same requirements as new commercial cooking equipment.

PRODUCT MARKINGS

Commercial Cooking Appliances (KNGT)—Continued

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power supply conductors, unless marked "Use Copper Wire Only For Power Supply Connections."

RELATED PRODUCTS

For similar types of gas-fired food service equipment intended for commercial use, see Gas-fired Food Service Equipment (LGQX).

For cooking oil filters that are not an integral part of another appliance, see Filters for Cooking Oil, Commercial (KNRF).

Appliances provided with integral ventilation or recirculating equipment have been investigated to the requirements contained in UL 710B, "Recirculating Systems," and are covered under Commercial Cooking Equipment with Integral Recirculating Ventilation Systems (KNKG).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ), and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, "Commercial Electric Cooking Appliances."

Appliances with an integral cooking oil filter have been additionally investigated to ANSI/UL 1889, "Commercial Filters for Cooking Oil."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of commercial cooking appliances that not only meet the appropriate requirements of UL but also have been investigated in accordance with ANSI/NSF 4, "Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Commercial Cooking Appliance" or "Cooking Appliance," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/NSF 4. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above, the EPH Mark, and the text "ANSI/NSF 4." The EPH Mark includes, within a triangle, the UL symbol, the word "CLASSIFIED" above the UL symbol, and the letters "EPH" below the UL symbol.

Commercial Cooking Appliance Assemblies Classified for Use with Other Manufacturers' Appliances (KNJA)

USE AND INSTALLATION

This category covers commercial cooking appliance assemblies intended for retrofit installation on other manufacturers' Listed commercial cooking appliances.

The devices consist of a controller assembly that is designed for use with a specific manufacturer and model of a commercial cooking appliance.

PRODUCT MARKINGS

The markings on and the literature provided with the controller indicate the specific end-use appliance for which it is intended to be used.

UNEVALUATED FACTORS

The operation of the appliance utilizing these controllers is intended to be identical to the operation with the factory-supplied control; however, any programming functions that vary from the original control have not been investigated.

RELATED PRODUCTS

See Commercial Cooking Appliances (KNGT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, "Commercial Electric Cooking Appliances."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for

Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG)**USE AND INSTALLATION**

This category covers cooking equipment intended for commercial use, such as deep fat fryers, griddles and other appliances for use in commercial kitchens, restaurants, or other business establishments where food is prepared. Each appliance covered in this category is manufactured with an integral recirculating ventilation system.

The integral recirculating ventilation systems of these appliances consist of a fan, collection hood, and an air filtering system consisting of a grease filter, and may also incorporate other air filtering devices. These systems incorporate an automatic fire extinguisher unit which has been investigated with the cooking equipment section.

Integral recirculating ventilation systems are intended for venting captured and filtered air back into the room in which the equipment is located. These products are not intended for connection to a ducted exhaust system.

These appliances are intended for commercial use in unclassified (ordinary) locations in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), and are intended to be installed in accordance with NFPA 96, "Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."

Commercial cooking appliances of certain types are designed for permanent connection to water supply and sewer lines at the point of installation. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

PRODUCT MARKINGS

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warning or special instructions are marked on the equipment.

Appliances covered under this category are suitable for wiring with either copper or aluminum power supply conductors, unless marked "Use Copper Wire Only For Power Supply Connections."

UNEVALUATED FACTORS

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

RELATED PRODUCTS

For products that are intended for installation with ducts, see Exhaust Hoods with Exhaust Dampers (YXZR) and Exhaust Hoods Without Exhaust Dampers (YYCW).

Recirculating systems which are separated from commercial cooking appliances are covered under Hoods, Recirculating Systems, for Use with Specified Commercial Cooking Appliances (YZCT).

For cooking oil filters that are not an integral part of another appliance, see Filters for Cooking Oil, Commercial (KNRF).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 197, "Commercial Electric Cooking Appliances."

Commercial cooking appliances with integral recirculating ventilation systems are additionally investigated to UL 710B, "Recirculating Systems."

Appliances with an integral cooking oil filter have been additionally investigated to ANSI/UL 1889, "Commercial Filters for Cooking Oil."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of commercial cooking appliances with integral recirculating ventilation systems that not only meet the appropriate requirements of UL but also have been investigated in accordance with ANSI/NSF 4, "Commercial Cooking, Rethermalization and Powered Hot Food Holding and Transport Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name

Commercial Cooking Appliances with Integral Recirculating Ventilation Systems (KNKG)—Continued

"Commercial Cooking Appliance" or "Cooking Appliance," or other appropriate product name as shown in the individual Listings, along with the words "With Integral Recirculating Ventilation System" or "With Ductless Hood."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated to ANSI/NSF 4. The combined Listing/Classification Mark consists of the Listing Mark elements detailed above, the EPH Mark, and the text "ANSI/NSF 4." The EPH Mark includes, within a triangle, the UL symbol, the word "CLASSIFIED" above the UL symbol, and the letters "EPH" below the UL symbol.

Commercial Cooking Appliances with Integral Systems for Limiting the Emission of Grease-laden Air (KNLZ)

This category covers cooking equipment intended for commercial use, such as pressurized deep fat fryers and other appliances for use in commercial kitchens, restaurants or other business establishments where food is prepared. Each appliance covered in this category is manufactured with an integral system feature to limit the emission of grease-laden air from the cooking process to the room ambient.

These appliances have been evaluated for the limit of 5 mg/m³ for the emission of grease-laden air to the room ambient in accordance with the recommendations of the National Fire Protection Association Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations, NFPA 96, using the EPA-202 test method prescribed for cooking appliances provided with integral recirculating air systems.

These products are not intended for connection to a ducted exhaust system.

Appliances in this category are not provided with an integral fire extinguishing system. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to fire extinguishing systems, such as the need for field installed systems in accordance with NFPA 96.

For products with integral recirculating systems including fire extinguishing systems, refer to Commercial, with Integral Recirculating Systems (KNKG).

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the National Electrical Code must be observed in installations or use, suitable warning or special instructions are marked on the equipment.

Appliances Listed in this category are suitable for wiring with either copper or aluminum power supply conductors unless marked "Use Copper Wire Only For Power Supply Connections".

Commercial cooking appliances of certain types are designed for permanent connections to water supply and sewer lines at the point of installation. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

For cooking oil filters that are not an integral part of another appliance, see Commercial Filters for Cooking Oil (KNRF).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standard used to investigate products in this category is ANSI/UL 197, "Commercial Electric Cooking Appliances".

Appliances Listed in this category with an integral cooking oil filter have been additionally investigated to the requirements in the standard "Commercial Filters for Cooking Oil", ANSI/UL 1889.

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number and one of the following product names as appropriate: "Commercial Cooking Appliance," "Cooking Appliance," or other appropriate product identify specified in the individual Listing, along with the words "with integral system for limiting the emission of grease-laden air."

Custom-built Food Service Equipment (KNNS)**GENERAL**

This category covers custom-built commercial food serving and/or cooking equipment that includes various combinations of electric broilers, food warmers including heated food servers, fryers, griddles, ranges, ovens, lighted and/or heated food displays, shelf heaters, plate warmers,

Custom-built Food Service Equipment (KNNS)—*Continued*

convenience receptacles, and the like. It may also include refrigerated beverage cooler/dispensers, drinking water coolers, freezers, ice makers, ice cream makers, refrigerators, soda fountain units, and the like.

INSTALLATION

Custom-built food service equipment has been evaluated for installation in accordance with the National Electrical Code, NFPA 70 (NEC) and the recommendations of NFPA 96, "National Fire Protection Association Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations."

Certain types of custom-built food service equipment are designed for permanent connections to water supply and sewer lines at the point of installation. Authorities having jurisdiction should be consulted as to the requirements for this equipment with respect to sanitation and connection to water supply and waste disposal lines.

INSTALLATION INSTRUCTIONS

Custom-built food service equipment of such size that shipment in one carton or fully assembled is impractical, may be divided into sections. Each section may bear a "Custom-built Food Service Equipment Section" Listing Mark and is marked "Section ____ of ____." The first blank space is filled with the number of the section. The second blank space is filled with a number indicating the total number of custom-built food service equipment sections that constitute the complete custom-built food service equipment. The custom-built food service equipment has installation instructions describing or illustrating the proper assembly, mounting and connection of the numbered custom-built food service equipment sections. The acceptability of the assembly of the sections in the field rests with the Authority Having Jurisdiction.

PRODUCT MARKINGS

This equipment includes factory-built assemblies incorporating pre-installed materials and components which after installation are usually concealed and may not be accessible for inspection at the installation site. Electrical connections made during installation, other than supply connections, are identified by markings on the product.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Equipment in this category is suitable for wiring with either copper or aluminum power supply conductors unless marked "Use copper wire only for power supply connections."

UNEVALUATED FACTORS

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared or served by use of this equipment has been investigated.

RELATED PRODUCTS

For refrigerated food service equipment without food heating functions, see Refrigeration Equipment (SCER).

For gas-fired food service equipment intended for commercial use, see Gas-fired Food Service Equipment (LGQX).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 197, "Commercial Electric Cooking Appliances", and ANSI/UL 471, "Commercial Refrigerators and Freezers".

Appliances in this category with an integral cooking oil filter have been additionally investigated to the requirements in ANSI/UL 1889, "Commercial Filters for Cooking Oil". For cooking oil filters that are not an integral part of another appliance, see Commercial Filters for Cooking Oil (KNRF).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with word "LISTED," a control number, and the product name "Custom-built Food Service Equipment" or "Custom-built Food Service Equipment Section," or other appropriate product name related to commercial preparation/serving of food such as "Food Kiosk" or "Food Service Work Table."

Filters for Cooking Oil, Commercial (KNRF)

This category covers filters rated 600 volts or less for cooking oil, and intended for commercial use.

Oil filters covered by this Listing filter the cooking oil used in deep fat fryers usually found in commercial kitchens, restaurants, or other business establishments where food is prepared. These filters include a pump and may include an integral oil heater. This Listing includes portable filters and fixed filters whether intended for use with a specific fryer or fryers or for general use.

Filters for Cooking Oil, Commercial (KNRF)—*Continued*

For cooking oil filters that form an integral part of another appliance, see Commercial Cooking Appliances (KNGT); Commercial, with Integral Recirculating Systems (KNKG); Commercial, with Integral Systems for Limiting the Emission of Grease Laden Air (KNLZ); Custom Built Food Service Equipment (KNNS); Commercial Cooking Appliances (LBOZ) or Gas-Fired Service Equipment (LGQX).

Filters suitable for built-in installation, side-by-side mounting or stacking are indicated in the installation instructions for the filter.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the National Electrical Code must be observed in installation or use, suitable warnings or special instructions are marked on the equipment.

Appliances listed in this category are suitable for wiring with either copper or aluminum power supply conductors unless marked "Use copper wire only for power supply connections" or the equivalent.

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared using filtered oil from these appliances has been investigated.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standard used to investigate products in this category is UL 1889, "Commercial Filters for Cooking Oil".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and the product name: "Commercial Filter for Cooking Oil", or other appropriate product name.

Household Cooking Appliances, Classified (KNSY)**GENERAL**

This category covers household cooking appliances intended for use on standard electrical distribution systems utilizing other than NEMA configuration wiring devices.

The appliances are rated 250 V ac or less, 50-60 Hz. Their only construction difference from appliances Listed under Household Cooking Appliances (KNUR) is the provision for a nonstandard configuration plug and cord, suitable for use on the electrical distribution system for which the appliance is intended. The appliance may be provided with a detachable or non-detachable cord set. The cord or the cord set is one of those styles recognized by Table 400.4 of ANSI/NFPA 70, "National Electrical Code," or one of the harmonized (HAR) types. The power supply cord or cord set is certified by an agency applicable to the country in which the appliance is to be sold.

The markings on the appliance and the literature provided with the appliance are in English and may also be in another language.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1026, "Electric Household Cooking and Food Serving Appliances," UL 1082, "Household Electric Coffee Makers and Brewing-Type Appliances," and UL 1083, "Household Electric Skillets and Frying-Type Appliances."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or carton is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), one of the following product names as appropriate: "Bun Warmer," "Corn Popper," "Griddle," "Coffee Maker," "Household Cooking Appliance," or the specific type of product as shown in the individual Classifications, the statement "AS TO FIRE, SHOCK AND CASUALTY HAZARD," and a control number.

Household Cooking Appliances (KNUR)**USE AND INSTALLATION**

This category covers appliances intended for household use that are designed to heat food products for human consumption during cooking or warming processes.

Products combining features for food preparation and cooking, such as bread makers and coffee grinder/makers, are also covered under this category.

In cases where the nature or construction of equipment is such that special safety precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use of the appliances,

Household Cooking Appliances (KNUR)—Continued

the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

REBUILT PRODUCTS

This category also covers household cooking appliances that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt household cooking appliances are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt household cooking appliances are subject to the same requirements as new household cooking appliances, except that a nonmetallic enclosure is required to comply with the flammability requirements for unattended portable appliances in ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations," and the appliances are required to be grounded.

UNEVALUATED FACTORS

Neither the toxicity of coatings nor the physiological effects consuming food prepared by use of these appliances has been investigated.

RELATED PRODUCTS

Range and range components intended for separate installation in kitchen cabinets or walls, such as built-in surface unit assemblies and ovens, are covered under Ranges, Household Electric (KRMX).

Microwave ovens are covered under Microwave Cooking Appliances (KQSQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1026, "Electric Household Cooking and Food Serving Appliances," ANSI/UL 1082, "Household Electric Coffee Makers and Brewing-Type Appliances," and UL 1083, "Household Electric Skillets and Frying-Type Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Bun Warmer," "Corn Popper," "Griddle," "Coffee Maker," "Household Cooking Appliance," or the name of the specific type of product as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Refurbished" or "Remanufactured" precedes the product name.

DE-ICING AND SNOW-MELTING EQUIPMENT (KOBQ)**USE AND INSTALLATION**

This category covers fixed outdoor electric de-icing and snow-melting systems for use in accordance with Article 426 of ANSI/NFPA 70, "National Electrical Code" (NEC). The equipment is provided with means for permanent wiring connections, except that equipment rated 20 A or less and 150 V ac or less to ground may be of cord-and-plug-connected construction.

To supplement the general requirements in the NEC, the manufacturer is required to provide, with the units or mats, specific installation instructions concerning any limitations of the installation and/or use of the equipment. The instructions for mats or cable units intended for burial in concrete specifically indicate that the slab must be a double pour (poured in two parts) if that is the only acceptable means of installation. If such a limitation is not specifically mentioned, either a single or double pour may be used.

RELATED PRODUCTS

Pipe heating cable is covered under Pipe Heating Cable (KQUF).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1588, "Outline of Investigation for Roof and Gutter De-Icing Cable Units."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "De-icing and Snow-Melting Equipment."

DUCT HEATERS, ELECTRIC (KOHZ)**GENERAL**

Duct Heaters, Electric (KOHZ)—Continued

This category covers fixed electric duct heaters and remote control assemblies, rated 600 V or less, typically used in the air stream of a ducted system.

A duct heater is a self-contained heater (external to the air-moving unit), field installed in the air stream of a ducted system. It is designed to be installed where an adequate flow of air from a separate interlocked fan or blower system is provided. Such a heater may be located in the main supply duct of an air heating system or in one of the branch ducts. Two or more duct heaters may be installed in a group (in proximity to one another in the duct) if tests indicate acceptable results when the heaters are installed in accordance with the manufacturer's instructions.

A duct heater intended to be employed in conjunction with another source of heat is judged on the basis of its compliance with ANSI/UL 1996, "Electric Duct Heaters," and further examination and tests to determine whether or not the combination is acceptable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests and Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC) as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations (AALZ) and **ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

INSTALLATION

This equipment is intended to be installed in accordance with the NEC. The air duct system is intended to be installed in accordance with ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," and ANSI/NFPA 90B, "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems."

Wiring Diagrams

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

Electric Heat Considerations

In duct heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent protective devices are either included as an integral part of the heater or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the heater is marked to specify that it be used with that particular separate assembly. For such separate assemblies which are specifically Listed for use with electric duct heaters, see Control Panels, Remote, for Electric Duct Heaters (KMLW). Other Listed separate assemblies, as referenced on the duct heater marking, may also be used.

Unless specifically indicated in the individual Listings as "Suitable for zero clearance installation," the duct heater units are intended to be installed in ducts with the clearances to combustible materials as specified in the manufacturer's installation instructions and marked on the duct heater unit itself. Care should be taken to ensure that duct heaters are positioned properly (horizontal air flow or vertical air flow) since required clearances are affected by the position of the duct work in some instances.

Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit and ducts.

Each duct heater incorporates integral limit controls intended to protect against abnormal operating conditions that might arise from blocked inlets, blocked outlets, or fan failures. Magnetically-operated switching devices or similar components required for use with these limit controls are either included as an integral part of the heater or are furnished as a separate assembly as described above. Supplementary controls are not necessarily supplied as part of the duct heater.

A separate room thermostat must be provided to control the room air temperatures. For Listings of thermostats and similar devices, see Temperature-indicating and -Regulating Equipment (XAPX). Provision for an interlock circuit, to ensure operation of the separate blower when the duct heater is energized, is included in the heater or in the separate assembly as described above.

Tests have indicated that no adverse thermal effects are obtained when duct heaters marked to indicate that they are suitable for use with heat pumps, or central cooling air conditioners or fan-coil units are installed with certain of these units [See Heating and Cooling Equipment (LZFE)], provided the duct heater is used only in horizontal or upflow systems,

Duct Heaters, Electric (KOHZ)—*Continued*

and the duct heater is located downstream at least 4 ft from the nearest surfaces of the heat pump, central cooling air conditioner, or fan-coil unit.

Unit Installation

Duct heaters are intended for installation in noncombustible ducts and are designed to be used individually and in groups as supplementary heat sources in air-heating systems or as primary heat sources with separate blowers where the available heat from the duct heaters is sufficient for local conditions.

Duct heaters suitable for outdoor installation are so marked. Heaters not marked as suitable for outdoor installation are for indoor use only.

The manufacturer's application and installation instructions furnished with each heater should be consulted to determine the factors applicable to the particular installation, including required distances between the heater and turns in the duct, changes in duct sizes, air filters, humidifiers, etc. Unless these instructions specify other distances for horizontal or upflow installations, (1) turns in the duct on the inlet side of the heater should be located at least 4 ft from the heater, (2) turns in the duct on the outlet side of the heater should be located at least 2 ft from the heater, and (3) changes in duct sizes, air filters, humidifiers, etc., should be located at least 4 ft from either side of the heater. Duct heaters having instructions describing particular design characteristics and/or installations are investigated for those specific characteristics and/or installations.

The proper installation of these heaters requires careful consideration of the individual manufacturer's design characteristics, taking into consideration the number of heaters employed, the volume of air passing through the heaters, and the ambient temperatures and source of the air on the input side of the heater installation.

Motor Group Installation

In permanently connected units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Section 430.53(C) as referenced in Section 440.22 of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked in the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or "HACR Type" circuit breakers, the circuit is intended to be protected only by the type of protective devices specified.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1996, "Electric Duct Heaters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Duct Heater."

HEATERS, SAUNA AND STEAM BATH (KPJV)**Sauna Heating Equipment (KPSX)****USE AND INSTALLATION**

This category covers heating equipment intended for concentrated heating at elevated temperatures in relatively confined areas with or without the addition of moisture.

Particular attention should be paid to the heater installation restrictions, such as warning markings, remote thermostats and control installations, guards, minimum size of room, and distance from adjacent surfaces that are marked on the heater.

This equipment is intended for permanent connection to the supply source, except for some sauna heater-room combination units that may be cord connected as specifically indicated.

Factors, such as the physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the heater is installed, have not been investigated.

RELATED PRODUCTS

Steam bath equipment is covered under Steam Bath Equipment (KQBZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

Sauna Heating Equipment (KPSX)—*Continued***REQUIREMENTS**

The basic standard used to investigate products in this category is ANSI/UL 875, "Electric Dry-Bath Heaters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Sauna Heater" or "Sauna," or other appropriate product name as shown in the individual Listings.

Steam Bath Equipment (KQBZ)**USE AND INSTALLATION**

This category covers steam bath generators, combination room and steam generator systems, and steam bath cabinets intended for high-humidity concentrated heating at elevated temperatures for personal bathing.

Steam bath equipment accessories, such as gangable steam units, timer options, and drain options, are also covered under this category. These accessories are intended for installation only on Listed equipment as designated in the individual Listings. The accessories are intended primarily for field installation, but may be factory installed.

Information concerning field-wiring connections, mounting location, installation clearances, end-use equipment catalog numbers, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

Particular attention should be paid to installation instructions of the steam generator and markings on the product for restrictions, such as minimum distances to adjacent surfaces, valving of the steam outlet, etc.

Steam generators covered under this category have not been investigated for their suitability as a source of steam for space-heating purposes or for industrial or commercial use.

Factors, such as physiological effects of heat, reduced ventilation, and other conditions that may be found within the room where the steam is discharged or where the steam bath is installed, have not been investigated.

RELATED PRODUCTS

Sauna heating equipment is covered under Sauna Heating Equipment (KPSX).

Steam generators for industrial or commercial use are covered under Heaters, Industrial and Laboratory (KQLR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Steam Bath Heater," "Steam Bath Equipment," "Steam Bath Cabinet," "Shower/Steamer Unit," or other appropriate product name as shown in the individual Listings.

The Listing Mark for accessories may appear on the smallest unit container in which the product is packaged.

IMMERSION-TYPE LIQUID HEATERS, INDUSTRIAL (KQGV)**USE AND INSTALLATION**

This category covers immersion-type liquid heaters intended for heating water-based liquids. The corrosion resistance of the immersed parts has been investigated on the basis of water. The degree of corrosion resistance to acidic, alkaline, etc., water-based liquids may vary depending on the material and/or coating on the immersed parts and the type and strength of the solution. The heater manufacturer's information should be consulted in selecting a heater for an application.

Through-the-wall heaters should be operated only while the heating element is completely immersed in a water-based liquid. Other immersion-type liquid heaters should be immersed to a depth as marked on the product or as indicated in the installation and use instructions.

The heaters incorporate a temperature-limiting device that responds to the temperatures created by the heater; or the heater is marked to specify that a low-liquid-level cutoff control should be installed and connected to de-energize the heater upon a low-liquid-level condition.

Heaters intended to be installed through the wall of a vessel have means for permanent wiring connections to the electrical supply. Other immersion-

Immersion-type Liquid Heaters, Industrial (KQGV)—Continued

type liquid heaters may have either a power-supply cord for cord-and-plug connection or provision for permanent wiring connections to the electrical supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Immersion Type Liquid Heater."

HEATERS, INDUSTRIAL AND LABORATORY (KQLR)**GENERAL**

This category covers heating appliances rated 600 V or less and intended for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC), for industrial and laboratory applications.

Heating appliances covered under this category include branding irons, brazers, dental laboratory heaters, electric kilns, etchers, glue pots, heat guns, heating cable, hot plates, incubators of the air flow and water types, laboratory furnaces and dryers, mobile drying ovens, soldering guns and irons, soldering stations and tools, vacuum ovens and water baths.

Portable electric heating devices of the soldering-iron-type present certain inherent hazards. The temperatures necessary for their normal use are high enough to cause fire if they are left in contact with combustible materials.

Infrared heating equipment has not been investigated for use in hazardous (classified) locations as defined in the NEC.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, suitable warnings and necessary special instructions are marked on the equipment.

Industrial and laboratory hot plates, ovens and other similar products have not been investigated for explosion and fire hazards involved in the heating of chemicals.

Vapor degreasers are intended for use only with the specific cleaning fluids. Adequate ventilation is required for this equipment and the manufacturer's installation and operation instructions should be followed. The physiological effects of the cleaning fluids intended for use with the degreasing equipment have not been investigated.

Steam generators and boilers are required to be provided with tanks built in conformance with the ASME Boiler Construction Code, and suitable pressure relief mechanisms. Water temperatures are not limited to a maximum of 90°C.

An explosion hazard may exist in steam generators because of the accumulation of oxygen and hydrogen in an unvented system operated under standby conditions for long periods of time, or to which condensate is returned. Suitable venting devices should be installed and such systems should be purged frequently.

Steam generators and boilers have not been investigated for their suitability as a source of hot water or steam for space-heating purposes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Laboratory Hot Plate," "Soldering Iron," "Laboratory Incubator," "Water Bath," "Branding Iron," or the name of the specific type of product as shown in the individual Listings.

MICROWAVE COOKING APPLIANCES (KQSQ)

This category covers cooking equipment incorporating one or more microwave generators operating in the normal ISM bands of 915 + or - 25 and 2450 + or - 50 megahertz.

Microwave Cooking Appliances (KQSQ)—Continued

The appliances are intended for household or commercial use in ordinary locations in accordance with the National Electrical Code. In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of the National Electrical Code must be observed in installation or use, the necessary special instructions are marked on the appliances themselves or are included in the installation instructions provided with the appliance.

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances have been investigated.

All microwave cooking appliances, cord connected and permanently connected, have provision for being properly grounded.

This category includes portable and stationary microwave cooking appliances employing resistive-type heating elements for baking, broiling, browning, convection cooking, or similar operations.

This category also includes combination microwave oven vent hood fans, and kits for converting counter top units to built-in, under-cabinet, wall-mounted or similar installations.

Products specifically designed for field installation in or on a microwave cooking appliance or to adapt a microwave cooking appliance from one type of installation to another are covered in this category under the individual listing and are marked to identify the microwave cooking appliance(s) with which they have been investigated.

Counter-top and under-cabinet mounted units have been tested individually in two sided right-angle alcoves. Products that have been investigated and found suitable for some other type of usage, such as built-in installation, side-by-side mounting, stacking or field installation over electric or gas ranges are identified for such usage by installation instructions, product markings, or both.

Units that have been investigated and found suitable for installation above a range or counter mounted cooking unit are identified for such installation and the minimum acceptable vertical clearance between the microwave cooking appliance and the range or counter mounted cooking unit is specified in instructions, product markings, or both.

Household electric ranges and built-in ovens incorporating a microwave cooking feature are Listed under Ranges, Household Electric category.

Listed microwave cooking appliances have been evaluated to demonstrate that the microwave radiation emission is within the limitations prescribed by the U.S. Dept. of Health and Human Services, Food and Drug Administration, Center for Devices and Radiological Health.

Listed microwave cooking appliances are provided with a marking indicating whether they are intended for household use, commercial use, or both.

Only those microwave ovens bearing the Marine Listing Mark or the Marine Listing Mark with the statement "For Use Only On Vessels Over 65 Ft." have been investigated to determine the suitability of the microwave oven in a marine environment such as aboard boats or ships. See also guide EJOY.

This category also covers microwave cooking appliances which are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt microwave cooking appliances are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt microwave cooking appliances are subject to the same requirements as new microwave cooking appliances.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standard used to investigate products in this category is UL 923, "Microwave Cooking Appliances".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following product names: "Microwave Oven", "Microwave Food Warmer", "Microwave Cooking Appliance", "Microwave/Oven Vent Hood Fan", or other appropriate product name indicated in the individual Listings.

The Listing Mark for rebuilt microwave cooking appliances additionally includes the word "Rebuilt", "Remanufactured" or "Reconditioned" preceding the above product name.

PIPE HEATING CABLE (KQF)**GENERAL**

This category covers electric heating cable designed to be secured to pipes to reduce the likelihood of freezing or to facilitate flow of viscous liquids. Some units incorporate a thermostat that automatically turns on the heating cable when the temperature drops below a predetermined value.

Pipe Heating Cable (KQUF)—*Continued*

Pipe heating cable is intended to be installed in accordance with the manufacturer's installation instructions.

Information is provided, either as marking on the cable or in the installation instructions, as to the intended application of the heating cable. The Listings appear separately under the following subcategories: Mobile/Manufactured Home Pipe Heating Cable (KQVU), Industrial and Commercial Pipe Heating Cable (KQXR) and Residential Pipe Heating Cable (KQYI).

The ability of heating cable to maintain temperatures of liquids in pipes depends upon ambient temperature conditions and has not been investigated.

RELATED PRODUCTS

For de-icing and snow melting equipment, see De-icing and Snow Melting Equipment (KOBQ).

Mobile/manufactured Home Pipe Heating Cable (KQVU)**USE AND INSTALLATION**

This category covers electric heating cable intended to reduce the likelihood of water freezing in exposed pipes of mobile/manufactured homes. The cable is provided with an attachment plug and intended to be connected to a receptacle outlet on the underside of the mobile/manufactured home.

Equipment is intended to be installed in accordance with the requirements of Articles 427 and 550 of ANSI/NFPA 70, "National Electrical Code."

Pipe heating cable is intended to be installed in accordance with the manufacturer's installation instructions.

Unless specifically indicated otherwise by marking on the heating cable or in the installation instructions, this heating cable is intended for use only on metallic pipes.

RELATED PRODUCTS

Heating cable for use with fire suppression sprinkler or standpipe systems is covered under Heating Cable Systems for Use on Fire Protection System Piping (VGNJ).

Heating cable for use as fixed outdoor electric de-icing and snow melting systems is covered under De-icing and Snow Melting Equipment (KOBQ).

Heating cable for use to reduce the likelihood of water freezing in residential pipes is covered under Residential Pipe Heating Cable (KQYI).

ADDITIONAL INFORMATION

For additional information, see Pipe Heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1462, "Outline of Investigation for Mobile Home Pipe Heating Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mobile Home Pipe Heating Cable" or "Mobile/Manufactured Home Pipe Heating Cable."

Industrial and Commercial Pipe Heating Cable (KQXR)**USE AND INSTALLATION**

This category covers electric heating cable intended to be installed on or in pipes in accordance with Article 427 of ANSI/NFPA 70, "National Electrical Code."

The heating cable is intended to be connected to the supply system by permanent wiring methods or by flexible supply cord with an attachment plug where permitted.

Unless specifically indicated otherwise by marking on the heating cable or in the installation instructions, the heating cable is intended for use only on metallic pipes.

RELATED PRODUCTS

Heating cable for use with fire suppression sprinkler or standpipe systems is covered under Heating Cable Systems for Use on Fire Protection System Piping (VGNJ).

ADDITIONAL INFORMATION

For additional information, see Pipe Heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 515, "Electrical Resistance Heat Tracing for Commercial and Industrial Applications."

Pipe heating cable intended for use in industrial applications is additionally investigated to the performance requirements of IEEE 515-2004, "Stan-

Industrial and Commercial Pipe Heating Cable (KQXR)—*Continued*

dard for the Testing, Design, Installation, and Maintenance of Electrical Resistance Heat Tracing for Industrial Applications."

Pipe heating cable intended for use in commercial applications is additionally investigated to the performance requirements of ANSI/IEEE 515.1-2005, "Recommended Practice for the Testing, Design, Installation, and Maintenance of Electrical Resistance Heat Tracing for Commercial Applications."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Pipe Heating Cable."

Residential Pipe Heating Cable (KQYI)**USE**

This category covers electric heating cable intended to reduce the likelihood of water freezing in residential pipes. The cable is provided with a flexible cord and attachment plug and is intended specifically for residential pipe heating uses, such as sprinkler systems and in crawl spaces, basements, well houses, and the like.

This cable is intended for use in accessible locations only.

This cable is suitable for use on metal and rigid plastic water-filled pipes.

ADDITIONAL INFORMATION

For additional information, see Pipe Heating Cable (KQUF), Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2049, "Outline of Investigation for Residential Pipe Heating Cable."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Residential Pipe Heating Cable."

RADIANT HEATING EQUIPMENT (KQYZ)**USE AND INSTALLATION**

This category covers electric space heating cable, electric radiant heating panels and heating panel sets intended to be installed as fixed equipment for space heating in accordance with Article 424, Sections V and IX of ANSI/NFPA 70, "National Electrical Code" (NEC). These products form an integral part of the building construction after on-site assembly, installation and connection.

The manufacturer is required to provide with the units specific installation instructions concerning any limitations of the installation and/or use of the equipment. Flexible ceiling heating panels and heating panel sets are intended to be installed without air gaps in direct contact with thermal insulation. Failure to comply with all installation instructions may result in a risk of fire or electric shock.

Radiant heating panels and heating panel sets are marked "Radiant Ceiling Heating Panel," "Radiant Floor Heating Panel" or "Radiant Concrete Heating Panel," as appropriate. Units intended for concrete installation are further marked "Concrete Installation Only."

The instructions for panel or cable units intended for burial in concrete specifically indicate that the slab must be a double pour (poured in two parts) if that is the only acceptable means of installation. If such a limitation is not specifically mentioned, either a single or double pour may be used. Cable units are provided with a tag attached to the nonheating leads which supplement the installation instructions.

The instructions for heating panels and heating panel sets intended for connection of single-conductor supply cable specify the type of branch-circuit conductor to be used and state that "Type NM and NMC nonmetallic-sheathed cable is not suitable for installing this product."

Cable units furnished with nonheating leads of single-conductor Type UF cable, or pre-loomed Type TW wire, have been investigated to determine that the use of additional flexible nonmetallic tubing is not required over the nonheating leads when the cable units are installed. The single-conductor Type UF cable may be identified by the type designation printed at frequent intervals on the cable.

Connectors to be assembled to wire or panel busbars in the field using a special tool are intended to be assembled using the tool specified by the manufacturer.

Stapling guns, if used in the installation of heating cable units require specially designed heads to prevent damage to the conductor insulation. Only those guns recommended by the cable unit manufacturer should be used for this purpose.

Radiant Heating Equipment (KQYZ)—Continued

RELATED PRODUCTS

Fixed electric heating equipment for pipelines and vessels is covered under Mobile/Manufactured Home Pipe Heating Cable (KQVU) and Pipe Heating Cable (KQUF).

Fixed outdoor electric de-icing and snow-melting equipment is covered under De-icing and Snow-melting Equipment (KOBQ).

Heating panels intended to be installed in a dropped or suspended ceiling or heating equipment with glowing wire heating elements is covered under Air Heaters, Room, Fixed and Location Dedicated (KKWS).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate radiant heating panels and heating panel sets in this category intended for installation under floor covering is ANSI/UL 499, "Electric Heating Appliances," in addition to the requirements contained in Article 424.99 of the NEC.

The basic standard used to investigate radiant heating panels and heating panel sets in this category intended for ordinary indoor installation is UL 1693, "Electric Radiant Heating Panels and Heating Panel Sets."

The basic standard used to investigate electric space heating cable in this category is UL 1673, "Electric Space Heating Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Radiant Heating Cable," "Radiant Heating Panel Unit" or "Radiant Heating Embedded Unit," or other appropriate product name as shown in the individual Listings, preceded by the words "Radiant Heating."

RANGES, HOUSEHOLD ELECTRIC (KRMX)

Listings in this category include household type all electric cooking equipment (consisting of oven and surface units), combination electric and solid fuel cooking equipment (consisting of electric ovens and surface units, together with a solid fuel combustion section), wall-mounted and counter mounted cooking equipment.

Cooking equipment-refrigerator combinations are Listed under Kitchen Units, Refrigerated (SJPT).

Cooking equipment is investigated and tested to determine that it can be properly installed in accordance with the installation instructions provided by the manufacturer. Some of the more common arrangements are described in the following paragraphs.

General — Microwave cooking appliances and hood fans with or without a shelf or compartment to accommodate a microwave oven, that have been investigated and found suitable for installation above a counter level range or a counter mounted cooking unit are identified for such installation. The minimum acceptable vertical clearance between the counter level range or counter mounted cooking unit and this appliance is specified in the appliance installation instructions, product markings or both. See Guide Information for Microwave Cooking Appliances (KQSQ) and Electric Fans (GPWW).

All Electric Arrangements

COUNTER-LEVEL RANGES — (See Fig. 1)

The range with or without a warming tray located on the top of the back guard may be installed close against vertical walls at the back and at both sides and a top cabinet may be installed not less than "A" inches above the top of the cooking platform. See Dimension "A" in Fig. 1.

FIG. 1

- 1. Building back wall
- 2. Top building cabinet
- 3. Control panel
- 4. Cooking surface
- 5. Building side wall
- 6. Oven
- 7. Building side wall

A = 30 in. minimum clearance between the top of the cooking platform and the bottom of an unprotected wood or metal cabinet; or A = 24 in. (not

Ranges, Household Electric (KRMX)—Continued

applicable when an electrically heated warming tray is provided on the back guard) when the bottom of the wood or metal cabinet is protected by not less than 1/4 in. flame retardant millboard covered with not less than No. 28 MSG sheet steel, 0.015 in. stainless steel, 0.024 in. aluminum or 0.020 in. copper.

EYE-LEVEL RANGES — (See Fig. 2)

The range (with either one or two ovens) may be installed close against a vertical wall at the back and a top cabinet may be installed above the upper oven. If the range does not have a top control panel (this design not shown in illustration) an upper end cabinet of the same depth as the cabinet above the oven and a base cabinet both 6 in. minimum width shall be installed at the end of the range opposite the hinged end of the door. If a top control panel is provided at that end, the upper end cabinet and base cabinet may be omitted and the range may be installed close against a vertical wall at that end. The end of the range on which the hinges are located may be installed close against a vertical wall; except that when the wall prevents opening of the door to a position which will permit the removal of an oven rack, an upper end cabinet of the depth mentioned above and a base cabinet (both of sufficient width) may be installed such that the required opening of the door is achieved. If a lower oven or storage area is not provided to permit floor mounting, the range may be installed on a bottom cabinet or over any specific appliance with which the range is intended to be used.

FIG. 2

- 10. Upper end building cabinet

All Electric Wall-Mounted Ovens and Counter-Mounted Cooking Units

These include wall-mounted and counter mounted cooking equipment or combinations thereof intended to be permanently installed on or in the building structure. Spacings to combustible materials are the minimum allowed by the construction of the device. Unless specifically indicated by marking on the appliances, the individual oven units or counter mounted cooking units are intended for single unit installation only and are not intended for stacking or placing in pairs side by side or back to back. When double unit installation is intended the installation instructions give the minimum centerline spacings unless the units are suitable for the smallest clearance between units permitted by the construction. For cooking units a top cabinet may be installed "A" inches above the top of the cooking platform. See Dimension "A" in Fig. 3, and note following Fig. 1.

COMBINATION RANGES

PRODUCT CATEGORIES BY CATEGORY CODE

Ranges, Household Electric (KRMX)—Continued

As permitted by the installation marking, the range may be installed close against a vertical wall or with no more than a 6 in. air space to a vertical wall at the end where electrical units are located. See the table below for the spacings at the flue or vent and at the end of the range where solid fuel is burned.

Type or Fuel & Range Construction	Spacing to Wall	Spacing From
	From Nonelectrical End of Range in In.	Flue or Vent in In.
Solid fuel, fire pot without fire-clay lining	36	18
Solid fuel, fire pot with fire-clay lining	24	18

All electric ranges, wall-mounted and counter mounted cooking equipment and combination ranges, intended for nominal 125/250 V or less (including those rated 120/208), three-wire, operation are provided with a bonding connection between the frame of the appliance and the neutral to provide grounding in accordance with the provisions of the National Electrical Code. Unless the appliance is marked "Warning-Frame Grounded To Neutral Of Appliance Through A Link. This Range Not For Use In Mobile Homes Or In Areas Where Local Codes Do Not Permit Grounding Through Neutral" instructions are provided for disconnecting the bond and making a direct connection of the metallic parts or the unit to ground.

The flexible metallic conduit and high temperature insulated leads provided with some ranges are tested and recognized as a component part of the equipment. Unless a conduit fitting or outlet box is installed at the factory, tape or other means is provided at the end of the conduit to protect the conductors during shipment. This protection is not intended to take the place of a conduit bushing or fitting which is required by the National Electrical Code.

Neither the toxicity of coatings nor the physiological effects on persons consuming food products prepared by use of these appliances has been investigated.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

The basic standards used to investigate products in this category are UL 858, "Household Electric Ranges", and UL 923, "Microwave Cooking Appliances".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Range", "Electric Range", or other appropriate product name.

WATER HEATERS (KSAV)**Commercial Storage Tank and Booster Water Heaters (KSBZ)****USE AND INSTALLATION**

This category covers water heaters intended to supply hot water for commercial or industrial use, and to be installed in accordance with ANSI/NFPA 70, "National Electrical Code."

These water heaters are equipped with a temperature-regulating control that limits the water temperature to a maximum of 90°C (194°F). This control has been preset at the factory to a maximum setting of 60°C (140°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 99°C (210°F) should a regulating control fail.

A combination temperature-pressure relief valve is supplied or factory installed on these heaters. When supplied separately, instructions for mounting the valve are provided with the heater.

RELATED PRODUCTS

Water heaters intended for use in marine environments are covered under Water Heaters, Marine (LXWV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1453, "Electric Booster and Commercial Storage Tank Water Heaters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

Commercial Storage Tank and Booster Water Heaters (KSBZ)—Continued

together with the word "LISTED," a control number, and the product name "Commercial Storage Tank Water Heater" or "Booster Water Heater," or other appropriate product name as shown in the individual Listings.

Water Heaters, Space Heating (KSDR)**USE AND INSTALLATION**

This category covers water heaters intended for the heating of water and storage of hot water for space-heating purposes, to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." These heaters are intended for use in jurisdictions that permit the use of hot water space-heating systems that do not employ tanks constructed and marked in accordance with the ASME Boiler and Pressure Vessel Code. Authorities Having Jurisdiction should be consulted before installation.

These heaters are equipped with temperature-regulating devices that allow a water temperature not higher than 90°C (194°F) and also with temperature-limiting devices that limit the water temperature to a maximum of 99°C (210°F).

RELATED PRODUCTS

Pressurized electric water heaters intended for space-heating applications that are constructed and marked in accordance with the appropriate ASME Boiler and Pressure Vessel Code are covered under Boilers, Electric (BDJS).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 834, "Heating, Water Supply, and Power Boilers - Electric."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Space Heating Water Heater," or other appropriate product name as shown in the individual Listings.

Household Water Heaters, Storage Tank (KSDT)**USE AND INSTALLATION**

This category covers storage tank water heaters rated 600 V or less and 12 kW or less and having a tank capacity of more than one gal and not more than 120 gals.

This category does not cover immersed electrode, side arm, booster, instantaneous or immersion-type water heaters or water-heating portions of water-dispensing appliances.

These water heaters are intended for household use and permanent connection to the supply source in accordance with ANSI/NFPA 70, "National Electrical Code."

Household storage tank water heaters are equipped with a temperature-regulating device intended to restrict the water temperature to a maximum of 85°C (185°F). This device has been preset at the factory to a maximum setting of 51.7°C (125°F). These heaters are also equipped with a manually reset temperature-limit control that restricts the water temperature to a maximum of 99°C (210°F) should a regulating control fail.

Safety devices, such as temperature-pressure relief mechanisms, are not required to be furnished as part of the Listed water heater, but markings and instructions accompany each water heater indicating that a suitable safety device which complies with the local plumbing codes shall be connected to the heater at the time it is installed.

PRODUCT MARKINGS

Water heaters in accordance with Part 280.707(d) (1) of HUD Mobile Home Construction and Safety Standards for Energy Efficiency are marked "Design evaluated by UL in accordance with Part 280.707(d) (1) of HUD Mobile Home Construction and Safety Standards for Energy Efficiency."

RELATED PRODUCTS

Water heaters intended for use in marine environments are covered under Water Heaters, Marine (LXWV).

Solar-electric water heaters are covered under Water Heaters, Solar (UZWZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 174, "Household Electric Storage Tank Water Heaters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products

Household Water Heaters, Storage Tank (KSOT)—Continued

includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Household Storage Tank Water Heater," or other appropriate product name as shown in the individual Listings.

Immersion Water Heaters (KSFX)**GENERAL**

This category covers immersion water heaters, both cord connected and for permanent connection.

Some immersion water heaters intended for permanent connection incorporate thermostats and auxiliary switches which respond to the temperatures created by the immersion water heaters. The acceptability of thermostats or auxiliary switch construction; as temperature regulating and/or safety controls when incorporated in the ultimate equipment assembly for which they are intended, must be determined in accordance with the requirements applicable to that equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Immersion Heater," or other appropriate product name as shown in the individual Listings.

Miscellaneous Water Heaters (KSGR)**GENERAL**

This category covers instantaneous heaters, strap-on-type heaters, heaters for sink or water cooler mounting, and other water heaters not covered under Household Storage Tank Water Heaters, Commercial Storage Tank and Booster Water Heaters, or Immersion Heaters.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ), Heating, Cooling, Ventilating and Cooking Equipment (AAHC) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Instantaneous Water Heater" or "Water Heater," or other appropriate product name as shown in the individual Listings.

HEATERS, WATERBED (KSHU)**USE**

This category covers cord-connected electric heaters, usually in the form of mats, intended for use under the mattresses of waterbeds. Heaters employing external, user-adjustable temperature control units are covered as a unit, for installation in accordance with the manufacturer's instructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1445, "Electric Water Bed Heaters."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Waterbed Heater."

HEATERS, SPECIALTY (KSOT)**USE AND INSTALLATION**

This category covers heating appliances rated 600 V or less for use in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). This

Heaters, Specialty (KSOT)—Continued

includes heating appliances intended for household and industrial applications, as well as products that generate steam for other than space heating purposes, and have an electrical power rating of 15 kW or less per steam generating vessel. A heating appliance is defined as an electrically energized product that directly or indirectly generates heat to perform its intended function.

Heating devices may present certain inherent hazards. The temperatures necessary for their normal use can be high enough to cause fire if they are left in contact with combustible materials.

In cases where the nature or construction of equipment is such that special precautions beyond the requirements of the NEC must be observed in installation or use, necessary special instructions are marked on the equipment.

RELATED PRODUCTS

Hand dryers incorporating fans without heaters are covered under Fans, Electric (GPVV).

ADDITIONAL INFORMATION

For additional information, see Heaters and Heating Equipment (KKBV), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

Steam cleaning machines with vacuum cleaning features are additionally investigated to ANSI/UL 1017, "Vacuum Cleaners, Blower Cleaners and Household Floor Finishing Machines."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Hand Dryer," "Pet Dryer," "Embosser," "Stock Tank Heater," "Charcoal Igniter," or the name of the specific type of product as shown in the individual Listings.

HEATERS, EMITTER TYPE, CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (KSSG)**USE AND INSTALLATION**

This category covers heaters intended for installation on specific models of UL Listed heating equipment that are shipped from the factory without heaters installed. These heaters have been investigated by UL in specific models identified in markings or instructions to determine that, when used in accordance with the manufacturer's instructions, the complete product complies with applicable requirements.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 499, "Electric Heating Appliances."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY]

**FOR USE WITH [identification of specified UL Listed product]
Control No.**

HEATING APPLIANCES (KTCR)**GENERAL**

This category covers heating appliances intended for installation and use in accordance with the following standards as appropriate:

- ANSI/NFPA 31, "Standard for the Installation of Oil-Burning Equipment"
- ANSI/NFPA 54, "National Fuel Gas Code"
- ANSI/NFPA 58, "Liquefied Petroleum Gas Code"
- ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems"
- ANSI/NFPA 90B, "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems"

When installing manufactured home and recreational vehicle appliances, see also the Department of Housing and Urban Development's Manufactured Home Construction and Safety Standards or ANSI/NFPA 1192, "Standard on Recreational Vehicles."

Heating appliances are investigated to determine the suitability of the construction and performance of the appliances as an assembly and of the fuel-burning apparatus, controls, electrical features and other parts furnished by the manufacturer as part of the Listed assembly. It is also determined that combustible walls and surfaces adjacent to or in contact with the appliance will not attain unsafe temperatures when the appliance is installed and used as directed.

Heating appliances are marked to indicate minimum clearances in inches, type of flooring, when they may be installed in an alcove or closet, and the total free area of the required air openings into a closet. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

When the Listing Mark on an appliance designates the primary safety control to be used, such appliances are suitable for operation when a competent attendant may not be present provided the appliance is so equipped. The primary safety control is designated by the control group number in accordance with the plan and classification under Controls, Primary Safety (MCCZ).

The safety control to be used with the appliance will be indicated by either stating the manufacturer's name and marking of the particular control or controls to be used, or by stating the group number of the control to be used. When the group number is specified, the burner shall be provided with one of the controls classified as "Interchangeable." When a control manufacturer's name is specified with the group number, only the controls of that manufacturer classified in that group should be used.

Some burners are provided with integral primary safety controls or integral antiflooding devices and, when such controls are provided, the Listing Mark will specify "Integral" with or without the group designation, in which case only the control included as part of the appliance by the manufacturer shall be used.

For convenience, the primary safety control manufacturers' names will be abbreviated by using the first letter of each word in their corporate name when necessary to refer to them in the individual Listings.

When the Listing Mark on an appliance includes the statement "For Operation Only in Presence of Competent Attendant," such appliances are not furnished with primary safety controls and are intended for operation only in the presence of a competent attendant.

The Listing Mark applied to an oil-burning appliance designates the ANSI/ASTM D396 grade number of the fuel oil, or other fuel, for which the appliance is Listed.

If the appliance is also investigated in accordance with a standard other than a UL Standard, the marking on the appliance includes the designation of that standard.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

BOILER ASSEMBLIES (KVFT)

USE AND INSTALLATION

This category covers gas-, gas-oil-, and oil-fired boiler assemblies intended for installation on the type of floors and with clearances to combustible construction not less than indicated on the boiler assembly. They are provided with primary safety controls as indicated in the boiler assembly Listing Mark or in the burner Listing Mark and with limit controls.

The sketches, dimension symbols and abbreviations as illustrated below are referenced in the individual Listings to indicate minimum clearances in inches, type of flooring, when an appliance may be installed in an alcove or closet, and the total free area of the required air openings into a closet. This

Boiler Assemblies (KVFT)—Continued

information is also marked on the appliance. The clearances so designated are the minimums required to avoid overheating; additional clearances may be needed for accessibility.

Installation Symbols and Abbreviations

Descriptions of symbols and abbreviations applicable to the installation of boiler assemblies are as follows:

- A – Clearance above top of boiler
- B – From front of boiler. Prefix "C" to numeral indicates suitability for closet or alcove installation; prefix "A" indicates suitability for alcove installation only
- C_H – From chimney or vent connector measured horizontally or below pipe
- C_V – From chimney or vent connector measured vertically above pipe
- D – From back of boiler
- E_L – From left side of boiler
- E_R – From right side of boiler
- F – Indicates type of flooring: NC = Noncombustible, C = Combustible
- G – Total minimum free area, in square inches, of air openings into a closet

Typical Installation Clearances for Gas-, Gas-Oil-, and Oil-fired Boiler Assemblies

When a gas-, gas-oil-, or oil-fired boiler assembly is Listed for typical installation clearances, the individual Listings refer to the Form designation; when the clearances are not typical, each clearance is indicated by the appropriate symbols in the individual Listings. If a boiler assembly Listed for alcove or closet installation is installed in a room which is large in relation to the size of the boiler assembly, it may be installed at the minimum clearances specified for closet and alcoves or as indicated by the designated optional Form.

Form designations for typical installation clearances for gas-, gas-oil-, and oil-fired boiler assemblies installed in rooms are as follows:

Form	Standard Minimum Clearances (in.)							
	A	B	C _H	C _V	D	E _L	E _R	F
II	6	24	18	18	6	6	6	NC
IIa	6	24	18	18	6	6	6	C
III	18	48	18	18	18	18	18	NC
IIIa	18	48	18	18	18	18	18	C
IV	48	96	36	36	36	36	36	NC
IVa	48	96	36	36	36	36	36	C
XII	6	18	6	6	6	6	6	NC
XIIa	6	18	6	6	6	6	6	C

Gas-, gas-oil-, and oil-fired boiler assemblies Listed for Forms II, IIa, III, and IIIa are low-heat appliances; those Listed for Forms IV and IVa are medium-heat appliances, all of which are intended to be flue connected to suitable chimneys

Gas-, gas-oil-, and oil-fired boiler assemblies Listed for Forms XII and XIIa and those Listed for Form III and IIIa equipped with draft hoods are low-heat gas appliances suitable for venting to Type B vents for gas appliances

Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

Solid-fuel-fired boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connectors should be connected to a chimney suitable for use with residential type and building heating appliances that burn solid fuel.

Waste-heat-recovery boiler assemblies are intended for installation on the type of floor and with clearances to combustible construction from sides, rear, front and chimney connector not less than indicated on the boiler assembly. The chimney connector should be connected to a suitable chimney.

Field-erected Boiler Assemblies (KVQE)**USE AND INSTALLATION**

This category covers gas-, oil-, and gas-oil-fired boiler assemblies intended to be assembled in the field by qualified service personnel.

By design, the boiler consists of factory-built subassemblies or segments and is furnished with appropriate controls and detailed instructions to accommodate assembly and installation pertaining to clearances, types of adjacent surfaces, and proper vent installation, in addition to the appropriate NFPA standards and local codes.

The boiler may be furnished either with an integral burner or intended for installation with a factory-built burner to accommodate the boiler as indicated in the individual Listings.

Authorities Having Jurisdiction should be consulted with regard to the inspection of field-erected boiler assemblies.

RELATED PRODUCTS

See Gas-fired Boiler Assemblies (KVTR), Oil-fired Boiler Assemblies (KWUX) and Burner Assemblies with Reduced Emissions (KXPU).

ADDITIONAL INFORMATION

For additional information, see Boiler Assemblies (KVFT), Heating Appliances (KTCR) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2106, "Field Erected Boiler Assemblies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names and information as appropriate:

- (A) "Gas-fired (or Oil-fired or Gas-Oil-fired) Field-erected Boiler Assembly. For Use With Integral Primary Safety Controls."
 (B) "Field-erected Boiler Assembly. For Use Only With [Company Name] Listed Gas (or Oil or Gas-Oil) Burner Model(s) _____. Max Input Gas ____ BTU Per Hour (Oil ____ Gals. Per Hour). Refer to Burner Label for Control and Fuel Specifications."

A field-erected gas-, oil-, or gas-oil-fired boiler assembly that includes the burner as an integral part of the front head assembly bears a Listing Mark with the product name and information similar to (A).

A field-erected boiler assembly designed for installation with a Listed burner bears a Listing Mark with the product name and information similar to (B), which covers the boiler only. The burner bears a separate Listing Mark as described for gas burners (see KXWT), oil burners (see KYXZ) or gas-oil burners (see KYKR). The proper assemblies of boilers and burners to make unit assemblies are as specified in the boiler Listing Mark.

HEATING AND COOLING EQUIPMENT (LZFE)**GENERAL**

This category covers various types of heating and cooling equipment typically used for space conditioning.

Individual categories following the **GENERAL INFORMATION** section below are identified for each type of equipment. Not all statements in **GENERAL INFORMATION** are applicable to all types of equipment covered under this category; only the statements that are identified are applicable. Refer to the individual categories for the general information that is applicable.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC) as follows:

- 75°C insulated conductors at the 75°C ampacities.
- 90°C insulated conductors at the 75°C ampacities in which case the equipment is marked for 90°C conductors.
- Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **IV. INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations (AALZ) and **VIII. ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

GENERAL INFORMATION**Product Types**

1. The following defines the types of systems covered in the individual categories below:

- Self-contained** — Refrigeration system in one section, factory assembled, with refrigerant charge and tested for leaks.
- Compressor Unit** — Includes one or more compressors with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit, and to a remote condenser having a marked working pressure

not less than designated by the marking on the unit data plate. (The term is applicable both to refrigeration equipment of any size and also to air conditioning equipment. The term "air conditioning systems equipment, compressor unit" is used for air conditioning equipment rated over 135,000 Btu/h.)

- Compressor Condenser Unit** — Includes one or more compressors and condensers with interconnecting refrigerant piping and with associated controls and wiring. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (The term is applicable to air conditioning systems equipment only.)
 - Compressor-Evaporator (Cooler) Unit** — Includes one or more compressors and evaporators (coolers) with interconnecting refrigerant tubing or piping and with associated controls and wiring. The unit is factory assembled and tested for leaks. The refrigerant type is marked on the unit and the operating refrigerant charge may or may not be provided as indicated on the unit nameplate. These units are intended for field connection to a remote condenser having a marked working pressure not less than designated by the marking on the unit data plate. (The term "compressor-evaporator" is applicable to air conditioning systems equipment and special purpose air conditioners, and the term "compressor-cooler" is applicable to liquid chillers.)
 - Compressor Evaporator/Condenser** — Refrigeration system in two sections, one including the compressor and the evaporator and the other, the condenser. The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the compressor evaporator unit nameplate. Each section is tested for leaks. (The term is applicable to central cooling air conditioners and special purpose air conditioners.)
 - Condensing Unit/Evaporator (Outdoor/Indoor Unit)** — Refrigeration or air conditioning system in two sections, the condensing unit (or outdoor) section including the compressor and condenser and the other section the evaporator (indoor section). The sections are intended to be installed remote from each other. The interconnecting refrigerant tubing may or may not be provided. The operating refrigerant charge may or may not be provided, as indicated on the condensing unit nameplate. Each section is tested for leaks. (The term "condensing unit/evaporator" is applicable to central cooling air conditioners and special purpose air conditioners, and the term "outdoor/indoor unit" is applicable to heat pumps.)
 - Heating, Cooling and Ventilating Equipment** — Intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately Listed. Unless indicated in the individual Listings for the other equipment, this equipment has not been investigated for operation when combined with other Listed equipment in a complete system assembled in the field.
 - Condensing Unit** — Includes one or more compressors and air- or water-cooled condensers with interconnecting refrigerant piping and with associated controls and wiring, and may also include a receiver. These units are intended for field connection to a remote evaporator, unit cooler or fan-coil unit. (Same as "C" above, except the term is applicable to refrigeration equipment or to air conditioning equipment of any size.)
2. Heating and cooling equipment of the unitary type consists of one or more factory-built sections. If the equipment is provided in two or more sections, each such section is designed for field interconnection with a matched section(s) to make the heating and/or cooling equipment. Equipment provided in two or more sections is either marked to identify the appropriate sections for proper installation, or the designations of the sections comprising the assembly are shown in the individual Listings. Where so designated, a separately Listed electric central heating furnace, fan-coil unit or fan unit may serve as a portion of the assembly.
- Listed equipment is rated 600 V or less. Centrifugal type units as identified in the individual Listings are rated 7200 V or less.
- Installation Codes**
- This equipment is intended to be installed in accordance with the requirements of the NEC.
 - Equipment to be connected to an air duct system is intended for installation in accordance with NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems" or NFPA 90B, "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems."
 - Equipment with a gas-, oil-, or gas-oil-fired burner(s) is intended to be installed in accordance with appropriate National Fire Protection Association standards, including ANSI/NFPA 31, "Standard for the Installation of Oil-Burning Equipment," ANSI Z223.1/NFPA 54, "National Fuel Gas Code" or ANSI/NFPA 58, "Liquefied Petroleum Gas Code."
 - For equipment intended to be installed in mobile homes, reference should be made to 24CFR3280, "Manufactured Home Construction and Safety Standards."

8. For equipment intended to be installed in recreational vehicles, reference should be made to ANSI/NFPA 1192, "Standard on Recreational Vehicles."

9. Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15, "Safety Standard for Refrigeration Systems," but are included in ANSI/ASHRAE 34-1994, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15, UL's Listing Reports (available from the manufacturer) identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15 for currently used refrigerants.

The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15 and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, "Refrigerants."

Wiring Diagrams

10. The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

Units Used with Duct Heaters

11. Unless otherwise indicated in the individual Listings, Listed duct heaters that may be installed in conjunction with the equipment covered in the Listings should be installed at least 4 ft downstream from the equipment.

Field-installed Accessories

12. Heating and cooling equipment investigated for use with Listed field-installed accessories, such as electric resistance heaters (including duct heaters), is specifically indicated in the individual Listings. See Accessories, Air Conditioning Equipment (ABFY) and Duct Heaters, Electric (KOHZ).

13. Units investigated for use with field-installed steam, hot water, or refrigerant coils or with electric resistance heaters (including Listed accessories or duct heaters as noted in paragraph 11 above) are marked to so indicate.

Electric Heat Considerations

14. Units that incorporate factory- or field-installed electric resistance heaters are identified in the individual Listings.

Field-installed electric resistance heaters that have been investigated for use with the Listed equipment at the time of Listing, are identified on the heating and cooling equipment nameplate by manufacturer's name and part number, or are covered under Electric Heater Assemblies Classified for Use on Specified Equipment (LZPU).

15. Where a through-air clearance to combustible materials is required, the clearance is marked on the heating and/or cooling equipment and is designated in the individual Listings. The clearances are the minimum required to avoid overheating; additional clearances may be required for accessibility.

When zero clearance is specified, temperatures are measured directly on the unit cabinet with uninsulated sheet metal ducts and plenum attached. When clearances other than zero are specified, temperatures are measured on a wood test enclosure spaced at the specified clearances from the unit cabinet, ducts and plenum.

16. In heating and cooling equipment employing electric resistance heaters rated more than 48 A, the loads are subdivided so that each load does not exceed 48 A and is protected by overcurrent devices at not more than 60 A.

The overcurrent devices are either included as an integral part of the heating and cooling equipment or furnished as a separate assembly. If the overcurrent devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies specifically recognized for use with electric space heaters provided as part of this equipment, see **CONTROL PANELS FOR SPECIFIC ELECTRIC SPACE HEATING EQUIPMENT** below. Other Listed separate assemblies, as referenced on a marking on the heating and cooling equipment, may also be used.

Unit Installation

17. Unless otherwise specified in the marking on the equipment, the unit may be installed on combustible flooring.

18. Attic type units are so indicated in the individual Listings. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the marking or instructions provided on the unit.

19. Units/Sections suitable for outdoor installation are so marked and identified in the individual Listings either by the term "outdoor section" or by an appropriate footnote. Units/Sections not marked as suitable for outdoor installation are for indoor use only.

Motor Group Installation

20. In permanently connected units employing two or more motors or a motor(s) and other loads operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Section 430.53(C) as referenced in Section

440.22 of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked in the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or "HACR Type" circuit breakers, the circuit is intended to be protected only by the type of protective devices specified.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment." Other standards may also be used where specifically indicated in the individual categories below.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as shown in the following individual categories or in the individual Listings.

The Gas-fired Listing Mark of Underwriters Laboratories Inc. for gas-fired products includes the UL symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the product identity, and the standard designation as shown in the following individual categories or in the individual Listings.

ABSORPTION AIR CONDITIONING EQUIPMENT

GENERAL INFORMATION paragraphs 1A, 2, 3, 4, 5, 6, 9, 19 and 20 are applicable to this equipment.

This category covers equipment of the unitary type employing an absorption type refrigeration system, intended for commercial or domestic cooling, or heating and cooling of a liquid such as water or a water-antifreeze solution. This equipment is intended primarily, but not exclusively, for air conditioning application.

The direct energy source for cooling and heating is a hot fluid (such as gas, liquid or steam) as obtained from a source such as a solar-heat system or waste-heat, and/or gas-, oil-, or gas-oil-fired burners. Absorption air conditioning equipment provided with gas-, oil-, or gas-oil-fired burner(s) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

AIR CONDITIONING SYSTEMS EQUIPMENT, SELF-CONTAINED UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COOLING PORTION OF SELF-CONTAINED UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR-EVAPORATOR UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR-CONDENSER UNITS

AIR CONDITIONING SYSTEMS EQUIPMENT, COMPRESSOR UNITS

GENERAL INFORMATION paragraphs 1A, 1B, 1C, 1D, 3, 4, 5, 6, 9, 10, 11, 12, 13, 15, 16, 17, 19 and 20 are applicable to this equipment.

This category covers equipment with a rated cooling capacity exceeding 135,000 Btu/h, intended for commercial or industrial central cooling applications. For equipment rated 135,000 Btu/h or less, see **AIR CONDITIONERS, CENTRAL COOLING** or **CONDENSING UNITS** below. For additional self-contained units incorporating gas-, oil-, or gas-oil-fired burners, see **HEATING AND COOLING UNITS** below.

Self-contained units and compressor-evaporator units may include heating means, including electric resistance heaters, gas-, oil-, or gas-oil-fired burners, or hot water or steam coils.

A gas-fired heating portion included in this category is for use only in the same manufacturer's specified air conditioning systems equipment as marked on the heating portion and as indicated in the individual Listings.

The basic standard used to investigate the refrigeration portion of the products in this category is ANSI/UL 1995. The basic standard used to investigate the gas heating portion of the products in this category is ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces."

The Gas-fired Listing Mark is provided either on a Listed self-contained unit or on a Listed gas-fired heating section or portion of a Listed self-contained unit.

The Gas-fired Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the words "Gas Heating Portion," and the standard designation "ANS Z21.47(+)" CSA 2.3(+)(++) Central Furn."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

CENTRAL COOLING AIR CONDITIONERS
SECTIONS OF CENTRAL COOLING AIR CONDITIONERS
ACCESSORIES FOR CENTRAL COOLING AIR CONDITIONERS
GENERAL INFORMATION paragraphs 1A, 1E, 1F, 2, 3, 4, 5, 7, and 9 through 20 inclusive are applicable to this equipment.

This category covers equipment of the unitary type for commercial or domestic central cooling applications.

Unitary air conditioners consist of one or more factory-made sections, as described under **GENERAL INFORMATION**. Unless so indicated in the individual Listings, the evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or furnished as a separate section.

CONDENSING UNITS
COMPRESSOR UNITS
ACCESSORIES FOR CONDENSING UNITS
ACCESSORIES FOR COMPRESSOR UNITS

ACCESSORIES FOR CONDENSING OR COMPRESSOR UNITS
GENERAL INFORMATION paragraphs 1B, 1H, 3, 4, 9, 13, 19 and 20 are applicable to this equipment.

This category covers units intended for refrigeration service of any Btu per hour capacity. For units intended primarily for air conditioning applications, see **AIR CONDITIONING SYSTEMS EQUIPMENT** (rated more than 135,000 Btu/h) or **CENTRAL COOLING AIR CONDITIONERS** above.

This equipment is intended to be installed in air conditioning and refrigeration systems.

Some condensing units or compressor units included in this category are intended for field connection to multiple refrigeration systems and include multiple condensing units, compressor units or compressors, with single or multiple condensers, with associated piping, controls, and wiring, mounted on a common frame or in a common housing.

The acceptability of operation of these units, when associated with other components of a complete system, has not been investigated.

These units are intended to be used only in systems with the specified refrigerant and operating at pressures not in excess of those indicated by the marked test pressures.

GENERAL PURPOSE CONTROL PANELS FOR ELECTRIC SPACE HEATING EQUIPMENT
CONTROL PANELS FOR SPECIFIC ELECTRIC SPACE HEATING EQUIPMENT

GENERAL INFORMATION paragraphs 3 and 4 are applicable to this equipment.

This category covers electrical panels incorporating control and/or overcurrent devices intended specifically for remote use with electric space heating equipment, including air conditioning equipment with electric resistance space heaters.

Overcurrent protective devices in these panels are intended to provide overcurrent protection in accordance with Section 424.22(C) of the NEC.

Unless otherwise specified in the manufacturer's installation instructions, these panels are intended to be mounted remote from the space heating equipment, in a location where they will not be affected by heat or condensation from operation of the equipment.

The proper installation of these panels requires careful consideration of the individual manufacturer's installation instructions and wiring diagrams.

General purpose panels are not limited to use with specific makes and models of space heating equipment. These panels are provided with installation instructions and wiring diagrams showing supply connections, connections to the space heating equipment, and control circuit connections to be completed at the time of installation.

General purpose panels containing only overcurrent devices or only magnetically operated switching devices are covered under Panelboards (QEU) and Industrial Control Equipment (NIMX), respectively.

Panels to be used only with specific Listed equipment are so identified and the equipment marked to require the particular panel. The installation instructions and wiring diagrams for these panels may be provided with the panel or may be provided only with the Listed space heating equipment.

For control panels for specific electric space heating equipment, see the equipment nameplate and installation instructions.

ELECTRIC CENTRAL HEATING FURNACES
SECTIONS OF ELECTRIC CENTRAL HEATING FURNACES

GENERAL INFORMATION paragraphs 2, 4, 5, 7, 8, 9, 15, 16 and 20 are applicable to this equipment.

This category covers electrically operated central heating furnaces intended for use in space heating applications in homes and other types of buildings, including mobile homes and recreational vehicles, as indicated in the manufacturer's installation instructions.

Warm-air furnaces have provision for connection to a duct system, except furnaces intended only for installation in a single-story residence need not have provision for connection of a return air duct.

Each electric central heating furnace is provided with an individual marking and instructions. If a noncombustible floor material is required, the necessary clearances to combustible constructions and proper installation in an alcove or closet are specified in the marking and/or instructions.

Furnaces consist of one or more factory-built sections. Equipment provided in more than one section is designed for field interconnection of matched sections to make the complete assembly. The individual sections that comprise the assembly are identified in the individual Listings and by a cross-reference marking on at least one of the sections.

Furnaces investigated for use with a field-installed refrigerant coil are so identified in the individual Listings, and the refrigerant coil(s) for such use are identified by a marking on the furnace. Tests of furnaces with these field-installed coils intended for cooling, or with integral factory-installed coils intended for cooling, have indicated no adverse effects on the furnace.

The assembly of a furnace with a field- or factory-installed refrigerant coil to a condensing unit of a central cooling air conditioner has been investigated only for those specific combinations identified in the individual Listings as "Air Conditioners, Central Cooling," or for those specific condensing units identified by a marking on the furnace.

The assembly of a furnace with a field- or factory-installed refrigerant coil to an outdoor section of a heat pump has been investigated only for those specific combinations identified in the individual Listings as "Heat Pumps." The effect of refrigerant heating on the furnace has not been investigated for other combinations.

ENVIRONMENTAL AIR TERMINAL UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 11, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers fixed appliances that include a motor-operated fan or blower with or without electric resistance heaters. The appliances are intended to be installed in accordance with the manufacturer's installation instructions in plenums above hung (suspended) ceilings where the inlet air to the appliance is taken from this plenum space in accordance with Section 300.22(C) of the NEC.

The air outlet may be free discharge or be ducted to ceiling diffusers.

FAN-COIL UNITS

SECTIONS OF FAN-COIL UNITS
ACCESSORIES FOR FAN-COIL UNITS

GENERAL INFORMATION paragraphs 1G, 2, 3, 4, 5, and 9 through 20 inclusive are applicable to this equipment.

This category covers appliances that include a motor-operated fan or blower together with a cooling coil, a heating coil, or both, and may also include an electric heater. The fan or blower is designed to recirculate air or to draw in outside air, or both. The coil may be designed for refrigerant cooling, for refrigerant heating, for chilled water cooling, for hot water heating, for steam heating, or for combinations of these functions.

A fan-coil unit is intended to be piped to a remote source of heat, of cooling, or of both. Authorities Having Jurisdiction should be consulted as to the requirements for this equipment with respect to connection to water supply lines.

Equipment intended for use with hot water is marked for a maximum inlet water temperature.

Equipment intended for use with steam is marked for a maximum inlet steam pressure.

A fan-coil unit containing a refrigerant coil that has been additionally investigated as part of a specific split-system cooling air conditioner, special purpose air conditioner or heat pump, is also identified as part of that system in the individual Listings as "Air Conditioners, Central Cooling," "Air Conditioners, Special Purpose" or "Heat Pumps."

A fan-coil unit, as covered by these requirements, may be designed for free delivery of air to the room or may be provided with means for duct connection. Representative types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert (built-in) units.

A room-type unit is designed to circulate air to the conditioned space directly, or by means of duct work having a static-pressure drop not exceeding 0.05 in. of water.

Units that are similar to fan-coil units with electric resistance heaters, but not provided with a refrigerant, steam or water coil, are identified in the individual Listings as "Room Fan Heater Units."

FAN UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers equipment intended to be connected to a duct system that supplies conditioned air for environmental heating and/or cooling. The units consist of a motor-operated fan or blower and may have air control dampers. The units may be thermostatically operated by integral or remote controls. The units do not include factory-installed heat exchangers or other integral heating or cooling means.

Fan units with field-installed heater accessories as detailed in paragraph 12 under **GENERAL INFORMATION** are the equivalent of "Electric Central Heating Furnaces."

Units intended for use in duct systems with air temperatures exceeding normal room ambient temperature are marked with the maximum inlet air temperature rating.

Other types of fans for duct connection are covered under Fans, Electric (GPWV) and Ventilators, Power (ZACT).

HEAT PUMPS**SECTIONS OF HEAT PUMPS
ACCESSORIES FOR HEAT PUMPS**

GENERAL INFORMATION paragraphs 1A, 1F, 2, 3, 4, 5, 7, and 9 through 20 inclusive are applicable to this equipment.

This category covers reverse cycle unitary air conditioning systems for comfort heating and cooling (or for comfort heating only), if so indicated in the individual Listings.

HEAT PUMP WATER HEATERS**SECTIONS OF HEAT PUMP WATER HEATERS
ACCESSORIES FOR HEAT PUMP WATER HEATERS**

GENERAL INFORMATION paragraphs 2, 3, 4, 9, 10 and 20 are applicable to this equipment.

This category covers products intended to heat water utilizing the heat of rejection from a mechanical refrigeration system and optional accessories for these products. These products are designed to restrict the outlet water temperature to a maximum of 85°C (185°F) under normal operation conditions and to a maximum of 99°C (210°F) under abnormal conditions.

These units may include an integral storage tank or may be designed for connection to a separate tank and may also include electric resistance heaters to heat the water. For those units that include an integral tank, see Water Heaters, Household, Storage Tank (KSDT) for additional information.

HEATING AND COOLING UNITS**COOLING PORTIONS OF HEATING AND COOLING UNITS**

GENERAL INFORMATION paragraphs 1A, 3, 4, 5, 6, 9, 10, 15, 19 and 20 are applicable to this equipment.

This category covers self-contained assemblies manufactured for installation as a package. They include all the necessary components needed for both heating and cooling. Heating is by gas-, oil-, or gas-oil-fired burner(s). Cooling is by mechanical refrigeration with any rated cooling capacity.

The information pertaining to safe placement is indicated in the individual Listings.

The name and amount of refrigerant, test pressure, and electrical rating appear on the unit.

A gas-fired heating portion included in this category is for use only in the same manufacturer's specified air conditioning systems equipment as marked on the heating portion and as indicated in the individual Listings.

The basic standard used to investigate the gas heating portion of the products in this category is ANSI Z21.47/CSA 2.3, "Gas-Fired Central Furnaces."

The Gas-fired Listing Mark is provided either on a Listed heating and cooling unit or on a Listed gas-fired heating section or portion of a Listed heating and cooling unit.

The Gas-fired Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Gas-fired Listing Mark for these products includes the UL symbol with the words "GAS-FIRED" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, the words "Gas Heating Portion," and the standard designation "ANS Z21.47(+) CSA 2.3(+)(++) Central Furn."

(+) Suffix letter of latest addendum if applicable

(++) Issue year of latest addendum or standard

LIQUID CHILLERS, SELF-CONTAINED UNITS**LIQUID CHILLERS, COMPRESSOR-COOLER UNITS
AIR CONDITIONING LIQUID CHILLERS****SECTIONS OF AIR CONDITIONING LIQUID CHILLERS**

GENERAL INFORMATION paragraphs 1A, 1D, 2, 3, 4, 6, 9, 10, 19 and 20 are applicable to this equipment.

This category covers equipment intended for cooling of liquid, such as water or water-antifreeze solutions. The equipment is intended primarily, but not exclusively for, air conditioning application.

Air conditioning liquid chillers rated 135,000 Btu/h or less are of the unitary type. Liquid chillers with a rated cooling capacity exceeding 135,000 Btu/h may be either self-contained units or compressor-cooler units.

Drinking water coolers, commercial processing water coolers, and other liquid chillers investigated only for commercial refrigeration applications other than air conditioning are covered under Refrigeration Equipment (SCER).

Absorption air conditioning equipment that utilizes hot fluid (such as gas, liquid or steam) as the direct energy source for cooling and heating is identified in the individual Listings as "Absorption Air Conditioning Equipment."

Absorption air conditioning equipment provided with a gas-, oil-, or gas-oil-fired burner(s) as the direct energy source for cooling and heating is covered under Absorption Air Conditioning Equipment (KTFV).

**MECHANICAL DRAFT WATER COOLING TOWERS
ACCESSORIES FOR MECHANICAL DRAFT WATER COOLING TOWERS**

GENERAL INFORMATION paragraphs 1G, 3, 4, 9, 10, 19 and 20 are applicable to this equipment.

This category covers equipment intended for use with water-cooled air conditioning and refrigeration equipment. The water used as a cooling medium may contain antifreeze, and is circulated through the tower via

either a finned tube assembly or a system that is open to the atmosphere. The tower includes a motor-driven fan or blower and may also include circulation pumps.

Equipment investigated for use with Listed accessories, such as pump assemblies, is marked to identify the accessories and is also identified in the individual Listings.

REFRIGERANT CONDENSERS

GENERAL INFORMATION paragraphs 3, 4, 9, 10, 19 and 20 are applicable to this equipment.

This category covers finned tube assemblies incorporating a motor driven fan that are intended to liquefy refrigerant vapor by removal of heat.

Evaporative or water-cooled devices are covered under Condensers, Refrigerant (SLSV).

ROOM AIR TERMINAL UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers units designed to be connected to the terminal end of a single duct or duct system supplying air from a remotely located air-handling unit for the purpose of providing heating, ventilation and/or cooling.

The unit types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert constructions.

Units incorporating electric heat have an automatic resetting temperature limiting control that is intended to protect against abnormal operating conditions and, in addition, each unit is provided with a replaceable thermal cutoff or a manually resettable temperature limiting control. In addition to ANSI/UL 1995, the standard used to investigate units incorporating electric heat is ANSI/UL 1996, "Electric Duct Heaters."

The proper installation of these units requires careful consideration of the individual manufacturer's design characteristics, taking into consideration the volume of air passing through the units and the temperature of the input air.

The manufacturer's application and installation instructions furnished with each unit should be consulted to determine the factors appropriate to the particular installation including required distances between the unit and turns in the duct, changes in duct sizes, air filters, humidifiers, etc. Unless these instructions specify other distances for horizontals or upflow installations, 1) turns in the duct on the inlet side of the unit should be at least 4 ft from the unit, 2) turns in the duct on the outlet side of the unit should be at least 2 ft from the unit, and 3) changes in duct size, air filters, humidifiers, etc. should be located at least 4 ft from either side of the unit.

Units incorporating electric heat may have provision for interlocking the air supply and the electric element circuit.

Units may include provision for a coil designed for cooling by refrigerant or chilled water, or heating by steam or hot water, or for combinations of such coils.

ROOM FAN HEATER UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 11, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers fixed appliances that include a motor-operated fan or blower and electric resistance heater, or an electrically heated heat exchanger.

These appliances are designed to serve a single room or space. Included are units similar to fan-coil units with electric resistance heaters but which are not provided with a refrigerant, steam or water coil, and units similar to air heaters, but which draw in air from outside the heated space. Air heaters are covered under Air Heaters, Room, Fixed and Location Dedicated (KKWS).

A room fan heater may be designed for free delivery of air to the room, or may be provided with a means for connection of a short extension duct. Representative types include floor-mounted, wall-mounted, ceiling-hung, and wall- or ceiling-insert (built-in) units.

Information concerning required installation clearances, etc. is designated in markings and/or installation instructions as indicated under **GENERAL INFORMATION**. This information also appears in the individual Listings.

SPECIAL PURPOSE AIR CONDITIONERS**SECTIONS OF SPECIAL PURPOSE AIR CONDITIONERS
ACCESSORIES FOR SPECIAL PURPOSE AIR CONDITIONERS**

GENERAL INFORMATION paragraphs 1A, 1D, 1E, 1F, 2, 3, 4, 9, 10, 12, 15, 16, 17, 19 and 20 are applicable to this equipment.

This category covers equipment designed for special purposes, such as environmental control of computer rooms.

This equipment consists of one or more factory-made sections, as described under **GENERAL INFORMATION**. Unless so indicated in the individual Listings, an evaporator blower is provided as part of the assembly, and may be an integral part of the evaporator section or be furnished as a separate section.

Computer room air conditioners are intended for installation in accordance with ANSI/NFPA 75, "Standard for the Protection of Information Technology Equipment." These air conditioners are generally installed on the raised floors of computer rooms and have not been investigated for connection to ducts unless so specified in the individual Listings.

Factory-installed electric heaters and humidifiers have been investigated for this application.

VENTILATING UNITS

SECTIONS OF VENTILATING UNITS

GENERAL INFORMATION paragraphs 1G, 3, 4, 5, 9, 10, 11, 12, 13, and 15 through 20 inclusive are applicable to this equipment.

This category covers units that consist of electric resistance heaters and a motor-operated blower. The units may also incorporate means for evaporative cooling. These units are intended to supply heated and/or cooled air to commercial and industrial buildings from which air is being exhausted by other equipment. There is no provision for return-air circulation on these units.

Information concerning required installation clearances, etc. is designated in markings and/or installation instructions as indicated under **GENERAL INFORMATION**. This information also appears in the individual Listings.

MISCELLANEOUS HEATING AND COOLING EQUIPMENT

GENERAL INFORMATION paragraph 4 is applicable to this equipment.

This category covers miscellaneous heating and cooling equipment.

HEATING AND COOLING EQUIPMENT ACCESSORIES

GENERAL INFORMATION paragraph 4 is applicable to this equipment.

This category covers accessories intended for installation only on Listed heating and cooling equipment as designated in the individual Listings of the equipment and accessories. The accessories are intended primarily for field installation, but may be factory installed.

The equipment on which these accessories may be field installed is marked to indicate that it is Listed for use with the specific accessory as designated by model, catalog number, part number, etc. in this category. Markings on the equipment also indicate any changes in the equipment ratings with the accessory installed.

Information concerning field wiring connections, mounting location, installation clearances, etc., are marked on the accessory, and/or in detailed installation instructions accompanying each accessory.

DUCTLESS HEATING AND COOLING EQUIPMENT, LARGE, OPEN BUILDING (LZPG)

GENERAL

This category covers ductless heating and cooling equipment intended to serve a single, large, open area, such as a warehouse. These are encased assemblies designed as a unit and intended as the prime source of heating, cooling and dehumidification.

INSTALLATION

This equipment is rated 600 V ac or less and is intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC).

Ductless heating and cooling equipment is custom built to the customer's specifications. This equipment may be installed in the conditioned airspace or outdoors; when installed outdoors, provisions, such as a short duct, are provided for serving the adjacent space. This equipment has a heating range from 10,000 to 18,000,000 Btu's, a cooling capacity range up to 1,000 tons, and an air circulation of 1,000 to 200,000 cfm. The heat sources include electric, gas, hot water, oil or steam. Each unit provided with electric, gas-fired or oil-fired heat incorporates integral limit controls intended to protect against abnormal operating conditions, which might arise from blocked inlets, blocked outlets, or fan failures. The limit control will not allow a discharge air temperature during all the normal, abnormal and back-up tests of 150°F (65.56°C).

After assembly on the production line, each unit will have tests conducted before it leaves the factory, and additional tests will be performed again once the unit has been installed at the site by a factory representative.

Ductless heating and cooling equipment is made up of three basic modules and optional extensions that are field erected in a stacked configuration. By design, the equipment consists of factory-built subassemblies or modules and furnished with appropriate controls and detailed instructions to accommodate assembly and installation with applicable codes.

The lowermost module is the **air base**, containing one or more propeller fans lying horizontal and, if specified, optional inlet filters. The air base unit has prewired power and control panel(s). These panels contain a power disconnect switch and motor starters, control relays and temperature controls. The selector controls and toggle switches are generally located inside of the control panel or vertically mounted on the side.

The second module is the **heat/cool section** that may consist of a cooling portion and/or a heating portion. The cooling portion consists of a refrigeration or chilled water heat exchanger coil. The heating portion may consist of one of the following options: (1) a Listed commercial/industrial gas burner (see KXWT), oil burner (see KYXZ) or gas-oil burner (see KYKR) with an air-to-air heat exchanger, (2) a Listed electric duct heater (see KOHZ), or (3) a hot water or steam heat exchanger. The boiler may be furnished either with an integral burner or intended for installation with a factory-built burner to accommodate the boiler as indicated in the individual Listings.

Normally the third module in the stacked configuration is the **air outlet** module; however, an **extension(s)** is frequently used to raise the discharge

Ductless Heating and Cooling Equipment, Large, Open Building (LZPG)—Continued

above items that surround the unit. The air outlet module is the uppermost module of the stacked configuration and may contain optional louvers that are capable of directing air in a specific direction.

This equipment is intended to employ other equipment and components, which are separately Recognized or Listed. Each piece of equipment has been factory tested prior to leaving the manufacturer's facility, and a factory-trained technician conducts the startup of each unit.

For fuel-fired heaters, the minimum clearance to combustible materials is 48 in. from the front side (burner side) and 18 in. from all other sides, including the top side. Fuel-fired heaters should not be mounted directly on a combustible floor.

For electric-duct-heater-supplied units, the minimum clearance to combustible materials is 48 in. from the front side (control panel side) and 18 in. from all other sides, including the top side. Electric-duct-heater-supplied units should not be mounted directly on a combustible floor.

Unless otherwise specified in the individual Listings and product marking, the unit may be installed on combustible flooring.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at no more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it be used with that particular separate assembly. For such separate assemblies which are specifically Listed for use with electric space heaters provided as part of this equipment, see Control Panels, Remote, for Electric Duct Heaters (KMLW). Other Listed separate assemblies, as referenced on the equipment marking, may also be used.

In units employing two or more motors or a motor and an electric space heater operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor-circuit components and wiring are investigated on the basis of compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sec. 430.53(C) of the NEC. Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating that does not exceed the value marked on the data plate. This marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or "HACR Type" circuit breakers, the circuit is intended to be protected only by the type of protective device specified.

Equipment suitable for outdoor installation is so marked. Equipment not marked as suitable for outdoor installation is for indoor use only.

Wiring Termination Provisions

For permanently connected equipment, the wiring termination provisions are based on tests during product investigation, and Table 310.16 of the NEC as follows:

1. 75°C insulated conductors at the 75°C ampacities.
2. 90°C insulated conductors at the 75°C ampacities, in which case the equipment is marked for 90°C conductors.
3. Insulation temperature rating of 75 or 90°C and wire size as marked on the unit.

Also see **INSTALLATION REQUIREMENTS** (Appliance and Utilization Equipment Terminations) under Electrical Equipment for Use in Ordinary Locations (AALZ) and **ELECTRICAL INSTALLATIONS** under Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

Installation Codes

Equipment with a gas-, oil-, or gas-oil-fired burner(s) is intended to be installed in accordance with appropriate National Fire Protection Association standards, including ANSI/NFPA 31, "Standard for the Installation of Oil-Burning Equipment," ANSI Z223.1/NFPA 54, "National Fuel Gas Code," or ANSI/NFPA 58, "Liquefied Petroleum Gas Code."

Equipment is marked with the refrigerant type used and some units may employ alternative refrigerants that are not currently listed in ANSI/ASHRAE 15-2004, "Safety Standard for Refrigeration Systems," but are included in ANSI/ASHRAE 34-2004, "Designation and Safety Classification of Refrigerants." The use of these alternative refrigerants resulted from environmental restrictions on some refrigerants currently listed in the code. Using requirements as applied to specified refrigerants in ANSI/ASHRAE 15-2004, UL's Listing Reports (available from the manufacturer) identify installation requirements applicable to the alternative refrigerants in the same manner as shown in ANSI/ASHRAE 15-2004 for currently used refrigerants.

The refrigerants are classified A1 or A1/A1 by ANSI/ASHRAE 15-2004 and have been determined to be nonflammable or practically nonflammable in accordance with the requirements in ANSI/UL 2182, "Refrigerants."

Wiring Diagrams

Ductless Heating and Cooling Equipment, Large, Open Building (LZPG)—Continued

The proper method of electrical installation (number of branch circuits, control wiring connections, etc.) is shown on the wiring diagram and/or marking attached to the equipment.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

The basic standard used to investigate electric duct heaters is ANSI/UL 1996, "Electric Duct Heaters."

The basic standard used to investigate commercial/industrial gas burners is UL 795, "Commercial/Industrial Gas Heating Equipment."

The basic standard used to investigate oil burners is ANSI/UL 296, "Oil Burners."

The basic standards used to investigate domestic gas-oil burners with gas-fired inputs up to and including 400,000 Btu/h (117.23 kW) are the current edition and effective addenda thereto of ANSI Z21.17/CSA 2.7, "Domestic Gas Conversion Burners," and ANSI/UL 296.

The basic standards used to investigate commercial/industrial gas-oil burners with gas-fired inputs over 400,000 Btu/h (117.23 kW) are UL 795 and ANSI/UL 296.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ductless, Large, Open Building Heating and Cooling Equipment."

A separate Listing Mark is provided on Listed electric duct heaters (see KOHZ), commercial/industrial gas burners (see KXWT), oil burners (see KYXZ) or gas-oil burners (see KYKR) when employed in the heating module of the ductless, large, open building heating and cooling equipment. Refer to the individual product categories for the appropriate Listing Marks.

HEATING, COOLING AND VENTILATING EQUIPMENT (LZLZ)

GENERAL

This category covers fan-coil units, plenum air-terminal units, room air-terminal units, room fan heater units, and other equipment intended for comfort heating, cooling and ventilation. This equipment is rated 600 V or less.

This equipment is intended for use as part of a complete system and, when installed, may be associated with other equipment and components that are separately Listed. This equipment has not been investigated from the standpoint of operation when combined with other equipment in a complete system assembled in the field, unless indicated in individual Listings for the other equipment.

Where a clearance is required to be maintained between the unit or attached duct work and combustible constructions, the clearance is designated in the individual Listings, and is also marked on the unit. Unless otherwise indicated, the designated clearances (other than "zero") are based on tests of units with uninsulated sheet-metal ducts and plenum attached. Under these conditions, temperatures below established criteria have been measured on a wooden test enclosure, representing combustible construction, spaced at the specified clearance (air) from the unit, ducts and plenum.

Unless specified otherwise in the individual Listings and product markings, the unit may be installed on combustible flooring.

Attic-type units are so indicated in the individual Listings. Such units are suitable for installation in an attic or comparable normally unoccupied location as designated by the product marking or instructions provided with the unit.

Separately shipped steam, hot water, or refrigerant coils suitable for field installation in conjunction with heating, cooling and ventilating equipment are identified by (1) the type or model designation of the coil, and (2) the type or model designation of the heating, cooling and ventilating equipment with which it is suitable.

In units rated more than 48 A and employing electric resistance heaters, the loads are subdivided so that each load does not exceed 48 A and is protected at not more than 60 A. The overcurrent protective devices are either included as an integral part of the unit or are furnished as a separate assembly. If the protective devices are furnished as a separate assembly, the unit is marked to specify that it is to be used with that particular separate assembly. For such separate assemblies which are specifically Listed for use with electric space heaters provided as part of this equipment, see **GENERAL PURPOSE CONTROL PANELS FOR ELECTRIC SPACE HEATING**

EQUIPMENT under Heating and Cooling Equipment (LZFE). Other Listed separate assemblies, as referenced on the equipment marking, may also be used.

In units employing two or more motors or a motor and an electric space heater operating from a single supply circuit, the motor overload protective devices (including thermal protection for motors) and other factory-installed motor circuit components and wiring are investigated on the basis of a compliance with the motor branch-circuit short-circuit and ground-fault protection requirements of Sec. 430.53(C) of ANSI/NFPA 70, "National Electrical Code." Such multimotor and combination load equipment is intended to be connected only to a circuit protected by fuses or a circuit breaker with a rating which does not exceed the value marked on the data plate.

PRODUCT MARKINGS

The marked protective device rating is the maximum for which the equipment has been investigated and found acceptable. Where the marking specifies fuses or "HACR Type" circuit breakers, the circuit is intended to be protected only by the type of protective device specified.

A unit to be connected to an air duct system is intended for installation in accordance with ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," or ANSI/NFPA 90B, "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems."

Equipment suitable for outdoor installation is so marked. Equipment not marked as suitable for outdoor installation is intended for indoor use only.

ELECTRIC HEATER ASSEMBLIES CLASSIFIED FOR USE ON SPECIFIED EQUIPMENT (LZPU)

USE AND INSTALLATION

This category covers electric heater assemblies intended for field installation on specific Listed heating and cooling equipment (see Heating and Cooling Equipment [LZFE]) as identified by a marking on the electric heater assembly. The accessories are intended to be installed in accordance with the installation instructions packaged with the electric heater assembly. All parts and materials necessary to accomplish the installation are included with the electric heater assembly.

The Classification Mark indicates that the heater assembly has been investigated and found suitable for use in combination with the specified Listed equipment and that this Mark supplements or supersedes any markings related to add-on heater assemblies marked on the Listed equipment.

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling and Ventilating Equipment (LZLZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1995, "Heating and Cooling Equipment."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

ELECTRIC HEATER ASSEMBLY FOR USE WITH * LISTED MODEL **

Control No.

* Heating and cooling equipment Listee's name

** Heating and cooling equipment Listee's model number

*** Category of Listed equipment

HEAT-RECOVERY VENTILATORS, DUCTED (LZTW)

USE AND INSTALLATION

This category covers fixed equipment intended to remove air from buildings, replace it with fresh outside air and, in the process, transfer heat from the warmer to the colder air. The equipment is intended to be connected to duct systems that interconnect rooms or spaces within buildings for exhausting the indoor air and/or distributing the outdoor air. These ventilators are intended to be installed in accordance with the installation instructions packaged with the equipment and ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Nonducted heat-recovery ventilators are covered under Heat-recovery Ventilators, Nonducted (LZUU).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling and Ventilating Equipment (LZLZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1812, "Ducted Heat Recovery Ventilators."

HEATING, COOLING AND VENTILATING EQUIPMENT
(LZLZ)

Heat-recovery Ventilators, Ducted (LZTW)—Continued

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ducted Heat Recovery Ventilator" or "Accessory for Ducted Heat Recovery Ventilator."

HEAT-RECOVERY VENTILATORS,
NONDUCTED (LZUU)

USE AND INSTALLATION

This category covers stationary or fixed equipment intended to remove air from buildings, replace it with fresh outside air and, in the process, transfer heat from the warmer to the colder air. The equipment is not intended to be connected to a duct system, other than the short-duct runs necessary to bring air to and from the equipment.

RELATED PRODUCTS

Equipment designed to be connected to ducts that interconnect rooms or spaces within buildings for exhausting the indoor air and/or distributing the outdoor air is covered under Heat-recovery Ventilators, Ducted (LZTW).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling and Ventilating Equipment (LZLZ), Electrical Equipment for Use in Ordinary Locations (AALZ) and Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1815, "Nonducted Heat Recovery Ventilators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Non-Ducted Heat Recovery Ventilator."

HEATING AND HEATING-COOLING
APPLIANCE ACCESSORIES (LZZX)

This category covers accessories for use in the assembly or installation of air conditioning heating, cooling or refrigeration equipment, and similar applications.

CONTROLS, LIMIT (MBPR)

GENERAL

This category covers controls that are essentially switches operated by a change in liquid level, pressure or temperature. They are intended primarily for use with air conditioning and heating equipment, although not limited to such specific applications. They are intended for household, commercial or industrial use in accordance with ANSI/NFPA 70, "National Electrical Code."

The limit controls may be provided as complete assemblies or they may consist of separate control and sensor sections as indicated in the individual Listings.

Controls for heating equipment — Controls intended for heating equipment are suitable for use with systems equipped with coal stokers, electric heaters, gas burners, or oil burners.

Limit controls and low-water shutoffs — Limit controls and low-water shutoffs should be of the type that opens the circuit when an unsafe condition is approached.

NFPA References — Limit controls are intended for operation of air conditioning, heating air cooling, and ventilating systems as recommended by the National Fire Protection Association for the installation of:

Air conditioning and ventilating systems of other than residence type (ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems")

Residence-type warm air heating and air conditioning systems (ANSI/NFPA 90B, "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems")

Oil-burning equipment (ANSI/NFPA 31, "Standard for the Installation of Oil-Burning Equipment")

Gas piping and gas appliances in buildings (ANSI/NFPA 54, "National Fuel Gas Code")

Control testing and specifications — Investigations are conducted to determine the suitability of the circuit scheme and of the intended method of installation and operation of the equipment for use in accordance with the applicable NFPA standards. The suitability and durability of the design and construction, the practicability of installation and use, and the accuracy and reliability of operation of the equipment are determined by appropriate examinations and tests.

HEATING AND HEATING-COOLING APPLIANCE ACCESSORIES
(LZZX)

205

Controls, Limit (MBPR)—Continued

When selecting controls, the temperature or pressure range desired and whether automatic or manual reset is required should be specified. The identification of this equipment and its primary function serves as a guide for specifying or ordering. The manufacturer's catalog should be consulted for detailed specifications.

Groups — Limit controls are grouped according to their primary functions as follows:

- **Group A** — Controls operated by a change in pressure intended primarily to limit the pressure in steam heating systems.
- **Group B** — Controls operated by a change in temperature intended primarily to limit the temperature in hot water heating systems and water heaters.
- **Group C** — Controls operated by a change in temperature intended primarily to limit the temperature in supply ducts of air conditioning and warm-air heating systems. May also be used to regulate air temperature in ovens and similar applications.
- **Group D** — Controls operated by a change in temperature intended to regulate the operation of air circulating fans in air conditioning and warm-air heating systems.
- **Group E** — Controls operated by a change in temperature for installation in the return air duct of air conditioning and ventilating systems to automatically shut off the fans when the temperature of the air in the system becomes excessive.
- **Group F** — Controls operated by a change in temperature for installation in the smoke pipe of stoker-fired heating plants to prevent feeding of green coal when the fire is out.
- **Group G** — Controls operated by a change in liquid level for boilers to prevent operation of the heating appliance in the event of low water in the boiler.
- **Group H** — Controls operated by a change in liquid level to regulate the delivery of feed water to boilers.

If a single control combines the functions of two groups its designation is a combination of the two groups. For example, a combination warm-air limit control and fan switch of the automatic reset type is classified under "Group C, D."

Manual reset controls — An "M1" or "M2" marking as a suffix to the group designation indicates the following manual reset functions are provided:

- **M1** — Controls that automatically reset to the "closed" position after normal operating conditions have been restored if the reset means is held in the "reset" position.
- **M2** — Controls that do not automatically reset to the "closed" position if the reset means is held in the "reset" position.

PRODUCT MARKINGS

Limit controls are marked with the company's name or trademark, a distinctive catalog number, and the electrical ratings. Additional markings may be required based on the individual Listing Reports.

RELATED PRODUCTS

Controls for refrigeration and air conditioning (except remote, wall-mounted room thermostats) are covered under Controllers, Refrigeration (SDFY).

Electrical temperature controls for heating equipment, motor operators, and wall-mounted room thermostats are covered under Temperature-indicating and Regulating Equipment (XAPX).

ADDITIONAL INFORMATION

For additional information, see Heating, Cooling, Ventilating and Cooking Equipment (AAHC).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 353, "Limit Controls."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Limit Control" or "Section of Limit Control," or other appropriate product name as shown in the individual Listings.

HOISTS (MSXT)

USE AND INSTALLATION

This category covers power-operated hoists of the overhead type, intended for material lifting service using either chain or wire rope.

Power hoists may include electric or pneumatic types of operation. They are intended to be suspended from a fixed member and may include trolleys for mobility.

All hoists are of the self-locking or braking type so that if the actuating force is removed, the load is retained in place. Load capacities are marked on the assemblies.

This category does not cover:

- Manual or power-operated portable hoists intended for use with scaffolds suspended by wire ropes
- Hoists for transporting people
- Manually-operated chain hoists
- The fixed member or trolley that suspends the hoist

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1340, "Hoists."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Hoist" or "Hoist."

HOISTWAY CABLE (MSZR)

GENERAL

This category covers hoistway cable which is a single and multiple conductor cable for use in raceways in accordance with Article 620 of ANSI/NFPA 70, "National Electrical Code." Insulated conductors are 20 to 14 AWG inclusive. Multiple-conductor cable consists of insulated conductors cabled together with a suitable binder or sheath. The cable is rated 300 V or 600 V. The temperature rating, if so marked, is 90°C, otherwise it is 60°C. All cable complies with a vertical flame test.

PRODUCT MARKINGS

Hoistway cable is identified by the words "Hoistway Cable" printed on each insulated conductor and on the sheath, if provided.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 62, "Flexible Cord and Fixture Wire."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hoistway Cable."

HOSPITAL SIGNALING AND NURSE CALL ACCESSORY EQUIPMENT (NBQW)

USE AND INSTALLATION

This category covers equipment intended to be used separately or in combination to supplement a hospital nurse call signaling system. Its application is defined by the installation diagram covering the combination of the unit(s) with other units either employed for general hospital signaling use or used to form part of a hospital nurse call signaling system.

The equipment is intended to be installed in accordance with ANSI/NFPA 99, "Standard on Health Care Facilities." Authorities Having Jurisdiction should be consulted before installation.

These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres, it is so indicated in the individual Listings and marked on the device.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1069, "Hospital Signaling and Nurse Call Equipment."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these prod-

ucts includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Hospital Signaling and Nurse Call Equipment" or "Hospital Signaling and Nurse Call Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Hospital Signaling and Nurse Call and Security Equipment" or "Hospital Signaling and Nurse Call and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Hospital Signaling and Nurse Call and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S - Security Equipment
- F - Fire Alarm Equipment
- HN - Hospital Signaling and Nurse Call Equipment
- G - General Signaling Equipment
- EM - Enclosed Energy Management Equipment
- IT - Information Technology Equipment
- T - Telephone Equipment

HOSPITAL SIGNALING AND NURSE CALL EQUIPMENT (NBRZ)

USE

This category covers units employed for general hospital signaling use, or to form part of a hospital nurse call signaling system.

Where system units are identified as supplementary, they are usually intended for connection to other manufacturer's non-Listed equipment. These Listed supplementary units have been investigated for their ability to provide isolation between the other non-Listed equipment and the other Listed system units.

Where system interconnection wiring is supervised for open, ground, and short faults, the supervised conductors/circuits are identified in the individual Listings.

Equipment suitable for use in shower stalls is identified in the individual Listings as "Shower Station."

Equipment suitable for use in oxygen-enriched atmospheres or by patients undergoing oxygen therapy is identified as such in the individual Listings. All other equipment should not be used in oxygen-enriched atmospheres or by patients undergoing oxygen therapy.

INSTALLATION

This equipment is intended to be installed in exact accordance with the instructions in the manufacturer's installation manual included with the equipment, and the requirements of ANSI/NFPA 70, "National Electrical Code," and ANSI/NFPA 99, "Standard for Health Care Facilities."

Authorities Having Jurisdiction should be consulted before installation.

To maintain leakage-current levels required by the applicable codes, it is intended that the interconnected wiring of the installed system be segregated (separate conduit) from that of systems which are not Listed or Listed to other categories not conforming to the leakage-current requirements of ANSI/NFPA 99.

INSTALLATION INSTRUCTIONS/MARKINGS

The individual system units covered under this category are separately Listed. These units are tested as a typical system while wired in accordance with the manufacturer's installation instructions and wiring diagram. The Listing covers not only the system units but also the installation instructions and wiring diagrams that specify proper interconnection.

Modifications to the system in the field are limited to that described in the installation instructions for that system.

Only equipment Listed under a specific system name should be considered as having been tested together and found to be compatible per the installation instructions and wiring diagram. Reference is made in the marking of the control unit to the wiring diagram showing complete information except when the installation wiring diagram is secured to the control unit.

These units are not intended to be installed in areas where flammable anesthetics are likely to be present. Where equipment has been found suitable for use in oxygen-enriched atmospheres it is so indicated in the Listings and marked on the device.

Other equipment connected to any system unit Listed under this product category is not considered to be part of the system configuration unless the equipment in question is identified by the Listee name and model number in the installation instructions and covered under this category or Hospital Signaling and Nurse Call Accessory Equipment (NBQW).

OPERATIONS

HOSPITAL SIGNALING AND NURSE CALL EQUIPMENT (NBRZ)

System units identified as fundamental perform an essential/required operation whose primary function is to provide notification and/or reset/cancellation of a staff-initiated or patient-initiated call signal to alert the staff. The operations include all of the following:

- Call annunciation at a nurse's station (audible and visual),
- Call annunciation at the dome light,
- Call-placed indicator on the patient station (visual),
- Zone annunciation (audible and visual), and
- Call reset/cancellation.

Devices that perform fundamental operations are not investigated as being capable of performing supplementary operations.

A supplementary device is a device that is electrically isolated and not investigated as a fundamental device. A supplementary operation is an operation that is adjunct to the fundamental operation so that the failure of such will have no effect on the fundamental operation of the nurse call system.

Various system units may additionally annunciate fire alarm signals. These signals are supplementary only and these system units have not been investigated as fire-protective signaling system units.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

ADDITIONAL INFORMATION

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1069, "Hospital Signaling and Nurse Call Equipment."

UL MARK

The Signaling Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Signaling Listing Mark for these products includes the UL symbol with the word "SIGNALING" above the UL symbol and the word "LISTED" below the UL symbol (as illustrated in the Introduction of this Directory), a control number, and the product name "Hospital Signaling and Nurse Call Equipment" or "Hospital Signaling and Nurse Call Subassembly."

When applicable, the Security Mark is also included. The combined Signaling/Security Listing Mark consists of the Signaling Mark elements detailed above and the word "SECURITY" above the UL symbol. The product name is "Hospital Signaling and Nurse Call and Security Equipment" or "Hospital Signaling and Nurse Call and Security Subassembly."

Some of these products are also Listed under other Signaling and Energy Management, Information Technology or Telephone categories. When applicable, the product name may include "and Fire Alarm," "and General Signaling," "and Enclosed Energy Management," "and Information Technology" or "and Telephone," as appropriate (e.g., "Hospital Signaling and Nurse Call and Telephone Equipment").

The product name may be abbreviated as follows: The word "Type:" followed by the appropriate Type Code (as shown below), additionally followed by "Subassembly," as applicable.

Type Codes:

- S – Security Equipment
- F – Fire Alarm Equipment
- HN – Hospital Signaling and Nurse Call Equipment
- G – General Signaling Equipment
- EM – Enclosed Energy Management Equipment
- IT – Information Technology Equipment
- T – Telephone Equipment

HYDROGEN GENERATORS (NCBD)

HYDROGEN GENERATORS, WATER REACTION TYPE (NCBR)

USE AND INSTALLATION

This category covers products that generate hydrogen for use as a fuel by chemical reactions with water and other chemical substances (e.g., sodium borohydride and sodium hydride). These products are intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." These products have an input rating of 600 V or less, and are intended for either portable or permanent connection to the source of supply and for installation in accordance with the manufacturer's installation instructions. These products are intended to be installed in accordance with ANSI/NFPA 55, "Standard for the Storage, Use, and Handling of Compressed Gases and Cryogenic Fluids

HYDROGEN GENERATORS (NCBD)

207

Hydrogen Generators, Water Reaction Type (NCBR)—Continued

in Portable and Stationary Containers, Cylinders, and Tanks," ANSI/NFPA 52, "Vehicular Fuel Systems Code," or the "International Fuel Gas Code," as applicable.

PRODUCT MARKINGS

These products are marked to indicate the manufacturer's name; model number; electrical input rating; IP rating; hydrogen output purity, temperature, capacity and pressure; and input fuel. Units are marked for residential use or nonresidential use as intended:

- **Residential** — Use in occupancies in which sleeping accommodations are provided for normal residential purposes and include all buildings designed to provide sleeping accommodations.
- **Nonresidential** — Use in locations other than residential, such as mercantile business, industrial and storage.

RELATED PRODUCTS

This category does not cover fuel cell systems or reversible fuel cell systems; such products are covered under Stationary Fuel Cell Systems (IRGZ), Fuel Cell Power Systems for Use in Industrial Trucks (IRGQ), Hand-held or Hand-transportable Fuel Cell Power Units and Disposable Fuel Cartridges (IRGU) or Fuel Cell Modules (IRGR2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Flammable and Combustible Liquids and Gases Equipment (AAPQ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2264B, "Outline of Investigation for Hydrogen Generators Using Water Reaction."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydrogen Generator, Water Reaction Type."

WATER-DRIVEN VENTILATORS FOR USE IN HAZARDOUS LOCATIONS (NCGV)

GENERAL

This category covers water-turbine-powered, positive-pressure ventilators intended for use in hazardous locations.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Positive Pressure Ventilation Fan for Use in Hazardous Locations" or "Water Driven Ventilator for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

HYDROMASSAGE BATHTUBS (NCHX)

USE AND INSTALLATION

This category covers indoor hydromassage bathtubs (also known as whirlpool baths) rated 250 V or less, for residential and commercial use, for permanent connection to the building plumbing, and intended for installation and use in accordance with Article 680 of ANSI/NFPA 70, "National Electrical Code." They are intended for either permanent connection to the electrical supply or are provided from the factory with a maximum 3 ft. type SJ or equivalent service cord terminating in a grounding type attachment plug. A hydromassage bathtub may have provision for a maximum of two supply sources.

A hydromassage bathtub consists of a drainable tub, a recirculating pump and optional equipment such as lights, a heater, a control and an

air blower. A bathtub may also be provided with an air-blower and no recirculating pump or with an integral shower unit.

This category also covers heaters intended to be installed after a hydromassage bathtub leaves the factory. These field-installed heaters are Listed as hydromassage bathtub accessories. They are provided with markings on the heater and on the heater packaging to indicate the hydromassage bathtub models with which they are suitable.

Hydromassage bathtubs and hydromassage bathtub accessory heaters are intended to be protected by a ground-fault circuit interrupter.

Double Insulation — Hydromassage bathtubs may utilize double insulated pumps. These pumps are marked "Double Insulated" or "Double Insulation." Double insulated pumps intended for permanent connection to the supply may or may not have provision to terminate an equipment grounding conductor. Cord-connected double insulated pumps may be provided with a power supply cord terminating in a nongrounding type attachment plug. Double insulated pumps are not provided with a pressure wire connector for equipotential bonding.

The physiological effect of using this equipment has not been determined. The suction fittings used in these hydromassage bathtubs have been investigated with respect to body and hair entrapment in accordance with ASME/ANSI A112.19.8M-1987.

INSTRUCTIONS/MARKINGS

Factory Configuration Information — Each hydromassage bathtub is provided with a marking on the wiring diagram, in the installation instructions or on a separate configuration sheet, to identify the factory-installed components of the unit. These components include pumps, controls, heaters, luminaires, and supply cords. This configuration marking and the installation instructions are intended to be available during installation and inspection.

Field-installed Options — Field-installed options that have been investigated and found to be suitable for addition to the unit are specified in the installation instructions. Hydromassage bathtubs intended for accessory heaters to be installed in the field are factory configured with fittings for this purpose. These bathtubs are marked "Suitable for Field-Installed Heater Accessory" and "Use only Accessory Heaters Marked for Use with This Bathtub."

RELATED PRODUCTS

Portable hydromassage equipment is covered under Personal Hygiene and Health Care Appliances (QGRZ). This category does not cover hydrotherapy tubs used in health care facilities. For professional equipment, see Medical and Dental Equipment, Professional (KFBO) under Health Care Facilities Equipment (KEVQ). For prefabricated steam baths and showers, see Prefabricated Assemblies, Sections and Units (QQXX). For sauna and steam bath heating equipment, see Heaters, Sauna and Steam Bath (KPJV). Self-contained spas and hot tubs are covered under Self-contained Spas (WCZW).

For unjetted plastic bathtubs, shower stalls, and the like tested in accordance with the applicable ANSI Z124 series standards, see Plastic Plumbing Fixtures (QNNP).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Plumbing and Associated Products (AAPP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1795, "Hydromassage Bathtubs."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of hydromassage bathtubs that not only meet the appropriate requirements of UL but also have been investigated in accordance with Standards or parts detailed below. These products are intended for installation and use in accordance with the applicable model plumbing code.

1. ASME/ANSI A112.19.7M+, "Requirements for Whirlpool Bathtub Appliances"
2. Water retention test requirement from ASME/ANSI A112.19.7M+ + Issue date of standard or latest addendum

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Hydromassage Bathtub" or "Hydromassage Bathtub Accessory."

Combination Listing/Classification Mark — A Listing Mark combined with a Classification Mark is provided on products that have additionally been investigated in accordance with standards or parts detailed below from the American National Standards Institute (ANSI). The combined Listing/Classification Mark consists of the Listing Mark elements detailed above and the following marking: "ALSO CLASSIFIED IN ACCORDANCE WITH *," where "*" is one of the texts detailed below:

1. ASME/ANSI A112.19.7M+
2. WATER RETENTION TEST REQUIREMENT FROM ASME/ANSI A112.19.7M+ + Issue date of standard or latest addendum

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

This category covers the following devices:

- Electro-sensitive protective equipment
- Emergency stop devices
- Industrial control panels
- Industrial control switches
- Motor control centers
- Motor controllers over 1500 V
- Motor controller accessories over 1500 V
- Motor controllers
- Power circuit and motor-mounted apparatus
- Power conversion equipment (medium voltage)
- Programmable controllers
- Programmable safety controllers
- Protective relays
- Proximity switches

Enclosure type ratings — Enclosed industrial control equipment is identified with an enclosure type designation and is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). Only enclosure type designations associated with the UL Listing Mark have been certified by UL. Open-type components investigated for mounting through the wall of specific enclosure types are marked "Suitable for use on a flat surface of a Type ___ enclosure," or the equivalent, and are provided with instructions and mounting hardware.

Open-type equipment — Unless otherwise specified in the instructions or markings on the product, open-type industrial control equipment is intended for installation within enclosures supplied in the field.

Field wiring connections — Industrial control equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Accessories — Industrial control equipment for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

Coil ratings — Unless otherwise marked, the sealed volt-ampere rating of the operating coil circuit of a magnetically-operated industrial control device is as tabulated below. For a magnetically-operated industrial control device with an ac coil, the device is investigated for operation over a range of +10% and -15% of the rated control circuit voltage. For a magnetically-operated industrial control device with a dc coil, the device is investigated for operation over a range of +10% and -20% of the maximum rated control circuit voltage.

Marked Contact Rating of Device, Amperes	Maximum Coil Volt-Amperes
30 A or less	30 VA
50 A or less	75 VA
150 A or less	100 VA
300 A or less	125 VA

Voltage ratings — Industrial control equipment is marked with the maximum voltage rating for the intended loads. When the marked voltage rating is included in one of the voltage ranges tabulated below, the equipment has been investigated for use at the corresponding maximum voltage of the range:

Marked Voltage Rating of Equipment	Maximum Use Voltage
110 - 120	120
220 - 240	240
254 - 277	277
380 - 415	415
440 - 480	480
550 - 600	600

Frequency — Unless otherwise marked on the equipment, industrial control equipment is intended for use on alternating-current supply with a rated frequency of 50/60 Hz.

Load type — Unless otherwise marked on the equipment, an ampere rating assigned to industrial control equipment is considered to be a general-purpose rating for use with a load that is continuous or with an inrush current that does not exceed the ampere rating of the device. For other specific load types, the rating is followed by one of the following terms:

Marked Rating on Device	Intended Load Type
Amperes	General use
Amperes, resistive (or res.)	Resistive
Amperes, resistance	Heater load

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Marked Rating on Device	Intended Load Type
Amperes, ballast	Electric discharge lamp magnetic ballast load
Amperes, electronic ballast	Fluorescent lamp electronic ballast load
Amperes or watts, tungsten	Incandescent lamp load
Code designation, volt-amperes	Coil, standard or heavy duty (pilot duty)
Amperes, kVar	Capacitor switching load, full load
Hp	amperes
FLA/LRA	Motor load
	Hermetic refrigeration compressor motor

Number of poles — Unless otherwise marked, an industrial control device rated for a single-phase load has been investigated for controlling a single-phase load using one pole of the controller. A controller rated for a three-phase load has been investigated for controlling the three-phase load using two poles of the controller. For an industrial control device marked “break all lines” or the equivalent, such as by means of a wiring diagram, a switched pole is intended to be connected to each conductor supplying the load.

Number of phases — A marked rating for which the number of phases is not specified is considered to be for a single-phase circuit.

Ambient temperature rating — Unless otherwise specified on the product or on instructions provided with the product, enclosed industrial control equipment and open-type equipment, when installed in an enclosure, is intended for use in an ambient temperature of 0°C – 40°C (32°F – 104°F).

Surrounding air-temperature rating — Some open-type equipment is marked with a surrounding air-temperature rating. Such equipment is intended to be installed within an enclosure having sufficient volume and ventilation or is provided with additional cooling means such that while the equipment is in operation, the air immediately surrounding the equipment within the ultimate enclosure does not exceed the marked surrounding air-temperature rating.

Service equipment markings — Some industrial control equipment is suitable for use as service equipment and may be so marked.

Some industrial control equipment incorporates neutrals that are insulated from the frame or enclosure. Such units are marked “Suitable for Use as Service Equipment.” Some industrial control equipment incorporates neutrals factory bonded to the frame or enclosure. Such units are marked “Suitable Only for Use as Service Equipment.”

ELECTRO-SENSITIVE PROTECTIVE EQUIPMENT (NIOZ)

GENERAL

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery. ESPE is applied to machinery that presents a risk of personal injury, and is intended to provide protection by causing the machine to revert to a safe condition before a person can be placed in a hazardous situation.

SPECIAL CONSIDERATIONS

In addition to fire and electric shock hazards, these devices have been investigated for their safety-related performance features. ESPE is designated as conforming to the requirements for Type 2, 3 or 4 ESPE as shown in the individual Listings and as defined in ANSI/UL 61496-1, “Electro-Sensitive Protective Equipment, Part 1: General Requirements and Tests.” In addition, the individual Listings identify products that also have been investigated to ANSI/UL 1998, “Software in Programmable Components,” or IEC 61508-3, “Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems – Part 3: Software Requirements.”

The adequacy of the dimensions or configuration of the sensing zone and its disposition in relation to hazardous parts for any particular application has not been investigated as part of this category, nor what constitutes a hazardous state of any machine. The investigation of ESPE is restricted to the functioning of the ESPE, the means by which it monitors the condition of the machine, and how it interfaces with the machine controls.

The products covered in this category may be relevant to applications other than those for the protection of persons, for example for the protection of machinery or products from mechanical damage. In those applications additional requirements may be necessary, for example when the materials that have to be recognized by the sensing function have different properties from those of persons.

Active Opto-electronic Protective Devices (NIPF)

GENERAL

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices (AOPD) for the sensing function.

The sensing function is performed by opto-electronic emitting and receiving elements detecting the interruption of optical radiations generated, within the device, by an opaque object present in the specified detection zone.

Excluded from this category are AOPDs employing radiation at wavelengths outside the range 400 nm to 1,500 nm.

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Active Opto-electronic Protective Devices (NIPF)–Continued

ADDITIONAL INFORMATION

For additional information, see Electro-sensitive Protective Equipment (NIOZ), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 508, “Industrial Control Equipment,” UL 61496-1, “Electro-Sensitive Protective Equipment Part 1: General Requirements and Tests” and UL 61496-2, “Electro-Sensitive Protective Equipment Part 2: Particular Requirements for Equipment Using Active Opto-Electronic Protective Devices (AOPDs).”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction to this Directory) together with the word “LISTED,” a control number, and one of the following product names or abbreviations, as appropriate: “Electro-Sensitive Protective Equipment” or “ESPE,” “Active Opto-Electronic Protective Device” or “AOPD,” or other appropriate product name as shown in the individual Listings.

Active Opto-electronic Protective Devices Responsive to Diffuse Reflection (NIPM)

GENERAL

This category covers electro-sensitive protective equipment (ESPE) for the safeguarding of machinery, employing active opto-electronic protective devices responsive to diffuse reflection (AOPDDR) for the sensing function.

The sensing function is performed by opto-electronic devices which respond to the diffused reflection from an opaque object present in the specified detection zone of their incident light.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 508, “Industrial Control Equipment,” IEC 61496-1, “Safety of Machinery – Electro-Sensitive Protective Equipment – Part 1: General Requirements and Tests” and IEC 61496-3, “Safety of Machinery – Electro-sensitive Protective Equipment – Part 3: Particular Requirements for Equipment Using Active Opto-Electronic Protective Devices Responsive to Diffuse Reflection.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction to this Directory) together with the word “LISTED,” a control number, and the product name “Electro-Sensitive Protective Equipment” (or “ESPE”) or “Active Opto-Electronic Protective Device Responsive to Diffuse Reflection” (or “AOPDDR”), or other appropriate product name as shown in the individual Listings.

EMERGENCY STOP DEVICES (NISD)

GENERAL

This category covers emergency stop devices, including emergency stop units and emergency stop buttons, intended to be installed in a machine control system to perform a Category 0 or Category 1 stop function as defined in ANSI/NFPA 79, “Electrical Standard for Industrial Machinery.” The emergency stop actuator provided in these devices is a self-latching type. These devices have been investigated for their functionality in addition to fire and electric shock safety.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are:

- ANSI/UL 508, “Industrial Control Equipment”
- UL 991, “Tests for Safety-Related Controls Employing Solid-State Devices”
- ANSI/NFPA 79, “Electrical Standard for Industrial Machinery”
- IEC 60947-5-5, “Low-Voltage Switchgear and Controlgear – Part 5-5: Control Circuit Devices and Switching Elements – Electrical Emergency Stop Device with Mechanical Latching Function”
- EN 418, “Safety of Machinery – Emergency Stop Equipment, Functional Aspects – Principles for Design”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured

Emergency Stop Devices (NISD)—Continued

under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Emergency Stop Device," "Emergency Stop Unit" or "Emergency Stop Button," or other appropriate product name as shown in the individual Listings.

INDUSTRIAL CONTROL PANELS (NITW)**GENERAL**

This category covers industrial control panels, which are factory-wired assemblies of industrial control equipment, such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch-circuit protective devices. An industrial control panel does not include the controlled loads, including motors, luminaires, heaters, or utilization equipment.

An enclosed industrial control panel is comprised of the enclosure, all components located within the enclosure, and all components mounted to the walls of the enclosure.

An open industrial control panel is comprised of a mounting sub-panel and all components mounted to the sub-panel, and is intended for installation into an enclosure in the field.

This category also covers industrial control panel enclosures. The enclosures may contain ventilation openings, observation windows, conduit fittings, environmental control devices, or maintenance luminaires. Industrial control panel enclosures are intended to house open-type industrial control panels or individual items of industrial control equipment installed in the field.

Industrial control panels are intended for installation in accordance with Article 409 of ANSI/NFPA 70, "National Electrical Code" (NEC).

Unless otherwise marked, industrial control panels covered under this category are intended for general-use industrial applications for control of heaters, lighting, motors or pump loads, or a combination of these loads, and are intended for installation in accordance with Chapter 4 of the NEC.

Industrial control panels marked "Industrial Control Panel for Industrial Machinery" on the unit nameplate have been investigated to determine that they meet the requirements of ANSI/NFPA 79, "Electrical Standard for Industrial Machinery," in addition to Article 670 of the NEC. Industrial control panels designated for control of industrial machinery may not be suitable for use with other.

Industrial control panels marked "Flame Control Panel" on the unit nameplate contain controls for fossil fuel-burning equipment, such as incinerators, kilns, and drying ovens, intended for industrial applications. These control panels may additionally contain controls for other loads.

Industrial control panels marked "Crane Control Panel" or "Hoist Control Panel" on the unit nameplate contain controls for overhead cranes and hoists for industrial applications. These panels are intended for installation in accordance with Article 610 of the NEC and may not be suitable for use with equipment other than cranes and hoists.

Industrial control panels marked "Industrial Control Panel for Marine Use" on the unit nameplate are intended for use aboard vessels over 65 feet (19.9 m) in length. These panels have been investigated to determine that they meet the requirements of USCG Electrical Engineering Regulations Subchapter J (46CFR, Part 110).

Industrial control panels marked "Industrial Control Panel for Refrigeration Equipment" or "Industrial Control Panel for Air Conditioning Equipment" on the unit nameplate contain controls for hermetic refrigerant compressor motors for industrial applications. These control panels are intended for installation in accordance with Article 440 of the NEC. Industrial control panels designated for control of refrigeration equipment may not be suitable for use with equipment other than refrigeration equipment.

Industrial control panels marked for service equipment use may be provided with ground-fault protection for services or major feeders. The circuit(s) so protected are identified by a marking, such as on a wiring diagram or on the equipment. Instructions are provided for on-site testing of the ground-fault protection at the time of installation.

Industrial control panels marked "Fountain Control Panel" on the unit nameplate are intended for control of permanently installed fountains or floating fountains. These control panels are intended for installation in accordance with Article 680 of the NEC.

RATINGS

Industrial control panels are rated 600 V or less. Each power circuit output from the control panel is rated in current or power, voltage, and the intended load type, such as a motor. Each supply input to the industrial control panel is rated in full load amperes, rating of largest motor load, voltage, number of phases, and frequency.

ENVIRONMENTAL RATINGS

Industrial control panel enclosures are marked with the enclosure type ratings for which they were investigated.

Enclosed industrial control panels are marked with an enclosure type rating. The type rating of the industrial control panel may differ from the rat-

Industrial Control Panels (NITW)—Continued

ing of the basic enclosure due to the presence of components or assemblies installed through the enclosure walls by the manufacturer.

PRODUCT MARKINGS

Industrial control panels are marked with the electrical ratings for each source of supply to the panel. The panel or wiring diagram provided with the panel is marked with the electrical ratings of the intended load equipment, such as motors, heaters, lighting, or appliance loads. Industrial control panels are provided with a complete schematic diagram of the panel as built by the manufacturer. When the schematic wiring diagram includes components that are not supplied with the industrial control panel, such as remote control devices, motors or similar devices, a notation or similar means is used to identify such components. When additional installation instructions are provided on a separate drawing, a reference to the drawing containing the information is marked on the nameplate of the industrial control panel.

SPECIAL CONSIDERATIONS

These control panels are investigated for electrical fire and shock hazards only. The investigation of industrial control panels does not include investigation of the adequacy of the control and protective devices to supervise the functioning of the controlled equipment.

Special relationships and investigations may be necessary for the proper operation of certain equipment, as noted below:

1. Control panels investigated for use in access control systems, which provide a means of regulating or controlling entry into an area, are covered under Access Control System Units (ALVY).
2. Fountain control panels investigated for use with permanently installed or floating fountains are covered under Architectural and Floating Fountains (AWEG).
3. Industrial control panels investigated with air conditioning and refrigeration equipment are covered under Heating and Cooling Equipment (LZFE) or Specialty Refrigeration Equipment (SROT).
4. Industrial control panels investigated with industrial machinery are covered under Factory Automation Equipment (GPNY).
5. Flame control panels investigated with specific burner assemblies are covered under Commercial/Industrial Gas Burners (KXWT), Gas-Oil Burners (KYKR) or Oil Burners (KYXZ).
6. Fluid-handling systems consisting of industrial control panels, pumps, valves, gauges, and piping mounted to a structural base are covered under Packaged Pumping Systems (QCZJ).
7. Control panels investigated with equipment intended for use as part of a semiconductor manufacturing process are covered under Analysis and Measurement Equipment (TWLR), Miscellaneous Equipment (TWTZ), Power Supplies (TWVJ) or Limited Production (TWWU).

RELATED PRODUCTS

Enclosures for general-use electrical equipment or wiring are covered under Boxes, Junction and Pull (BGUZ) or Cabinets and Cutout Boxes (CYIV).

Control panels intended for elevators, dumbwaiters, escalators, moving walks, inclined lifts and their associated equipment are covered under Elevator Control Panels (FQPB).

Control panels with connection to sensors or initiating devices to detect and activate emergency alarms are covered under Signal System Units (UDTZ).

Equipment for gas or vapor detection and intended for connection to emergency alarm equipment is covered under Gas and Vapor Detectors and Sensors (FTAM).

Control equipment intended to supply automatic illumination, power, or both, to critical areas and equipment essential to safety of human life is covered under Emergency Lighting and Power Equipment (FTBR).

Freestanding motor control center sections, motor control center units and equipment intended for field installation into a motor control center are covered under Motor Control Centers (NJAV).

Control panels intended for installation in hazardous (classified) locations are covered under Control Panels and Assemblies for Use in Hazardous Locations (NNNY).

Control panels provided with intrinsically safe circuits for extension into hazardous (classified) locations are covered under Industrial Control Panels Relating to Hazardous Locations (NRBX).

Cabinets, enclosures and rack/frame systems that include components and assemblies intended to power, protect, heat, cool or otherwise support information technology (IT), telecommunications equipment, or audio/video equipment (A/V) are covered under Information Technology and Communications Equipment Cabinet, Enclosure and Rack Systems (NWIN).

Equipment intended for the control of fuel cells, photovoltaic systems, or utility interactive systems are covered under AC Modules (QHYZ), Distributed Resource Power Systems (QIJL) or Static Inverters and Converters for Use in Independent Power Systems (QIKH).

Portable control panels containing switches, overcurrent protection, and that are cord connected via attachment plugs and receptacles for use at carnivals, circuses, fairs, exhibition halls, motion picture and television studios,

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Industrial Control Panels (NITW)—Continued

theaters, construction sites and similar locations are covered under Portable Power Distribution Units and Devices (QPSH) or Portable Power Distribution Panels (QPSM).

Assemblies comprised of equipment such as circuit breakers, fuses, switches, and related accessory equipment and intended to distribute power to field installed communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY).

Prefabricated walk-in buildings or structures that may include industrial control panels or other equipment are covered under Commercial and Industrial Buildings (QRNZ).

Control panels intended for industrial application on power-operated machines intended for such uses as pressing, punching, shearing or braking operations, and additionally investigated in accordance with the Occupational Safety and Health Administration Standard Section 1910.217 are covered under Press and Other Power-operated Machine Controls and Systems (QUEQ).

Controllers intended for electric fire pumps are covered under Pump Controllers, Fire (QYZS).

Industrial control panels additionally investigated in accordance with SEMI S2 Standards are covered under Control Panels (TWRP).

Control panels containing electrical control units for use in fire-protective signaling systems are covered under Control Units, Releasing Device (SYZV), Control Units, System (UOJZ) or Smoke Control System Equipment (UUKL).

Control panels intended for use with equipment for water-play fountains and water playground areas, swimming pools and spas, or fountains with water in common with swimming pools are covered under Controls (WAWU).

Freestanding assemblies of circuit breakers and busses for control of electric light and power circuits of equipment for installation into dead-front switchboards are covered under Switchboards, Dead-front (WEVZ).

Enclosed assemblies consisting only of lengths of busbars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors for power circuits are covered under Termination Boxes (XCKT).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Open Industrial Control Panel," "Enclosed Industrial Control Panel" or "Industrial Control Panel Enclosure."

The "Enclosed Industrial Control Panel" Listing Mark covers both the enclosure and the provided panel. Open panels employ the "Open Industrial Control Panel" Listing Mark. The "Industrial Control Panel Enclosure" Listing Mark covers only the enclosure; the compatibility of the enclosure and the installed equipment and associated wiring has not been investigated unless an "Enclosed Industrial Control Panel" Listing Mark is also present.

Flame Control Panels (NIVT)**USE**

This category covers flame control panels intended for application in the control of fossil fuel burning equipment such as incinerators, kilns and drying ovens. Flame control panels have been Classified only as to electrical fire and shock hazards incident to their use in ordinary locations. The compatibility of the panel with the controlled equipment from the standpoint of programming the burner(s) and preventing hazardous conditions due to firing of fuel has not been determined.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Panels (NITW), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

MOTOR CONTROL CENTERS (NJAV)**GENERAL**

This category covers motor control centers, which are floor-mounted assemblies of one or more enclosed vertical sections having a common horizontal power bus and primarily containing combination motor control units. In addition, motor control centers may contain other types of units, such as relay units, circuit breaker units, disconnect switch units, or panelboard units. Units are mounted one above the other in the vertical sections. Power may be supplied to the individual units by vertical power bus or, if the bus is omitted, by suitable wiring to the horizontal bus.

A combination motor control unit includes an externally operable circuit disconnecting means, branch circuit overcurrent protection, and a motor controller. Motor control centers are intended for installation in accordance with Article 430 of ANSI/NFPA 70, "National Electrical Code."

Motor control center sections and units are rated 600 V maximum. Motor control center sections are rated for the maximum current for horizontal and vertical bus. A motor control center section is marked "Short-circuit current rating amps – RMS symmetrical volts – maximum. Do not install on circuits with available short-circuit currents greater than the lowest short-circuit rating of any installed unit," or the equivalent.

Combination motor control center units are rated in horsepower. A motor control center unit is marked "Unit short-circuit current rating – RMS symmetrical amps – volts maximum, when equipped with fuse or circuit breaker," or the equivalent.

A motor control center section or enclosure investigated for outdoor use is marked "Rainproof." A motor control center enclosure is intended to enclose one or more motor control center sections.

USE AS SERVICE EQUIPMENT

The marking "Suitable For Use As Service Equipment" appears on each motor control center section optionally intended for use at a service.

Some motor control center sections incorporate neutrals factory bonded to the enclosure. Such sections are marked "Suitable Only For Use As Service Equipment."

A section marked for use at services may also be used to provide the main control and disconnecting means for a separately derived system.

RELATED PRODUCTS

For information concerning overcurrent protective devices for motor controllers, see Motor Controllers (NJOT).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 845, "Motor Control Centers."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor Control Center Unit," "Motor Control Center Section" or "Motor Control Center Rainproof Enclosure."

The Listing Mark for motor control center sections also includes the marking "___ of ___." The first space is stamped with a number indicating the position that the section occupies in the series of sections constituting the motor control center. The latter space is stamped with the total number of sections in the motor control center. The Listing Mark on the motor control center section does not cover the individual units that are installed in the section.

The splice bus for interconnecting horizontal bus of abutting vertical sections in the series is also covered by the section Listing Mark.

Each Listed motor control center unit is identified by its own Listing Mark. Only those sections and units that bear the Listing Mark are covered under UL's Follow-Up Service.

MOTOR CONTROLLERS OVER 1500 VOLTS (NJHU)**GENERAL**

This category covers enclosed motor controllers having ac voltage ratings of 1501 V to 15 kV, intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA or kA rating appearing on the nameplate. The three-phase available symmetrical MVA is

Motor Controllers Over 1500 Volts (NJHU)—Continued

equal to the product of the available symmetrical rms short-circuit current, the line-to-line open circuit voltage, and a phase factor of 1.73×10^6 .

Motor controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled; accordingly, they are tested at six times the continuous current rating of the controller at rated voltage.

Some motor controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

These motor controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

These motor controllers may consist of a single vertical section housing one or more individual controllers, or may consist of several abutting vertical sections intended for interconnection by means of a suitable horizontal bus. These vertical sections are normally freestanding; however, a single motor controller may be provided in a construction intended for wall mounting.

This category covers both electromechanical and solid-state-type controllers. Solid-state controllers have static switching elements for stopping, starting, and controlling the load, and are also provided with an isolating means which, when opened, provides a visible isolation gap.

ARC-RESISTANT MOTOR CONTROLLERS

Motor controllers specially designed to provide some degree of protection to an operator, or other personnel in the vicinity of the equipment, from the effects of an internal arc occurring in atmospheric air within the enclosure when the doors and covers are secured as intended may additionally be Classified as arc-resistant motor controllers.

Arc-resistant motor controllers have been investigated for installation in buildings (for indoor applications) that have sufficient overhead space to permit venting without reflecting arc products, as specified in the installation instructions.

Arc-resistant motor controllers are marked with an Accessibility Type designation of Type 1, 1C, 2 or 2C, based upon the construction.

Type 1 designates motor controllers with arc-resistant construction at the front only.

Type 1C designates motor controllers with arc-resistant construction at the front, and between compartments within the same section or adjacent sections.

Type 2 designates motor controllers with arc-resistant construction at the front, sides and rear.

Type 2C designates motor controllers with arc-resistant construction at the front, sides and rear, and between compartments within the same section or adjacent sections.

In Type 1C or 2C equipment, a fault in a main busbar compartment may propagate into the main busbar compartments of adjacent sections.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate electromechanical products rated 7200 V or less in this category is ANSI/UL 347, "High Voltage Industrial Control Equipment." The basic requirements used to investigate controllers rated 7201 V to 15 kV, and solid-state-type controllers rated 1501 V to 15 kV in this category are contained in UL Subject 347B, "Outline of Investigation for Medium Voltage Motor Controllers, Up to 15 kV."

In addition to the basic standards noted above, the standard used to investigate motor controllers Classified as "arc resistant" is IEEE C37.20.7, "IEEE Guide for Testing Medium-Voltage Metal-Enclosed Switchgear for Internal Arcing Faults."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Industrial Control Equipment" or "High Voltage Motor Control Equipment Section."

The Listing Mark for high-voltage motor control equipment sections also includes the designation "___ of ___." The first blank is stamped with the number indicating the position that the section occupies in the series of sections constituting the high-voltage motor control equipment. The second blank is stamped with the total number of sections in the high-voltage motor control equipment (including sections not bearing a UL Listing Mark).

Each Listed high-voltage motor control equipment section consists of one or more high-voltage industrial control equipment units. Each Listed high-voltage industrial control equipment unit is individually identified as a Listed product.

Classification Mark for Arc-resistant Motor Controllers

The Classification Mark of Underwriters Laboratories Inc. on motor controllers investigated as arc resistant is the only method provided by UL to

Motor Controllers Over 1500 Volts (NJHU)—Continued

identify products manufactured under its Classification and Follow-Up Service. The Classification Mark consists of the appropriate Listing Mark (noted above) and the following additional information:

ARC-RESISTANT MOTOR CONTROLLER**ALSO CLASSIFIED IN ACCORDANCE WITH IEEE C37.20.7**

The Classification Mark appears on the front of each vertical section eligible for Classification. The Classification Mark covers only the vertical section to which it is affixed; it does not cover other vertical sections included in the assembly, or removable units. Each vertical section of a line-up of abutting vertical sections is provided with a "___ of ___" marking, where the first blank indicates the position (from left to right) of the vertical section bearing the UL Mark, and the second blank indicates the total number of vertical sections (including sections not bearing the UL Mark).

Power Conversion Equipment, Medium Voltage (NJIC)**GENERAL**

This category covers enclosed power conversion equipment with primary voltage ratings of 1501 to 15 kV, intended for use in accordance with ANSI/NFPA 70, "National Electrical Code." This equipment supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for medium-voltage power conversion equipment.

PRODUCT MARKINGS

Medium-voltage power conversion equipment incorporating overload protection for motors is marked to indicate the level of protection provided in percent of full-load current. Where such protection is adjustable, a marking with instructions for adjustment is provided.

Equipment not providing motor overload protection is marked to indicate motor protection, such as thermal overload relays, or a thermally-protected motor must be otherwise provided.

Medium-voltage power conversion equipment is marked with the following electrical ratings:

- **Input Ratings:** Voltage, maximum continuous input current, frequency, number of phases, maximum allowable system symmetrical short-circuit current, and impulse withstand.

- **Output Ratings:** Maximum output voltage, rated continuous current, frequency range and number of phases.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers Over 1500 Volts (NJHU), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 347, "High Voltage Industrial Control Equipment," and ANSI/UL 508C, "Power Conversion Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium Voltage Power Conversion Equipment."

MOTOR CONTROLLER ACCESSORIES OVER 1500 VOLTS (NJIJ)**USE**

This category covers accessories intended for field installation in motor controllers having ac voltage ratings in the range of 1501 V to 15 kV. The motor controllers are intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products rated 7200 V or less in this category is ANSI/UL 347, "High Voltage Industrial Control Equipment."

The basic requirements used to investigate products in this category rated 7201 V to 15 kV are contained in UL Subject 347B, "Outline of Investigation for Medium Voltage Motor Controllers, Up to 15 kV."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Motor Controller Accessories Over 1500 Volts (NJIJ)—Continued

includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Industrial Control Equipment Accessory."

MOTOR CONTROLLERS (NJOT)

This category covers the following devices rated 600 V or less, and those rated 601–1500 V:

- Auxiliary devices
- Combination motor controllers
- Float- and pressure-operated motor controllers
- Magnetic motor controllers
- Manual motor controllers
- Mechanically-operated and solid-state motor controllers
- Power conversion equipment

Horsepower ratings — Unless otherwise marked, motor controllers with three-phase horsepower ratings are intended for use with induction-type squirrel cage Design B, C or D motors. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and locked rotor current. For single-phase motors, the tested locked rotor current is at six times the motor full-load running current for ac ratings, and at ten times the motor full-load running current for dc ratings. For three-phase motors, the tested locked rotor current is as in Table 430.251(B) of ANSI/NFPA 70, "National Electrical Code" (NEC). For motor ratings in excess of 500 hp, the full-load current and locked-rotor currents are also specified. Some motor controllers are marked with the full-load current (FLA) and locked-rotor current (LRA) in lieu of horsepower when they are intended to control motors equivalent to 2 hp or smaller.

Overload relay tripping class — Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600% of the overload relay current-element trip rating. The designations "Class 10," "Class 20," and "Class 30" are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds. Overload relays with maximum tripping times of 10 or 30 seconds are marked "Class 10" and "Class 30," respectively. Overload relays with a maximum tripping time of 20 seconds may be marked "Class 20." Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

Overload relay instructions — Open-type overload relays with replaceable heater elements, or adjustable or electronic settings, are provided with additional instructions on an adhesive-backed label that is intended to be adhered to the ultimate enclosure for the equipment. These instructions also contain short-circuit ratings and required size and type of branch-circuit protection.

Overload relays with ground-fault current-sensing feature — Some overload relays are provided with a ground-fault current-sensing feature that has been investigated as providing additional protection to the motor circuit. This ground-fault current-sensing feature is not intended to be used for ground-fault current protection required by the NEC; see Ground-fault Sensing and Relaying Equipment (KDAX). When this feature is provided and activated/selected, the overload relay is caused to trip when a differential current occurs between phases that is in excess of the pick-up current or tripping curve specified in the manufacturer's instructions.

Branch-circuit-protection requirements — Overload relays, motor controllers and motor starters (e.g., motor controllers incorporating thermal cutouts, thermal overload relays or other devices for motor-running overcurrent protection) are considered to be suitably protected against overcurrent due to short circuits or grounds by motor branch-circuit, short-circuit and ground-fault protective devices selected in accordance with the NEC and any additional information marked on the product. Motor controllers may specify that protection is to be provided by fuses only or, additionally, by an inverse-time circuit breaker. If there is no marking regarding the protective device type, controllers are considered suitably protected by either type of device. Motor controllers may specify a maximum rating of protective device. If not marked with a rating, the controllers are considered suitably protected by a protective device of the maximum rating permitted by the NEC.

Short-circuit-current rating — Combination motor controllers, overload relays, motor controllers rated more than 1 hp at 300 V or more, motor controllers rated more than 2 hp at any voltage, and motor starters (e.g., motor controllers incorporating thermal cutouts or overload relays) have been investigated as tabulated below. These controllers are marked "Suitable for use on a circuit capable of delivering not more than ___ rms symmetrical amps, ___ volts maximum," or the equivalent. These markings are provided on the motor controller or, for open-type motor controllers, the markings may be located on a separate adhesive-backed label (such as a heater table) packaged with the motor controller.

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Motor Controllers (NJOT)—Continued

Motor Controllers Rated 600 V or Less, Max Hp Rating	Motor Controllers Rated 601–1500 V Max Full Load Current, Amps	Min Short-circuit-current Ratings, RMS Symmetrical Amps
1 or less	—	1,000
Over 1 to 50	50 or less	5,000
Over 1 to 200	Over 50 to 200	10,000
Over 200 to 400	Over 200 to 400	18,000
Over 400 to 600	Over 400 to 600	30,000
Over 600 to 900	Over 600 to 850	42,000
Over 900 to 1600	Over 850 to 1500	85,000
Over 1600	Over 1500	100,000

Motor controllers that have additionally been investigated for use at higher available fault currents than the minimum short-circuit-current ratings tabulated are marked "Suitable for use on a circuit capable of delivering not more than ___ rms symmetrical amps, ___ volts maximum when protected by Class ___ fuses or when protected by a circuit breaker having an interrupting rating not less than ___ rms symmetrical amperes, ___ volts maximum," as applicable.

Motor controllers intended for group installations are marked "Suitable for motor group installation on a circuit capable of delivering not more than ___ rms symmetrical amperes, ___ volts maximum."

Manual motor controllers additionally investigated for use as tap conductor protection in accordance with Section 430.53 (D)(3) of the NEC are marked "Suitable for tap conductor protection in group installations."

Controllers intended for electric-motor-driven fire pumps are covered under Pump Controllers, Fire (QYZS).

Auxiliary Devices (NKCR)

GENERAL

This category covers the following devices:

- Magnetically-operated control switches (relays)
- Manually-operated switches (push-buttons)
- Pilot lights
- Push-button stations (including parts, such as pilot lights and selector switches)
- Electronic, thermal and magnetic overload relays
- Time-delay relays
- Foot-operated switches
- Flow switches
- Liquid-level controls
- Printed wiring board assemblies incorporating switched outputs

Some pilot lights and push-button assemblies are of a modular construction where individual parts, such as lenses, lampholders, operators and contact blocks, are individually Listed and identified for use with mating parts.

These devices are intended for use in control circuits of magnetic motor controllers and the like. The contacts and switched outputs are marked with the voltage rating and whether they are intended for Standard Duty or Heavy Duty, or with a code designation such as A600, B600, etc. These codes represent the control circuit load that may be controlled by the device. The significance of each code is shown in the tables below. Standard Duty indicates ratings under Codes B and P; Heavy Duty indicates ratings under Codes A and N for the marked voltage rating.

Rating Codes for AC Control-circuit Contacts at 50 and 60 Hz

Contact Rating Code Dsg ^a	Thermal Continuous Test Current Amps	Max Current Amps ^b									
		120 V		240 V		480 V		600 V		Max Volt-amps	
		Make	Break	Make	Break	Make	Break	Make	Break	Make	Break
A150	10	60	6.00	—	—	—	—	—	—	7200	720
A300	10	60	6.00	30	3.00	—	—	—	—	7200	720
A600	10	60	6.00	30	3.00	15	1.50	12	1.20	7200	720
B150	5	30	3.00	—	—	—	—	—	—	3600	360
B300	5	30	3.00	15	1.50	—	—	—	—	3600	360
B600	5	30	3.00	15	1.50	7.5	0.75	6	0.60	3600	360
C150	2.5	15	1.5	—	—	—	—	—	—	1800	180
C300	2.5	15	1.5	7.5	0.75	—	—	—	—	1800	180
C600	2.5	15	1.5	7.5	0.75	3.75	0.375	3.00	0.30	1800	180
D150	1.0	3.60	0.60	—	—	—	—	—	—	432	72
D300	1.0	3.60	0.60	1.80	0.30	—	—	—	—	432	72
E150	0.5	1.80	0.30	—	—	—	—	—	—	216	36

^aThe numerical suffix designates the maximum voltage design values, which are to be 600 V, 300 V and 150 V for suffixes 600, 300 and 150, respectively.

PRODUCT CATEGORIES BY CATEGORY CODE

Auxiliary Devices (NKCR)—Continued

Contact Rating Code Dsg ^a	Thermal Continuous Test Current Amps	Max Current Amps ^b								
		120 V		240 V		480 V		600 V		Max Volt-amps
		Make	Break	Make	Break	Make	Break	Make	Break	

^bFor maximum ratings at voltages between the maximum design value and 120 V, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage. For voltages below 120 V, the maximum make current is to be the same as for 120 V, and the maximum break current is to be obtained by dividing the break volt-amperes by the application voltage, but are not to exceed thermal continuous test current.

Rating Codes for DC Control-circuit Contacts

Contact Rating Code Dsg ^a	Thermal Continuous Test Current Amps	Max Make or Break ^b Current Amps			Max Make or Break V Amps at 300 V or Less
		125 V	250 V	301 to 600 V	
N150	10	2.2	—	—	275
N300	10	2.2	1.1	—	275
N600	10	2.2	1.1	0.40	275

P300	5.0	1.1	0.55	—	138
P600	5.0	1.1	0.55	0.20	138
Q150	2.5	0.55	—	—	69
Q300	2.5	0.55	0.27	—	69
Q600	2.5	0.55	0.27	0.10	69
R150	1.0	0.22	—	—	28
R300	1.0	0.22	0.11	—	28

^aThe numerical suffix designates the maximum voltage design values, which are to be 600 V, 300 V and 150 V for suffixes 600, 300 and 150, respectively.

^bFor maximum ratings at 300 V or less, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage, but are not to exceed the thermal continuous test current.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Auxiliary Control Equipment" (or "Aux. Cont. Eq.").

Combination Motor Controllers (NKJH)

USE AND INSTALLATION

This category covers combination motor controllers, which provide the motor branch-circuit functions of motor controller, disconnect means, short-circuit and ground-fault protection and motor overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

These products are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the Listing of the controller.

An open-type combination motor controller is intended for factory installation in a switchboard, motor control center, industrial control panel or the like, or for field installation in an enclosure for industrial control equipment, a cabinet or a cutout box.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

Combination Motor Controllers (NKJH)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Combination Motor Controller" (or "Comb. Mtr. Cntrlr.>").

Motor Controllers, Float- and Pressure-operated (NKPZ)
USE

This category covers:

Float-operated switches, including weight-operated switches

Pressure-operated switches, including vacuum-operated switches

These devices are intended for direct control of motors and/or control of general-use-type loads.

Unless otherwise marked, these devices are intended for use only with air, water, or other nonhazardous fluids.

RELATED PRODUCTS

Pressure-operated switches investigated for use in connection with automatic sprinkler or similar protective equipment are covered under Switches, Pressure (VOXZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.>").

Motor Controllers, Magnetic (NLDX)

This listing covers the following devices:

Across-the-line starters

Across-the-line starters with motor circuit switches

Reduced voltage starters such as Autotransformer, part-winding wye-delta, reactance and resistant type

Speed regulators

Combined starters and speed regulators

Magnetic switches for controlling other than motor loads are listed under Industrial Control Equipment — Switches, Magnetically Operated.

Magnetic motor controllers have been tested to determine their acceptability for continuous operation at their marked rated load.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 508, "Electric Industrial Control Equipment".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.>").

Motor Controllers, Manual (NLRV)

GENERAL

This category covers the following manually-operated devices intended for across-the-line starting of motors:

Across-the-line starters

Autotransformer starters

Reactance-type starters

Resistance-type starters

Speed regulators

Combined starters and speed regulators

Motor disconnect switch — Manual motor controllers that have been additionally investigated for use as a motor disconnect switch are marked "Suitable as Motor Disconnect." These devices are intended to be installed on the load side of motor branch-circuit protection in accordance with Section 430.109(A)(6) of ANSI/NFPA 70, "National Electrical Code" (NEC).

Tap conductor protection — Manual motor controllers that have been additionally investigated for use as tap conductor protection within a motor group are marked "Suitable as Tap Conductor Protection in Group Installations." These devices are intended to be installed on the load side of motor branch-circuit protection for a motor group in accordance with Section 430.53(D)(3) of the NEC.

ADDITIONAL INFORMATION

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Motor Controllers, Manual (NLRV)—Continued

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Manual Motor Controller" (or "Man. Mtr. Cntrlr.").

Motor Controllers, Mechanically-operated and Solid-state (NMFT)

GENERAL

This category covers the following devices intended for across-the-line starting of motors:

- Flow-operated motor controllers
- Machine-operated motor controllers
- Soft starters
- Solid-state starters
- Solid-state reduced-voltage starters
- Solid-state speed controls

These devices are intended for the direct control of motors.

Mechanically-operated and solid-state motor controllers have been tested to determine their acceptability for continuous operation at their marked rated motor load.

REBUILT PRODUCTS

This category also covers mechanically-operated and solid-state motor controllers that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt mechanically-operated and solid-state motor controllers are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt mechanically-operated and solid-state motor controllers are subject to the same requirements as new mechanically-operated and solid-state motor controllers.

RELATED PRODUCTS

Devices intended for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices (NKCR).

Devices intended for use in nonmotor circuits other than motor control circuits are covered under Switches, Industrial Control (NRNT).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq."), "Solid-state Motor Controller" or "Solid-state Reduced-voltage Starter."

For rebuilt products the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

Power Conversion Equipment (NMMS)

GENERAL

This category covers equipment that supplies power to and controls a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also covers power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type. This equipment is intended for use in unclassified (ordinary) locations in accordance with Articles 430 and 440 of ANSI/NFPA 70, "National Electrical Code."

Power conversion equipment incorporating overload protection for motors and not intended for use with remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor overload protection is marked to indicate motor protection such as thermal overload relays, or a thermally protected motor must be otherwise provided.

Power conversion equipment is marked with input electrical ratings and output motor electrical ratings.

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

215

Power Conversion Equipment (NMMS)—Continued

RELATED PRODUCTS

Equipment intended to provide a primary, secondary, or primary and secondary power source to nonspecific loads in parallel or separate from the utility is investigated in accordance with UL 1741, "Inverters, Converters, and Controllers for Use in Independent Power Systems," and covered under Static Inverters and Converters for Use in Independent Power Systems (QIKH). Examples of this equipment are utility interactive, stand-alone, and multimode inverters and converters.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers (NJOT), Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508C, "Power Conversion Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Power Conversion Equipment."

POWER CIRCUIT AND MOTOR-MOUNTED APPARATUS (NMTR)

GENERAL

This category covers autotransformers, including motor starting and variable voltage types; battery chargers for industrial use; magnetically-operated brakes; busbars; magnetically-operated clutches; enclosed slip rings; lamp dimmers, including incandescent, fluorescent, mercury vapor, surgical light and theater use; phase converters; power factor correction equipment; power supplies for industrial use; reactors, including line chokes; and resistors, including motor starting, rheostats, potentiometers, and high impedance grounding types.

A brake or clutch may consist of several parts with the Listing Mark appearing on the main electrical part (i.e., field). Where other part(s) are essential to complete a Listed assembly, the basic unit is marked to indicate the parts needed.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.").

PROGRAMMABLE CONTROLLERS (NRAQ)

GENERAL

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power supplies, central processing units, input and output accessories, computer interfaces, and programming or program diagnostic units associated with programmable control systems.

All products covered under this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

RECONDITIONED PRODUCTS

This category also covers programmable controllers and their accessories which have been reconditioned by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. (Reconditioned programmable controllers and their accessories may also be referred to as rebuilt.) Reconditioned programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Reconditioned programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

RELATED PRODUCTS

Programmable Controllers (NRAQ)—Continued

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas, gas-oil, or oil-fired appliances. Such controls are covered under Controls, Primary Safety (MCCZ).

This category does not cover equipment intended for use in applications involving instruments for measurement, recording and/or control of process variables (such as temperature, pressure, flow, etc.) and auxiliary devices used with these instruments, such as sensors, transducers and valve operations. Such equipment is covered under Process Control Equipment, Electrical (QUYX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.").

For reconditioned products, the word "Reconditioned" or "Rebuilt" precedes the product name.

PROGRAMMABLE SAFETY CONTROLLERS (NRGF)**USE**

This category covers control equipment incorporating software for use in safety-related functions. These devices are primarily intended to detect unsafe conditions, to alert operators, and/or take action based on out-of-specification parameters to place the equipment-under-control or system into a safe configuration. These devices may additionally have facilities for performing functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also includes power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

INSTALLATION INSTRUCTIONS

These products fulfill their safety-related function only when used in accordance with the manufacturer's instructions. The equipment covered under this category has been found suitable for the implementation of safety-related control functions with a safety integrity level as stated in the manufacturer's documentation and as defined in International Electrotechnical Commission Standard IEC 61508, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems."

RATINGS

All products covered in this category are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

RELATED PRODUCTS

This category does not cover programmable devices whose primary function is the control of industrial equipment. For those controls, see Programmable Controllers (NRAQ).

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 508, "Industrial Control Equipment," UL 1998, "Software in Programmable Components," NFPA 79, "Electrical Standard for Industrial Machinery" (2002) and IEC 61508, "Functional Safety of Electrical/Electronic/Programmable Electronic Safety-Related Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Programmable Safety Controller" or "Safety Related Control Device" (or "SRCD").

PROTECTIVE RELAYS (NRGU)**GENERAL**

This category covers relays of types directly associated with power switchgear. This category does not cover overload relays of types designed primarily for industrial control or types used with communication, traffic signaling, computer switching, or other equipment not intended for the direct control of power equipment.

Protective Relays (NRGU)—Continued

Typical devices covered under this category are instantaneous-current relays, voltage unbalance relays, high-speed differential relays, dc timing relays, time overcurrent relays, reverse-power relays and the like. Instrument transformers are not generally covered under this category.

These devices are intended to make or transfer current only, and to operate only under abnormal conditions.

These devices are intended for use in circuits rated 600 V maximum. They may be used to monitor circuits of higher voltage, when suitably-rated instrument transformers are used in conjunction with these devices, such that the voltage input to the protective relay is 600 V or less.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment (NIMX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic standard used to investigate products that include ground-fault protection for equipment in this category is ANSI/UL 1053, "Ground-Fault Sensing and Relaying Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.").

PROXIMITY SWITCHES (NRKH)**USE**

This category covers electronic switching devices that are actuated by position of an object without mechanical contact with the object. These proximity switches respond to inductive, capacitive, LED or photoelectric effects.

These devices are intended for use on industrial machinery or mass production industrial equipment as defined by ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

PRODUCT MARKINGS

The devices are marked with electrical ratings. At least one rating is marked on the product and additional ratings may be marked on an instruction sheet shipped with the device.

RELATED PRODUCTS

This category does not cover equipment intended for use in safety-related functions, such as electro-sensitive protective equipment (ESPE) for the safeguarding of machinery that presents a risk of personal injury (e.g., light curtains). Such equipment is covered under Electro-sensitive Protective Equipment (NIOZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Con. Eq.") or "Proximity Switch."

SWITCHES, INDUSTRIAL CONTROL (NRNT)**GENERAL**

This category covers the following products:

- Magnetically-operated switches
- Manually-operated switches

- Photoelectric switches
- Solid-state switches

These devices are intended for the direct control of nonmotor-rated loads. Open-type switches are Listed for use as parts of equipment where the acceptability of the combination has been determined by Underwriters Laboratories Inc. or where open-type switches may be employed.

Switches have been tested to determine their acceptability for continuous operation at their marked rated load.

RELATED PRODUCTS

Switches intended for the direct control of motors are rated in horsepower and are covered under Motor Controllers, Magnetic (NLDX), Motor Controllers, Manual (NLRV) and Motor Controllers, Mechanically-operated and Solid-state (NMFT).

INDUSTRIAL CONTROL EQUIPMENT (NIMX)

Switches, Industrial Control (NRNT)—*Continued*

Switches intended for use in motor-control circuits are rated in pilot-duty code or volt-amperes and are covered under Auxiliary Devices (NKCR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment" (or "Ind. Cont. Eq.") or "Industrial Control Switch" (or "Ind. Cont. Switch").

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (NNGZ)

Industrial control equipment marked "Rain tight" is subjected to a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

If the sealed rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

CONTROL PANELS AND ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS (NNNY)

GENERAL

This category covers control panels and assemblies consisting of enclosures and electrical components such as push-button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Lead wire seals are not required between the modular enclosures. However, conduit runs entering an assembly should be sealed in accordance with ANSI/NFPA 70, "National Electrical Code," unless factory-made seals are provided and the product is marked to so indicate.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other Listed ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on Listed assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations and while heavily blanketed with combustible dust for Class II locations.

The plugs of the receptacle-plug combinations are for use with Type S, SO, ST or STO flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS (NNGZ)

217

Control Panels and Assemblies for Use in Hazardous
Locations (NNNY)—*Continued***ADDITIONAL INFORMATION**

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Assembly Body for Hazardous Locations," "Control Assembly Cover for Hazardous Locations" or "Control Panel for Hazardous Locations."

Control Assembly Covers for Use in Hazardous Locations (NNRL)

USE AND INSTALLATION

This category covers control assembly covers consisting of devices such as push-button stations, pilot lights, snap switches, motor controllers or receptacles Classified for use only with specific models of Listed control assembly bodies or plugs for hazardous locations as specified in the installation instructions provided with the cover.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor-running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other Listed ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for ac horsepower ratings, and at 10 times motor full load running current for dc horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

The plugs are for use with Type S, SO, ST or STO flexible cord having a grounding conductor. The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which plugs and receptacles will be permitted for use. It is recognized that portable equipment should be used only where necessary. Receptacles and plugs Listed for use in Class II, Group F locations are for use only in atmospheres containing electrically nonconductive dusts as defined in Article 500 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Control Panels and Assemblies for Use in Hazardous Locations (NNNY), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**CONTROL ASSEMBLY COVER FOR USE IN HAZARDOUS LOCATIONS
FOR USE WITH LISTED *
SPECIFIED IN THE INSTALLATION INSTRUCTIONS
PROVIDED WITH THE PRODUCT**

Control No.
* CONTROL ASSEMBLY BODIES or PLUGS

**Flame Control Panels for Use in Hazardous
Locations (NNTE)**
GENERAL

This category covers flame control panels intended for application in the control of fossil fuel-burning equipment, such as incinerators, kilns and drying ovens. Flame control panels have been Classified only as to electrical fire and shock hazards. The compatibility of the panel with the controlled equipment from the standpoint of programming the burner(s) and preventing hazardous conditions due to firing of fuel has not been determined.

ADDITIONAL INFORMATION

For additional information, see Control Panels and Assemblies for Use in Hazardous Locations (NNNY), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is UL 508A, "Industrial Control Panels."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**FLAME CONTROL PANEL FOR USE IN HAZARDOUS LOCATIONS
AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY**
Control No.

**ENCLOSED SLIP RINGS FOR USE IN
HAZARDOUS LOCATIONS (NNTR)**
USE AND INSTALLATION

This category covers enclosed slip rings intended to transfer power to industrial equipment.

A terminal compartment is provided for connection to threaded rigid conduit systems.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Enclosed Slip Ring for Use in Hazardous Locations."

**MOTOR CONTROLLERS FOR USE IN
HAZARDOUS LOCATIONS (NNUX)**

Motor controllers are Listed under the following categories with maximum ratings of 200 hp and/or 300 amp and 600 V:

- Auxiliary Devices
- Combination Motor Controllers
- Float- and Pressure-Operated Motor Controllers
- Magnetic Motor Controllers
- Manual Motor Controllers
- Miscellaneous Motor Controllers

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS (NNGZ)**

Motor Controllers for Use in Hazardous Locations (NNUX)—*Continued*

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

**Auxiliary Devices for Use in Hazardous
Locations (NOIV)
USE AND INSTALLATION**

This category covers auxiliary devices intended for use in control circuits of magnetic motor controllers and the like, and consist of the following devices: machine-operated switches, push-button stations (including pilot lights and selector switches), magnetically-operated switches, and miscellaneous manually-operated switches.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Pilot lights without guards should be used only where not subject to breakage.

Enclosures furnished without mechanisms are marked to identify the mechanisms that are to be used.

RECONDITIONED PRODUCTS

This category also covers auxiliary devices that have been reconditioned. Reconditioned auxiliary devices may also be referred to as rebuilt. Reconditioned auxiliary devices are factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. The reconditioned auxiliary devices are subject to the same requirements as new auxiliary devices.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

For reconditioned products, the product name is preceded by "Reconditioned" or "Rebuilt."

**Combination Motor Controllers for Use in
Hazardous Locations (NOTH)**
GENERAL

This category covers combination motor controllers, which provide the motor branch-circuit functions of the motor controller, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch-circuit functions indicated above have been investigated and are included in the Listing of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms which should be used.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

(NOTH)—Continued**

includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosure for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

**Float- and Pressure-operated Motor Controllers
for Use in Hazardous Locations (NOWT)**
USE

This category covers float- and pressure-operated switches, including vacuum-operated switches. These devices are for direct control of motors, use in control circuits of magnetic motor controllers and the like, and control of other types of loads.

Unless otherwise indicated on the individual products, these devices are intended for use only with air, water, or other nonhazardous fluids.

Unless otherwise indicated on the individual products, these devices are intended for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature.

These devices have not been investigated for use in connection with automatic sprinkler or similar protective equipment.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Hazardous Locations" or "Industrial Control Equipment for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

**Magnetic Motor Controllers for Use in Hazardous
Locations (NPKR)**
GENERAL

This category covers magnetic across-the-line starters.

Safety of operation of oil immersed-type starters will be endangered should the oil level be below the minimum shown by the indicator. These devices should be installed with a Listed sealing fitting adjacent to each opening where threaded rigid conduit is connected.

Enclosures furnished without mechanisms are marked to identify the mechanisms which should be used.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Auxiliary Devices for Use in Hazardous Locations (NOIV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment for Hazardous Locations," "Industrial Control Equipment Enclosure for Hazardous Locations," "Industrial Control Equipment for Use in Hazardous Locations" or "Industrial Control Equipment Enclosures for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

**Manual Motor Controllers for Use in Hazardous
Locations (NPXZ)**
GENERAL

This category covers manual across-the-line starters.

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS (NNGZ)**

219

**Manual Motor Controllers for Use in Hazardous Locations
(NPXZ)—Continued**

Overload units are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other Listed ratings in order that proper overload units may be furnished.

The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

**Miscellaneous Motor Controllers for Use in
Hazardous Locations (NQLX)**
USE

This category covers devices intended for direct control of motors.

Unless otherwise indicated on the individual products, these devices are for use in an ambient temperature normally prevailing in habitable spaces, and for use with fluids at such a temperature.

These devices have not been investigated for use in locations having automatic fire sprinklers.

RELATED PRODUCTS

Devices for use in control circuits of magnetic motor controllers and the like are covered under Auxiliary Devices for Use in Hazardous Locations (NOIV).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX), Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Hazardous Locations" or "Industrial Control Equipment for Use in Hazardous Locations." The words "Industrial Control Equipment" may be abbreviated "Ind. Cont. Eq."

**Power Conversion Equipment for Use in
Hazardous Locations (NQMD)**
USE

This category covers equipment that supplies power to control a motor or motors operating at a frequency or voltage different than the input supply voltage. This category also includes power-supply modules, input and output modules, SCR or transistor output modules, dynamic braking modules, and input/output accessory kits for power conversion equipment. Power conversion equipment may be of the open or enclosed type. This equipment is intended for use in hazardous (classified) locations in accordance with Article 500 of ANSI/NFPA 70, "National Electrical Code."

PRODUCT MARKINGS

Power conversion equipment incorporating overload protection for motors and not intended for remote or external motor overload protection is marked to indicate the level of protection provided in percent of full load current. Where such protection is adjustable, a marking with instructions for adjustment is provided. Equipment not providing motor over-

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (NNGZ)**
**Power Conversion Equipment for Use in Hazardous Locations
(NQMD)—Continued**

load protection is marked to indicate motor protection, such as thermal overload relays, or a thermally-protected motor must be otherwise provided.

Power conversion equipment is marked with input and output electrical ratings.

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Hazardous Locations (NNUX) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508C, "Power Conversion Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc.") or "Power Conversion Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

**MOTOR CONTROLLERS OVER 1500 VOLTS
FOR USE IN HAZARDOUS LOCATIONS
(NRAA)**
GENERAL

This category covers enclosed motor controllers having ac voltage ratings in the ranges of 2.2 kV to 2.5 kV or 3.8 kV to 5.0 kV, intended for starting, stopping, regulating, controlling, or protecting electric motors or other electrical loads, including refrigeration equipment.

This equipment has been investigated for use on three-phase circuits having available fault levels not exceeding the MVA rating appearing on the nameplate. The three-phase available symmetrical MVA is equal to the product of the available symmetrical rms short-circuit current, the line-to-line open-circuit voltage, and a phase factor of 1.73×10^6 .

Motor controllers are intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, accordingly they are tested at six times the continuous current rating of the controller at rated voltage.

Some motor controllers are provided with an integrally mounted surge arrester to meet the required impulse withstand.

These motor controllers are substantially complete when shipped from the factory and final acceptability for service does not depend upon assembly of parts in the field.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Hazardous Locations (NNGZ) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 347, "High Voltage Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "High Voltage Industrial Control Equipment for Use in Hazardous Locations."

**PROGRAMMABLE CONTROLLERS FOR USE
IN HAZARDOUS LOCATIONS (NRAG)**
GENERAL

This category covers programmable industrial control systems intended for use in Division 2 hazardous locations utilizing a programmable memory for internal storage of user-oriented instructions for specific functions, such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also covers power

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN HAZARDOUS
LOCATIONS (NNGZ)**
**Programmable Controllers for Use in Hazardous Locations
(NRAG)—Continued**

supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

These products are marked with their electrical ratings. Output devices may have more than one rating. At least one rating is marked on the output device and additional ratings may be marked on an instruction sheet referenced on the output device.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas-, gas-oil-, or oil-fired appliances.

REBUILT PRODUCTS

This category also covers programmable controllers and their accessories that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt programmable controllers and their accessories are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc.") or "Industrial Control Equipment for Hazardous Locations (or "Ind. Cont. Eq. for Haz. Loc."), or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt," "Remanufactured," "Reconditioned" or "Refurbished" precedes the product name.

**INDUSTRIAL CONTROL EQUIPMENT
RELATING TO HAZARDOUS
LOCATIONS (NRAW)**
**INDUSTRIAL CONTROL PANELS RELATING
TO HAZARDOUS LOCATIONS (NRBX)**
GENERAL

This category covers industrial control panels relating to hazardous locations which are factory wired assemblies of industrial control equipment such as motor controllers, switches, relays and auxiliary devices. The panels may include disconnect means and motor branch circuit protective devices.

Industrial control panels relating to hazardous locations are intended for installation in unclassified (ordinary) locations. They are provided with intrinsically safe (low energy) circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

For intrinsically safe circuits, the energy level available in the hazardous location under normal and abnormal conditions is sufficiently low as not to cause ignition of the specified explosive atmospheres. To maintain the low energy levels, it is necessary that the intrinsically safe and associated equipment be installed and interconnected in accordance with the instructions provided. The intrinsically safe circuit wiring must be routed in a separate raceway or otherwise reliably segregated from all power and other circuit wiring to preclude excessive currents and voltages from being impressed on the intrinsically safe circuit, rendering it nonintrinsically safe.

The investigation of industrial control panels relating to hazardous locations does not include investigation of the function of the controlled equipment.

RELATED PRODUCTS

Industrial control panels for general use and for metal working machine tools for use in unclassified (ordinary) locations are covered under Industrial Control Panels (NITW).

Equipment that has been investigated for use only in the classified locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**INDUSTRIAL CONTROL EQUIPMENT RELATING TO
HAZARDOUS LOCATIONS (NRAW)**
**Industrial Control Panels Relating to Hazardous Locations
(NRBX)—Continued**
REQUIREMENTS

The basic standards used to investigate products in this category are UL 508A, "Industrial Control Panels" and UL 698A, "Industrial Control Panels Relating to Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, the product name "Industrial Control Panel Relating to Hazardous Locations" or "Enclosed Industrial Control Panel Relating to Hazardous Locations" and the statement "with Intrinsically Safe Circuit Extensions."

**MOTOR CONTROLLERS RELATING TO
HAZARDOUS LOCATIONS (NRCY)**
GENERAL

This category covers auxiliary devices and magnetic motor controllers.

These devices are for use in unclassified (ordinary) locations. They contain intrinsically safe circuits intended for extension into hazardous (classified) locations.

Motor controllers incorporating thermal cutouts, thermal relays or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motor with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings, and at ten times motor full load running current for d-c horsepower ratings.

**Auxiliary Devices Relating to Hazardous
Locations (NRDZ)**

Devices covered in this section are for use in control circuits of magnetic motor controllers and the like.

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

The basic standards used to investigate products in this category are UL 508, "Industrial Control Equipment", and UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II and III, Division 1, Hazardous Locations".

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment Relating to Hazardous Locations".

**INDUSTRIAL CONTROL EQUIPMENT
FOR USE IN ZONE CLASSIFIED
HAZARDOUS LOCATIONS (NWEX)**

The Listing covers the following products:

Control Panels and Assemblies
Motor Controllers
Programmable Controllers

Enclosed industrial control equipment is intended for use as indicated in the general guide information at the front of Part II of this directory.

Industrial Control Equipment is for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and is on a wiring diagram or other readily visible location.

Industrial Control Equipment, for which accessory kits are available for the field or distributor modification of the basic product or which may be assembled in many forms from separate components are marked to indicate the suitable accessories or separate components which may be used.

If the rating of the operating coil circuit of a magnetically operated industrial control device exceeds 125 volt-amperes, the coil circuit rating is marked on the device.

Overload relays or industrial control equipment incorporating overload relays are identified as to their maximum tripping time at 600 per cent of the overload relay current element trip rating. The designations "Class 10, Class 20 and Class 30" are used to identify the maximum tripping times, with the Class number indicating the maximum tripping time in seconds.

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE
CLASSIFIED HAZARDOUS LOCATIONS (NWEX)**

221

Overload relays with maximum tripping times of 10 or 30 seconds are marked Class 10 or Class 30 respectively. Overload relays with a maximum tripping time of 20 seconds may be marked Class 20. Overload relays with tripping times in excess of 30 seconds are marked with their maximum tripping times. All unmarked overload relays have a maximum tripping time of 20 seconds.

**CONTROL PANELS AND ASSEMBLIES
FOR USE IN ZONE CLASSIFIED
HAZARDOUS LOCATIONS (NWFA)**
USE AND INSTALLATION

This category covers control panels and assemblies consisting of enclosures and electrical components such as push button stations, pilot lights, motor controllers, and receptacles with plugs.

A single enclosure or a group of interconnected (modular) enclosures may be used for mounting the electrical components.

The enclosures making up a modular assembly are intended to be interconnected either at the factory or in the field by the user. Limitations on the interconnection of the enclosures are given on or with the product. Modular assemblies must be installed in accordance with the installation instructions provided with each part.

The electrical components are provided as part of the product and are intended to be installed either at the factory or in the field by the user.

It is intended that wiring between the electrical components of modular assemblies be field installed.

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Overload units of motor controllers are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to use of a controller for other Listed ratings in order that proper overload units may be furnished. Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled are tested at rated voltage and at six times motor full load running current for AC horsepower ratings and at 10 times motor full load running current for DC horsepower ratings.

Pilot lights without guards should be used only where not subject to breakage.

Receptacles with plugs included on Listed assemblies have been subjected to endurance and overload operation tests in the presence of the specific flammable atmospheres for Class I locations.

The plugs of the receptacle-plug combinations are for use with extra hard usage flexible cord with grounding conductor.

The flexible cord should be frequently inspected and replaced when necessary. Terminal connections to the cord must be properly made and maintained. Safe use also depends on the maintenance of insulation at current-carrying parts of the plug and receptacle. The devices should, therefore, not be used where the insulation may be impaired by moisture, dirt, or other foreign material.

Authorities Having Jurisdiction should be consulted with regard to conditions under which those assemblies having receptacles with plugs will be permitted for use. It is recognized that portable equipment should be used only where necessary.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are indicated in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Control Panel for Use in Hazardous Locations," "Control Assembly Cover for Use in Hazardous Locations" or "Control Assembly Body for Use in Hazardous Locations."

**MOTOR CONTROLLERS FOR USE IN ZONE
CLASSIFIED HAZARDOUS LOCATIONS
(NWFE)**

Motor controllers are Listed under the following categories:

Auxiliary Devices
Combination Motor Controllers
Float-and Pressure-Operated Motor Controllers
Magnetic Motor Controllers

INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWEX)**Motor Controllers for Use in Zone Classified Hazardous Locations (NWFE)—Continued****Manual Motor Controllers****Miscellaneous Motor Controllers**

Motor controllers incorporating thermal cutouts, thermal relays, or other devices for motor running overcurrent protection are considered to be suitably protected against overcurrent due to short circuits or grounds by fuses or circuit breakers (overcurrent protective devices) having ratings not in excess of four times the full load current of the motors with which they are intended to be used.

Motor controllers intended for across-the-line starting and for making and breaking the circuit when the motor is stalled, are tested at rated voltage and at six times motor full load running current for a-c horsepower ratings and at ten times motor full load running current for d-c horsepower ratings.

Auxiliary Devices for Use in Zone Classified Hazardous Locations (NWFN)**GENERAL**

This category covers devices such as machine-operated switches, push-button stations (including parts, such as pilot lights, meters, terminal blocks and selector switches), magnetically-operated switches, and miscellaneous manually-operated switches intended for use in control circuits of magnetic motor controllers, and the like.

Pilot lights without guards should be used only where not subject to breakage.

Auxiliary devices provided with a factory seal of conductors entering the pilot light or switch enclosure are so identified by a marking on the product.

Enclosures furnished without mechanisms are marked to identify the mechanisms intended to be used.

REBUILT PRODUCTS

This category also covers auxiliary devices that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt auxiliary devices are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt auxiliary devices are subject to the same requirements as new auxiliary devices.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

For rebuilt products the word "Rebuilt" or "Reconditioned" precedes the product name.

Combination Motor Controllers for Use in Zone Classified Hazardous Locations (NWFP)**GENERAL**

This category covers combination motor controllers.

Combination motor controllers provide the motor branch circuit functions of motor controller, disconnect means, short-circuit and ground-fault protection and overload protection. The functions may be provided by individual discrete components or be combined in a single controller unit.

Combination motor controllers are marked "Combination Motor Controller" to signify that all of the motor branch circuit functions indicated above have been evaluated and are included in the Listing of the controller.

Combination motor controllers are marked with a short-circuit rating and are intended for connection to circuits in which the available fault current does not exceed the marked short-circuit rating.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWEX)****Combination Motor Controllers for Use in Zone Classified Hazardous Locations (NWFP)—Continued**

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations" or "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Use in Hazardous Locations."

Magnetic Motor Controllers for Use in Zone Classified Hazardous Locations (NWFR)**USE**

This category covers magnetic across-the-line starters.

The safety of operation of oil-immersed-type starters will be endangered should the oil level be below the minimum shown by indicator. These devices should be installed with a Listed sealing fitting adjacent to each opening where threaded rigid conduit is connected.

Enclosures furnished without mechanisms are marked to identify the mechanisms that should be used.

RELATED PRODUCTS

Magnetic switches for controlling other than motor loads are covered under Auxiliary Devices for Use in Zone Classified Hazardous Locations (NWFN).

ADDITIONAL INFORMATION

For additional information, see Motor Controllers for Use in Zone Classified Hazardous Locations (NWFE), Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWEX) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names: "Industrial Control Equipment (or Ind. Cont. Eq.) for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosure for Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) for Use in Hazardous Locations," "Industrial Control Equipment (or Ind. Cont. Eq.) Enclosures for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

Manual Motor Controllers for Use in Zone Classified Hazardous Locations (NWFU)**GENERAL**

This category covers manual across-the-line starters.

Overload units are marked for identification for the particular ratings for which controllers are furnished. The manufacturer should be consulted with regard to the use of a controller for other Listed ratings in order that proper overload units may be furnished.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

**INDUSTRIAL CONTROL EQUIPMENT FOR USE IN ZONE
CLASSIFIED HAZARDOUS LOCATIONS (NWEX)**
**PROGRAMMABLE CONTROLLERS FOR USE
IN ZONE CLASSIFIED HAZARDOUS
LOCATIONS (NWGD)**
USE AND INSTALLATION

This category covers programmable industrial control systems for use in hazardous locations utilizing a programmable memory for internal storage of user oriented instructions for specific functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also includes power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

This category also covers programmable controllers and their accessories that have been reconditioned. Reconditioned programmable controllers and their accessories are factory reconditioned to the extent necessary by disassembly and reassembly using new or reconditioned component parts. The reconditioned programmable controllers and their accessories are subject to the same requirements as new programmable controllers and their accessories.

This category does not cover primary safety controls intended for programming and monitoring the operation of the burner on gas, gas-oil, or oil fired appliances.

ADDITIONAL INFORMATION

For additional information, see Industrial Control Equipment for Use in Zone Classified Hazardous Locations (NWEX) and Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Industrial Control Equipment for Use in Hazardous Locations" (or "Ind. Cont. Eq. for Use in Haz. Loc.") or "Industrial Control Equipment for Hazardous Locations" (or "Ind. Cont. Eq. for Haz. Loc.") or other appropriate product name as shown in the individual Listings.

For reconditioned products the product name is preceded by the word "Reconditioned," "Rebuilt," "Remanufactured" or "Refurbished."

**INFORMATION TECHNOLOGY
EQUIPMENT INCLUDING ELECTRICAL
BUSINESS EQUIPMENT (NWGQ)**
USE

This category covers equipment, appliances and systems rated 600 V or less normally found in offices and other business establishments, residences (homes), educational facilities, and other similar environments classified as ordinary locations.

This equipment has been investigated for installation in information technology equipment (computer) rooms as defined in ANSI/NFPA 75, "Protection of Electronic Computer/Data Processing Equipment," and Article 645 of ANSI/NFPA 70, "National Electrical Code" (NEC), unless the equipment is otherwise identified by a marking or instruction.

EQUIPMENT TYPES

Equipment may be electronic or electromechanical in design or a combination thereof.

Various groupings of equipment are covered under this category, such as:

Displays: Flat-panel displays, LCD displays, monitors, plasma displays.

Information processing equipment: Central processing units (CPUs), hand-held computers (personal assistants), laptop computers, notebook computers, pen-based computers, personal computers, point-of-sale terminals, scanners (including portable bar code scanners), servers, work stations.

Accessories: Docking stations, flash memory cards, keyboards, mouse, PCMCIA-memory-modem cards, port replicators, trackballs.

Information storage equipment: Automated information storage equipment, CD-ROM/RW drives, disk drives, DVD drives, tape drives, optical drives.

Telecommunication equipment: Cellular site equipment, cordless telephone sets, facsimile machines, ISDN systems and telephones, modems, key telephone systems, powerline communication equipment, private automated branch exchanges (PABXs), telephone answering machines, telephone sets, voicemail systems, IP telephones, IP systems, wireless telephony systems.

Office appliances: Adding machines, bursters, calculators, collators, dictation and transcribing machines, electric typewriters, erasers, folding, embossing and sealing machines, label printers, microfilm readers, motor-

**INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

223

operated file cabinets, overhead projectors, paper cutters, paper shredders, pencil sharpeners, sorters, stackers, staplers.

Printers/Reproduction equipment: Copiers, duplicating machines, microfilm printers, mimeograph machines, plotters, printers.

Mailing, banking and currency-handling equipment: Cash registers, coin counters, feeders and dispensers, accounting machines, check-writing-, -assigning, -dating, -inserting, -mailing, -numbering and -stamping machines, point-of-sale terminals.

Multimedia equipment/accessories: Cable modems, digital cameras, DLP projectors, LCD projectors, microphones, set top boxes, speakers, video conferencing systems.

Network equipment: Baluns, bridges, fiber optic transceivers, hubs, nodes, Power over Ethernet (PoE) equipment (e.g., power source equipment [PSE] and powered devices [PD]), repeaters, routers, switches, transceivers.

Wireless (RF, infrared) transceiving equipment: RF modems, hand-held computers with integral transceivers.

Static neutralizing equipment: Power units with discharge bars used with or within copiers, collators, film-plate processors, digital printers, duplicating machines and similar equipment.

Interconnecting cable assemblies: Cable assemblies intended for use beneath raised floors of computer rooms. These assemblies are also covered under Computer Interconnection Cable Assemblies (DVPJ).

Included within the above groupings is equipment which is battery powered, either by standard-size consumer-replaceable batteries (e.g., AA, C, D), or nonstandard sizes specified by manufacturer, type and ratings.

This category also covers power distribution units (PDUs) and computer power centers investigated as part of a computer system for use exclusively in information technology equipment (computer) rooms in accordance with Article 645 of the NEC. This equipment is connected to branch circuits unless otherwise indicated in the manufacturer's installation instructions, and it distributes power to other units in the computer system by means of interconnecting cable assemblies complying with one or more of the wiring methods outlined in Article 645 of the NEC. Many of these units require special installation, such as a separate transformer, special grounding methods, motor-generator equipment, air conditioning, etc. Such features are covered in the manufacturer's installation instructions.

INSTALLATION

Some equipment has been investigated for installation in a restricted access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel. Such equipment is provided with a marking or installation instructions that state "To be installed only in a Restricted Access Location," or similar wording. If also intended for installation over a concrete or non-combustible surface, such equipment will also be marked "Suitable for mounting on concrete or other noncombustible surface only," or similar wording.

Equipment installed in a restricted access location generally receives power from a centralized d.c. power source. If field wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of the NEC.

Products such as LAN transceivers and baluns investigated for use in air-handling spaces are marked "Suitable for Use in Other Environmental Air Space in Accordance with Section 300.22, (C) of the National Electrical Code" or "Suitable for Use in Air Handling Spaces." These products have been additionally investigated to UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and their Accessories Installed in Air-Handling Spaces." Products that bear the marking are suitable for installation in accordance with Section 300 of the NEC, Chapter 4 of ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," Section 602 of the "International Mechanical Code," and Section 602 of the "Uniform Mechanical Code."

When Listed equipment intended for use with a detachable power-supply cord is not provided with such a cord, a cord suitable for connection of the equipment to the branch circuit should be separately provided.

Equipment intended to be installed in closed and multiunit standard racks and cabinets has been determined to be suitable for use in ambient temperatures not exceeding the manufacturer's recommended ambient temperature as specified in the equipment's installation instructions.

Equipment identified with an Enclosure Type designation, or as "Rain-tight" or "Rainproof," is intended for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ).

ACCESSORIES

Field-installed accessories to Listed equipment are provided with suitable markings and/or instructions detailing proper installation or assembly of the accessory with either a specific or generic Listed equipment specified in the markings or instructions.

OUTPUT CONNECTORS/CIRCUITS

**224 INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

Class 2 circuits are marked "Class 2." All other output circuits, including those associated with the Universal Serial Bus (USB), IEEE 1394 bus and PS/2 connectors are limited-power circuits supplied by ANSI/UL 60950-1 limited-power sources, unless:

- the circuits are clearly telecommunication circuits (e.g., RJ series modular jack, 50-pin commercial connectors with insulation-piercing terminals). These circuits are limited to telecommunication network voltages (TNV) and are suitable for connection to the telecommunication network and distribution wiring in accordance with Article 800 of the NEC; or
- the circuits are marked, or otherwise identified in the installation instructions with the type of circuit (e.g., Class 1), intended cable type (e.g., DP-2) or specific equipment intended to be interconnected (e.g., mfr/model printer).

Limited-power circuits of listed ITE supplied by limited-power sources are recognized by Section 725.41(A)(4) of the NEC as being equivalent to Class 2 circuits for purposes of applying Article 725 Class 2 wiring requirements.

SPECIAL CONSIDERATIONS

Equipment investigated with respect to security or burglary resistance is covered under Access Control System Units (ALVY), Antitheft Alarms and Devices (ATJT) and other associated categories. Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security.

The burglary and theft protection features of coin-operated equipment, banking and currency-handling equipment, cash registers, coin counters and the like have not been investigated.

Automated teller machines (ATMs) investigated for security and burglary resistance are covered under Automated Teller Systems (TPEU). ATMs that have not been investigated for security protection are covered under Bank Equipment (BALT).

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated.

RELATED EQUIPMENT

Power distribution centers for communications equipment are covered under Power Distribution Centers for Communications Equipment (QPQY).

Uninterruptible power supply (UPS) equipment intended for indoor and outdoor use that may be stationary or fixed is covered under Uninterruptible Power Supply Equipment (YEDU).

Automatic transfer switches intended for use in optional standby systems in accordance with Article 702 of the NEC are covered under Automatic Transfer Switches for use in Optional Standby Systems (WPXT).

Power supplies for information technology and telecommunication equipment are covered under Power Supplies, Information Technology Equipment Including Electrical Business Equipment (QQGQ) and Power Supplies, Telephone (QQJE).

Secondary (rechargeable) battery packs for use in transportable equipment are covered under Batteries, Household and Commercial (BBFS).

Static neutralizing equipment is covered under Static Neutralizing Equipment (VWWZ). High-voltage parts that may be accessible after installation have been investigated as limited-current circuits.

Air conditioning equipment for use in computer rooms or other areas in which information technology equipment is installed is covered under Air Conditioners, Special Purpose (ACVS) and Heating and Cooling Equipment (LZFE).

Fire-resistant materials, sprinklers, extinguishers and associated equipment intended for use in computer rooms is covered under Carbon Dioxide Extinguishers (FXHV) and Halogenated Agent Extinguishing System Units (GLER).

Filing cabinets covered under this category have not been investigated with respect to fire resistance or security. Fire-resistant filing cabinets are covered under Record Protection Equipment (RYPH).

Smoke detectors are covered under Smoke-automatic Fire Detectors (UROX); alarm equipment is covered under Single- and Multiple-station Smoke Alarms (UTGT).

Other equipment associated with information technology/processing but not intended for use in offices, residences or computer rooms is covered under Graphics Arts Equipment (KCQT), Inspection and Measuring Electrical Equipment (NYOK), Teaching and Instruction Equipment (WYFW), Laboratory Use Electrical Equipment (OGTK), Medical and Dental Equipment, Professional (KFBQ), Medical Equipment (PIDF), Marking and Coding Equipment, Electronic (PGBE), Photographic Equipment (QINT) and X-Ray Equipment (ZQOR). Other multimedia equipment and accessories are covered under Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ). Other telecommunication appliances and equipment is covered under Telephone Appliances and Equipment (WYQQ).

Modular assemblies of telecommunication equipment (e.g., racks, circuit card assemblies) designed for field installation by trained service personnel are covered under Custom-built Telecommunication Equipment (WYKM).

**INFORMATION TECHNOLOGY EQUIPMENT INCLUDING
ELECTRICAL BUSINESS EQUIPMENT (NWGQ)**

Equipment intended to be installed on the network side of the subscriber demarcation point and installed and maintained by telephone companies, CATV companies and similar network communication companies, is covered under Communication Service Equipment (DUZO).

Cabinet, enclosure and rack/frame systems that are not complete information technology (IT) or telecommunication equipment, but include components and assemblies that are intended to power, protect, heat, cool of otherwise support IT or telecommunication equipment that will be installed at a later time are covered under Information Technology and Telecommunication Equipment Cabinets, Enclosures and Racks (NWIN).

Power distribution products intended for indoor use as relocatable multiple-outlet extensions of a single branch circuit not for exclusive use of ITE and consisting of an attachment plug and a single length of flexible cord terminated in a single enclosure in which one or more receptacles are mounted are covered under Relocatable Power Taps (XBYS).

Power distribution products intended for installation in modular furniture are covered under Furniture Power Distribution Units (IYNC).

Equipment intended to protect against mains transients is covered under Transient Voltage Surge Suppressors (XUHT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements," or UL 60950-21, "Information Technology Equipment – Safety – Part 21: Remote Power Feeding," as appropriate.

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following category identifiers: "UL 1950," "UL 60950," "UL 60950-1," "Information Technology Equipment" (or "Info. Tech. Equip." or "I.T.E.") or "NWGQ." The Listing Mark may also include one of the following product names: "Copier," "Modem," "Paper Shredder," "Personal Computer," "Cordless Telephone," or other appropriate product name as shown in the individual Listings.

The category identifier for field-installed accessories includes the word "Accessory."

**INFORMATION TECHNOLOGY
EQUIPMENT FOR USE IN ZONE
CLASSIFIED HAZARDOUS
LOCATIONS (NWHC)**
GENERAL

This category covers information technology equipment for use in hazardous (classified) locations such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and/or electronic.

SPECIAL CONSIDERATIONS

Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security or burglary resistance.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters/receivers are additionally investigated for short-term characteristics to ANSI/IEEE C95.1-1999, "Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

RELATED EQUIPMENT

Graphic display and touch panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Zone Classified Hazardous Locations (NWGD).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

**INFORMATION TECHNOLOGY EQUIPMENT FOR USE IN
ZONE CLASSIFIED HAZARDOUS LOCATIONS (NWHC)**

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

The ability or reliability of these products to perform their intended function in a particular application has not been investigated.

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Information Technology Equipment for Use in Hazardous Locations" (or "I.T.E. for Use in Hazardous Locations" or "Info. Tech. Equip. for Use in Hazardous Locations") or other appropriate product name as shown in the individual Listings.

**INFORMATION TECHNOLOGY
EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (NWHP)**
GENERAL

This category covers information technology equipment for use in hazardous (classified) locations such as, but not limited to, personal computers, card readers and printers, rated 600 V or less, normally used in business establishments and other similar environments.

The equipment and appliances may be electromechanical and/or electronic.

SPECIAL CONSIDERATIONS

Card readers, badge readers and similar identification equipment covered under this category have not been investigated with respect to security.

PHYSIOLOGICAL EFFECTS

The physiological effects of chemical substances used in or with this equipment have not been investigated.

The long-term characteristics or the possible physiological effects of radio frequency (RF) electromagnetic fields associated with this equipment have not been investigated. Hand-held transportable RF products that interconnect to the telecommunication network through RF transmitters/receivers are additionally investigated for short-term characteristics to ANSI/IEEE C95.1-1999, "Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz."

RELATED EQUIPMENT

Graphic display and touch panel equipment for information technology and telecommunications equipment is covered under Programmable Controllers for Use in Hazardous Locations (NRAG).

Card readers and data entry terminal equipment for information technology and telecommunications equipment is covered under Office Appliances and Business Equipment for Use in Hazardous Locations (QAVS).

Scanner and bar code reader equipment for information technology and telecommunications equipment is covered under Data Processing Equipment, Electronic for Use in Hazardous Locations (ENWS).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is ANSI/UL 60950-1, "Information Technology Equipment – Safety – Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

**INFORMATION TECHNOLOGY AND COMMUNICATIONS
EQUIPMENT CABINET, ENCLOSURE AND RACK SYSTEMS
(NWIN)**

225

**INFORMATION TECHNOLOGY AND
COMMUNICATIONS EQUIPMENT
CABINET, ENCLOSURE AND RACK
SYSTEMS (NWIN)**
GENERAL

This category covers cabinet, enclosure and rack/frame systems that are not complete but include components and assemblies that are intended to power, protect, heat, cool or otherwise support information technology (IT) or telecommunications equipment, audio/video equipment (A/V), or the like that will be installed at a later time. They usually include mounting hardware, shelves or space for the installation of additional electronic equipment. These cabinet, enclosure and rack/frame systems are intended to be used by manufacturers in the construction of complete IT and communications equipment, or by service providers for the installation of network infrastructure equipment.

A marking includes a configuration list, or diagram of the components, and assemblies provided with the product covered under the system category. In addition, it is the responsibility of the Authority Having Jurisdiction over the final installation to determine if the final configuration meets the necessary criteria for installation and use.

As appropriate, this equipment should be installed in accordance with NFPA 70, "National Electrical Code" (NEC), and/or the applicable sections of ANSI C2, "National Electrical Safety Code" (NESC). Equipment intended for installation in information technology equipment (computer) rooms should be installed in accordance with NFPA 75, "Protection of Electronic Computer/Data Processing Equipment."

Equipment covered under this category includes, but is not limited to, indoor and outdoor cabinets and enclosures, racks, frames (nonenvironmentally controlled cabinets, pedestals, enclosures, etc.), and the like. For the purpose of identification in this Guide Information, all of the equipment (cabinets, racks and enclosures) covered under this category is referred to as "ITC equipment cabinets."

Equipment intended for outdoor use is marked with an enclosure Type designation and provides a degree of protection as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). Such units are evaluated under the outdoor environmental requirements in UL 50, "Enclosures for Electrical Equipment." The absence of a Type rating will presume no environmental conditions have been assessed, and will automatically designate the equipment with a "Type 0" rating. Cabinets and enclosures may incorporate multiple Type designations for differing compartments if marked on the equipment. In addition, equipment may optionally be evaluated and marked for ingress protection in accordance with IEC 60529, "Degrees of Protection Provided by Enclosures (IP Code)." IP codes are not intended to replace Type ratings.

Except for equipment identified with a specific temperature range, outdoor equipment has been evaluated over a temperature range of -33°C to +40°C. The effects of insolation (solar loading) have also been considered.

For equipment containing Listed primary protectors for telecommunications circuits (see QVGV), the individual Listing information for the protectors should be consulted for information regarding the installation and use of the protectors.

INSTALLATION

Some ITC equipment cabinet, enclosure, and rack/frame systems have been evaluated for installation in a restricted access location, such as a dedicated equipment room or telecommunication equipment closet, where access is limited to trained service personnel. Such ITC equipment is provided with a marking or installation instructions which state "To be installed only in a Restricted Access Location" or similar wording. If also intended for installation over a concrete or noncombustible surface, such equipment is also marked "Suitable for mounting on concrete or other noncombustible surface only" or similar wording.

Equipment installed in a restricted access location generally receives power from a centralized dc power source. If field wiring terminals are not contained in an internal compartment, both protection of exposed wiring terminals and wiring methods used for such equipment are intended to be provided in accordance with (1) markings on or instructions with the equipment, and (2) the provisions of Sections 110.26 and 110.27 of the NEC.

All wiring shall conform to the NEC. Wiring in an IT equipment (computer) room shall conform to Article 645 of the NEC.

PRODUCT MARKINGS

Equipment containing service equipment is marked with the service panel input and output ratings. Short-circuit capacity may additionally be evaluated and marked.

Equipment containing air conditioning or heat exchangers is marked with the BTU rating for the heat it can eliminate from the equipment interior. This rating is based solely on the manufacturer's specifications and has not been evaluated or verified by UL. In addition, the heat release data for any installed equipment that is part of the cabinet system is also included. The heat release from power supplies is specified for the power

**INFORMATION TECHNOLOGY AND COMMUNICATIONS
EQUIPMENT CABINET, ENCLOSURE AND RACK SYSTEMS**

226

(NWIN)

supply operating under full load (basically the inefficiency of the power conversion process) but the heat release from powered equipment not included as part of the cabinet system is not included.

Equipment containing ac or dc power supplies or distribution is marked with an appropriate electrical rating for the power it can provide to installed units.

UNEVALUATED FACTORS

Other features that may affect the operation or performance of the installed equipment have not been evaluated.

RELATED PRODUCTS

Complete ITC equipment cabinets are covered under Information Technology Equipment Including Electrical Business Equipment (NWXG), Telephone Appliances and Equipment (WYQQ), Communication Service Equipment (DUZO), Custom-built Telecommunication Equipment (WYKM), Communication Circuit Accessories (DUXR), Audio and Video Equipment (AZUJ), Audio and Radio Equipment, Commercial (AZCY), Commercial Audio and Radio Equipment, Systems and Accessories (AZJX), Commercial Phonographs, Tape Playing and Recording Appliances and Accessories (AZQW), Audio/Video Apparatus (AZSQ), Closed Circuit Television Equipment (DRQH), Television/Video Equipment for Use in Health Care Facilities (KFCV), Video and Audio Equipment, Professional (ZCBY), and similar categories that cover complete equipment.

Cabinets and enclosures that do not include any additional components or assemblies may also be covered under Industrial Control Panels (NITW) and evaluated in accordance with UL 50, "Enclosures for Electrical Equipment."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60950, "Information Technology Equipment." Outdoor Type ratings are evaluated in accordance with UL 50, "Enclosures for Electrical Equipment." Components and assemblies provided/installed as part of a communications rack or cabinet are investigated to the applicable UL requirements as appropriate for the component or assembly.

Protectors for paired conductor communications circuits (see QVGV) are evaluated in accordance with UL 497, "Protectors for Paired Conductor Communications Circuits."

Service equipment, such as meter socket accessories (see PKAX) are evaluated in accordance with UL 414, "Meter Sockets."

Special purpose air conditioners (see ACVS) are evaluated in accordance with ANSI/UL 484, "Room Air Conditioners."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number or file number, and one of the following product names: "Enclosure System," "Cabinet System," "Rack System," preceded by "Telecom," "Telecommunications," "Communications," "IT," "ITC," "A/V," "CATV," a specific application such as "Cell System," "Wireless" or "Remote Terminal," or other appropriate product name as shown in the individual Listings.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT (NYOK)

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality control procedures.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Inspection and measuring equipment for specialized use is covered under appropriate product categories such as Garage Equipment (JGWV), Medical and Dental Equipment, Professional (KFBQ) and Photographic Equipment (QINT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its

**INSPECTION AND MEASURING ELECTRICAL EQUIPMENT
(NYOK)**

Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment" or "Measuring Equipment," or the name of the specific type of product as shown in the individual Listings.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (NYPA)

USE

This category covers equipment intended primarily for the purpose of identifying, examining and investigating materials, and making measurements and tests such as might be associated with manufacturing processes and quality-control procedures.

The accuracy of the equipment has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 3101-1, "Electrical and Measuring Test Equipment: Part 1: General Requirements."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Inspection Equipment for Hazardous Locations" or "Measuring Equipment for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

INSPECTION AND MEASURING ELECTRICAL EQUIPMENT, SPECIAL INSPECTION EQUIPMENT (NYQD)

GENERAL

This category covers portable, mobile, stationary, and fixed units or systems intended primarily for the purpose of identifying materials, examining and investigating materials, including x-ray scanning (luggage) units, and other equipment that uses special technologies to perform its function.

Equipment not covered under this category includes, but is not limited to, medical x-ray equipment (including x-ray equipment designed to operate on supply potentials of over 600 V), equipment incorporating unenclosed aerial conductors, separate devices, such as tables, timers, etc., that are not limited in design to x-ray applications, and equipment which is not necessary for successful operation of x-ray equipment. See Inspection and Measuring Electrical Equipment (NYOK), Medical Equipment (PIDF) and X-Ray Equipment (ZQOR).

This equipment has been Classified as to electrical fire, shock, and mechanical hazards only.

The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in ANSI/NFPA 70, "National Electrical Code."

The nature of some of this equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and must, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

UNEVALUATED FACTORS

These products generate radiation or contain radioactive materials or involve working with toxic materials, or other potentially harmful technologies, where data regarding levels of exposure and physiological effects are not investigated. The accuracy of measured, analyzed or prepared quantities has not been investigated.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health, Education and Welfare. Compliance with the applicable regulations under conditions of normal and abnormal operation has not been investigated.

ADDITIONAL INFORMATION

**INSPECTION AND MEASURING ELECTRICAL EQUIPMENT,
SPECIAL INSPECTION EQUIPMENT (NYQD)**

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use: Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control, and Laboratory Use – Part 1: General Requirements."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

PRODUCT NAME*

WITH RESPECT TO ELECTRICAL FIRE, SHOCK AND MECHANICAL HAZARDS ONLY

Control No.

* **SPECIAL INSPECTION EQUIPMENT or SPECIAL MEASURING EQUIPMENT**, or the name of the specific type of product

INSTRUMENTATION TRAY CABLE (NYTT)

GENERAL

This category covers Type ITC instrumentation tray cable for use only in industrial establishments in accordance with Article 727 of ANSI/NFPA 70, "National Electrical Code" (NEC). The cable consists of two or more insulated copper or thermocouple alloy conductors enclosed within a nonmetallic jacket. The cable may have a metal sheath or armor over the nonmetallic jacket, and may contain grounding conductors and/or optical fiber members.

The cable is rated 300 V and is intended for use on circuits rated 150 V or less and 5 A or less. The cable is Listed in conductor sizes 22 to 12 AWG. Conductor sizes within a cable may be mixed.

Regarding cable seals outlined in Article 501 of the NEC, Type ITC cable has a sheath considered to be gas/vapor tight but the cable has not been investigated for inability to transmit gases through its core.

PRODUCT MARKINGS

The cable identification "TYPE ITC" and other markings are visible on the surface of the nonmetallic jacket.

Cable with thermocouple alloy conductors is intended for thermocouple extension use only and is so marked or has the marking "THCPL EXTN."

The temperature rating of the cable is 60°C unless otherwise marked on the cable.

Cable containing optical fiber members is identified with the suffix "OF."

Cable investigated in accordance with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is marked with the suffix "-LS."

Cable investigated for direct burial in the earth is marked "DIRECT BURIAL" (or "DIR BUR").

Cable permitted to be used between cable trays and utilization equipment in accordance with Section 727.4(6) of the NEC is surface marked with the supplementary letters "-ER" (formerly marked "Open Wiring").

Cable marked "Wet" or "Wet Location" is suitable for use in wet locations.

Cable for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D, and Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC is marked "Type ITC-HL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2250, "Instrumentation Tray Cable."

The basic standard used to investigate cable marked "Type ITC-HL" in this category is ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Instrumentation Tray Cable" or "Type ITC."

See Cable for Use in Hazardous Locations (PJPP) for Listing Mark requirements for "Type ITC-HL."

INSULATING DEVICES AND MATERIALS (NYYV)

INSULATING BUSHINGS (NZMT)

USE

This category covers insulating bushings intended for the protection of wire, cable and flexible cord where it passes through walls or barriers of metal.

RELATED PRODUCTS

Insulating bushings intended for use on the ends of conduit in boxes, gutters, etc. are covered under Conduit Fittings (DWTT).

Insulating bushings intended for use on the ends of rigid or flexible conduit, electrical metallic tubing, or armored cable, where a change to open wiring is made, are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 635, "Insulating Bushings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Bushing" or "Insulated Bushing."

INSULATING TAPE (OANZ)

USE

This category covers rubber insulating tape for insulating joints and splices in electrical conductors where an outer covering of protective material, such as friction tape, is intended to be applied over the insulating tape.

This category also covers thermoplastic tape intended for use as the sole insulation and covering of joints and splices in electrical conductors.

This tape is suitable as electrical insulation at not more than 600 V and at temperatures not exceeding 80°C (176°F).

PRODUCT MARKINGS

The wrapper or carton containing a single roll of tape, or the central paper core on which the tape is wrapped, is marked with (1) the manufacturer's name or trademark, (2) the catalog or type number, and (3) the words "For use at not more than 600 V and at not more than 80°C (176°F)," or an equivalent statement.

Tape determined to be flame retardant is marked "Flame Retardant."

Tape determined to be suitable for exposure to sunlight is marked "Sunlight Resistant."

Tape determined to be suitable to insulate splices while subjected to temperatures down to -10°C is marked "Cold Resistant."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 510, "Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Insulating Tape" (or "Insul. Tape"), "Electrical Tape" (or "Elec. Tape") or "Electrical Insulating Tape" (or "Elect. Insul. Tape"), or other appropriate product name as shown in the individual Listings.

INSULATING DEVICES AND MATERIALS, MISCELLANEOUS (OCDT)

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standards used to investigate products in this category are UL 746A, "Polymeric Materials-Short Term Property Evaluations", UL 746B, "Polymeric Materials-Long Term Property Evaluations", and UL 746C, "Polymeric Materials-Use in Electrical Equipment Evaluations".

Insulating Devices and Materials, Miscellaneous (OCDT)—Continued

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product, when size or shape permits is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "LISTED", a control number, and one of the following product names as appropriate: "Insulating Link", "Insulating Cover", "Insulating Closure", or other appropriate product name.

INTERCOMMUNICATION SYSTEMS FOR USE IN HAZARDOUS LOCATIONS, MARINE (ODJV)

TELEPHONES FOR USE IN HAZARDOUS LOCATIONS, MARINE (OEPX)

GENERAL

This category covers telephone sets with a handset-type transmitter and receiver, and sound-powered telephone handsets for installation with circuit wiring, except cord assembly, using wiring materials specified by the Electrical Engineering Regulations of Subchapter J, Title 46, Code of Federal Regulations, Parts 110 to 113 inclusive. The sound-powered telephones are intrinsically safe and should not be installed with any other equipment or wiring that may impart dangerous currents to them.

These telephones are intended for use on ocean-going vessels and are designed to operate without causing ignition of surrounding flammable gas or vapor-air atmospheres covered by the Class I, Divisions 1 and 2 hazardous locations groups under which they are Listed. Telephones Listed for use in any of the groups under Class II, Divisions 1 and 2 hazardous locations have been tested for dust-tightness and safe operation in the presence of the specific combustible dusts.

This category also covers telephones for use in Division 2 only of one or more of the hazardous locations groups. Such telephones are similar to those for Division 1 locations except that ordinary handsets are provided that do not have any switches or arcing parts. These telephones are marked with the words "Division 2 Only."

The handset and cord assembly should be carefully inspected and should be replaced if there is any evidence of damage or deterioration or corrosion.

Station equipment, power supply equipment, and protectors, when used with these telephones, should be located outside the hazardous area. Information with regard to telephone supply line protection is given in the individual Listings.

ADDITIONAL INFORMATION

For additional information, see Marine Products (AAMP) and Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Marine Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Marine Listing Mark for these products includes the UL symbol with the word "MARINE" above the UL symbol (as illustrated in the Introduction of this Directory), the word "LISTED," a control number, and the product name "Telephone for Use in Hazardous Locations."

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (OERX)

GENERAL

This category covers products and systems investigated as to intrinsic safety only, as it pertains to use in hazardous locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual Classifications.

This equipment has not been investigated for performance of its intended function.

RELATED PRODUCTS

Equipment investigated for use only in the hazardous locations of automotive and marine service stations is covered under Control, Monitoring and Auxiliary Equipment (EQXX).

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN HAZARDOUS LOCATIONS (OERX)

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 913, "Intrinsically Safe Apparatus and Associated Apparatus for Use in Class I, II, and III, Division 1, Hazardous (Classified) Locations."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT NAME] FOR USE IN HAZARDOUS LOCATIONS
ONLY AS TO INTRINSIC SAFETY
Control No.

ION GENERATORS (OETX)

GENERAL

This category covers portable air ionizers of the household and commercial types intended for emitting charged ions into the atmosphere. These appliances may or may not employ mechanical filters.

REBUILT PRODUCTS

This category also covers ion generators that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt ion generators are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt ion generators are subject to the same requirements as new ion generators.

UNEVALUATED FACTORS

The physiological effects of the operation of these appliances, beneficial or otherwise, have not been investigated.

RELATED PRODUCTS

Electrostatic air cleaners and fans employing electrostatic air cleaners are covered under Electrostatic Air Cleaners (AGGZ).

Air filtering appliances utilizing mechanical filtration only or ultraviolet/germicidal lamps are covered under Air Filtering Appliances (AEDX).

Deodorizers intended to be used in treating air by dispersal of chemicals or by scenting the air are covered under Deodorizers and Air Fresheners (EOGX).

Deodorizers intended to remove odors in specific applications by ozone generation are covered under Deodorizers, Ozone Generator Type (EOKL).

Appliances employing ultraviolet lamps or ionization tubes for the purpose of treating air and having provisions for connection to heating and ventilation ducts used for air distribution are covered under Accessories, Air Duct Mounted (ABQK).

Power supplies intended for use in electrostatic air cleaning equipment are covered under Power Supplies, Electrostatic Air Cleaning Equipment (QQCH2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 867, "Electrostatic Air Cleaners."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Ion Generator," or other appropriate product name as shown in the individual Listings.

For rebuilt products, the word "Rebuilt," "Remanufactured" or "Reconditioned" precedes the product name.

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (OEVX)

GENERAL

This category covers products and systems investigated as to intrinsic safety only, as it pertains to use in hazardous locations. Included are intrinsically safe products, intrinsically safe systems, associated apparatus with intrinsically safe circuit extensions, and other arrangements involving intrinsic safety as identified in the individual Classifications.

INTRINSICALLY SAFE EQUIPMENT AND SYSTEMS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (OEVS)

This equipment has not been investigated for performance of its intended function.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic standards used to investigate products in this category are referenced in Equipment for Use in Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

[PRODUCT IDENTITY] FOR USE IN HAZARDOUS LOCATIONS ONLY AS TO INTRINSIC SAFETY
Control No.

IRRIGATION CABLE (OFFY)

GENERAL

This category covers irrigation cable for use with electrically driven or controlled irrigation machines in accordance with Article 675 of ANSI/NFPA 70, "National Electrical Code."

Irrigation cable used to interconnect enclosures on the structure of an irrigation machine is an assembly of stranded, insulated conductors with non-hygroscopic fillers in a core of moisture and flame resistant, nonmetallic material overlaid with a metallic covering and jacketed with a moisture, corrosion and sunlight-resistant nonmetallic material. Irrigation cable is suitable for direct burial in the earth and may, optionally, be so marked.

This cable may consist of a composite of power, control and grounding conductors in sizes 18 AWG and larger, stranded copper, and is rated 75°C and 600 V.

RELATED PRODUCTS

Fittings for use with this cable are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 1263, "Outline of Investigation for Irrigation Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel, or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Irrigation Cables."

IRRIGATION CABLE ASSEMBLIES (OFJZ)

USE

This category covers irrigation cable assemblies consisting of Listed irrigation cable terminated at each end in special-purpose fittings, intended for use with irrigation equipment in accordance with Article 675 of ANSI/NFPA 70, "National Electrical Code" (NEC). These assemblies are connecting devices used to interconnect multiple parts of irrigation equipment as permitted by the NEC.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Irrigation Cable Assembly."

LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OGNA)

GENERAL

This category covers laboratory equipment and accessories designed for technological activities involving:

1. The measurement of physical or chemical properties of materials.
2. The measurement, control, and/or display of the functional performance of a piece of equipment.

LABORATORY EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OGNA)

229

3. Qualitative or quantitative constituent analysis of substances.
 4. Preparation of materials for further analysis or measurements.
- These products have been investigated with respect to risk of fire, shock, and injury to persons. The accuracy of measured, analyzed, or prepared quantities has not been investigated.

This category does not cover laboratory equipment intended for patient contact.

In cases where the nature or construction of the equipment is such that special precautions beyond the requirements of ANSI/NFPA 70, "National Electrical Code," must be observed in installation or use, the necessary instructions are marked on the equipment or provided in the instructions.

RELATED PRODUCTS

Other equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory for Use in Hazardous Locations (KGIZ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standards used to investigate products in this category are UL 1262, "Laboratory Equipment," and UL 3101-1, "Electrical Equipment for Laboratory Use; Part 1: General Requirements," as appropriate.

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-operated Laboratory Equipment for Use in Hazardous Locations" or "Laboratory Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

LABORATORY HOODS AND CABINETS (OGOY)

USE AND INSTALLATION

This category covers laboratory hoods, biological safety cabinets and laminar flow cabinets classified as to fire, electrical and mechanical hazards.

Laboratory hoods are intended to provide an enclosed counter top work area with exhaust for capture and removal of vapors, mists and particulate matter from the work area.

Biological safety cabinets are intended to provide an enclosed counter top work area for handling and containment of biological materials.

Laminar flow cabinets are ventilated, partially enclosed cabinets using laminar air flow and intended to provide "clean" air flow over the work surface.

These products have been investigated for fire, electrical and mechanical hazards only. Effectiveness and reliability of air flow for capture, containment and exhaust have not been investigated. Unless specifically marked on the equipment, suitability for use with perchloric acid, radiological materials, or the like has not been investigated.

Requirements for the installation of this equipment are included in NFPA 45-1982, "Fire Protection for Laboratories Using Chemicals."

PRODUCT MARKINGS

Laboratory hoods and cabinets are marked with (1) the manufacturer's name, trade name or trademark or other descriptive marking by which the organization responsible for the product may be identified, (2) a distinctive "catalog" or "model" number or the equivalent, (3) the electrical rating, and (4) the date or other dating period of manufacture not exceeding any three consecutive months.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1805, "Laboratory Hoods and Cabinets."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product, when the size and shape permits, is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), the product identity, the statement "IN

ACCORDANCE WITH UL 1805 " or "AS TO FIRE, ELECTRICAL AND MECHANICAL HAZARDS ONLY," and a control number.

LABORATORY USE ELECTRICAL EQUIPMENT (OGTK)

USE

This category covers laboratory equipment used to measure, indicate, monitor or analyze substances, or to prepare materials, including in vitro diagnostic (IVD) equipment. Examples include but are not limited to blood/tissue/gas analyzers, centrifuges, hot plates and stirrers, sterilizers, fiber optic illuminators and laboratory mixers.

MODULAR SYSTEMS

Laboratory equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

ACCESSORIES AND SUBASSEMBLIES

Field-installed accessories and subassemblies (component assemblies) to Listed equipment are provided with suitable markings and/or instructions, providing details on proper installation or assembly of the accessory/subassembly with equipment specified in the markings or instructions.

REBUILT PRODUCTS

This category also covers laboratory equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt laboratory equipment is factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt laboratory equipment is subject to the same requirements as new laboratory equipment.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically Listed in the individual Listings. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

Laboratory equipment intended for patient contact is covered under Medical Equipment (PIDF).

Additional equipment that may be used in laboratories is covered under Heaters, Industrial and Laboratory (KQLR) and Measuring, Testing and Signal Generation Equipment (PICQ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010A-1, "Electrical Equipment for Laboratory Use – Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use – Part 1: General Requirements," and one or more of the following Particular Standards as applicable:

IEC 61010-2-010, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-010: Particular Requirements for Laboratory Equipment for the Heating of Materials"

IEC 61010-2-020, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-020: Particular Requirements for Laboratory Centrifuges"

IEC 61010-2-041, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-041: Particular Requirements for Autoclaves Using Steam for the Treatment of Medical Materials, and for Laboratory Processes"

IEC 61010-2-042, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-042: Particular Requirements for Autoclaves and Sterilizers Using Toxic Gas for the Treatment of Medical Materials, and for Laboratory Processes"

IEC 61010-2-043, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-043: Particular Requirements for Dry Heat Sterilizers Using Either Hot Air or Hot Inert Gas for the Treatment of Medical Materials, and for Laboratory Processes"

IEC 61010-2-045, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-045: Particular Requirements for Washer Disinfectors Used in Medical, Pharmaceutical, Veterinary and Laboratory Fields"

IEC 61010-2-051, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-051: Particular Requirements for Laboratory Equipment for Mixing and Stirring"

IEC 61010-2-061, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-061: Particular Requirements for Laboratory Atomic Spectrometers with Thermal Atomization and Ionization"

IEC 61010-2-081, " Safety Requirements for Electrical Equipment for

Measurement, Control, and Laboratory Use – Part 2-081: Particular Requirements for Automatic and Semi-Automatic Laboratory Equipment for Analysis and Other Purposes"

IEC 61010-2-101, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use – Part 2-101: Particular Requirements for In Vitro Diagnostic (IVD) Medical Equipment"

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Laboratory Equipment," or other appropriate product name as shown in the individual Listings.

When the size or shape of a subassembly makes it impractical to incorporate the product identification text, the product may be marked with the UL symbol, "OGTK" and the control number, provided that the complete Listing Mark text appears on the smallest shipping container.

The product name for field-installed modules, accessories and subassemblies is provided with the additional word "Module," "Accessory" or "Sub-assembly."

For rebuilt equipment the word "Rebuilt," "Remanufactured," "Refurbished" (or "Refurb") or "Reconditioned" precedes the product name.

LAMP HOLDERS (OIMZ)

LAMP HOLDERS, ELECTRIC DISCHARGE (OJAX)

Lamp holders, Electric Discharge, Over 1000 Volts (OJOV)

USE

This category covers lampholders and electrode receptacles for use with electric discharge lamps and tubes.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 542, "Lampholders, Starters, and Starter Holders for Fluorescent Lamps" and UL 879, "Electrode Receptacles for Gas-Tube Signs."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product when size or shape permits is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder" or "Electric Discharge Lampholder" or other appropriate product name as shown in the individual Listings.

Lamp holders, Electric Discharge, 1000 Volts or Less (OKCT)

USE

This category covers lampholders and combination lampholders with starter holders intended for use with electric discharge or fluorescent lamps.

This category also covers GU24 and GU24-1 holders for fluorescent and LED self-ballasted lamps and lamp adapters with mating pin bases.

RELATED PRODUCTS

Separate starter holders are covered under Holders for Automatic Starters (FLPZ).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder" or "Electric Discharge Lampholder," or other appropriate product name as shown in the individual Listings.

LAMP HOLDERS, FITTINGS (OKQR)

USE

LAMP HOLDERS (OIMZ)

Lampholders, Fittings (OKQR)—Continued

This category covers attachments and parts that modify lampholders for certain conditions of usage.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder Fitting" or "Shadeholder," or other appropriate product name as shown in the individual Listings.

LAMP HOLDERS, INCANDESCENT (OLDZ)**Lampholders, Adapters (OLRX)****GENERAL**

This category covers screw-shell lamp adapters. Included are male-to-female screw-shell adapters and screw-shell adapters provided with attachment plug blades or receptacles.

RELATED PRODUCTS

For plug-in devices with a lampholder intended to be used as a nightlight, see Nightlights (QOYX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Adapter," "Lampholder Adapter" or "Incandescent Lampholder Adapter," or other appropriate product name as shown in the individual Listings.

Lampholders, Candelabra and Miniature (OMFV)**GENERAL**

This category covers screw-shell lampholders of the candelabra and miniature base sizes.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used in addition to the paper covering on the screw-shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Miniature Lampholder" or "Candelabra Lampholder."

Lampholders, Intermediate Base (OMTT)**GENERAL**

This category covers screw-shell lampholders of the intermediate-base size.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw-shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

LAMP HOLDERS (OIMZ)

231

Lampholders, Intermediate Base (OMTT)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Intermediate Lampholder" or "Incandescent Lampholder."

Lampholders, Medium Base (ONHR)**GENERAL**

This category covers screw-shell lampholders of the admedium- and medium-base sizes.

Candle lampholders are those having exposed wiring terminals or other live parts intended for use with a close fitting, nonmetallic outer decorative casing, which is used, in addition to the paper covering on the screw-shell and terminals, to enclose the entire lampholder and provide the required depth of lamp cavity.

Admedium bases are not intended for use with ordinary incandescent lamps.

Switched lampholders are tested on circuits involving a potential to ground of 125 V.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Medium Lampholder" or "Incandescent Lampholder."

Lampholders, Mogul Base (ONUZ)**GENERAL**

This category covers screw-shell lampholders of the mogul-base size.

Switched lampholders are tested on circuits involving a potential to ground of 125 V.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Lampholder," "Mogul Lampholder" or "Incandescent Lampholder."

Lampholders, Miscellaneous (OOIX)**GENERAL**

This category covers lampholders for lamps that employ other than the usual screw-shell bases or are designed for specialized uses.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, "Lampholders."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word

Lamp holders, Miscellaneous (OOIX)—Continued

“LISTED,” a control number, and the product name “Lamp holder,” “Miscellaneous Lamp holder” or “Incandescent Lamp holder.”

LAMPS (OOKH)**LAMPS, SELF-BALLASTED AND LAMP ADAPTERS (OOLR)****USE AND INSTALLATION**

This category covers self-ballasted lamps consisting of a ballast, transformer or power supply, and an integrated or replaceable lamp, for direct connection to a lampholder.

These products are intended for connection to lampholders for outlet boxes and lampholders provided in luminaires, portable luminaires and signs. The point-of-supply connection (the lamp base for these products) can be an Edison screw-type as well as other ANSI lamp bases. These products are intended for operation at the voltage marked on the product.

Products in this category employ various lamp technologies including, but not limited to, fluorescent lamps and high-intensity-discharge (HID) lamps. Devices with an integral lamp are termed “self-ballasted”; devices with a replaceable lamp are termed “adapters.”

These products are generally for use in indoor, dry locations unless additionally investigated and marked for applications such as damp locations (not directly exposed to water). Products investigated and marked for wet locations may have additional restrictions regarding use or orientation.

These products have been investigated for use in the smaller of a 6- or 8-in. diameter recessed luminaire, if they will physically fit, and are intended for use in totally enclosed, recessed luminaires unless marked and stated not for such use.

These products are not intended for use in emergency lighting equipment or exit fixtures where brightness is a factor.

RELATED PRODUCTS

Light-emitting-diode type, self-ballasted lamps and lamp adapters are covered under Lamps, Self-ballasted and Lamp Adapters, Light-emitting-diode Type (OOLV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1993, “Self-Ballasted Lamps and Lamp Adapters.”

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Self-ballasted Lamp” or “Lamp Adapter,” or other appropriate product name as shown in the individual Listings.

LAMPS, SPECIALTY (OONB)**USE**

This category covers specialty lamps, usually of the common bulb shapes, containing assemblies of light sources (such as miniature incandescent bulbs, light-emitting diodes) and associated electrical components, and provided with bases of various sizes, usually of the standard configurations covered in ANSI/ANSI C81.61, “American National Standard for Electrical Lamp Bases – Specifications for Bases (Caps) for Electric Lamps.”

These lamps are intended for use in Listed equipment, such as exit fixtures or exit lights, where the product marking specifies the use of a lamp covered under this category.

PRODUCT MARKINGS

The lamp or the smallest unit container is marked with the wattage, voltage, manufacturer’s identification and catalog number.

UNEVALUATED FACTORS

Interchangeability of these lamps with commonly available lamps has not been investigated.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 496, “Lamp holders.”

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for

Lamps, Specialty (OONB)—Continued

these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**SPECIALTY LAMP
FOR USE IN PRODUCTS MARKED
TO USE UL CLASSIFIED LAMP, ____ (+) ____ (++)
Control No.**

(+) Company identification
(++) Lamp catalog number

LAMPS, TUNGSTEN HALOGEN (OOOJ)**GENERAL**

This category covers tungsten halogen lamps employing an integral shield that has only been investigated in accordance with the guard and shield requirements applicable to lighting products for use with tungsten halogen lamps.

These lamps may be used in all Listed lighting products with or without a containment barrier where permitted by the product markings.

The lamp or the smallest unit container is marked with the wattage, voltage, lamp type, manufacturer and model number.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 153, “Portable Electric Luminaires.”

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word “CLASSIFIED” above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**TUNGSTEN HALOGEN LAMP
FOR PARTICLE CONTAINMENT ONLY
Control No.**

LEAK DETECTION EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (OPDH)**GENERAL**

This category covers leak detection equipment, including control units, indicators, sensors, probes and auxiliary devices, used as part of leak detection systems.

Certain products in this category are associated apparatus and are intended for installation in unclassified (ordinary) locations. They are provided with intrinsically safe circuit(s) as indicated on the product, for extension into a hazardous (classified) location.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word “LISTED,” a control number, and the product name “Leak Detection Equipment for Use in Hazardous Locations” or “Leak Detection Equipment (Associated Apparatus),” or other appropriate product name as shown in the individual Listings.

LIGHTING AND POWER EQUIPMENT, AUXILIARY (OUST)**USE AND INSTALLATION**

This category covers equipment to be used in conjunction with a facility emergency lighting and power system. This equipment has not been evaluated for compliance with the performance criteria of Article 700 of the National Electrical Code (ANSI/NFPA 70), the Life Safety Code (ANSI/NFPA 101) or the Uniform Fire Code. It may consist of battery assemblies, unit equipment, remote light sources, illuminated signs, or related devices.

LIGHTNING AND POWER EQUIPMENT, AUXILIARY (OUST)

This equipment is for use in unclassified areas and is intended for indoor, dry location use only unless marked for damp or wet locations.

RELATED PRODUCTS

See Emergency Lighting and Power Equipment (FTBR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 924, "Emergency Lighting and Power Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Auxiliary Lighting Equipment," "Auxiliary Power Equipment."

LIGHTNING PROTECTION (OVGR)

LIGHTNING CONDUCTORS, AIR TERMINALS AND FITTINGS (OVTZ)

GENERAL

Lightning protection components are intended to be installed to provide a lightning protection system complying with UL 96A, "Installation Requirements for Lightning Protection Systems."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 96, "Lightning Protection Components."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product, when size or shape permits, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Lightning Conductor," "Air Terminal," "Fitting," or other appropriate product name.

LIGHTNING PROTECTION SYSTEM INSTALLATIONS (OWAY)

GENERAL

This category covers the installation of lightning protection systems on structures (as limited by UL 96A) to protect them from damage by lightning. The issuance of a Certificate is evidence that the installation of the lightning protection system (1) has been made by an installer that Subscribes to UL's Follow-Up Service, (2) employs materials subject to factory inspection service and bears the UL Mark, and (3) is subject to a field inspection program covering proper installation of the system. The components of the system are described in UL 96A, "Installation Requirements for Lightning Protection Systems" and UL 96, "Lightning Protection Components."

RELATED PRODUCTS

For manufacturers of Listed ground rods suitable for use in installations of lightning protection equipment, see Grounding and Bonding Equipment (KDER).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 96A, "Installation Requirements for Lightning Protection Systems."

LOOK FOR THE CERTIFICATE FOR NEW INSTALLATIONS

The Certificate of Underwriters Laboratories Inc. is the only method provided by UL to identify lightning protection systems covered under its Listing and Follow-Up Service. The Certificate is limited to the number of years for which it has been issued and must be renewed to remain in effect.

Underwriters Laboratories Inc. maintains a factory inspection service for counterchecking conductors, air terminals and fittings, and also a field inspection service for counterchecking installations.

SURGE ARRESTERS (OWHX)

USE

This category covers surge arresters intended to afford protection against surge-related damage to secondary distribution wiring systems and/or to

LIGHTNING PROTECTION (OVGR)

233

Surge Arresters (OWHX)—Continued

equipment connected thereto. These devices are for use on alternating current power circuits and are intended to be installed in accordance with Article 280 of ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

Transient voltage surge suppressors are intended for use only on the load side of the main service disconnect and are covered under Transient Voltage Surge Suppressors (XUHT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C62.11, "Standard for Metal-Oxide Surge Arresters for AC Power Circuits." All other types of surge arresters are investigated to IEEE C62.1-1989, "Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Surge Arrester," "Secondary Surge Arrester," "Secondary MOV Surge Arrester," "Secondary Metal-Oxide Surge Arrester," "Secondary Valve Type Surge Arrester" or "Distribution Light Duty Surge Arrester."

SURGE ARRESTERS CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (OWIW)

GENERAL

This category covers surge arresters which have been investigated and found suitable for use as plug-in devices in specified panelboards. The surge arresters are Classified for use in specified panelboards in accordance with the details on the surge arrester or in the publication provided therewith.

In addition to the Classification Marking, one of the following statements or the compatibility list is marked on the side of the surge arrester: "For Catalog Numbers of Compatible Panelboards, refer to the installation instructions provided with the surge arrester" or "For catalog numbers (or equivalent) of specified panelboards, refer to Publication No. _____ provided with this surge arrester."

The referenced publication is a compatibility list which tabulates the company name, catalog number and electrical ratings of the Classified surge arrester in addition to the company name and catalog number of the applicable UL Listed panelboards which the Classified surge arrester has been investigated for use in. One copy of the compatibility list is provided with each surge arrester.

RELATED PRODUCTS

See Surge Arresters (OWHX).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic Standard used to investigate metal oxide surge arresters is IEEE C62.1-1989, Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits. All other types of surge arresters are investigated to IEEE C62.1-1989, Standard for Gapped Silicon-Carbide Surge Arresters for AC Power Circuits.

UL MARK

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Marking for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the word "CLASSIFIED", a control number and one of the following product names as appropriate: "Surge Arrester", "Secondary Surge Arrester", "Secondary MOV Surge Arrester", "Secondary Metal-Oxide Surge Arrester", "Secondary Valve Type Surge Arrester".

In the Classification Marking the words "Underwriters Laboratories Inc." may be abbreviated "Underwriters Lab. Inc." or "Und. Lab. Inc."

Included as part of the Classification Marking on the surge arrester is the statement: "For Catalog Numbers of Compatible Panelboards, refer to the installation instructions provided with the surge arrester".

LIMITED COMBUSTIBLE CABLE (OWKZ)

GENERAL

This category covers electrical and optical fiber cable that meets the limited combustible and smoke developed requirements for cable in ceiling

cavity and raised floor plenums in accordance with NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems." This cable also meets the requirements for cable used in ducts, plenums and other spaces used for environmental air in accordance with Articles 725, 760, 770, 800, 820 and 830 of ANSI/NFPA 70, "National Electrical Code".

This cable has a maximum Potential Heat value of 3500 Btu/lb when tested in accordance with NFPA 259, "Standard Test Method for Potential Heat of Building Materials." This cable has a maximum smoke developed index of 50 and a maximum flame spread index of 25 when tested in accordance with UL 723 (NFPA 255), "Test for Surface Burning Characteristics of Building Materials" before and after exposure to elevated temperature and humidity. The cable also meets the requirements for plenum cable in one or more of the following product categories:

- Power-limited Circuit Cable (QPTZ) – Types CL2P or CL3P
- Communications Cable (DUZX) – Type CMP
- Power-limited Fire Alarm Cable (HNIR) – Type FPLP
- Nonpower-limited Fire Alarm Cable (HNHT) – Type NPLFP
- Optical Fiber Cable (QAYK) – Types OFNP or OFCP
- Community Antenna Television Cable (DVCS) – Type CATVP
- Network-powered Broadband Communications Cable (PWIP) – Type BLP

PRODUCT MARKINGS

This cable is identified by the marking "Limited Combustible FHC 25/50" on the surface of the jacket or on a marker tape under the jacket. This marking is immediately followed by one of the Type designations shown above. The cable also has the required markings including optional markings as indicated in the product categories referenced above. This cable may also be Verified for transmission performance if authorized in the product categories referenced above, and will bear the appropriate performance verification marking.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 2424, "Outline of Investigation for Cable Marked 'Limited Combustible.'"

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Limited Combustible Cable."

Cable which is also Verified to the UL Data Transmission Performance Category Marking Program has the marking "Verified to UL Performance Category Program," or the UL Verification Mark along with the words "Performance Category Program" together with the Listing Mark information on the tag, the reel, or the smallest unit container. Cable which is also Verified to another transmission performance specification has the marking "Verified in Accordance with [Specification name and/or number]" or the UL Verification Mark along with the applicable Specification name and/or number together with the Listing Mark information on the tag, the reel, or the smallest unit container.

LINE ISOLATION MONITORS (OWLS)

GENERAL

This category covers line isolation monitors, with or without supplementary remote indicating units, designed to supervise the isolated power supply circuits in hospital inhalation anesthetizing locations.

The monitor and supplementary indicating units are intended to be installed in any of the following locations in conformity with the applicable requirements of ANSI/NFPA 99, "Standard for Health Care Facilities," and ANSI/NFPA 70, "National Electrical Code":

- (a) Nonhazardous anesthetizing area
- (b) Above a hazardous area (5 ft or more above the floor)
- (c) Included as part of an isolated power supply center

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1022, "Line Isolation Monitors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory)

together with the word "LISTED," a control number, and the product name "Line Isolation Monitor" or "Line Isolation Monitor Accessory."

LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAPU)

GENERAL

This category covers devices such as low-voltage ac power circuit breakers, low-voltage dc power circuit breakers, low-voltage ac power circuit protectors, low-voltage ac integrally-fused power circuit breakers, and low-voltage power-switching device adapters.

Low-voltage power-switching devices have been investigated for continuous duty at 100% of their current ratings and are designed to provide service-entrance, feeder or branch-circuit protection. They may be manually and/or electrically operable.

These low-voltage power-switching devices, enclosures and adapters are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such markings are independent of any marking on terminal connectors and are on a wiring diagram or other readily-visible location.

Stationary equipment is normally bus connected. However, terminal pads are provided which can accommodate field-installed pressure-wire connectors.

PRODUCT MARKINGS AND RATINGS

Unless the device is marked to indicate otherwise, the wiring space and current-carrying capacity are based on the use of 60°C wire in circuits rated 100 A or less, and on the use of 75°C wire for higher amp-rated circuits.

Low-voltage power-switching devices suitable for use with an accessory are marked to indicate the accessory(s), the electrical rating and proper connections (if not obvious).

Low-voltage power-switching devices without enclosures are intended for use only in Listed enclosures or as part of other Listed equipment which has been and are marked for use with a specific low-voltage power switching device.

ACCESSORIES, LOW-VOLTAGE POWER-SWITCHING DEVICES (PAQF)

GENERAL

This category covers accessories such as shunt trip devices, undervoltage trip devices, alarm switches and auxiliary switches intended for field installation for use only with specific low-voltage power-switching devices. Correct combinations of low-voltage power-switching devices and accessories are indicated by markings on or with the accessory and/or the low-voltage power-switching device.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear – Low Voltage AC Power Circuit Breakers Used in Enclosures – Test Procedures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Breaker Accessory," or other appropriate product name as shown in the individual Listings.

ADAPTERS, LOW-VOLTAGE AC POWER-SWITCHING DEVICES (PAQQ)

GENERAL

This category covers equipment designed to adapt low-voltage power-switching devices to receiving devices, such as individual enclosures, dead-front switchboards (switchgear), panelboards, etc. Field installation is intended only in those receiving devices which are specifically marked for their use.

These adapters have been investigated in conjunction with power-switching devices and have been found suitable to carry 100% of the current rating of the power-switching device, and to withstand the maximum fault-current levels specified on the power-switching device.

PRODUCT MARKINGS

The adapters are marked to indicate the power-switching device with which they may be used.

ADDITIONAL INFORMATION

Adapters, Low-voltage AC Power-switching Devices (PAQQ)—Continued

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear - Low Voltage AC Power Circuit Breakers Used in Enclosures - Test Procedures," and ANSI/IEEE C37.20.1, "Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage Power Switching Device Adapter."

LOW-VOLTAGE AC FUSE DRAW-OUTS (PAQT)**GENERAL**

This category covers fuse draw-outs intended to be installed in switchgear and connected in series with Listed low-voltage ac power circuit breakers in order to extend the short-circuit current rating of the circuit breaker.

Fuse draw-outs consist of fuses or current limiters and an open fuse-trip device in a draw-out-type assembly. The open fuse-trip device will cause the associated circuit breaker to trip when any fuse or current limiter opens.

These devices have been investigated in combination with specific circuit breakers for use on circuits having an available fault current of 200,000 rms symmetrical amps, maximum, 3-phase.

PRODUCT MARKINGS

Fuse draw-outs are marked with maximum voltage, frequency, continuous current and short-circuit current ratings, and the type or catalog number designation of the circuit breaker with which it is intended to be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/NEMA C37.50, "Switchgear - Low Voltage AC Power Circuit Breakers Used in Enclosures - Test Procedures," and ANSI/IEEE C37.20.1, "Standard for Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Fuse Draw-Out."

LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAQX)**GENERAL**

This category covers low-voltage power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection or serve as a disconnecting means. This category also covers power circuit breaker enclosures. They are covered by the classifications indicated by the label designation as follows:

Low-voltage ac power circuit breaker — Without enclosure, and with or without noninterchangeable trip devices.

Low-voltage ac power breaker frame — Frame only of power circuit breaker with provision for interchangeable trip devices. A Listed low-voltage power circuit breaker frame is Listed for use only with a Listed low-voltage ac power circuit breaker trip device.

Low-voltage ac power circuit breaker trip device — Trip device only of a power circuit breaker having provisions for interchangeable trip devices.

Low-voltage ac power-switching device enclosure — Enclosure only for individual 1-, 2- or 3-pole power circuit breaker.

The frame size determines the maximum continuous-current rating for all parts of a low-voltage ac power circuit breaker except the coils of the direct-acting trip device. The rating of the trip device determines the actual continuous-current rating.

The trip devices may contain ground-fault current, longtime-delay overcurrent, short-time-delay overcurrent and instantaneous overcurrent trip elements that may be adjustable. The tolerance of the marked position of the longtime-delay overcurrent trip setting is plus or minus 10%.

A ground-fault current trip element is one that functions at all values of current at or above a predetermined value of fault current to ground.

Low-voltage AC Power Circuit Breakers (PAQX)—Continued

An instantaneous overcurrent trip element is one that functions with no purposely delayed action at all values of current at or above a predetermined value of overcurrent.

A long-time overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time or instantaneous pick-up settings of the circuit breaker.

A short-time-delay overcurrent trip element is one that functions with a purposely delayed action at all values of current between a predetermined value of overcurrent and the short-time current rating of the circuit breaker.

Circuit breakers without trip devices cannot of themselves respond to overcurrent, short-circuit or ground faults and are marked "No Over-Current Protection Provided" or "If Over-Current Protection is Required, Use With Type ___ Protective Relays." Circuit breakers without trip devices can respond to overcurrent when properly connected to protective relays.

PRODUCT MARKINGS

Low-voltage ac power circuit breakers are marked with maximum voltage, frequency, continuous current, short-time current, short-circuit current (interrupting rating) and control-voltage ratings. The short-time current rating is the designated limit of fault current that the low-voltage ac power circuit breaker can successfully carry for a short interval. Other rating information, such as the nominal design voltage and time-delay overcurrent trip setting, may be provided.

The short-circuit current rating of a low-voltage ac power circuit breaker may be extended by connecting a low-voltage ac fuse draw-out in series. When such connection is used, the circuit breaker is provided with means for tripping by way of a signal from an open fuse-trip device. The open fuse-trip device may be either on the fuse draw-out or on the circuit breaker. Circuit breakers are marked with the catalog or type designation of the fuse draw-out with which they are intended to be used.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear - Low Voltage AC Power Circuit Breakers Used in Enclosures - Test Procedures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Low-Voltage AC Power Circuit Breaker," "Low Voltage AC Power Breaker Frame," "Low Voltage AC Power Circuit Breaker Trip Unit," "Low Voltage AC Power Switching Device Enclosure."

Secondary Network Protectors (PARZ)**USE**

This category covers secondary network protectors for use in spot or grid networks rated 600 V or less. These protectors consist of a circuit breaker and its control equipment. They are used for automatically disconnecting a transformer from a secondary network in response to predetermined electrical conditions on the primary feeder or transformer. They are also used for connecting a transformer to a secondary network either through manual control or automatic control responsive to predetermined electrical conditions on the feeder and the secondary network.

PRODUCT MARKINGS

Each secondary network protector is marked with the company name, model number and its electrical ratings, which includes the maximum short circuit rating of the device.

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Circuit Breakers (PAQX), Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is IEEE C57.12.44, "IEEE Standard Requirements for Secondary Network Protectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this

Secondary Network Protectors (PARZ)—Continued

Directory) together with the word "LISTED," a control number, and the product name "Secondary Network Protector."

LOW-VOLTAGE AC INTEGRALLY-FUSED POWER CIRCUIT BREAKERS (PASQ)

GENERAL

This category covers low-voltage ac integrally-fused power circuit breakers rated 600 V maximum. Low-voltage ac integrally-fused power circuit breakers include all the mechanical features of low-voltage ac power circuit breakers and, in addition, have current limiters or current-limiting fuses that function to increase the fault-current interrupting rating of the low-voltage ac integrally-fused power circuit breakers.

These devices have been investigated for use on circuits having available fault currents of 200,000 rms symmetrical amps, maximum, three-phase.

In addition to overcurrent trip elements of the low-voltage ac power circuit breakers, these are provided with anti-single-phase tripping device that automatically opens the circuit breaker contacts in response to circuit interruption by the current limiter or the current-limiting fuse.

PRODUCT MARKINGS

Low-voltage ac integrally-fused circuit breakers are marked with maximum voltage, frequency, continuous current, short-circuit current (interrupting rating) and control voltage ratings. Other rating information, such as the nominal design voltage and time-delay overcurrent tripping setting, may be provided.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.13, "Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/NEMA C37.50, "Switchgear — Low Voltage AC Power Circuit Breakers Used in Enclosures — Test Procedures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Integrally Fused Power Circuit Breaker."

LOW-VOLTAGE AC POWER CIRCUIT PROTECTORS (PATT)

GENERAL

This category covers low-voltage ac power circuit protectors rated 240 V or 480 V, investigated for use on circuits having available fault currents of 200,000 rms symmetrical amps maximum, three-phase.

Low-voltage ac power circuit protectors consist of a low-voltage ac power circuit breaker that has been modified to omit the direct-acting tripping device and to include a Class L current-limiting fuse in series with the load terminals of each pole.

PRODUCT MARKINGS

The low-voltage ac power circuit protectors are marked with maximum voltage, frequency, continuous current, short-circuit current and control voltage(s) ratings. Other rating information, such as switching current rating, may be provided.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/IEEE C37.29, "IEEE Standard for Low-Voltage AC Power Circuit Protectors Used in Enclosures," and ANSI/NEMA C37.52, "Test Procedures for Low Voltage AC Power Circuit Protectors Used in Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage AC Power Circuit Protector."

LOW-VOLTAGE DC POWER CIRCUIT BREAKERS (PAXW)

USE

This category covers low-voltage dc power circuit breakers specifically designed to provide service-entrance, feeder or branch-circuit protection.

Low-voltage DC Power Circuit Breakers (PAXW)—Continued

Low-voltage dc power circuit breakers are separated into three types: general purpose, high speed and semi-high speed.

These products are intended for use in Listed enclosures or switchboards with Recognized or Listed adapters.

PRODUCT MARKINGS

These products are marked with rated maximum voltage, rated continuous current, rated momentary current (when applicable), rated peak current (when applicable), rated short-time current, rated short-circuit current and rated control voltage.

ADDITIONAL INFORMATION

For additional information, see Low Voltage AC Power Switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures," and ANSI/IEEE C37.14, "IEEE Standard for Low-Voltage DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Low Voltage DC Power Circuit Breaker."

TRIP DEVICES CLASSIFIED FOR USE IN LOW-VOLTAGE AC POWER CIRCUIT BREAKERS (PAYK)

USE

This category covers trip devices suitable for use in place of the original trip device of a low-voltage ac power circuit breaker. Classification covers only the trip device in its ability to sense and respond to overcurrent and fault-current conditions.

This category does not cover the circuit breaker on which the trip device is mounted.

ADDITIONAL INFORMATION

For additional information, see Low-voltage AC Power-switching Devices (PAPU) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/IEEE C37.59-1996, "IEEE Standard Requirements for Conversion of Power Switchgear Equipment," which references ANSI/IEEE C37.13-1990, "IEEE Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures," ANSI/IEEE C37.17-1997, "Trip Devices for AC and General Purpose DC Low Voltage Power Circuit Breakers," ANSI/NEMA C37.50-1989, "Switchgear Low Voltage AC Power Circuit Breakers Used in Enclosures," and ANSI/UL 1066, "Low-Voltage AC and DC Power Circuit Breakers Used in Enclosures."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

TRIP DEVICE
IN ACCORDANCE WITH IEEE C37.59-[date]
Control No.

MAGNETIC RESONANCE IMAGING EQUIPMENT (PAZB)

This category covers equipment which, unless otherwise noted, is designed for professional use by personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities. Unless otherwise noted they have not been evaluated for mobile use. The nature of MRI equipment is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation manual. The equipment is intended to be operated in accordance with the accompanying documents provided with the equipment.

This equipment has been investigated from the standpoint of electric shock, fire, and mechanical hazards. Other hazards, including those which may result from the use of this equipment in the presence of flammable anesthetics have not been investigated. The effect on a patient of simultaneous use of this equipment with other electrical apparatus and the physiological effects, beneficial or otherwise, which may be produced by this equipment, have not been investigated.

MAGNETIC RESONANCE IMAGING EQUIPMENT (PAZB)

Some Magnetic Resonance Imaging (MRI) Equipment generates large magnetic fields as part of its function. For this equipment, precautions must be taken to protect against the magnetic effects on materials in the vicinity which might be attracted or repulsed by the magnetic field.

The basic standards used to investigate products in this category are UL 187, X-Ray Equipment, UL 1012, Power Supplies, and UL 1950, Information Technology Equipment Including Business Equipment, depending on the individual equipment's use and function.

MRI equipment may also or alternatively be covered in this directory under MEDICAL ELECTRICAL EQUIPMENT (PIDF).

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by Underwriters Laboratories Inc. to identify products under its Classification and Follow-up Service. The Classification Marking includes "CLASSIFIED BY UNDERWRITERS LABORATORIES AS TO ELECTRIC SHOCK, FIRE, AND MECHANICAL HAZARDS ONLY", or equivalent statement as indicated in the individual Classifications, and a control number.

For products also classified under Medical Electrical Equipment (PIDF), the Marking includes the appropriate Classification Marking and "Also Classified IN ACCORDANCE WITH UL 2601-1 " .

MANAGEMENT EQUIPMENT, ENERGY (PAZX)**USE**

This category covers energy management equipment that energizes or de-energizes electrical loads to achieve the desired use of electrical power. This equipment normally controls electrical loads by responding to sensors or transducers monitoring power consumption, by sequencing, by cycling the loads through the use of preprogrammed data logic circuits, or any combination thereof. Devices responding to signals from a utility company may receive the signals over the power lines or as radio signals.

Typical loads controlled are space heating, air conditioning, lighting and other similar loads.

UNEVALUATED FACTORS

The effects of the controls on the performance ratings of the connected loads have not been evaluated.

PRODUCT MARKINGS

"Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" and "Energy Management Equipment Accessory" require modular labeling. The marking on the individual subassembly, or smallest container, will make reference to 1) a wiring diagram for interconnection of a system, and 2) the various combinations of subassemblies that may be employed to comprise the system unit.

RELATED PRODUCTS

Signal system units incorporating energy management systems are covered under Signal System Units (UDTZ) in the Electrical Appliance and Utilization Equipment Directory.

Switching devices operated by a clock mechanism and other similar type products used to energize or de-energize loads are covered under Switches, Clock-operated (WGZR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 916, "Energy Management Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Open Energy Management Equipment," "Enclosed Energy Management Equipment," "Energy Management Equipment Enclosure," "Energy Management Equipment Enclosure Part," "Energy Management Equipment Subassembly" or "Energy Management Equipment Accessory."

MANUFACTURED HOME KITCHEN CABINETRY AND BATHTUB AND SHOWER UNITS (PDLT)**GENERAL**

This category covers finished units, components, and/or materials have been Classified in accordance with the flammability requirements of the Federal Manufactured Home Construction and Safety Standards; Section 3280.203(b)(5) for kitchen cabinet doors, counter tops, back splashes,

MANUFACTURED HOME KITCHEN CABINETRY AND BATHTUB AND SHOWER UNITS (PDLT)

237

exposed bottoms, and end panels or Section 3280.203(b)(6) for plastic bathtubs, shower units, and tub or shower doors.

The insulating, acoustical, structural, toxicity of products of combustion and other properties have not been investigated. The Classification Mark pertains to the finished units, components, and/or materials themselves, and not to the structures in which they are installed.

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MANUFACTURED HOME KITCHEN CABINETRY
IN ACCORDANCE WITH FEDERAL MANUFACTURED HOME
CONSTRUCTION AND SAFETY STANDARDS SECTION 3280.203(b)(5)
WITH RESPECT TO FLAMMABILITY ONLY**

Control No.

or

**MANUFACTURED HOME BATHTUB AND SHOWER UNIT
IN ACCORDANCE WITH FEDERAL MANUFACTURED HOME
CONSTRUCTION AND SAFETY STANDARDS SECTION 3280.203(b)(6)
WITH RESPECT TO FLAMMABILITY ONLY**

Control No.

MANUFACTURED HOMES (PDQV)**GENERAL**

This category covers manufactured homes, which are structures, transportable in one or more sections, built on a permanent chassis and designed to be used with or without a permanent foundation.

All manufactured homes include provisions for attachment to anchoring and tie-down devices and suitable piers and footings at the installation site.

Manufactured homes are intended for installation subject to approval by the Authority Having Jurisdiction.

RELATED PRODUCTS

Prefabricated modular buildings are covered under Prefabricated Units (QRHQ), Commercial and Industrial Buildings (QRNZ), Composite Panels (QRSY) and Residential Buildings (QTDI).

ADDITIONAL INFORMATION

For additional information, see Building Materials (AABM).

REQUIREMENTS

Manufactured homes intended for use as dwelling units have been classified in accordance with the Federal Department of Housing and Urban Development Manufactured Home Construction and Safety Standards, Title 24CFR, Part 3280, December 18, 1975.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MANUFACTURED HOME**SEE HUD LABEL**

One Classification Mark is applied near the data plate (single-wide) or near the data plate and at eye level in the largest bedroom closet of each additional transportable section (double- and triple-wide) of each manufactured home intended for use as a dwelling unit. In addition, information concerning the equipment and appliances factory furnished as part of the manufactured home is included on a data plate posted within the building.

MARINA AND BOATYARD CABLE (PDYQ)**USE**

This category covers cable intended for use as flexible branch circuit and feeder wiring in marinas and boatyards in accordance with Article 555 of ANSI/NFPA 70, "National Electrical Code."

The cable is rated 600 V, 75°C and is suitable for exposure to sunlight, fresh water, salt water, gasoline, diesel fuel and lubricating oil.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ) and Marine Products (AAMP).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 83, "Thermoplastic Insulated Wire."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Marina and Boatyard Cable."

MARKING AND CODING EQUIPMENT, ELECTRONIC (PGBE)

USE AND INSTALLATION

This category covers electronic marking and coding equipment rated 600 V or less. Included in this category are ink jet printers or similar systems for production line labeling and/or coding. Units covered under this category normally are located in commercial or industrial environments. This equipment may be cord connected or have provision for field wiring. The units are marked with the type or types of ink for which they have been investigated.

RELATED PRODUCTS

Printing equipment intended for use in other applications is covered under Information Technology Equipment Including Electrical Business Equipment (NWGQ) or Graphic Arts Equipment (KCQT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1950, "Safety of Information Technology Equipment, Including Electrical Business Equipment."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names, as appropriate: "Marking and Coding Equipment," "Ink Jet Coding Machine," "Ink Jet Marking Machine," "Laser Coding Machine" or "Laser Marking Machine."

MATTRESSES AND PADS, ELECTRICALLY CONDUCTIVE, RELATING TO HAZARDOUS LOCATIONS (PHLV)

USE

This category covers mattresses and pads provided with a sheet covering made of cotton material coated with an electrically conductive natural or synthetic rubber, and intended for use in flammable anesthetizing locations where it is necessary for safety to avoid the accumulation of static electricity.

Tests indicate that the electrical resistance conforms to ANSI/NFPA 99, "Standard for Health Care Facilities," and that the mattresses and pads, when in contact with grounded objects, will prevent accumulation of dangerous amounts of static electrical charges.

As oil is injurious to rubber compounds and impairs the electrical conductive properties of these materials, contact with oil should be avoided.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1067, "Electrically Conductive Equipment and Materials for Use in Flammable Anesthetizing Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electrically Conductive Mattress Relating to Hazardous Locations" or "Electrically Conductive Pad Relating to Hazardous Locations."

MEASURING, TESTING AND SIGNAL GENERATION EQUIPMENT (PICQ)

GENERAL

MEASURING, TESTING AND SIGNAL GENERATION EQUIPMENT (PICQ)

This category covers equipment that generates electrical signals (transducers, waveform generators, and the like) or that measures, indicates and/or records electrical or nonelectrical signals, quantities, or other parameters generated by other equipment.

This equipment may incorporate circuits used to visually and audibly indicate various wiring conditions in 15 or 20 A branch circuits along with markings or instructions to identify the probable wiring conditions which cannot be determined by the tester.

The devices may include provisions for checking the functions of a ground-fault circuit interrupter (GFCI) connected to the branch circuit, or for indicating that a branch circuit is connected to an arc-fault circuit interrupter (AFCI).

AFCI indicators operate by producing a waveform similar to an arc fault. Since these devices cannot produce an actual arc fault, an AFCI indicator may not trip every AFCI. AFCI indicators are provided with markings or instructions that state the following or equivalent: "CAUTION: AFCIs recognize characteristics unique to arcing, and AFCI indicators produce characteristics that mimic some forms of arcing. Therefore the indicator may provide a false indication that the AFCI is not functioning properly. If this occurs, recheck the operation of the AFCI using the test and reset buttons. The AFCI button test function will demonstrate proper operation."

Equipment intended to be installed only in process control panels is so identified.

Equipment may be shipped completely assembled or in modular form. Modular assemblies are intended to be field assembled to form a complete system in accordance with the provided installation instructions.

Open-type measuring, testing and signal generation equipment is not provided with a complete enclosure and is intended to be placed in an industrial control panel or similar type of enclosure.

UNEVALUATED FACTORS

These products have been investigated with respect to risk of fire, shock and injury to persons. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury has included only the equipment specifically listed in the individual Listings. The accuracy of measured, analyzed or prepared quantities has not been investigated.

RELATED PRODUCTS

This category does not cover medical and dental or process control metering and testing equipment. Listings of equipment which measures the functional performance (nonelectrical or nonelectronic) of other equipment, the physical or chemical properties of materials or qualitative or quantitative constituent analysis of materials and preparation of materials for further analysis or measurement are covered under Laboratory Use Electrical Equipment (OGTK).

Additional Listings are covered under Electrical and Electronic Measuring and Testing Equipment (FHCW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 61010B-1, "Electrical Measuring and Test Equipment - Part 1: General Requirements," or ANSI/UL 61010-1, "Electrical Equipment for Measurement, Control and Laboratory Use - Part 1: General Requirements," and IEC 61010-2-032, "Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 2-032: Particular Requirements for Hand-Held and Hand-Manipulated Current Sensors for Electrical Test and Measurement," as applicable.

Equipment incorporating circuits to indicate wiring conditions in branch circuits, GFCI functions, or to indicate that a branch circuit is connected to an AFCI is additionally investigated to UL 1436, "Outlet Circuit Testers and Similar Indicating Devices."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Verification of measuring, testing and signal generation equipment that not only meets the appropriate requirements of UL but also has been investigated to Levels I, II, III and/or IV of Annexes A and B of Performance Specification TSB-155, "Transmission Performance Specifications for Field Testing of Unshielded Twisted-Pair Cabling Systems."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Measuring and Testing Equipment," "Measuring Equipment," "Testing Equipment," "Signal Generation Equipment," or the name of the specific type of product as shown in the individual Listings, or combinations of the preceding identities. The product name may be preceded by the words "Open-type."

Measuring, testing and signal generation equipment that has additionally been investigated to Levels I, II, III and/or IV of Annexes A and B of Per-

formance Specification TSB-155 has the marking "ALSO VERIFIED IN ACCORDANCE WITH LEVEL(S) * OF TSB-155," together with the Listing Mark elements detailed above.

* I, II, III and/or IV

MEASUREMENT EQUIPMENT CLASSIFIED FOR USE IN HAZARDOUS LOCATIONS (PICX)

GENERAL

This category covers equipment intended for measuring physical properties, such as thickness and density, on a production line.

This equipment has been investigated for risk of explosion, fire and electric shock only.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic unclassified (ordinary) locations standard used to investigate products in this category is ANSI/UL 508, "Industrial Control Equipment."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

MEASUREMENT EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS AS TO FIRE, ELECTRICAL SHOCK AND EXPLOSION HAZARDS ONLY
Control No.

MEDICAL EQUIPMENT (PIDF)

USE AND INSTALLATION

This category covers equipment intended to diagnose, treat, or monitor a patient under medical supervision, and which makes physical or electrical contact with the patient and/or transfers energy to or from the patient and/or detects such energy transfer to or from the patient.

This category also covers those accessories defined by the manufacturer as necessary for the normal use of the equipment.

Unless otherwise noted, this equipment is designed for professional use by qualified personnel in hospitals, nursing homes, medical care centers, medical and dental offices, and similar health care facilities, and in remote areas under the direction of qualified personnel, in accordance with the instructions specified by the manufacturer.

This equipment has been Classified with respect to electric shock, fire, mechanical and other specified hazards incident to its use in unclassified (ordinary) locations. The other specified hazards are those that are included in UL 60601-1 (formerly UL 2601-1) and the Particular and/or Collateral Standards to which the equipment has been investigated.

The wiring methods for installation of these products are covered by Article 517 of ANSI/NFPA 70, "National Electrical Code" (NEC). The individual units of a system may be designed to be interconnected by means of one or more of the wiring methods outlined in the NEC.

The nature of some of this equipment, such as X-ray, nuclear imaging, and magnetic resonance equipment, is such that it involves features of installation and use not ordinarily presented in utilization equipment. Such features are covered in the manufacturer's installation instructions. Installation must, if possible, be made in a room or compartment in which provision is made to prevent fire or injury to persons and, in all cases, be in accordance with the manufacturer's installation instructions furnished with the equipment and the requirements of the Authorities Having Jurisdiction.

X-radiation safety and performance requirements are regulated under Public Law 90-602 and are enforced by the U.S. Department of Health and Human Services. These criteria are outlined in Code of Federal Regulations, Title 21, Parts 1000 to 1999. Compliance with the applicable regulations under the conditions of normal and abnormal operation has not been investigated by UL.

Some of the Medical Equipment Classifications are predicated on the provision of one of two alternate attachment plugs specifically referred to in Attachment Plugs, Fuseless (AXUT). One is a locking type identified by the marking "Hospital Only" and the other is a nonlocking type ANSI Standard configuration grounding type identified by the marking "Hospital Grade" and a green dot on the body. The identification is visible after installation on the flexible cord.

Baby incubators and similar equipment for use with oxygen-enriched atmospheres have been investigated with respect to the increased hazard

resulting from the presence of oxygen and electrical parts within the equipment. Motor-operated beds are marked if they are suitable for use with oxygen.

Oil bath sterilizers and similar equipment have been investigated with respect to their use with oils such as are recommended by the sterilizer manufacturer.

Products covered under this category include equipment intended to be field installed, in accordance with the instructions provided, to Classified equipment of the same manufacturer. The field-installed equipment is appropriately marked as noted below.

Individual components of the end products in this category have been investigated to applicable UL component requirements. Also, investigation of components to applicable international component requirements has been performed by UL or other appropriate certifying agency (as determined by UL). UL Follow-Up Service at the end-product manufacturing facility also determines that such components continue to bear the appropriate designated certifying agency's mark.

REBUILT PRODUCTS

This category also covers medical equipment that is rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt medical equipment is rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt medical equipment is subject to the same requirements as new medical equipment.

UNEVALUATED FACTORS

The physiological effects, beneficial or otherwise, which may be produced by this equipment have not been investigated.

RELATED PRODUCTS

Medical equipment that includes refrigerated components, such as refrigeration therapy equipment, is covered under Refrigerated Medical Equipment (SOPT).

Equipment investigated to determine its suitability for use in hazardous (classified) locations as defined in the NEC is covered under Medical Equipment for Use in Hazardous Locations (PINR).

For household health care equipment, see Personal Hygiene and Health Care Appliances (QGRZ). For heating pads, see Heating Pads, Electric (MNUV).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 60601-1 (formerly UL 2601-1), "Safety of Medical Electrical Equipment, Part 1: General Requirements." Note that although redesignated as UL 60601-1, UL 2601-1 is identical to UL 60601-1 except for formatting. Therefore, products identified as investigated to either standard are subject to identical technical requirements.

Particular Standards — UL 60601-1 contains requirements for safety which are generally applicable to all medical equipment. For certain types of equipment, these requirements are supplemented or modified by the special requirements of a Particular Standard (IEC 60601-2-XX). However, unless otherwise indicated in the deviations, the requirements of a Particular Standard do not modify the deviations. Where Particular Requirements exist, the General Standard is not used alone.

Collateral Standards — When the equipment falls within the scope of one or more Collateral Standards (IEC 60601-1-XX) such standard(s) may, optionally, also be used. Unless otherwise indicated in the deviations, the requirements of a Collateral Standard do not modify the deviations.

Product Marking (with respect to applicable standards) — As part of the Classification Mark, reference to UL 60601-1 and/or UL 2601-1 is included. For products that have been investigated to the applicable Particular (IEC 60601-2-XX) and/or Collateral (IEC 60601-1-XX) Standards, reference to these standards is made on the product or in the accompanying documents.

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**MEDICAL EQUIPMENT+
WITH RESPECT TO ELECTRICAL SHOCK, FIRE AND MECHANICAL
HAZARDS ONLY
IN ACCORDANCE WITH [standard*]
Control No.**

+ or other appropriate product name as shown in the individual Classifications

For rebuilt or remanufactured products the word "Rebuilt," "Remanufactured," "Refurbished" or "Reconditioned" precedes the product name.

For field-installed products the words "Field Installed" precedes the product name.

Alternate Marking Options

1. The Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the product name as described above, the phrase "SEE ACCOMPANYING DOCUMENTS," or the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 - Δ), the standard number* and a control number. As a minimum, the standard number* always includes UL 60601-1, UL 2601-1 or both. In addition, the product's accompanying documents will contain the complete Classification Mark.
2. For products with limited space for markings, the Classification Mark includes the UL symbol, the word "CLASSIFIED" above the UL symbol, the symbol of a triangle containing the exclamation point (IEC 348, Symbol 14 - Δ), and a control number. In addition, the product's accompanying documents will contain the complete Classification Mark.
3. For products (such as implantable devices) where the Classification Mark is not feasible, the complete Classification Mark will appear on the carton or smallest unit container in which the product is packaged. The product's accompanying documents may also contain the complete Classification Mark.

* Based on the certification coverage of the product, the standard may be UL 60601-1, UL 2601-1 or both, applicable Particular (IEC 60601-2-XX) and/or related Collateral (IEC 60601-1-XX) Standards for which the product has been found to comply by UL.

MEDICAL EQUIPMENT FOR USE IN HAZARDOUS LOCATIONS (PINR)

GENERAL

This category covers portable suction, pressure and anesthesia units, portable baby incubators, surgical devices and similar equipment designed for professional use by attendants in hospitals. This equipment has been investigated solely from the standpoint of electrical, fire, explosion, and accident hazards. Other hazards, such as physiological effects, have not been investigated.

Except for low-voltage battery-powered devices, connections to supply lines require the use of receptacles with plugs or receptacles with plugs interlocked with snap switches, or their equivalent, Listed for the specified hazardous locations. The flexible cord connected to the units should be frequently inspected and replaced when necessary. Terminal connections should be properly made and maintained.

Authorities Having Jurisdiction should be consulted with regard to conditions under which these portable devices will be permitted for use. It is recognized that portable equipment should be used only where necessary.

These devices are intended for use in accordance with ANSI/NFPA 99, "Standard for Health Care Facilities."

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medical Equipment for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

MEDIUM-VOLTAGE POWER CABLE (PITY)

GENERAL

This category covers medium-voltage cable rated 2400 to 35,000 V intended for use and installation in accordance with Article 328 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable is single or multiconductor, aluminum or copper, with solid extruded dielectric insulation and may have an extruded jacket, metallic covering or combination of both over the single conductors or over the assembled conductors in a multiconductor power cable.

All insulated conductors rated higher than 2400 V have electrostatic shielding. Cable rated 2400 V is nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90 or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only" indicating suitability for use only in dry locations at 90°C maximum.

Cable marked "Oil Resistant I" or "Oil Resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "Sunlight Resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays in accordance with Article 392 of the NEC is marked "For Use in Cable Trays" (or "For CT Use").

Cable with aluminum conductors is marked with the word "Aluminum" (or "AL").

The cable is marked with the conductor size, voltage rating and insulation level (100% or 133%).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Medium-Voltage Cable."

MEDIUM-VOLTAGE CABLE CLASSIFIED IN ACCORDANCE WITH UL 1072, WITH METRIC CONDUCTOR SIZES (PIVW)

GENERAL

This category covers medium-voltage cable rated 2001 to 35,000 V and in conductor sizes 10 through 500 sq mm.

The cable complies with all requirements specified in UL 1072, "Medium-Voltage Power Cables," except that metric conductor sizes are used instead of AWG sizes. The cable is for use in jurisdictions where metric conductor sizes are required or permitted.

The cable is single or multi-conductor, aluminum or copper, with solid extruded dielectric insulation. An extruded jacket, metallic covering, or combination of both may be provided over single conductors or over the assembled conductors in a multi-conductor power cable.

All insulated conductors rated 8001 V and higher have electrostatic shielding. Cable rated 2001 to 8000 V may be shielded or nonshielded.

Nonshielded cable is intended for use where conditions of maintenance and supervision ensure that only competent individuals service and have access to the installation.

PRODUCT MARKINGS

Shielded cable is marked "MV-90" or "MV-105" and is suitable for use in wet or dry locations at 90°C or 105°C.

Nonshielded cable is marked either "MV-90" indicating suitability for use in wet or dry locations at 90°C maximum, or "MV-90 Dry Locations Only."

Cable marked "oil resistant I" or "oil resistant II" is suitable for exposure to mineral oil at 60°C or 75°C, respectively.

Cable marked "sunlight resistant" may be exposed to the direct rays of the sun.

Cable intended for installation in cable trays is marked "For CT Use" or "For Use In Cable Trays."

Cable with aluminum conductors is marked with the word "Aluminum" or the letters "AL."

Cable is marked with conductor size in sq mm, voltage rating and insulation level (100 percent or 133 percent).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1072, "Medium-Voltage Power Cables."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product, the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below:

**MEDIUM VOLTAGE CABLE
CLASSIFIED BY UNDERWRITERS LABORATORIES INC®
IN ACCORDANCE WITH UL 1072, WITH METRIC
CONDUCTOR SIZES
Control No.**

METAL-CLAD CABLE (PJAZ)

GENERAL

This category covers Type MC metal-clad cable. The cable is rated for use up to 2000 V, and Listed in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum or copper-clad aluminum, and employs thermoset or thermoplastic insulated conductors. It is intended for installation in accordance with Article 330 of ANSI/NFPA 70, "National Electrical Code" (NEC).

The cable consists of one or more insulated circuit conductors, a grounding path (grounding conductor, metal sheath, or combination thereof) as described below, one or more optional optical fiber members, and an overall metal sheath. The metal sheath is an interlocked metal tape, a corrugated metal tube, or a smooth metal tube. The metal sheath of single-conductor cable is nonferrous. A nonmetallic jacket may be provided under and/or over the metal sheath. Cable with metal armor, rated 2400 to 35,000 V is covered under Medium-voltage Power Cable (PITY) and is marked "Type MV or MC."

Cable with interlocked armor that has been determined to be suitable for use as a grounding means has interlocked aluminum armor in direct contact with a single, full-sized, bare aluminum grounding/bonding conductor. This cable is marked to indicate that the armor/grounding conductor combination is suitable for ground. The equipment grounding conductor required within all other cable with interlocked armor may be insulated or bare, may be sectioned, and is located in the cable core but not in contact with the armor. Any additional grounding conductors of either design have green insulation. One insulated grounding conductor may be unmarked, one other may have only a yellow stripe and the balance have surface markings that indicate they are additional equipment grounding conductors or isolated grounding conductors.

The sheath of the smooth or corrugated tube Type MC cable or a combination of the sheath and a supplemental bare or unstriped green insulated conductor is suitable for use as the ground path required for equipment grounding. The supplemental grounding conductor may be sectioned. When sectioned, all sections are identical. Each additional green insulated grounding conductor has either a yellow stripe or a surface marking or both to indicate that it is an additional equipment or isolated grounding conductor. Additional grounding conductors, however marked, are not smaller than the required grounding conductor.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-clad Al." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

For termination information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked. Cable marked for direct burial is also considered acceptable for encasement in concrete.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable containing one or more optical fiber members is marked "MC-OF."

Cable with a nonmetallic outer jacket that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," and all unjacketed metal-clad cable may be marked with the suffix "LS."

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

Cable intended for use in hazardous (classified) locations, Class I, Division 1, Groups A, B, C and D; Class II, Division 1, Groups E, F and G; Class I, Zone 1, Groups IIA, IIB and IIC in accordance with the NEC, is marked "MC-HL."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1569, "Metal-Clad Cables."

Cable marked "MC-HL" has been additionally investigated to ANSI/UL 2225, "Cables and Cable Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable."

See Cable for Use in Hazardous Locations (PJPP) for Listing Mark requirements for cable marked "MC-HL."

METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH IEC PUBLICATIONS (PJHY)

This category covers Listed products that have also been investigated in accordance with IEC 332-3, Tests on Electric Cables Under Fire Conditions; IEC 502, Extruded Solid Dielectric Insulated Power Cables for Rated Voltages from 1 kV up to 30 kV; and IEC 540, Test Methods for Insulations and Sheaths of Electric Cables and Cords (Elastomeric and Thermoplastic Compounds). These products are provided with the Listing Mark for Metal-Clad Cable (PJAZ).

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The Classification Marking of Underwriters Laboratories Inc. on the product is the only method provided by Underwriters Laboratories Inc. to identify products manufactured under its Classification and Follow-Up Service.

The Classification Marking for these products includes the appropriate Listing Mark and the statement: "Also Classified by Underwriters Laboratories Inc. in accordance with IEC Publications 332-3, 502 and 540."

METAL-CLAD CABLE CONNECTORS, TYPE MC (PJOX)

GENERAL

This category covers fittings for use with metal-clad cable, Type MC, employing (a) interlocking aluminum or steel tape, (b) metal-clad interlocking armor ground cable, (c) smooth aluminum tube, or (c) corrugated aluminum or copper tube. This product is intended for installation and use in accordance with the following information and the limitations specified in Metal-clad Cable (PJAZ).

Connector Selection — Connectors are intended to be selected in accordance with the size and type of cable for which they are designated.

Bronze connectors are intended for use only with cable employing corrugated copper tube. Aluminum connectors are intended for use only with cable employing corrugated aluminum, interlocking aluminum or smooth aluminum tube, unless marked otherwise on the carton (see **PRODUCT MARKINGS** below).

Use in Concrete — Fittings made of aluminum are not considered suitable for use in concrete or cinder fill unless protected with asphalt paint or the equivalent. Fittings suitable for use in concrete are identified by a marking on the carton.

Grounding — Metal-clad cable connectors for use with metal-clad interlocking armor ground cable, corrugated aluminum or copper tube, or smooth aluminum tube, are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

Dry and Wet Locations — Nonmetallic parts, such as glands or seals, are suitable for use at a temperature of 90°C in dry and wet locations. The fittings are suitable for use in dry or wet locations unless marked otherwise (see **PRODUCT MARKINGS** below).

Use with Armored Cable — Metal-clad cable connectors also suitable for use with armored cable, Type AC, are so marked on the device or carton. Listed armored cable, Type AC, is covered under Armored Cable Connectors, Type AC (AWSX).

PRODUCT MARKINGS

Metal-clad cable fittings or the smallest unit shipping cartons are marked with (1) the range of cable diameters and the type of cable sheath (corrugated, interlocking or smooth), (2) the material of the sheath (aluminum, copper or steel) for which they have been investigated, (3) "Concrete-tight" if suitable for use in poured concrete, and (4) "For Type AC Cable" (or equivalent wording) if suitable for that use. See the following table for additional carton markings. Metal-clad cable fittings suitable for use only in dry locations are marked "Dry Locations" on the device and smallest unit carton.

242 METAL-CLAD CABLE CONNECTORS, TYPE MC (PJOX)

Type of Metal-clad Cable	Abbreviation
Metal-clad interlocking armor cable	MCI
Metal-clad interlocking armor ground cable	MCI-A
Metal-clad continuous smooth sheath armor cable	MCS
Metal-clad continuous corrugated sheath armor cable	MCC
Metal-clad continuous corrugated sheath armor cable, flat	FLAT

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metal-clad (Type MC) Cable Connector."

METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)

GENERAL

This category covers Type MC metal-clad cable. It is rated for use up to 2000 V, and Classified in sizes 1.5 through 35 sq mm copper, 4.0 through 35 sq mm aluminum or copper-clad aluminum and employs thermoset or thermoplastic insulated conductors.

The cable complies with all the requirements specified in UL 1569, "Metal-Clad Cables," except that metric conductor sizes are used instead of AWG/kcmil sizes. This cable is for use in jurisdictions where metric conductor sizes are required or permitted.

Type MC cable is of three designs (a) interlocked metal tape, (b) corrugated tube and (c) smooth tube, and all are intended for aboveground use except when marked for direct burial.

The armor of the interlocked metal tape type may or may not be used for grounding. Interlocked armor constructions that may be used as a ground path have a grounding/bonding conductor outside the cable core and in direct contact with the armor. Interlocked armor constructions that are not intended as a ground path have a grounding conductor inside the cable core and not in contact with the armor. The tube of corrugated or smooth tube Type MC Cable in combination with the equipment grounding conductor, when provided, is suitable for grounding; otherwise the tube by itself is suitable for grounding.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and sq mm size is shown either on a marker tape under the armor or on the surface of a nonmetallic jacket, if used.

Copper-clad aluminum conductors are surface printed "AL (CU-CLAD)" or "Cu-Clad Al." Aluminum conductors are surface printed "AL."

Cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays, direct sunlight or direct burial application is so marked.

Cable marked "Oil Resistant I" (or "Oil Res I") is suitable for exposure to mineral oil at 60°C. Cable suitable for exposure to mineral oil at 75°C is marked "Oil Resistant II" (or "Oil Res II").

Cable with an interlocked armor that is intended as a ground path is marked "armor is grounding path component," and is provided with installation instructions.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1569, "Metal-Clad Cable."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product, the attached tag, the reel, or the smallest unit container in which the prod-

METAL-CLAD CABLE CLASSIFIED IN ACCORDANCE WITH UL 1569, WITH METRIC CONDUCTOR SIZES (PJPJ)

uct is packaged is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products shall only be as illustrated below using the appropriate product name: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-Clad Cable"; metal-clad cable that contains aluminum conductors has the product name "Metal-Clad Aluminum Cable."

IN ACCORDANCE WITH UL 1569, WITH METRIC
CONDUCTOR SIZES
Control No.

CABLE FOR USE IN HAZARDOUS LOCATIONS (PJPP)

GENERAL

This category covers Type MC-HL metal-clad cable and Type ITC-HL instrumentation tray cable for use in Class I and II hazardous (classified) locations.

Type MC-HL cable is rated up to 35,000 V, and Listed in sizes 18 AWG through 2000 kcmil for copper, 12 AWG through 2000 kcmil for aluminum, or copper-clad aluminum, and employs thermoset- or thermoplastic-insulated conductors. It is intended for installation in accordance with Articles 330, 501 502 and 505 of ANSI/NFPA 70, "National Electrical Code" (NEC). Cable containing conductors rated 2 kV may be used in circuits operating at 2 kV, nominal or less, in accordance with Articles 600 and 490 of the NEC. Cable containing conductors rated 5,000 to 35,000 V is intended for installation and use in accordance with Articles 328, 501, 502 and 505 of the NEC.

Type MC-HL cable consists of two or more insulated conductors, one or more grounding conductors, and an overall gas/vapor tight continuous corrugated metallic sheath. A nonmetallic jacket is provided over the metal sheath.

The equipment grounding conductor required within Type MC-HL cable may be insulated or bare and may be sectioned. Any additional grounding conductors have green insulation.

Type ITC-HL cable is rated for use on circuits up to 150 V and 5 A. The conductors are size 22 AWG through 12 AWG copper or thermocouple alloy with thermoset or thermoplastic insulation. The cable is intended for installation in accordance with Articles, 501, 502, 505 and 727 of the NEC.

Type ITC-HL cable consists of two or more insulated conductors, with an overall gas-/vapor-tight continuous corrugated metallic sheath and with nonmetallic jackets both under and over the metal sheath. An equipment-grounding conductor may be provided within a Type ITC-HL cable and may be insulated or bare.

PRODUCT MARKINGS

Information regarding temperature rating, voltage rating, cable and conductor Type and AWG size is shown on the surface of a nonmetallic jacket. The cable is marked as described in Metal-clad Cable (PJAZ) or Instrumentation Tray Cable (NYTT), except the suffix "-HL" follows "MC" or "ITC."

RELATED PRODUCTS

See Cable Fittings for Use in Hazardous Locations (CYMX) and Cable Fittings for Use in Class I, Zone Classified Hazardous Locations (CYMJ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 1569, "Metal-Clad Cables," ANSI/UL 2250, "Instrumentation Tray Cable," and UL 2225, "Metal-Clad Cables and Cable-Sealing Fittings for Use in Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Metal-clad cable that contains copper or copper-clad aluminum conductors has the product name "Metal-clad Cable for Use in Hazardous Locations"; metal-clad cable that contains aluminum conductors has the product name "Metal-clad Aluminum Cable for Use in Hazardous Locations" or "Instrumentation Tray Cable for Use in Hazardous Locations."

METER MOUNTING EQUIPMENT (PJSR)

This category covers meter mounting equipment, which consists of an enclosure, wiring terminals and provision for fastening the meter to the

METER MOUNTING EQUIPMENT (PJSR)

equipment. Meter mounting equipment does not include a meter, overcurrent devices, instrument transformers, arcing or switching parts, or the like. A meter socket may include provisions for installation of current transformers within the meter socket enclosure.

Meter mounting equipment is marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating. Meter mounting equipment accommodating two or more meters is marked with a continuous current line bus rating (may also be referred to as an overall assembly rating) and may, in addition, have an overall maximum use (intermittent) line bus rating (or overall assembly rating) of not more than 125% of the continuous line bus rating.

This equipment is intended for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is on a wiring diagram or other readily visible location and is independent of any marking on a terminal connector unless the terminal connector is an integral, nonremovable part of the meter socket jaw.

Wire connectors in Listed meter mounting equipment are intended to accommodate one conductor only unless use with more than one conductor is clearly indicated on the wiring diagram or other readily visible location.

Unless the equipment is marked to indicate otherwise, the termination provisions are based on the use of 75°C ampacities for wire as specified in Table 310.16 of ANSI/NFPA 70, "National Electrical Code" (NEC). However, 3-wire, single-phase service entrance or feeder conductors for dwelling units may be as covered in Section 310.15(B)(6) of the NEC. Termination provisions are determined based on values provided in Table 310.16 or Section 310.15(B)(6), with no adjustment made for correction factors.

Meter mounting equipment is marked with the enclosure type described in Electrical Equipment for Use in Ordinary Locations (AALZ).

A post-mounted meter socket, having an open bottom for the entry of underground conductors, is provided with:

- A marking showing the final grade level, which should be no less than 2 ft (0.6 m) above the lower end of the enclosure for a self-supported post and 18 in. (457 mm) for a separately supported post, and
- Instructions for setting the post in concrete or for securing to other mounting support.

A pedestal-mounted meter socket is intended to be mounted on a concrete base through which the underground conductors enter the enclosure by means of conduit. Mounting pedestals constructed of a coated aluminum base are provided with recommended installation procedures to avoid damage to the pedestal.

Meter mounting equipment with a mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions for the use of sealing facilities.

Unless marked otherwise, meter mounting equipment with a post or pedestal is not intended to serve as the sole support of a mast for overhead wiring.

METER FITTINGS (PJVV)

GENERAL

This category covers meter fittings, which are designed to accommodate bolt-in type watt-hour meters and similar meters.

Ratings of Listed meter fittings are limited to 600 V ac maximum and 400 A maximum.

Meter fittings are marked with their short-circuit current rating in rms symmetrical amps. For short-circuit ratings exceeding 10 kA rms symmetrical, the marking includes the type and rating of overcurrent protection to be used with the meter fitting.

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Fitting."

METER SOCKET BASES (PJWT)

GENERAL

This category covers meter socket bases, which are bases intended to accommodate plug-in type watt-hour and similar meters rated for use with current transformers. They are designed to be installed, with the meter, inside enclosures to allow for connection in accordance with ANSI/NFPA 70, "National Electrical Code."

Meter socket bases are rated 600 V ac maximum. Meter socket bases rated over 30 A are marked with their short-circuit current rating in rms sym-

METER MOUNTING EQUIPMENT (PJSR)

243

Meter Socket Bases (PJWT)—Continued

metrical amps. For short-circuit current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter socket bases are marked with a continuous amp rating and may, in addition, have a maximum use (intermittent) rating of not more than 125% of the continuous amp rating.

RELATED PRODUCTS

Meter sockets with meters protruding through the enclosure are covered under Meter Sockets (PJYZ).

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Unenclosed Meter Socket."

METERING TRANSFORMER CABINETS (PJXS)

GENERAL

This category covers metering transformer cabinets, which consist of an enclosure and provisions for accommodating current transformers. They do not include the current transformers. They may have provision for the mounting of plug-in type watt-hour meters. They may also include wiring terminals and buses to accommodate bus-type current transformers.

Metering transformer cabinet interiors are intended for field installation into enclosures. Unless marked for use in a specific enclosure, wiring space has not been investigated.

Ratings of Listed metering transformer cabinets and interiors are limited to 600 V ac maximum and 6000 A maximum.

Metering transformer cabinets intended for use with specific metering transformer cabinet interiors and the interiors themselves are marked with their short-circuit current rating in rms symmetrical amps.

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Metering Transformer Cabinet" or "Metering Transformer Cabinet Interior."

METER SOCKETS (PJYZ)

GENERAL

This category covers meter sockets, which are complete enclosures accommodating plug-in type watt-hour and similar meters. They provide terminating means for conductors of wiring systems recognized by ANSI/NFPA 70, "National Electrical Code."

The tightening torque required for terminal screws is specified by a marking.

Terminal wire connectors may be omitted and, if omitted a marking specifies which connectors are intended to be used. Instructions for the field installation of connectors are provided with the connectors.

Meter sockets are suitable for supply wiring to enter the enclosure from either the top or the bottom, unless the meter socket is marked "Overhead Feed Only" or "Underground Feed Only," or the equivalent. The marking "Top Feed" is considered equivalent to "Overhead Feed," and "Bottom Feed" is considered equivalent to "Underground Feed."

The ratings of these meter sockets are limited to 600 V ac maximum and to 400 A maximum through any one meter.

Meter sockets rated over 30 A are marked with their short-circuit current rating in rms symmetrical amps. For short-circuit current ratings exceeding 10 kA, the marking includes the type and rating of overcurrent protection to be used with the meter socket.

Meter sockets are marked with a continuous amp rating and may in addition have a maximum use (intermittent) amp rating of not more than 125% of the continuous amp rating.

ADDITIONAL INFORMATION

Meter Sockets (PJYZ)—Continued

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Socket."

METER SOCKET ACCESSORIES (PKAX)**GENERAL**

The category covers accessories intended for use with meter sockets, such as jumper covers, meter socket extenders or other equipment.

Ratings of Listed meter socket accessories are limited to 600 V ac and 400 A maximum.

Meter socket accessories are only considered suitable for use in meter sockets with a short-circuit current rating not exceeding 10 kA rms symmetrical, unless the accessory is otherwise marked.

RELATED PRODUCTS

See Meter Sockets (PJYZ).

ADDITIONAL INFORMATION

For additional information, see Meter Mounting Equipment (PJSR) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 414, "Meter Sockets."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Meter Socket Accessory," "Temporary Jumper Cover Accessory" or "Meter Socket Extender," or other appropriate product name as shown in the individual Listings.

MICROWAVE AND CABLE COMMUNICATION EQUIPMENT (POFV)

This category covers microwave communication equipment, cable communication equipment, communication antennas and antenna positioning equipment intended for household or commercial use.

This equipment has been investigated with respect to risk of fire, electric shock and personal injury. Where such equipment is included in systems that involve other pieces of equipment or mechanical operations, the investigation of the risk of fire, electric shock and personal injury have included only the equipment specifically noted in the individual Listings.

Video tape recorders, video cameras and related accessories are covered under Audio/Video Apparatus (AZSQ) and Audio and Video Equipment (AZUJ).

COMMUNICATION ANTENNAS (POQQ)

This Listing covers satellite or microwave receiving and transmitting antennas and accessories intended for household or commercial use, such as: satellite antenna dishes, microwave antenna horns or waveguides, receiving and transmitting antennas, antenna mounting/support hardware (tripods, masts, polar mounts) and similar products.

Products of the above types may also be Listed under the categories Audio/Video Apparatus (AZSQ) and Audio/Video Equipment (AZUJ).

For additional information, see Microwave, and Cable Communication Equipment (POFV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standards used to investigate products in this category are UL 1409, Low-Voltage Video Products Without Cathode-Ray-Tube Displays. (Field wiring is investigated to the applicable portions of UL 1950, Information Technology Equipment including Electrical Business Equipment, and UL 873, Electrical Temperature-Indicating and -Regulating Equipment).

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the follow-

Communication Antennas (POQQ)—Continued

ing product names as appropriate: "Microwave and Cable Communication Equipment", "Satellite Antenna Equipment", "Microwave Antenna Equipment", "Antenna Equipment", or "...Product", or appropriate product name, as shown in the individual Listing.

MICROWAVE COMMUNICATION EQUIPMENT CLASSIFIED FOR USE IN SPECIFIED EQUIPMENT (POVJ)

These products are retrofit kits consisting of parts intended for field installation in microwave communication equipment. These products have been evaluated by UL to determine that when installed in accordance with the manufacturer's instructions they do not adversely affect the operation of the Specified Equipment. The installation instructions provided with each kit provide the information identifying the specific equipment into which the kit may be installed.

For additional information, see Microwave and Cable Communication Equipment (POFV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic Standard used to investigate these retrofit kits is UL 1409, Low-Voltage Video Products Without Cathode Ray Tube Displays.

LOOK FOR CLASSIFICATION MARK ON PRODUCT

The Classification Marking of Underwriters Laboratories Inc. (as shown below) on the product, together with the control number, is the only method provided by Underwriters Laboratories Inc. to identify products which have been produced under its Classification and Follow-Up Service.

MINERAL-INSULATED CABLE ASSEMBLIES FOR USE IN HAZARDOUS LOCATIONS (POWD)**GENERAL**

This category covers lengths of Listed mineral-insulated metal-sheathed cable with one or both ends factory terminated with a Listed mineral-insulated cable fitting. The fittings provide threaded connection of the cable to hazardous locations equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Assembly for Hazardous Locations," or other appropriate product name as shown in the individual Listings.

MINERAL-INSULATED CABLE FITTINGS FOR USE IN HAZARDOUS LOCATIONS (POWX)**GENERAL**

This category covers termination fittings for providing threaded connection of mineral insulated cable to hazardous locations equipment.

These fittings are provided with a screw-on pot for sealing ends of cable with a special compound supplied by the manufacturer of fittings and a connector having conduit threads for attachment to hazardous locations equipment.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

MINERAL-INSULATED CABLE FITTINGS FOR USE IN HAZARDOUS LOCATIONS (POWX)

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Related to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Fitting for Hazardous Locations."

MINERAL-INSULATED METAL-SHEATHED CABLE (PPKV)

GENERAL

This category covers Type MI mineral insulated metal-sheathed cable which consists of one or more solid copper conductors insulated with highly compressed magnesium oxide and enclosed in a continuous copper or alloy steel sheath, with or without a nonmetallic jacket. It is intended for use in accordance with Article 332 of NFPA 70, "National Electrical Code." Cable rated 600 V is labeled in sizes 16 AWG to 500 kcmil single conductor, 16 to 4 AWG two and three conductor, 16 to 6 AWG four conductor, and 16 to 10 AWG seven conductor constructions. Cable rated 300 V is labeled in two, three, four and seven conductor, sizes 18 to 16 AWG, for use on signaling circuits.

The copper sheath is suitable as an equipment grounding conductor. For cable with alloy steel outer sheath one of the conductors is to be used for equipment grounding.

Nonmetallic jackets or coatings have not been investigated for resistance to corrosion.

PRODUCT MARKINGS

Information regarding voltage rating, cable Type, and conductor size is shown either on a tag affixed to the reel or carton, or on the surface of the metal sheath. If a nonmetallic jacket is used, the information is printed on the surface of the jacket.

Cable with nonmetallic jackets has the following marking on a tag affixed to the reel or carton: "Not suitable for use in Ducts, Plenums or Other Spaces used for environmental air."

Cable with nonmetallic jackets marked "Not suitable for use on or in buildings" has not been investigated for fire retardance but are sunlight resistant.

Cable with nonmetallic jackets that has been investigated for use in cable trays is surface marked "CT Use" or "Cable Tray Use" and may additionally be marked "sunlight Resistant" if applicable.

RELATED PRODUCTS

Terminations especially investigated for use with this cable are covered under Mineral Insulated Cable Fittings (PPYT).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. affixed to the reel supporting the cable or tag attached to the cable is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Metal-Sheathed Cable."

MINERAL-INSULATED CABLE FITTINGS (PPYT)

GENERAL

This category covers fittings intended for use with mineral-insulated cable (Type MI) and small-diameter mineral-insulated cable. These fittings are suitable for use at a maximum operating temperature of 90°C in dry locations and 60°C in wet locations. A complete box connector consists of a connector body and a screw-on potting fitting.

Screw-on Potting Fitting — The screw-on potting fitting to be used with the connector may be used separately as an end fitting for change to open wiring. The screw-on potting fitting is intended to be assembled with a special tool and consists of a screw-on pot, insulating cap, insulating sleeving, anchoring bead, and sealing compound.

Grounding — These fittings are considered suitable for grounding for use in circuits over and under 250 V and where installed in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Mineral-insulated Metal-sheathed Cable (PPKV) and Electrical Equipment for Use in Ordinary Locations (AALZ).

MINERAL-INSULATED METAL-SHEATHED CABLE (PPKV) 245

Mineral-insulated Cable Fittings (PPYT)—Continued

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mineral Insulated Cable Fitting," "Connector" or "Box Connector," or other appropriate product name as shown in the individual Listings.

MOTOR-GENERATOR SETS (PQYW)

USE

This category covers indoor use motor generator sets and frequency converters intended for use in accordance with ANSI/NFPA 70, "National Electrical Code."

RELATED PRODUCTS

This category does not cover electrical generating equipment driven by gasoline, LP-gas, or diesel fueled internal combustion engines. These products are covered under Engine Generators (FTSR).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 508, "Industrial Control Equipment," UL 1004, "Electric Motors," and UL 1248, "Engine-Generator Assemblies for Use in Recreational Vehicles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Motor-Generator Set" or "Flywheel Energy Storage System," or other appropriate product name as shown in the individual Listings.

MOTORS (PRGY)

USE

This category covers motors intended for use in unclassified locations.

PRODUCT MARKINGS/INSTALLATION INSTRUCTIONS

An enclosed type motor has the enclosure type designation marked on the motor for use as indicated in Electrical Equipment for Use in Ordinary Locations (AALZ). The motor may also be marked "Raintight" or "Rainproof."

An enclosed type motor is not intended to be installed in an enclosure unless a marking on the motor, the installation instructions or a stuffer sheet provided with the motor states that the motor may be enclosed. Specifications for the enclosure are included with the instructions or marking.

An open type motor is intended to be installed in an enclosure suitable for the end use. The minimum size of the enclosure is marked on the motor, provided in the installation instructions or as a stuffer sheet provided with the motor.

A motor that has running heating and locked-rotor protection is marked "Thermally Protected" or if rated less than 1/8 hp (100 watts), "T.P." A motor that has locked-rotor protection only is marked "Thermally Protected L" or "Impedance Protected" or, if rated less than 1/8 hp (100 watts), "T.P.L." or "Z.P."

All motors are intended for use in a 40°C (104°F) ambient unless marked for a different ambient.

All motors are provided with installation information which indicate the proper methods to secure the motor and electrically connect the motor to the power source. The instructions will also provide information concerning the type of load the motor can operate and, if needed, what type of protection.

FIELD PROVISIONS

If a motor does not have thermal or impedance protection as described above, protection should be provided in the end-use application. The motor has a marking indicating that the motor is not provided with protection.

Motors are provided with a means to electrically connect the motor with the electrical system in the field.

Suitability of guards for the shaft or other moving parts should be determined in the end-use application.

RELATED PRODUCTS

Motors intended for use in hazardous (classified) locations are covered under Motors for Use in Hazardous Locations (PTDR), Motors, Specialty for Use in Hazardous Locations (PUCJ), or Motors, Division 2 for Use in Hazardous Locations (PTHE).

Motors incomplete in construction and intended for ordinary use are covered under Motors (PRGY2).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 1004B, "Outline of Investigation for Electric Motors and Generators."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor."

MOTORS AND GENERATORS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PRSN)

MOTORS FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PRZA)

USE

This category covers motors.

The Listing Mark on a motor applies to the motor, but not to any equipment driving or driven by the motor. In the case of a motor generator set provided with a common base, the motor and generator each will bear its respective Listing Mark.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard use to investigate products in this category is UL 1004, "Electric Motors."

The hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Use in Class I, Zone 0, 1 and 2 Hazardous Locations."

MOTORS, SPECIALTY FOR USE IN ZONE CLASSIFIED HAZARDOUS LOCATIONS (PRZM)

USE AND INSTALLATION

This category covers specialty motors.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage waveform, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

Unless otherwise marked, these motors are intended for use in ambient temperatures within the range of -20°C (-4°F) to +40°C (+104°F).

The Listing Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

REQUIREMENTS

The basic unclassified locations standard used to investigate products in this category is UL 1004, "Electric Motors."

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Zone Classified Hazardous Locations (AANZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its

Motors, Specialty for Use in Zone Classified Hazardous Locations (PRZM)—Continued

Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Specialty Motor for Use in Hazardous Locations."

MOTORS AND GENERATORS FOR USE IN HAZARDOUS LOCATIONS (PSBV)

GENERATORS FOR USE IN HAZARDOUS LOCATIONS (PSPT)

GENERAL

This category covers generators for use in Class I, Groups C and D; Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, generators for use in Class I and Class II hazardous locations are intended for use in ambient temperature within the range of -25°C (-13°F) to +40°C (+104°F).

The Listing Mark on a generator applies to the generator, but not to any equipment driving or driven by the generator. In the case of a motor generator set provided with a common base, the motor and generator will each bear its respective Listing Mark.

RELATED PRODUCTS

For rebuilt generators see Motors and Generators, Rebuilt for Use in Hazardous Locations (PTKQ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Generator for Hazardous Locations."

MOTORS FOR USE IN HAZARDOUS LOCATIONS (PTDR)

GENERAL

This category covers motors for use in Class I, Groups B, C and D; Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, motors for use in Class I and Class II hazardous locations are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Listing Mark on a motor applies to the motor, but not to any equipment driving or driven by the motor. In the case of a motor generator set provided with a common base, the motor and generator each will bear its respective Listing Mark.

Some motors are provided with Recognized inherent overheating protective devices.

RELATED PRODUCTS

For rebuilt motors, see Motors and Generators, Rebuilt for Use in Hazardous Locations (PTKQ).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Hazardous Locations."

MOTORS, DIVISION 2 FOR USE IN HAZARDOUS LOCATIONS (PTHE)

GENERAL

MOTORS AND GENERATORS FOR USE IN HAZARDOUS LOCATIONS (PSBV)**Motors, Division 2 for Use in Hazardous Locations (PTHE)—Continued**

This category covers electric motors for use in Class I, Division 2, Groups A, B, C and D, and Class II, Division 2, Groups F and G hazardous (classified) locations.

For Class I, Division 2 locations, the enclosure may be of the open or totally enclosed type. The Group designation is marked unless the motor is acceptable for Groups A, B, C and D. The motor is also marked with the operating-temperature code designating the maximum internal or external surface temperature determined at rated full-load steady-state conditions, if the temperature is greater than 100°C. If the enclosure incorporates one or more arcing or sparking parts, the part is housed in a Class I, Division 1 enclosure or the part is within a hermetically sealed enclosure, constructed with current interrupting contacts immersed in oil, located in a nonincendive circuit, or located in a purged and pressurized enclosure. If the motor is provided with an internal space heater, the space heater is intended to be wired in the control circuit such that the space heater is energized when the motor is de-energized, and vice versa. The maximum surface temperature of the space heater is marked on the motor, if the temperature exceeds 80% of the operating temperature of the motor.

For Class II, Division 2 locations, the enclosure is of the totally enclosed type. The motor is marked with the operating temperature or operating-temperature code designating the maximum full-load external temperature determined at rated full-load steady-state conditions when operating in free air (not dust blanketed), if the external temperature is greater than 100°C.

RELATED PRODUCTS

For Division 1 motors, see Motors for Use in Hazardous Locations (PTDR).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 1836, "Outline of Investigation for Electric Motors and Generators for Use in Class I, Division 2 and Class II, Division 2 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Electric Motor for Division 2 Hazardous Locations."

MOTORS AND GENERATORS, REBUILT FOR USE IN HAZARDOUS LOCATIONS (PTKQ)**USE**

This category covers rebuilt motors and generators for use in Class I, Groups B, C and D, and Class II, Groups E, F and G hazardous locations.

Unless otherwise marked, rebuilt motors and generators for use in Class I and Class II hazardous location are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Rebuilt Electric Motor [or Generator] for Hazardous Locations."

The Listing Mark on a rebuilt motor or generator applies to the motor or generator, but not to any equipment driven by or driving the motor or generator. In the case of a rebuilt motor generator set provided with a common base the motor and generator will each bear its respective Listing Mark.

MOTORS, SPECIALTY FOR USE IN HAZARDOUS LOCATIONS (PUCJ)**USE AND INSTALLATION**

This category covers specialty motors for use in Class I, Groups B, C and D; Class II, Groups E, F and G hazardous (classified) locations.

These motors are intended for installation and operation in accordance with the instructions provided for each motor by the manufacturer. These motors may require any or all of the following for proper operation: (1) special controllers, (2) special control circuitry, (3) atypical input voltage wave-

form, (4) atypical input current waveform. Refer to the operating instructions. These motors are not intended for across-the-line operation.

Unless otherwise marked, these motors are intended for use in ambient temperatures within the range of -25°C (-13°F) to +40°C (+104°F).

The Listing Mark on a specialty motor applies to the motor, but not any equipment driving or driven by the motor.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 674, "Electric Motors and Generators for Use in Division 1 Hazardous (Classified) Locations."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Specialty Motor for Use in Hazardous Locations."

MOUNTING POSTS AND PEDESTALS FOR DISTRIBUTION EQUIPMENT (PUPR)**GENERAL**

This category covers mounting posts and pedestals rated 600 V ac or less. They are intended to serve as a raceway for underground wiring that is being brought above grade to feed an outdoor electrical distribution device, such as a power outlet, panelboard, meter socket, circuit breaker enclosure or the like. They are intended to support the distribution device, which is installed either in the factory or in the field. They may contain electrical termination points for underground wiring and for wiring to the distribution device.

USE AND INSTALLATION

A mounting post is intended to be mounted in concrete at grade level or below, or is intended to be secured to some other mounting support.

A mounting pedestal is intended to be mounted to a concrete slab.

A mounting post or pedestal either has ventilation to inhibit condensation or is provided with instructions indicating the correct mounting procedure.

Unless marked otherwise, a mounting post or pedestal is intended to be self-supporting and is not intended to serve as the support of a mast for overhead wiring.

Investigation of posts and pedestals include a test designed to simulate exposure to beating rain to determine that such exposure will not result in the entrance of water.

PRODUCT MARKINGS

Mounting posts and pedestals are marked to indicate the electrical distribution unit(s) with which they are intended to be used.

A mounting post is marked with a grade level line to which the post is intended to be encased.

Posts and pedestals are for use with copper conductors unless marked to indicate which terminals are suitable for use with aluminum conductors. Such marking is independent of any marking on terminal connectors and shall be on a wiring diagram or other readily visible location.

Unless the equipment is marked with both the size and temperature rating of wire to be used, the termination provisions on equipment are based on the use of 60°C wire ampacities for wire sizes 14-1 AWG, and 75°C wire ampacities for wire sizes 1/0 AWG and larger.

RELATED PRODUCTS

Termination boxes are covered under Termination Boxes (XCKT).

Equipment connected only by busbars to both input and output circuits and equipment known as "end cable tap boxes" are covered under Busways and Associated Fittings (CWFT).

Equipment containing switching devices, relays or overcurrent devices is covered under the appropriate category; see Switchboards, Dead-front (WEVZ), Industrial Control Panels (NITW) or Panelboards (QEUY).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1773, "Termination Boxes."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these prod-

MOUNTING POSTS AND PEDESTALS FOR DISTRIBUTION EQUIPMENT (PUPR)

248

ucts includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Mounting Post and Pedestal."

MULTIOUTLET ASSEMBLIES (PVGT)

USE AND INSTALLATION

This category covers metal raceways and power-pole assemblies with factory-installed conductors and attachment plug receptacles without provision for field installation of additional conductors, except where the product is marked to indicate the number, type and size of additional conductors that may be field installed.

This category also covers nonmetallic raceways with factory-installed conductors and attachment plug receptacles either factory installed or separately Listed as Multioutlet Assembly Fittings (PVUR) for field installation.

Separation of communication, signal and data circuits from branch-circuit wiring is provided in the assembly where the conductors are installed at the factory. Separate channels are provided in assemblies intended to be field wired with circuits requiring separation.

Multioutlet assemblies are intended for installation in accordance with Article 380 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly."

MULTIOUTLET ASSEMBLY FITTINGS (PVUR)

USE AND INSTALLATION

This category covers multioutlet assembly fittings intended for use with multioutlet metal raceways and power-pole assemblies. Fittings may consist of flexible metal conduit or armored cable to be connected to multioutlet assemblies by means of nonstandard wired plug-in devices or prefabricated component parts, such as preformed corners and the like.

Multioutlet assembly fittings are intended for installation in accordance with Article 380 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Multioutlet Assemblies (PVGT) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5, "Surface Metal Raceways and Fittings," and ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-Outlet Assembly Fitting," "Elbow" or "End Fitting," or other appropriate product name as shown in the individual Listings.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY (PVVA)

GENERAL

This category covers multi-point interconnection power cable assemblies intended for use in an industrial environment to distribute power to branch circuits, including motor branch circuits, of industrial machinery. The assemblies may consist of power cable assemblies, male and female power cable fittings, panel-mounted power cable/conductor fittings and feeder-tap power cable fittings used with industrial machinery in accordance with ANSI/NFPA 79, "Electrical Standard for Industrial Machinery."

This category does not cover male-to-male cable assemblies or multi-outlet fittings.

Product Types

The following products are covered under this category:

Power Cable Assemblies — These assemblies consist of a length of flexible cord or cable with a molded-on or assembled-on male or female power cable fitting on at least one end of the cable.

MULTI-POINT INTERCONNECTION POWER CABLE ASSEMBLIES FOR INDUSTRIAL MACHINERY (PVVA)

Male and Female Power Cable Fittings — These fittings are intended to be field-wired onto flexible cord or cable with either a male or female insert. The diameter and the wire size of the flexible cord or cable to which the fitting is intended to be assembled is marked on the individual fitting or on the smallest unit shipping container.

Panel-mounted Power Cable/Conductor Fittings — These fittings consist of a panel-mounted assembly with either a male or female insert. Each assembly is provided with a means to secure to an enclosure of the industrial machinery.

Feeder-tap Power Cable Fittings — These fittings are intended for feed-through termination to tray cable or other appropriate cable, together with either a female interconnection device to terminate to a cable assembly or to connect to flexible cord or cable suitable for hard use, that is the same size and ampacity as the feeder cable.

SPECIAL CONSIDERATIONS

The power cable assemblies and mating fittings are not intended to be used as a substitute for the fixed wiring of the building structure. The power cable assemblies and mating fittings may be connected to the fixed wiring of the building structure, using a feeder-tap fitting or male/female cable fittings.

These devices are intended for use only with the Listee's same line of products covered under this category.

Power cable assemblies and fittings covered under this category are not intended to make or interrupt current under load conditions.

These devices are intended for indoor use only, unless otherwise so identified.

RATINGS

These power cable assemblies are rated 600 V or less. Each power cable assembly and fitting is rated in volts and amperes. The electrical ratings are marked on each device or on a flag label affixed to each individual power cable assembly.

These power cable assemblies and fittings have been investigated for their marked short-circuit current rating. Power cable assemblies and fittings may specify a maximum ampere rating, type of overcurrent protective device, or both. Unless otherwise marked, the power cable assemblies and fittings are intended to be supplied from an overcurrent protective device of the maximum ampere rating permitted by Table 7.2.10.1 of ANSI/NFPA 79.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2237, "Multi-Point Interconnection Power Cable Assemblies for Industrial Machinery."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Multi-point Interconnection Assembly," "Power Cable Assembly for Industrial Machinery" or "Power Cable Fitting for Industrial Machinery."

MUSICAL INSTRUMENTS (PWHZ)

USE

This category covers electrical devices that produce music under the direct control of the player. This category also covers accessories for use with musical instruments, such as rhythm generators, tone cabinets, music tuners, and the like.

RELATED PRODUCTS

Devices that reproduce music from records, magnetic tape or other recording media are covered under Commercial Audio and Radio Equipment, Systems and Accessories (AZJX) and Commercial Phonographs, Tape-playing and Recording Appliances and Accessories (AZQW).

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 469, "Musical Instruments and Accessories," UL 6500, "Audio/Video and Musical Instrument Apparatus for Household, Commercial, and Similar General Use," or ANSI/UL 60065, "Audio, Video, and Similar Electronic Apparatus — Safety Requirements."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Musical Instrument," or other appropriate product name as shown in the individual Listings.

NEON TRANSFORMERS AND POWER SUPPLIES (PWIK)

USE

This category covers indoor and outdoor use neon transformers and power supplies intended for use with display signs, outline lighting and luminaires employing gas-filled glass tubing identified as neon or electric discharge tubing.

These transformers and power supplies have been investigated for the secondary-circuit ground-fault protection requirements in ANSI/NFPA 70, "National Electrical Code" (NEC).

This category also covers neon transformer and power supply accessories intended for use with specific neon transformers and power supplies.

PRODUCT MARKINGS

Transformers and power supplies covered under this category are marked "Indoors," "Outdoors," or "Weatherproof" or "WP." Products marked "Indoors" are only suitable for use indoors, and products marked "Outdoors" are suitable for use indoors or outdoors sheltered from rain, snow and the like by being located within a sign body, enclosure and the like. Products marked "Weatherproof" or "WP" do not need to be additionally sheltered from rain, snow and the like.

Transformers and power supplies covered under this category are marked with a Type number from 2 to 8 in association with the location designation "Indoors," "Outdoors," "Weatherproof" or "WP." These Type numbers identify particular construction features associated with a particular transformer or power supply as identified below:

- **Type 2** – Neon supply with input and output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 3** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system, and with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 4** – Neon supply with input and output terminals or leads enclosed and intended for connection to a permanent wiring system.
- **Type 5** – Neon supply with input terminals or leads enclosed and intended for connection to a permanent wiring system and provided with integral receptacles for output connection.
- **Type 6** – Cord-connected neon supply provided with integral receptacles for output connection.
- **Type 7** – Cord-connected neon supply with output terminals or leads that should be enclosed in accordance with the NEC.
- **Type 8** – Cord-connected neon supply with enclosed output terminals or leads.

These Type designations do not relate in any way to general enclosure designations as noted in Electrical Equipment for Use in Ordinary Locations (AALZ).

Transformers and power supplies are also marked with a model designation and may be marked with an optional designation 2161HX, 2161KX, 2161MH or 2161WX. The optional designations provide information on the construction of the transformer and power supply for sign manufacturers and installers to use for ordering and replacement purposes.

Transformers and power supplies marked "For Moving Vehicle Use Only" are intended for use only in moving vehicles and not for use in a freestanding sign, or building-mounted sign or outline lighting product.

Neon transformer and power supply accessories are marked "For Use With XXX Neon Transformer" or "For Use With XXX Neon Power Supply," where "XXX" indicates the model number, catalog number, part number, or other specific identifier of the neon transformer or neon power supply.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 2161, "Neon Transformers and Power Supplies."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Neon Transformer," "Neon Power Supply," "Neon Transformer Accessory" or "Neon Power Supply Accessory."

NETWORK-POWERED BROADBAND COMMUNICATIONS CABLE (PWIP)

USE

This category covers network-powered broadband communications cable, which is a jacketed single-conductor coaxial cable or a multiple-conductor

jacketed cable, consisting of a combination of coaxial members, insulated conductors and/or optic fiber members. The cable is intended for use in low-power and medium-power circuits in accordance with Article 830 of ANSI/NFPA 70, "National Electrical Code" (NEC). All Types, with the exception of Types BLU and BMU, have been investigated for use where exposed to the direct rays of the sun.

PRODUCT MARKINGS

Network-powered broadband communications cable is identified by markings on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

BMU — Indicates medium-power cable intended for outdoor underground use in accordance with Section 830.151(C) of the NEC.

BM — Indicates medium-power cable intended for general use within buildings in accordance with Section 830.151(C) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," or as an alternative, the damage height of this cable does not exceed 4 ft 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BMR — Indicates medium-power cable intended for use within buildings in vertical shafts in accordance with Section 830.151(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested in accordance with ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

BLP — Indicates low-power cable intended for use in ducts or plenums or other spaces used for environmental air in accordance with Section 830.154(B) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame-propagation distance of 5 ft, when tested in accordance with ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

BLR — Indicates low-power cable intended for use within buildings in vertical shafts in accordance with Section 830.154(C) of the NEC. The flame propagation height of this cable is less than 12 ft. when tested in accordance with UL 1666.

BL — Indicates low-power cable intended for general use within buildings in accordance with Section 830.154(D) of the NEC. This cable does not spread flame to the top of the tray in the Vertical-Tray Flame Test described in UL 1685, or as an alternative, the damage height of this cable does not exceed 4 ft. 11 in. when tested in accordance with the CSA FT4 Vertical-Tray Flame Test also described in UL 1685.

BLU — Indicates low-power cable intended for outdoor underground use in accordance with Section 830.154(D)(3) of the NEC.

BLX — Indicates low-power cable intended for limited use within buildings in accordance with Sections 830.154(D)(2), (4) and (5) of the NEC. This cable complies with the VW-1 Flame Test requirements in ANSI/UL 1581, "Reference Standard for Electrical Wires, Cables, and Flexible Cords."

Cable that contains one or more optical-fiber members has the suffix "OF" added to the above.

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "-30C", "-40C", "-50C", "-60C" or "-70C" complies with a cold bend test conducted at that temperature.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2261, "Outline of Investigation for Cables for Network-Powered Broadband Communications Systems."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Network-powered Broadband Communications Cable."

NONMETALLIC-SHEATHED CABLE (PWVX)

USE

This category covers Types NM-B and NMC-B nonmetallic-sheathed cable, rated 600 V, intended for use in accordance with Article 334 of ANSI/NFPA 70, "National Electrical Code" (NEC), and Listed in copper sizes 14 to 2 AWG inclusive and aluminum or copper-clad aluminum sizes 12 to 2 AWG inclusive.

This cable contains conductors rated 90°C; however, the ampacities of the cable are those of 60°C conductors as specified in Article 334 and Table 310.16 of the NEC.

PRODUCT MARKINGS

Cable with copper-clad aluminum conductors is surface marked "AL (CU-CLAD)" or "Cu-clad AL," and cable with aluminum conductors is surface marked "AL."

Wire and cable employing compact-stranded copper conductors is so identified directly following the conductor size, wherever it appears (surface, tag, carton or reel), by "compact copper." The abbreviations "CMPCT" and "CU" may be used for compact and copper, respectively.

Tags, reels and cartons for products employing compact-stranded copper conductors have the marking: "Terminate with connectors identified for use with compact-stranded copper conductors."

Cable suitable for use in cable trays is appropriately marked. Cable marked for cable tray use may also have a supplementary sunlight resistant marking.

Cable that complies with the Limited Smoke Test requirements specified in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables," is surface marked "ST1."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 719, "Nonmetallic-Sheathed Cables."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify these products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name as appropriate: Nonmetallic-sheathed cable that contains copper or copper-clad aluminum conductors has the product name "Nonmetallic-sheathed Cable"; nonmetallic-sheathed cable that contains aluminum conductors has the product name "Nonmetallic-sheathed Aluminum Cable."

NONMETALLIC-SHEATHED CABLE CONNECTORS (PXJV)

GENERAL

This category covers connectors intended for use with nonmetallic-sheathed cable. These connectors are also suitable for use with multiconductor underground feeder and branch-circuit cable where used in dry locations unless otherwise indicated on the carton.

Single Cable — If single conductor Type UF cable is terminated with a fitting not specifically recognized for use with single conductor cable, special care should be taken to ensure it is properly secured and not subject to change.

The individual Listings may have details about the size and number of the nonmetallic-sheathed cable each connector will secure.

MARKINGS

Connectors which are also suitable for use with service-entrance cable, flexible nonmetallic tubing or flexible cord are so indicated on the device or carton.

Except for duplex connectors or when otherwise marked on the carton to indicate connecting of more than one cable or cord, the connectors covered under this category have been investigated for connecting one cable or cord only.

RELATED PRODUCTS

Connectors covered under Armored Cable Connectors (AWSX), Conduit Fittings (DWTT) and Power and Control Tray Cable Connectors (QPOZ) are also suitable for use with nonmetallic-sheathed cable when specifically indicated on the device or carton.

Connectors suitable for flexible cord only are covered under Outlet Bushings and Fittings (QCRV).

ADDITIONAL INFORMATION

For additional information, see Nonmetallic-sheathed Cable (PWVX) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514B, "Conduit, Tubing, and Cable Fittings."

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Connector" (or "N.M. Cable Connector"), or other appropriate product name as shown in the individual Listings.

NONMETALLIC EXTENSIONS (PXXT)

NONMETALLIC EXTENSION FITTINGS (PYYZ)

USE

This category covers attachment plug caps, receptacles for attachment plugs, and end caps for nonmetallic surface extensions, and wiring compartments, entrance bushings, bonding connectors, hangers, terminal fittings, support fittings, receptacles and lampholders for aerial cable.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 5A, "Nonmetallic Surface Raceways and Fittings," UL 183, "Manufactured Wiring Systems," and UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Extension Fitting" (or "NM Extension Ftg.") or "End Cap," or other appropriate product name as shown in the individual Listings.

NONMETALLIC SURFACE EXTENSIONS (PZMX)

USE AND INSTALLATION

This category covers assemblies of two insulated circuit conductors with or without a grounding conductor within a nonmetallic jacket or extruded thermoplastic covering, intended for installation in accordance with Article 382 of ANSI/NFPA 70, "National Electrical Code." Assemblies without a grounding conductor are marked "Intended for replacement use only."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 5A, "Nonmetallic Surface Raceways and Fittings," ANSI/UL 183, "Manufactured Wiring Systems," and ANSI/UL 498, "Attachment Plugs and Receptacles."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Surface Extension."

NONMETALLIC-SHEATHED CABLE INTERCONNECTORS (QAAV)

GENERAL

This category covers self-contained interconnectors employing pressure cable connectors, insulation displacement or insulation piercing connectors for splicing or tapping nonmetallic (NM) sheathed cable. These interconnectors are intended for installation in accordance with ANSI/NFPA 70, "National Electrical Code."

These devices have been investigated for equivalency to Type NM cable in insulation and temperature rise, and for capability to withstand fault currents, vibration and mechanical shock that may occur during transport of the units in which they are used.

PRODUCT MARKINGS

The devices are marked with the Listee's name or identification, the catalog number or equivalent, and complete electrical ratings.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 2256, "Outline of Investigation for Nonmetallic Sheathed Cable Interconnectors."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged or on the product when size or shape permits is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction

**NONMETALLIC-SHEATHED CABLE INTERCONNECTORS
(QAAV)**

of this Directory) together with the word "LISTED," a control number, and the product name "Nonmetallic Sheathed Cable Interconnector" (or "N.M. Cable Interconnector"), or other appropriate product name as shown in the individual Listings.

**COMMERCIAL SEATING SYSTEMS
(QAHU)**
GENERAL

This category covers single- or multiple-seating systems that may be provided with an integral table and contain electrical accessories, such as an electrical distribution system, and may also be provided with channels for routing communication wiring. The seating is intended to be permanently mounted to the building structure.

This category covers only the electrical hazards associated with the product.

RELATED PRODUCTS

Electrical accessories designed for field installation, such as receptacles, electrical distribution systems, power distribution elements, etc., are covered under Office Furnishings (QAWZ) and are marked to identify the specific seating system with which they have been investigated for use.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1286, "Office Furnishings."

ADJUNCT SERVICES

Underwriters Laboratories Inc. (UL) provides a service for the Classification of commercial seating systems that not only meet the appropriate requirements of UL but also have been investigated in accordance with one or more of the following standards:

1. State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 117, "The Test Procedure and Apparatus for Testing the Flame Retardance of Resilient Filling Materials Used in Upholstered Furniture" (2000)
2. For flammability in accordance with State of California Department of Consumer Affairs Bureau of Home Furnishings and Thermal Insulation, Technical Bulletin 133, "The Flammability Test Procedure for Seating Furniture for Use in Public Occupancies" (1991)
3. For strength and durability in accordance with ANSI/BIFMA No. X5.4, "The Standard for Office Furnishing Lounge Seating" (1997)

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

**POWERED SEATING SYSTEM*
FOR ELECTRICAL HAZARD ONLY
Control No.**

* or other appropriate product name as shown in the individual Classifications

Combination Classification Mark — A combined Classification Mark is provided on products that have additionally been investigated to the standards referenced under **ADJUNCT SERVICES**.

The combined Classification Mark consists of the Classification Mark elements detailed above and the following marking(s):

**ALSO CLASSIFIED IN ACCORDANCE WITH
THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS
BUREAU OF HOME FURNISHINGS AND THERMAL INSULATION
TECHNICAL BULLETIN 117 (2000)
and/or**

**ALSO CLASSIFIED IN ACCORDANCE WITH
THE STATE OF CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS

TECHNICAL BULLETIN 133 (1991)
and/or**

**ALSO CLASSIFIED IN ACCORDANCE WITH
THE STANDARD FOR OFFICE FURNITURE LOUNGE SEATING
ANSI/BIFMA No. X5.4-1997**

**OFFICE APPLIANCES AND BUSINESS
EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (QAVS)**
GENERAL
**OFFICE APPLIANCES AND BUSINESS EQUIPMENT FOR USE IN
HAZARDOUS LOCATIONS (QAVS)**

251

This category covers equipment and appliances normally used in business establishments classified as hazardous locations. The equipment and appliances may be electromechanical and/or electronic.

Intrinsically safe equipment is so marked on the product.

To maintain the intrinsically safe features of battery-operated appliances, only batteries of the type and size indicated on the product should be used.

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Office Appliance for Use in Hazardous Locations" or "Business Equipment for Use in Hazardous Locations."

OFFICE FURNISHINGS (QAWZ)

The office furnishings covered by this listing are portable and consist of panels, study carrels, work stations and pedestal-style systems that may be mechanically interconnected to form an office furnishing system to be installed in accordance with Article 605 of the National Electrical Code. These may be provided with an electrical distribution system, including switches, and receptacles. They may contain channels for routing communication cables within the system components separate from power circuit raceways. The systems may include filing cabinets, desks, work surfaces, shelves, storage units and the like that have a particular electrical or mechanical function unique to an office furnishing system.

Partitions that extend to the ceiling or that are used to support the building structure are not Listed as office furnishings. They may be Listed as Prefabricated Sections and Units or Classified as Composite Panels with respect to one or more model Building Codes, Plumbing Codes, National Electrical Code, a State Building Code and/or an applicable local building code.

The surface burning characteristics of building materials employed in these assemblies is judged to be no greater than that of ordinary lumber used in on site construction. Finish surfaces are of materials having a flame spread rating of 200 or less and, unless otherwise marked, a smoke developed rating of 450 or less.

Products specifically designed and arranged for field installation in individual designs of office furnishings such as lighting units, receptacles, clocks, power distribution elements, work surfaces, shelves, etc. are covered as accessories under the individual listing and are marked to identify the specific office furnishing with which they have been investigated. Lighting units for use with office furnishings are Listed under Office Furnishing Lights, QAXB.

Office furnishings are marked with the designation of one of the following three types:

Type I - A system that includes all parts and contains pre-wired modular raceways and accessories necessitating only quick-connect type of electrical interconnections. A Type I system may be shipped with the accessories installed in the panel, or field installed where marked for use in the system. Means for permanent wiring connections to the branch circuit supply are provided.

Type II - A system that provides raceways and devices for routing and termination of wiring. All wiring is installed in the field.

Type III - A system that is not intended to be wired and has no provision for routing and termination of wiring.

This category also covers office furnishings and office furnishing accessories which are rebuilt.

Rebuilt office furnishings and rebuilt office furnishing accessories are factory rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned component parts. Rebuilt office furnishings and rebuilt office furnishing accessories are subject to the same requirements as new office furnishings and office furnishing accessories.

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

The basic standard used to investigate products in this category is UL 1286, "Office Furnishings."

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the name and/or symbol of Underwriters Laboratories Inc. (as illustrated in the Introduction of this Directory) together with the

word "LISTED", a control number and "Office Furnishing", Office Furnishing Accessory", "Rebuilt Office Furnishing", or "Rebuilt Office Furnishing Accessory".

OFFICE FURNISHING LIGHTS (QAXB)

GENERAL

This category covers lights intended for use with office furnishings when installed in accordance with Articles 410 and 605 of ANSI/NFPA 70, "National Electrical Code." This category covers both freestanding and mounted lights that may be electrically or mechanically connected to an office furnishing. Products specifically designed and arranged for use with an individual design of office furnishing are marked to identify the specific office furnishing with which they have been investigated.

Products that require electrical assembly in the field are covered as kits or light accessories under the individual Listing. Kits and light accessories are completely wired to the extent permitted by the intended field installation, with all splices and connections completed and with all electrical components mounted.

A kit forms a complete office furnishing light when assembled in accordance with the instructions provided.

A light accessory and the required office furnishing or a combination of light accessories form a complete office furnishing light when assembled in accordance with the instructions provided.

The following designations are used to specify the type(s) of product(s) covered under this category. Presence of the Roman numerals in an individual Listing indicates products of that type are covered. The "type" numerals denote the following:

- II – Incandescent
- III – Fluorescent
- VI – Tungsten Halogen
- XII – High Intensity Discharge (HID)
- XVI – Kits
- XVII – Light Accessories

Types I, IV, V, VII-XI, and XIII-XV are reserved.

REBUILT PRODUCTS

This category also covers office furnishing lights that are rebuilt by the original manufacturer or another party having the necessary facilities, technical knowledge and manufacturing skills. Rebuilt office furnishing lights are rebuilt to the extent necessary by disassembly and reassembly using new or reconditioned parts. Rebuilt office furnishing lights are subject to the same requirements as new office furnishing lights.

RELATED PRODUCTS

Office furnishing lights investigated to UL 153, "Portable Electric Luminaires," may also be covered under Luminaires, Portable (QOWZ).

Office furnishing light accessories investigated to UL 153 may also be covered under Portable Luminaire Kits and Subassemblies (QPAU).

Office furnishing light accessories investigated to UL 1598, "Luminaires," may also be covered under Luminaire Fittings (IFFX).

ADDITIONAL INFORMATION

For additional information, see Office Furnishings (QAWZ) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are UL 153, "Portable Electric Luminaires," and UL 1286, "Office Furnishings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Office Furnishing Light," "Office Furnishing Light Kit," "Office Furnishing Light Accessory" or "Rebuilt Office Furnishing Light."

OFFICE FURNISHING ACCESSORIES CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (QAXE)

USE AND INSTALLATION

This category covers office furnishing accessories, such as work surfaces and shelves, intended for field installation in specific combinations that have been investigated for use with the specific office furnishing systems.

These accessories have been investigated for use with other manufacturers' Listed office furnishings, as indicated in the Classification Mark or the referenced compatibility list.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is UL 1286, "Office Furnishings."

OFFICE FURNISHING ACCESSORIES CLASSIFIED FOR USE WITH SPECIFIED EQUIPMENT (QAXE)

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

FOR USE WITH SPECIFIED EQUIPMENT

FOR USE WITH UL LISTED * OFFICE FURNISHING PANEL SYSTEM

Control No.

* Manufacturer's name and model no(s).

or

FOR USE WITH SPECIFIED EQUIPMENT

FOR CATALOG NUMBERS OF COMPATIBLE EQUIPMENT, REFER TO PUBLICATION NO. ___ PROVIDED WITH THIS PRODUCT.

IF ADDITIONAL INFORMATION IS NECESSARY, CONTACT THE FACTORY.

Control No.

The referenced publication is a compatibility list that tabulates the company names, catalog numbers and electrical ratings of the Classified accessories, and the company name(s) and catalog number(s) of the applicable UL Listed products with which the accessories have been investigated. One copy of the compatibility list and the installation instructions are provided with each accessory.

OPTICAL FIBER CABLE (QAYK)

USE AND INSTALLATION

This category covers optical fiber cable which is a jacketed cable for use within buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). Where optical fiber is installed in a laser system, the system shall comply with the ANSI Z136 laser system safety standards.

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket or on a marker tape under the jacket. This marking includes one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFCC — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFCC except it contains no metallic members and no other electrically conductive materials.

OFNR — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNR — This cable is the same as Type OFCR except it contains no metallic members and no other electrically conductive materials.

OFCP — Indicates cable containing noncurrent-carrying conductive members such as metallic strength members and metallic vapor barriers for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNP — This cable is the same as Type OFCP except it contains no metallic members and no other electrically conductive materials.

Cable that complies with the requirements for "Limited Combustible" specified in ANSI/NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems," is surface marked "Limited Combustible."

Cable that complies with the Limited Smoke Requirements specified in UL 1685 is surface marked with the suffix "LS."

Cable marked "sunlight resistant" or "sun res" may be exposed to the direct rays of the sun.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

OPTICAL FIBER CABLE (QAYK)

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable".

UL MARK

The UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable."

Cable also Verified to a performance specification under Optical Fiber Cable Verified in Accordance with National or International Specifications (QAZI) has the marking "Also Verified [Specification name and/or number]" together with the Listing Mark information on the tag, reel or smallest unit container.

OPTICAL FIBER CABLE, FIELD ASSEMBLED (QAZD)

USE AND INSTALLATION

This category covers field-assembled optical fiber cable, which is an on-site assembly of one or more optical fiber units and an optical fiber jacket. Field-assembled optical fiber cable is intended for installation in buildings in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). The optical fiber jacket is installed in a manner similar to conduit or raceway. Once the jacket is installed, the optical fiber units are inserted into the jacket, completing the assembly.

Laser systems in which optical fiber is installed comply with the following Laser Institute of America safety standards:

- ANSI/LIA Z136.1, "Safe Use of Lasers"
- ANSI/LIA Z136.2, "Safe Use of Optical Fiber Communication Systems Utilizing Laser Diode and LED Sources"
- ANSI/LIA Z136.3, "Safe Use of Lasers in Health Care Facilities"
- ANSI/LIA Z136.4, "Recommended Practice for Laser Safety Measurements for Hazard Evaluation"
- ANSI/LIA Z136.5, "Safe Use of Lasers in Educational Institutions"
- ANSI/LIA Z136.6, "Safe Use of Lasers Outdoors"

PRODUCT MARKINGS

Optical fiber cable is identified by a marking on the surface of the jacket. This marking includes the Listee's name and catalog designation and one of the following Type designations:

OFC — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. This cable does not spread fire to the top of the tray when tested as described under UL Flame Exposure (smoke measurements are not applicable) in UL 1685, "Vertical-Tray Fire-Propagation and Smoke-Release Test for Electrical and Optical-Fiber Cables."

OFN — This cable is the same as Type OFC except it contains no metallic members and no other electrical conductive materials.

OFNG — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in accordance with Section 770.154(C) of the NEC. The damage height of this cable does not exceed 4 ft 11 in. when tested as described under FT4/IEEE 1202, "Type of Flame Exposure" (smoke measurements are not applicable) in UL 1685.

OFNG — This cable is the same as Type OFNG except it contains no metallic members and no other electrically conductive materials.

OFNCR — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in vertical runs in a shaft in accordance with Section 770.154(B) of the NEC. The flame propagation height of this cable is less than 12 ft when tested per ANSI/UL 1666, "Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts."

OFNFR — This cable is the same as Type OFNCR except it contains no metallic members and no other electrically conductive materials.

OFNCP — Indicates cable containing noncurrent-carrying conductive members, such as metallic strength members and metallic vapor barriers, for use in ducts or plenums or other spaces used for environmental air in accordance with Section 770.154(A) of the NEC. This cable exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested per ANSI/NFPA 262, "Standard Method of Test for Flame Travel and Smoke of Wires and Cables for Use in Air-Handling Spaces."

OFNFP — This cable is the same as Type OFNCP except it contains no metallic members and no other electrically conductive materials.

Cable marked "Sunlight Resistant" (or "Sun Res") may be exposed to the direct rays of the sun.

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged includes the following: "For Use Only with Optical Fiber Units, Cat. No.____, manufactured by [company name]."

OPTICAL FIBER CABLE (QAYK)

253

Optical Fiber Cable, Field Assembled (QAZD)—Continued

The marking on the attached tag, coil, reel or smallest unit container in which the optical fiber units are packaged includes the following: "[Company name] Optical Fiber Unit, For Use Only With Optical Fiber Jacket Cat. No. ____, manufactured by [company name]."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 1651, "Optical Fiber Cable."

UL MARK

The UL symbol on the optical fiber jacket and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, coil, reel or smallest unit container in which the optical fiber jacket is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Field Assembled Optical Fiber Cable."

OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QAZI)

GENERAL

This category covers data transmission optical fiber cable whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable US national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications. This cable is not necessarily investigated for use in accordance with ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-20-CORE (Issue 2 July 1998), "Generic Requirements for Optical Fiber and Optical Fiber Cable." Other performance specifications, applicable to optical fiber cable, may also be used by UL in Verification investigations.

UL MARK

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Cable," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber cable which is also Listed under Optical Fiber Cable (QAYK), the marking includes the appropriate Listing Mark and the text "Also Verified [Specification name(s) and/or number(s), date of Specification(s)]."

OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH NEW YORK CITY TRANSIT SPECIFICATION TO (QAZK)

GENERAL

This category covers data transmission optical fiber cable whose signal transmission, environmental and/or mechanical performance characteristics have been determined by Underwriters Laboratories Inc. to be in accordance with New York City Transit Specification TO. This cable is not necessarily evaluated for use in accordance with the specifications of NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

UL MARK

254 OPTICAL FIBER CABLE VERIFIED IN ACCORDANCE WITH
NEW YORK CITY TRANSIT SPECIFICATION TO (QAZK)

The UL symbol with the word "VERIFIED" on the product and the Verification Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, and the product name "Optical Fiber Cable NYC Transit Specification TO."

For optical fiber cable which is also Listed under Optical Fiber Cable (QAYK), the marking includes the appropriate Listing Mark along with either the Verification Mark and "NYC Transit Specification TO" or the text "Also Verified to NYC Transit Specification TO."

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/COAXIAL CABLE RACEWAY (QAZM)

USE AND INSTALLATION

This category covers raceway and fittings for installation of nonconductive optical fiber cable, communications cable, signaling cable and coaxial cable in accordance with ANSI/NFPA 70, "National Electrical Code" (NEC). The raceway is only suitable for the installation of the optical fiber, communications cable, signaling cable and coaxial cable noted in the following information. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceway or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

A raceway marked "Plenum" is suitable for use in ducts, plenums or other spaces used for environmental air in accordance with the NEC when used to enclose optical fiber cable marked "OFNP" or "OFCP", communications cable marked "CMP" or "CMP-OF", signaling cable marked "CL2P" or "CL3P", and coaxial cable marked "CATVP". This raceway exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested in accordance with the Test for Flame Propagation and Smoke-Density Values (Plenum) in ANSI/UL 2024, "Optical Fiber Cable Raceway." This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Plenum." A raceway marked "Plenum" is also suitable for installation in risers when used to enclose optical fiber cable marked "OFNP" or "OFNR", communications cable marked "CMP", "CMP-OF", "CMR" or "CMR-OF", signaling cable marked "CL2P", "CL3P", "CL2R" or "CL3R", and coaxial cable marked "CATVP" or "CATVR", and general purpose use when used to enclose optical fiber cable marked "OFNP", "OFCP", "OFNR", "OFCR", "OFNG" or "OFN", communications cable marked "CMP", "CMP-OF", "CMR", "CMR-OF", "CMG", "CMG-OF", "CM" or "CM-OF", signaling cable marked "CL2P", "CL3P", "CL2R", "CL3R", "CL2", "CL3", "CL2X" or "CL3X", and coaxial cable marked "CATVP", "CATVR", "CATV" or "CATVX."

A raceway marked "Riser" is suitable for installation in risers in accordance with the NEC when used to enclose optical fiber cable marked "OFNP", "OFCP", "OFNR" or "OFCR", communications cable marked "CMP", "CMP-OF", "CMR" or "CMR-OF", signaling cable marked "CL2P", "CL3P", "CL2R" or "CL3R", and coaxial cable marked "CATVP" or "CATVR." This raceway has fire resistant characteristics capable of preventing the carrying of fire from floor to floor. This raceway meets the test requirements of the Test for Flame Propagation (Riser) in ANSI/UL 2024. This raceway is identified by a marking on the surface of the raceway or on a marker tape indicating "Riser." A raceway marked "Riser" is also suitable for general purpose use when used to enclose optical fiber cable marked "OFNP", "OFNR", "OFNG" or "OFN", communications cable marked "CMP", "CMP-OF", "CMR", "CMR-OF", "CMG", "CMG-OF", "CM" or "CM-OF", signaling cable marked "CL2P", "CL3P", "CL2R", "CL3R", "CL2", "CL3", "CL2X" or "CL3X", and coaxial cable marked "CATVP", "CATVR", "CATV" or "CATVX."

A raceway with neither the marking "Plenum" nor "Riser" is suitable for general purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP", "OFCP", "OFNR", "OFCR", "OFNG", "OFCG", "OFC" or "OFN", communications cable marked "CMG", "CMG-OF", "CM", "CM-OF", "CMR", "CMR-OF", "CMP" or "CMP-OF", signaling cable marked "CL2P", "CL3P", "CL2R", "CL3R", "CL2", "CL3", "CL2X" or "CL3X", and coaxial cable marked "CATVP", "CATVR", "CATV" or "CATVX." This raceway is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in ANSI/UL 2024.

Pliable raceway is a raceway that can be bent by hand without the use of tools. The smallest radius of the curve of the inner edge of any bend to which the raceway may be bent without cracking either on the outer surface or internally is not less than 2-1/2 times the outside diameter of the raceway.

ADDITIONAL INFORMATION

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/COAXIAL
CABLE RACEWAY (QAZM)

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 2024, "Optical Fiber Cable Raceway."

UL MARK

The UL symbol and the product name "Optical Fiber Raceway," "Communications Cable Raceway," "Signaling Cable Raceway," "Coaxial Cable Raceway" or "Optical Fiber/Communications/Signaling/Coaxial Cable Raceway" on the raceway, and the Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the appropriate product names as indicated above.

OPTICAL FIBER RACEWAY ASSEMBLIES (QAZQ)

GENERAL

This category covers raceway assemblies intended for the installation of optical fiber cable in accordance with ANSI/NFPA 70, "National Electrical Code." The raceway may be provided with multiple inner ducts that are assembled before shipment. Raceway systems differ in their inside and outside diameters and, therefore, are not interchangeable with other conduit or raceway systems. This category includes straight sections, elbows, bends, and fittings intended to be secured together by cement.

The raceway assemblies are designed for use under the following conditions, as indicated in the Listing Mark: (1) direct burial with or without being encased in concrete, (2) aboveground, or both (1) and (2).

The transition from an optical fiber raceway system to another conduit or raceway system has not been investigated.

The raceway system components have not been investigated for their ability to withstand exposure to reagents, unless specifically marked.

Aboveground raceway assemblies are suitable for exposed work where not subjected to physical damage and where expansion fittings are not necessary.

ADDITIONAL INFORMATION

For additional information, see Optical Fiber/Communications Cable Raceway (QAZM) and Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standards used to investigate products in this category are ANSI/UL 2024, "Optical Fiber and Communications Cable Raceway," and ANSI/UL 651, "Schedule 40 and 80 Rigid PVC Conduit and Fittings."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and one of the following product names as appropriate: "Optical Fiber Raceway Assemblies, Underground," "Optical Fiber Raceway Assemblies, Underground for Concrete Encasement Only," "Optical Fiber Raceway Assemblies, Underground Direct Burial and Concrete Encasement" or "Optical Fiber Raceway Assemblies, Aboveground, Underground Direct Burial and Concrete Encasement."

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/COAXIAL CABLE OUTLET BOXES (QAZR)

USE AND INSTALLATION

This category covers outlet boxes and other device-mounting products intended to support outlets for use with or without raceways and fittings that contain nonconductive optical fiber cable, communications cable, signaling cable, and coaxial cable. These products are intended to be installed in accordance with ANSI/NFPA 70, "National Electrical Code." The products and raceways are only suitable for the installation of the optical fiber, communications cable, signaling cable, and coaxial cable. Individual raceway systems differ in their construction and, therefore, their components are not interchangeable with other raceways or fittings of other systems.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in UL Subject 2269, "Outline of Investigation for Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Boxes."

UL MARK

OPTICAL FIBER/COMMUNICATIONS/SIGNALING/COAXIAL CABLE OUTLET BOXES (QAZR)

The Listing Mark on the product, or the UL symbol on the product and the Listing Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Outlet Box," "Communications Cable Outlet Box" or "Optical Fiber/Communications/Signaling/Coaxial Cable Outlet Box," or other appropriate product name as shown in the individual Listings.

OUTLET BOX ACCESSORIES FOR USE IN HAZARDOUS LOCATIONS (QAZV)

GENERAL

This category covers conduit box bodies, flat and domed covers, fixture hanger covers, threaded extensions, sealing hub covers, and similar subassemblies of outlet boxes, fixture fittings and conduit fittings. They are intended to be assembled at the factory or in the field by the user to form a complete explosion-proof or dust-ignition-proof enclosure. Information on restrictions in the use and assembly of these devices is marked on each part.

RELATED PRODUCTS

See Outlet Boxes for Use in Hazardous Locations (QBCR), Conduit Fittings for Use in Hazardous Locations (EBNV) and Luminaire Fittings for Use in Hazardous Locations (IGIV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged with the UL symbol on the product the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box Accessory for Use in Hazardous Locations," or other appropriate product name as shown in the individual Listings.

OPTICAL FIBER/COMMUNICATIONS CABLE ROUTING ASSEMBLIES FOR USE IN TELECOMMUNICATION INSTALLATIONS (QBAA)

USE AND INSTALLATION

This category covers routing assemblies for installation of nonconductive optical fiber cable and communications cable. The routing assemblies are only suitable for the installation of optical fiber and communications cable noted in the following information. Individual routing assembly systems differ in their construction and, therefore, their components are not interchangeable with other routing assemblies or fittings of other systems. This category includes pliable lengths, rigid straight sections, elbows, bends and fittings such as expansion joints, female and male adapters, and couplings.

These products are intended for installation in telecommunications facilities. These products may or may not incorporate end fixtures or covers.

Optical fiber and communications cable raceways are Listed in accordance with Sections 770.53(A) and 800.53(A) of NFPA 70, "National Electrical Code" under Optical Fiber/Communications Cable Raceways (QAZM).

A routing assembly marked "Plenum" is suitable for use in ducts, plenums or other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP" or communications cable marked "CMP" or "CMP-OF." This routing assembly exhibits a maximum peak optical density of 0.5, a maximum average optical density of 0.15, and a maximum flame spread distance of 5 ft when tested in accordance with Subject 2024A, "Outline of Investigation for Optical Fiber Cable Routing Assemblies". This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape indicating "Plenum." A routing assembly marked "Plenum" is also suitable for installation in risers when used to enclose optical fiber cable marked "OFNP" or "OFNR," or communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF," and general purpose use when used to enclose optical fiber cable marked "OFNP," "OFNR," "OFNG" or "OFN," or communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" or "CM-OF."

OPTICAL FIBER/COMMUNICATIONS CABLE ROUTING ASSEMBLIES FOR USE IN TELECOMMUNICATION INSTALLATIONS (QBAA)

255

A routing assembly marked "Riser" is suitable for installation in riser installations when used to enclose optical fiber cable marked "OFNP" and "OFNR," or communications cable marked "CMP," "CMP-OF," "CMR" or "CMR-OF." This routing assembly has fire resistant characteristics capable of preventing the carrying of fire from floor to floor. This routing assembly meets the test requirements of Subject 2024A. This routing assembly is identified by a marking on the surface of the routing assembly or on a marker tape indicating "Riser." A routing assembly marked "Riser" is also suitable for general purpose use when used to enclose optical fiber cable marked "OFNP," "OFNR," "OFNG" or "OFN," or communications cable marked "CMP," "CMP-OF," "CMR," "CMR-OF," "CMG," "CMG-OF," "CM" and "CM-OF."

A routing assembly with neither the marking "Plenum" nor "Riser" is suitable for general purpose use, with the exception of risers, plenums, and other spaces used for environmental air when used to enclose optical fiber cable marked "OFNP," "OFNR" or "OFN," or communications cable marked "CMG," "CMG-OF," "CM," "CM-OF," "CMR," "CMR-OF," "CMP" or "CMP-OF." This routing assembly is resistant to the spread of fire when tested in accordance with the Vertical-Tray Flame Test (General Use) in Subject 2024A.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic requirements used to investigate products in this category are contained in Subject 2024A, "Outline of Investigation for Optical Fiber Cable Routing Assemblies."

UL MARK

The UL symbol on the product or the complete Listing Mark of Underwriters Laboratories Inc. on the attached tag, the reel, or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Routing Assembly," "Communications Cable Routing Assembly" or "Optical Fiber/Communications Cable Routing Assembly."

OUTLET BOXES FOR USE IN HAZARDOUS LOCATIONS (QBCR)

GENERAL

This category covers conduit boxes for use in threaded rigid conduit or steel intermediate metal conduit wire raceways. They provide for splicing of conductors, but conductors should not be sealed in conduit boxes. The boxes are marked to indicate when accessories such as unions and sealing fittings are furnished with the box.

Boxes marked "rain tight" have been subjected to tests designed to simulate exposure to beating rain to determine that such exposure will not result in entrance of water.

Cast-aluminum alloy outlet boxes are not considered acceptable for installation in concrete or cinder fill unless protected with asphalt base paint or the equivalent.

RELATED PRODUCTS

See Conduit Fittings for Use in Hazardous Locations (EBNV).

ADDITIONAL INFORMATION

For additional information, see Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

REQUIREMENTS

The basic hazardous (classified) locations standards used to investigate products in this category are referenced in Equipment for Use in and Relating to Class I, II and III, Division 1 and 2 Hazardous Locations (AAIZ).

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the smallest unit container in which the product is packaged, with or without the UL symbol on the product, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Outlet Box for Hazardous Locations."

OPTICAL FIBER BRANCHING DEVICES (QBEA)

GENERAL

This category covers optical fiber branching devices intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other similar passive devices.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations." Additionally, branching devices employing optical fiber connectors have been investigated to TIA-455-6-B, "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the attached tag or the smallest unit container in which the product is packaged or on the product when size or shape permits is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Branching Device."

For optical fiber branching devices which are also Verified to a performance specification under Optical Fiber Branching Devices Verified in Accordance with National or International Specifications (QBEN), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]" or the UL Verification Mark along with [Specification name and/or number].

OPTICAL FIBER BRANCHING DEVICES VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QBEN)

GENERAL

This category covers optical fiber branching devices whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

Optical fiber branching devices include optical flexible circuits, fan-out devices, wavelength division multiplexers (WDM and DWDM) and other similar passive devices. These devices are intended for residential and/or commercial applications as part of an optical fiber wiring system.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-2866-CORE (Issue 1 June 1995), "Generic Requirements for Optical Fiber Ribbon Fanouts." Other performance specifications applicable to optical fiber cable assemblies and connector products may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Fiber Branching Device," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber branching devices which are also Listed under Optical Fiber Branching Devices (QBFA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS (QBFA)

GENERAL

This category covers factory-assembled optical fiber cable assemblies and connector products intended for residential and/or commercial applications as part of an optical fiber wiring system.

Optical fiber cable assemblies consist of Listed optical fiber cable and optical fiber cable connectors and are intended for use in accordance with Article 770 of ANSI/NFPA 70, "National Electrical Code" (NEC). According to Article 770, the restrictions that apply to the cable used in these assemblies also apply to the complete cable assemblies.

These assemblies have not been investigated for use in environmental air spaces in accordance with Sections 300.22(B) and (C) of the NEC unless specifically marked for the application.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate optical fiber connectors is ANSI/UL 746C, "Polymeric Materials – Use in Electrical Equipment Evaluations."

The basic standards used to investigate optical fiber cable assemblies are ANSI/UL 746C and TIA-455-6-B, "FOTP-6 – Cable Retention Test Procedure for Fiber Optic Cable Interconnecting Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Optical Fiber Cable Assembly" or "Optical Fiber Connector."

For optical fiber cable assemblies and optical fiber connectors which are also Verified to a performance specification under Optical Fiber Cable Assemblies and Connectors Verified in Accordance with National or International Specifications (QBFN), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name and/or number]," or the UL Verification Mark together with the Specification name and/or number.

OPTICAL FIBER CABLE ASSEMBLIES AND CONNECTORS VERIFIED IN ACCORDANCE WITH NATIONAL OR INTERNATIONAL SPECIFICATIONS (QBFN)

GENERAL

This category covers optical fiber cable assemblies and connector products whose signal transmission, environmental and/or mechanical performance characteristics have been investigated in accordance with one or more of the applicable U.S. national standards, published international standards, regional standards, miscellaneous standards, or regulations of other organizations, as indicated in the individual Verifications.

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The performance specifications used to investigate products in this category are contained in Telcordia GR-326-CORE (Issue 3 September 1999), "Generic Requirements for Singlemode Optical Connectors and Jumper Assemblies." Other performance specifications, applicable to optical fiber cable assemblies and connector products, may also be used by UL in Verification investigations.

UL MARK

The Verification Mark of Underwriters Laboratories Inc. on the product or on the attached tag or the smallest unit container in which the product is packaged is the only method provided by UL to identify products manufactured under its Verification and Follow-Up Service. The Verification Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "VERIFIED," a control number, the product name "Optical Cable Assembly" or "Optical Fiber Connector," the Specification name(s) and/or number(s), and the date of the Specification(s).

For optical fiber cable assemblies and optical fiber connectors which are also Listed under Optical Fiber Cable Assemblies and Connectors (QBFA), the marking includes the appropriate Listing Mark and either the text "Also Verified [Specification name(s) and/or number(s)]," or the UL Verification Mark together with the Specification name(s) and/or number(s) and the date of the Specification(s).

OUTLET BOXES AND FITTINGS (QBZ)

ILLUMINATED COVER PLATES FOR FLUSH-MOUNTED WIRING DEVICES (QBSA)

GENERAL

OUTLET BOXES AND FITTINGS (QBPZ)

Illuminated Cover Plates for Flush-mounted Wiring Devices (QBSA)—Continued

This category covers illuminated cover plates for flush-mounted wiring devices. The cover plates have integral nonreplaceable light sources, such as neon, light-emitting diode (LED) or electroluminescent panel, and are intended for installation in accordance with Article 314 of ANSI/NFPA 70, "National Electrical Code."

ADDITIONAL INFORMATION

For additional information, see Electrical Equipment for Use in Ordinary Locations (AALZ).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 514D, "Cover Plates for Flush-Mounted Wiring Devices."

UL MARK

The Listing Mark of Underwriters Laboratories Inc. on the product, or the UL symbol on the product and the Listing Mark on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Listing and Follow-Up Service. The Listing Mark for these products includes the UL symbol (as illustrated in the Introduction of this Directory) together with the word "LISTED," a control number, and the product name "Illuminated Cover Plate for Flush-mounted Wiring Devices."

OUTLET BOXES AND FITTINGS CLASSIFIED FOR FIRE RESISTANCE (QBWY)

GENERAL

This category covers special purpose boxes for installation in floors and nonmetallic outlet boxes for installation in walls and partitions and ceilings in accordance with the provisions of NFPA 70, "National Electrical Code" (NEC). They have shown a degree of fire resistance when installed in the particular floor(s) or wall(s) described for each Classified company. Boxes of the type Listed in UL's Electrical Construction Materials Directory have been investigated and found to comply with established electrical requirements and are so Listed.

This category includes Classifications for nonmetallic outlet and switch boxes for use in fire resistive rated wall or partition assemblies. The information provided for each Classification includes the model numbers for the Classified products, a description of the rated assemblies, the spacing limitations for the boxes and the installation details. Nonmetallic boxes should not be installed on opposite sides of walls or partitions of staggered stud construction unless Classified for use in such constructions.

Where indicated in the individual Classifications, products have also been investigated for heat and smoke release characteristics in accordance with UL 2043, "Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces." Such products may be installed in air-handling spaces in accordance with Sec. 300.22(C) of the NEC. Authorities Having Jurisdiction should be consulted before installation.

FLOOR BOXES

Boxes for use with floors have been investigated for use with electrical receptacles fabricated of melamine, phenolic or urea materials, unless specified otherwise in the installation instructions and Classification information. Floor boxes and fittings are intended to be installed in accordance with installation instructions provided with the product.

Boxes with integral connectors for electric metallic tubing or for unthreaded rigid metallic conduit are provided with a marking on the carton to indicate the specific type or types of wiring system for which the box has been tested.

Floor boxes designated for floor installation as covered in the NEC are provided with covers and gaskets to exclude surface water and sweeping compounds that might be present in floor cleaning operations. Those boxes, intended for installation in concrete floors, are frequently provided with leveling screws, threaded hubs, or both and are provided with a marking on the carton to identify boxes of this type such as "Floor Box" or "Floor Box, Concrete Tight" as appropriate.

WALL AND PARTITION AND CEILING BOXES

Nonmetallic outlet boxes evaluated for installation in fire resistive assemblies are provided with the appropriate Listing Mark for electrical products and other markings as described in Nonmetallic Outlet Boxes (QCMZ). Nonmetallic outlet boxes Classified for use in fire resistive designs may have the following marking in the base of the box:

Class * hr, F, W and/or C

OUTLET BOXES AND FITTINGS (QBPZ)

257

Outlet Boxes and Fittings Classified for Fire Resistance (QBWY)—Continued

where * indicates hourly rating such as 1 hr or 2 hr and F = Floor, W = Wall and C = Ceiling.

The boxes are Classified for use in certain fire resistive designs when installed in accordance with the details described for each Classified company. Any Listed metallic or nonmetallic cover is suitable for use with these nonmetallic boxes.

For information on the installation of Listed metallic outlet and switch boxes in fire resistive rated wall or partition assemblies, see Metallic Outlet Boxes (QCIT).

REQUIREMENTS

The basic standard used to investigate products in this category is ANSI/UL 263, "Fire Tests of Building Construction and Materials."

UL MARK

The Classification Mark of Underwriters Laboratories Inc. on the product or on each UL Classified Steel Floor and Form Unit with factory-installed floor boxes or the UL symbol on the product and the Classification Mark of Underwriters Laboratories Inc. on the smallest unit container in which the product is packaged, is the only method provided by UL to identify products manufactured under its Classification and Follow-Up Service. The Classification Mark for these products includes the UL symbol, the word "CLASSIFIED" above the UL symbol (as illustrated in the Introduction of this Directory), and the following additional information:

OUTLET BOXES AND FITTINGS
CLASSIFIED FOR FIRE RESISTANCE
DESIGN NOS. _____SEE PRODUCT CATEGORY IN
UL FIRE RESISTANCE DIRECTORY
Control No. _____

Where indicated in the individual Classifications, products may be marked "Suitable for use in air-handling spaces in accordance with Sec. 300.22(C) of the National Electrical Code" when investigated to determine suitability for such use.

METALLIC OUTLET BOXES (QCIT)

GENERAL

This category covers metallic flush device boxes, conduit bodies, conduit boxes, floor boxes, outlet boxes, special purpose boxes, extension rings, covers, and cover plates for flush-mounted wiring devices.

EXTENSION RINGS

Extension rings are suitable for extending properly secured flush- or surface-mounted boxes. One or more extensions may be used. An extension ring is intended to increase the box depth, volume, or both.

USE IN FIRE-RATED ASSEMBLIES

Listed single- and double-gang metallic outlet and switch boxes with metallic or nonmetallic cover plates may be used in bearing and nonbearing wood stud and steel stud walls with ratings not exceeding 2 h. These walls have gypsum wallboard facings similar to those shown in Design Nos. U301, U411 and U425, as covered under Fire Resistance Ratings – ANSI/UL 263 (BXUV). The boxes are intended to be fastened to the studs with the openings in the wallboard facing cut so that the clearance between the boxes and the wallboard does not exceed 1/8 in. The boxes are intended to be installed so that the surface area of individual boxes does not exceed 16 sq in, and the aggregate surface area of the boxes does not exceed 100 sq in per 100 sq ft of wall surface.
